The structure of the nine regions was developed with information provided by the United States Attorneys and all participating law enforcement agencies. Through this process, Federal judicial districts were grouped into regions that had similar drug problems based on common demographics. The new regional structure will better enable OCDETF to support drug enforcement initiatives that impact OCDETF investigations, such as the Southwest Border Initiative and the Methamphetamine Strategy. For example, the discussion of prosecutors and investigators produced a proposal to create a single region composed of several Midwestern states that share concerns facing rural areas and currently, an escalating methamphetamine problem. The creation of the West Central region will facilitate and enhance the communication and coordination that law enforcement is striving to maintain to meet the methamphetamine threat.

Similarly, the formation of the Southwest Region is intended to foster and assist in the cooperative efforts of the Southwest Border U.S. Attorneys, in meeting the threat common to that region. Many of the significant drug cases being brought under the Southwest Border Initiative, such as Operation Zorro, are OCDETF cases. The new Southwest Region will consolidate the Federal districts along the U.S.-Mexican border, and allow OCDETF to take advantage of, and further contribute to the enhanced coordination and cooperation of law enforcement in that area.

Attorney Benefits Provided to the OCDETF Program

One of the principles of the OCDETF program is early attorney involvement in the development of case strategy. The OCDETF approach provides prosecutors that participate in the formulation of strategy and are available for necessary legal services and counsel that investigators require. OCDETF attorneys are dedicated full-time to complex OCDETF matters and over time develop expertise in the request for and use of sophisticated investigative tools, i.e., electronic surveillance or the mounting of undercover operations, which require extensive and complex paperwork.

The range and nature of the investigative techniques require continuing and intensive participation by AUSAs in the provision of continuing counsel to ensure that the evidence growing out of investigations will be complete, conclusive, proper and admissible. OCDETF attorneys have placed increased emphasis on forfeitures, either in civil actions or under the criminal forfeiture provisions; have used a range of statutes, in addition to drug statutes to dismantle trafficking organizations; and have coordinated prosecutorial activities among various jurisdictions to achieve maximum impact on criminal organizations.

The OCDETF AUSA, working with agents with a diverse range of expertise, assures that specific statutory violations are appropriately documented and charged. This results in a strategy that times the prosecution of cases to provide the maximum disruption of drug trafficking organizations involved. Maintaining an adequate number of AUSAs in the OCDETF program is critical to insuring successful prosecutions. If the attorney-to-agent ratio is altered, performance in terms of number of investigations, number of indictments, number of successful prosecutions, and the number of successful responses to appeals will decrease.

Increased Complexity of Cases

Overall program workload has grown and costs have increased because:

- Criminal cases, especially drug cases, now involve more defendants.
- More defendants apply for and receive court-appointed attorneys.
- More defendants are being tried in Federal courts.
- The cases are more complex, principally because of changes in Federal Sentencing Guidelines and mandatory minimum sentencing statutes, resulting in more work for attorneys on each case.
- Various sources have also cited the growing number of multiple defendant cases as a major contributor to increased program costs.

Multiple defendant cases can be more complex and time consuming than other cases, particularly when they involve sophisticated drug trafficking organizations.

Statistical data for drug prosecutions in FY 1994 revealed the impact of this strategy:

- (1) EOUSA statistics show that the average prison sentence for defendants convicted of drug dealing increased in FY 1994 compared to FY 1993 for both OCDETF (up 2%, from 107 to 109 months) and for non-OCDETF defendants (up 7%, from 75 to 80 months). ~~We are getting better results.~~
- (2) Sentencing Commission data show the Department is prosecuting fewer drug defendants with little or no criminal histories and higher numbers of drug defendants with extensive criminal histories. About 57% of all drug defendants in 1994 were of criminal history category I (the lowest). This is down from 61% of all drug defendants in 1993, and 63% in 1992. In contrast, about 7% of all drug defendants in 1994 were of criminal history category VI (the highest). This is up from 6% in 1993, and 4% in 1992.
- (3) The average length of time between the filing of a drug case and its termination increased by 12% in FY 1994 (from 8.9 months in 1993 to 10 months in 1994). ~~This reflects our focus on more complex cases.~~
- (4) The number of Title III's used in drug cases has increased by 10% in FY 1994 (from 718 to 789), and is up 34% since FY 1992 (from 586 to 789). ~~We are using more sophisticated and resource-intensive investigative techniques to catch the major criminals.~~

C. Factors Affecting Selection of FY 97 and 98 Targets. In addition to those factors addressed under 1996, the following actions may impact the level of performance for 1997 and 1998. It should also be noted that factors identified under 1996-1998 would also affect the expected performance for General Goals 2, 3, and 4.

Recent Department initiatives will increase the program's workload. To be effective and consistent, any Department drug effort that involves major drug organizations must involve OCDETF.

As an example, the Department's new Methamphetamine Strategy will target high-level drug operators. In a June 1996 GAO Report entitled, *Drug Control, Counter-Narcotics Efforts in Mexico*, the evolution of the organizations directing methamphetamine manufacture and sales demonstrates the new targets of law enforcement. "During the past 3 years, Mexican trafficking organizations on both sides of the border have replaced U.S.-based outlaw motorcycle gangs as the predominant methamphetamine manufacturers and traffickers in the United States." Major cartels have increased their influence and power in production of this dangerous drug. As part of the National Methamphetamine Strategy put forth in April 1996, current efforts and items to be implemented include the following:

Select high-level targets who are involved in significant money laundering and other organized criminal activities.

Maintain liaison with federal, state and local law enforcement... to ensure there are no gaps in the law enforcement system...

Form or intensify use of existing task forces composed of federal, state and local law enforcement officials (e.g., the Organized Crime Drug Enforcement Task Force Program (OCDETF) and the Safe Streets Task Force), particularly in rural areas in need of enhanced resources.

DEA has reported that the Strategy will likely result in an increased number of OCDETF cases because the initiative stresses forming or intensifying use of existing task forces. DEA stated that:

The OCDETF program provides funding and expands local law enforcement jurisdiction to investigate methamphetamine investigations outside their jurisdiction. In the past two years, OCDETF investigations have resulted in the arrest of 764 methamphetamine violators. This is an average of 352 per year. In the first 5 months of 1996, OCDETF investigations have resulted in the arrest of 210 methamphetamine violators. At the present rate, it is anticipated that approximately 450 methamphetamine violators under OCDETF investigations will be arrested. With increased emphasis on methamphetamine, the number of OCDETF investigations could double.

Another Department initiative that is likely to increase OCDETF's workload is the Southwest Border Initiative. As stated in the Attorney General's Report to the President entitled *Fighting Crime on the Southwest Border: A Progress Report*, the Southwest Border Initiative is a regional strategy to investigate, prosecute and dismantle the most significant factions of the principal drug trafficking organizations. As an example, the Report chronicles the first major prosecution under the Southwest Border Initiative, Operation Zorro which was an OCDETF case. Due to the nature of this initiative and its target, major drug organizations whose operations are connected from the border to all points in the U.S., additional OCDETF cases are likely.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY GENERAL GOAL

GENERAL GOAL: 2. Promote a coordinated drug enforcement effort in each OCEDEF region and between regions, and encourage the maximum cooperation and coordination among all Federal drug and drug related law enforcement agencies and the United States Attorney offices.

A. Definitions of Terms or Explanations for Indicators:

Explanation of indicators on charts (Data extracted from OCDETF MIS)

*The number of investigations in which this agency is expected to participate at the time the investigations were initiated. U.S. Marshals Service and U.S. Attorneys were expected to participate in all cases.
The number of investigations initiated by the Task Force. The percentages show the frequency of anticipated involvement for each type of agency. More than one agency is involved in all cases.

**The number of indictments and informations in which this agency participated in either the investigation or prosecution. U.S. Marshals Service and U.S. Attorneys are assumed to be involved in all cases.
The number of indictments and informations returned in OCDETF cases. The percentages show the frequency of participation for each agency. More than one agency is involved in all cases.

Agency Participation in Investigations (Data extracted from OCDETF MIS)

An OCDETF case is, by definition, a multi-agency case. Initial agency resource allocations may shift as an investigation progresses.

The Program's history of agency resource assignments (1983 - January 14, 1997) reflected DEA involvement in 81.3 percent (6,547) of all OCDETF investigations; IRS involvement in 63.0 percent (5,071); FBI in 45.8 percent (3,687); Customs in 25.4 percent (2,046); EATF in 37.1 percent (2,989); and INS, only in the Task Forces since FY 1988, in 23.6 percent (1,900). The U.S. Attorney's and the U.S. Marshall Service are assumed to be involved in all OCDETF case investigations.

* Represents number of individual cases in which county/local investigators participated in relation to the number of OCDETF investigations initiated.

A. Definitions of Terms or Explanations for Indicators: From the Program's inception, State and local law enforcement elements have worked closely with the Task Force. The OCDETF Guidelines promote joint involvement of State/local authorities in the investigation, apprehension, and prosecution of major drug traffickers and their organizations.

Several elements of the OCDETF program facilitate State/local participation. Annual funding has been available to the OCDETF program to reimburse States and localities for overtime and expenses incurred by their personnel while participating in OCDETF cases. This funding was distributed among the OCDETF regions based on a variety of factors including demonstrated need and caseload. To receive funding, State/local governments must enter into an agreement with an OCDETF Region. Agreement requests are submitted from the district to the OCDETF Coordination Group for approval. Once an agreement is approved, State/local governments then submit Reimbursement Requests for payment after the expenses have been incurred. The OCDETF Executive Office serves as the coordination and policy office, and coordinates and manages the funding on a nationwide basis and processes all State/local Agreements and reimbursement Requests for obligation and payment. Funding of approximately \$5 million has allowed regional Coordination Groups to annually execute 1,500 agreements with State/local governments nationwide involving the participation of more than 6,000 State/local officers. Although these local agencies continue to pay the salaries of their investigators who work on OCDETF cases, they are assisted in meeting the costs of overtime, travel, and per diem expenses resulting from their participation.

State/local participation is further facilitated, when appropriate to a case, by the deputation of State/local law enforcement officials. Upon deputation, State/local officers adhere to the requirements of the Federal Rules of Criminal Procedure as well as the policies and procedures of the sponsoring Federal agency.

The cross-designation of attorneys and the sharing of forfeited assets further enhances the OCDETF Program approach to intergovernmental cooperation. Cross-designation of attorneys makes it possible for designated Federal attorneys to participate in State court prosecutions or for State attorneys to participate in Federal prosecution. Sharing of forfeited assets provides a bonus to participating State/local agencies in the form of vehicles, aircraft, boats, weapons, and cash.

B. Factors Affecting FY 1995 - FY 1998 Program Performance.

Since FY 1995, funding for this program has been derived from the Department of Justice Asset Forfeiture Fund (AFF). This places program funding in competition with other law enforcement priorities for continually scarce resources in the Fund. Absent a stable and permanent source of base funding for this important activity, continued participation by State and local law enforcement agencies cannot be guaranteed.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY GENERAL GOAL

GENERAL GOAL: 4. Make full use of financial investigative techniques, including tax law enforcement and forfeiture actions, against assets obtained as a result of illegal drug trafficking or related crime activity.

More than one activity is involved in many investigations.
- **Tax Division Workload:**
Workload statistics were obtained from the Criminal Appeals and Tax Enforcement Policy (CATEP) Section, which maintains the Tax Division's automated case reporting and tracking system for criminal tax matters. 1996 data and out-year estimates are based upon internal data, statistics received from the Criminal Investigation Division of the IRS, and information obtained from the Office of National Drug Control Policy.
- **Types of Criminal Activities Charged:**
The number of indictments and informations in which this activity was charged. The number of indictments and informations returned in OCDETF cases. The percentages show the frequency for each category of illicit activity charged. More than one activity is charged in many cases.
- **Investigative Techniques Used:**
The major financial investigation related investigative techniques used during investigation and prosecution. The number of indictments and informations in which this technique was used. The number of indictments and informations returned in OCDETF cases. The percentages show the frequency with which each financial investigation-related technique was used. More than one technique is involved in many cases.

Clearly, OCDETF makes extensive use of a wide variety of investigative methods, some of which require considerable sophistication and persistence to exploit properly. It is also apparent that it is typical to employ several investigative methods during the course of any particular investigation. All of these methods are currently in use in each of the regions. The charges under Titles 18, 26, and 31 have each brought down hundreds of drug-connected defendants, some of whom have received the highest penalties. In FY 1990 OCDETF began recording indictments under the money laundering provisions of Title 18.
- **Offenses Charged:**
The number of defendants charged in OCDETF cases indictments and informations. The percentages show the frequency with which each financial investigation-related offense is charged. Many defendants were charged with more than one offense. Some defendants were charged in more than one indictment or information.
- **Non-Drug Seizures**
Drug trafficking organizations, like other businesses, can be disrupted by the removal of the financial resources needed to support their operations as well as by the removal of leadership and expertise. Through September 30, 1996, the OCDETF Program had seized a total of over \$3 billion in property and cash.

A. Definitions of Terms or Explanations for Indicators:

Financial Investigations:

The criteria for selection of OCDETF cases are designed to ensure that each case chosen is of a type and magnitude that will derive maximum benefit from utilization of the OCDETF approach. Cases that require the expertise of more than one investigative agency, that involve major drug trafficking figures or organizations, and that involve activity in more than one jurisdiction are prime candidates for consideration as OCDETF cases. The effectiveness of OCDETF case management is materially enhanced by Assistant U.S. Attorney involvement at the early stages of the investigation.

Cases that meet these criteria, while usually targeting drug kingpins, often lead to charges against and conviction of other criminals. These individuals fall into two broad categories: those providing support functions to illegal drug trafficking and those who work directly for the kingpins. Those providing auxiliary support include such specialists as money-launderers, financiers, legal counselors, and drug-producing and drug-designing chemists. Direct employees of the drug trafficking operations may include wholesalers, distributors, and enforcers. Cases may also lead to other organizations connected to the initial target. These may include smuggling, supply, distribution, or production organizations whose assistance was unsuspected at the inception of the case. Often, investigations of these connected organizations or figures provide the information and link needed to develop a successful case against the kingpins who were the initial focus of the investigation. Experience with OCDETF indicates that financial investigations often provide an opportunity for exposing such links. The uncovering of the financial network of organized drug trafficking operations is also an invaluable tool in piecing together details of organizational relationships in the drug trafficking world. The results of such investigations enable OCDETF investigators to trace the cash flow that sustains the entire organizational structure of drug trafficking operations.

During prosecution, evidence gathered in financial investigations is used to give juries a clearer picture of the scope of drug operations. This type of evidence is often more enlightening to a jury than is the simple fact of a quantity of seized drugs. Often, evidence is found in financial investigations that allows for immediate seizure of drug organizations or drug kingpin assets. In addition, financial investigations can provide the basis for bringing currency or tax violation charges against drug organizations and kingpins. These charges are an important adjunct to the drug charges themselves and in some instances, where direct drug charges cannot be sustained, provide the only way of successfully prosecuting drug traffickers.

The IRS actively participates in OCDETF cases through its investigation of tax-related violations of the Internal Revenue Code. The IRS's Criminal Investigation Division also investigates money laundering operations, enforces major provisions of the Bank Secrecy Act, and assists in asset seizure and forfeiture actions. Additionally, the IRS's Examination Division may initiate jeopardy and termination tax assessments in cases where the collection of a tax may be in jeopardy.

Along with the IRS, the U.S. Customs Service has been especially effective in conducting financial investigations. Through the analysis of computer data collected under the Bank Secrecy Act, Customs identifies drug traffickers and money launderers for OCDETF investigations. Customs' capacity to track the international movement of cash, persons, and commodities complements the drug trafficking investigations of other OCDETF agencies.

The Tax Division provides nationwide review and coordination of all tax charges in OCDETF cases. An experienced Tax Division attorney is assigned as a liaison official to each of the OCDETF regions. These attorneys work closely with AUSAs and IRS coordinators and Special Agents in the investigation of tax crimes. They provide the regions with advice, guidance and expertise in developing and handling the tax investigations, and provide litigation support.

(Dollars in thousands)

	Perm. Pos.	Work- years	Amount
Transfers to and from other accounts:			
1. Transfer to Department of Transportation, Coast Guard, Operating Expenses.....			-4828

This transfer reflects the Administration proposal to directly fund task force participation costs for agencies outside the Department of Justice.

2. Transfer to Department of the Treasury, Interagency Law Enforcement, Interagency Crime and Drug Enforcement.....	-760	-732	-73,784
---	------	------	---------

This transfer reflects the Administration proposal to directly fund task force participation costs for agencies outside the Department of Justice. Resources are provided for the Bureau of Alcohol, Tobacco and Firearms, the Internal Revenue Service, and the United States Customs Service.

Increases:

1. 1998 pay raise.....			5,963
------------------------	--	--	-------

This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 1998 Budget Submissions, August 1, 1996. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$5,963,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$4,845,000 for pay and \$1,118,000 benefits = \$5,963,000).

2. Annualization and increase of 1997 pay raise.....			2,113
--	--	--	-------

This pay annualization represents first quarter amounts (October through December) of the anticipated 1997 pay increase of 3.0 percent estimated to be effective January 1997. The amount requested, \$2,113,000, represents the pay amounts for three-quarters of the year (\$1,715,000 for compensation and \$398,000 for benefits).

	Perm. Pos.	Work- year	Amount
3. Within-grade increases.....			1,487
<p>This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay rates, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$1,207,000 for pay and \$280,000 for benefits.</p>			
4. General pricing level adjustments.....			398
<p>This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.8 percent against those subject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.</p>

FEDERAL BUREAU OF INVESTIGATION

Approved by  Date 8/16/96
 JANET RENO
 Attorney General A-1

**Federal Bureau of Investigation
Summary Statement
Fiscal Year 1998**

Overview

For 1998, the FBI is requesting a total of \$3,041,875,000 in direct budget authority, 24,839 permanent positions (10,524 agent), and 23,770 direct funded workyears for its Salaries and Expenses, Violent Crime Reduction Program, Construction, and Telecommunications Carrier Compliance appropriations. This request represents a net increase of \$204,265,000 from the 1997 enacted levels. To address new and increasing investigative responsibilities, and to provide necessary investigative assistance and infrastructure services, the President's 1998 budget proposes direct program increases totaling 522 new permanent positions (161 agent), 262 workyears, and \$142,051,000 for these appropriations:

- *Salaries and Expenses:* The President's 1998 budget proposes 24,831 permanent positions (10,524 agents) and \$2,713,748,000 in direct funding under the Salaries and Expenses appropriation. Program increases totaling 520 permanent positions (161 agent) and \$55,932,000 are requested, including: 56 positions and \$5,945,000 for computer crime investigations; 40 positions and \$16,876,000 for expansion of FBI Legal Attache offices and overseas assignments; 47 positions and \$5,000,000 for investigations of the La Cosa Nostra; 239 positions and \$11,394,000 to comply with the Electronic Freedom of Information Act (EFOIA); and 138 positions and \$16,717,000 for Southwest Border drug and public corruption investigations.
- *Violent Crime Reduction Trust Fund:* The President's 1998 budget proposes 8 permanent positions and \$179,121,000 for FBI activities authorized by the Violent Crime Control and Law Enforcement Act of 1994, as amended, and the Antiterrorism and Effective Death Penalty Act of 1996. Program increases proposed for 1998 total 2 positions and \$30,959,000, including: \$5,900,000 for the Computer Investigations and Infrastructure Threat Assessment Center; \$9,059,000 for EFOIA and Freedom of Information/Privacy Act Document Processing System equipment and services; \$8,000,000 for security reinvestigations; 2 positions and \$6,000,000 to replace microwave radio equipment; and \$2,000,000 for the national backstopping program.
- *Construction:* For 1998, a total of \$49,006,000 is proposed for construction projects. Funding requested in 1998 would support two ongoing projects, the construction of the new FBI Laboratory (\$32,559,000) and necessary maintenance and upgrades at the FBI Academy (\$1,287,000). Funding totaling \$15,160,000 is proposed for two new projects, the renovation of the FBI Headquarters Building (\$10,500,000) and the expansion and renovation of the FBI's Los Angeles Field Office (\$4,660,000).

- *Telecommunications Carrier Compliance Fund:* The President's budget proposes a total of \$100,000,000 in direct funding for the Telecommunications Carrier Compliance Fund, an increase of \$40,000,000. This funding would allow the FBI to continue systems engineering and engineering development activities involving priority telephone switching platforms.

1998 Budget Initiatives

The FBI has identified seven initiatives for the 1998 Congressional budget process: Technology Crimes, International Law Enforcement, La Cosa Nostra, Infrastructure, Telecommunications Carrier Compliance, Southwest Border, and Construction. Following is a summary of these initiatives and the program increases proposed for 1998.

Technology Crimes: 56 Pos. (34 agent), \$11,845,000

Illegal electronic intrusion into computer networks is a rapidly escalating crime problem. White collar criminals, economic espionage agents, organized crime groups, foreign intelligence agents, and terrorist groups have been identified as "electronic intruders" responsible for penetrations of American computer networks. It is estimated that the Pentagon's computers are subject to hackers' attempts 250,000 times a year. The United States Government relies upon the National Information Infrastructure (NII) for the efficient, uninterrupted flow of electronic information for air traffic control, military communications, energy distribution, public safety, and other essential government programs and services. Intelligence and industry forecasts indicate the United States is just beginning to realize the potentially damaging effects and extent of the computer crime problem. Recognizing the potential impact to the government and the private sector, as well as the national security, the FBI has established a Computer Investigations and Infrastructure Threat Assessment Center (CITAC) at FBI Headquarters. This center serves as a joint criminal and intelligence operation to focus upon computer crime investigations and threats to the NII. In support of the Technology Crime initiative, the FBI requires program increases of 56 positions (34 agents) and \$5,945,000 to conduct computer crime investigations and \$5,900,000 for operations of the CITAC.

International Law Enforcement: 40 Pos. (29 agent), \$16,876,000

The FBI believes it is essential to station agent and support staff in other countries to prevent foreign terrorism and foreign crime from reaching into the United States. By the end of 1997, the FBI anticipates having 152 employees (88 agents) assigned to Legal Attache posts in 34 countries around the world. These employees work closely with authorities of host countries to build cop-to-cop bridges that help all law abiding societies to develop cooperative efforts that better protect their people and our people. In June 1996, the FBI provided Congress with a four-year plan for expanding overseas operations between 1996 and 1999. Under this plan, the number of FBI Legal Attache offices would increase from 23 in 1996 to 46 in 1999. FBI overseas staffing for

both Legal Attache offices and DIAP Resolution 6 locations would increase to a total of 205 (126 agents). The FBI's overseas expansion plan was prepared in consultation with and approved by the Department of Justice and Department of State.

In 1998, FBI international law enforcement activities require an increase of 34 positions (23 agent) and \$14,330,000 to open eight new Legal Attache offices and to expand staffing in other existing Legal Attache offices. Additionally, six agent positions and \$2,546,000 are required for assignment to DEA Country Offices in Mexico under the provisions of DIAP Resolution 6. A proposal to extend to the FBI the authority to provide danger pay for personnel assigned to high risk overseas assignments is included under Section 107, General Provisions - Department of Justice.

La Cosa Nostra: 47 Pos. (28 agent), \$5,000,000

The La Cosa Nostra remains the foremost organized criminal threat to American society. There are currently over 1,200 "made" members of the La Cosa Nostra and many additional associates. Less than 10 percent of identified La Cosa Nostra members are currently incarcerated. Investigative and intelligence information indicate that La Cosa Nostra families that were seriously damaged by previous FBI and other law enforcement investigations and prosecutions are beginning to rebuild their criminal enterprises, including the induction of new "made" members.

In 1996, the FBI began implementation of a five-year strategic plan, named "Operation Heaven's Gate," to further reduce the La Cosa Nostra's influence over labor unions and certain industries, as well as to reduce the membership of all La Cosa Nostra families. The FBI is assigning approximately 445 agents in 21 field offices to this initiative on a full-time basis starting in 1996. Continued implementation in 1998 of the "Operation Heaven's Gate" five-year plan requires an additional 47 positions (28 agent) and \$5,000,000.

Infrastructure: 241 Pos., \$36,453,000

The President's 1998 budget proposes increases totaling 241 positions and \$36,453,000 to address several Administration and FBI Infrastructure priorities. The Electronic Freedom of Information Act of 1996 (EFOIA) requires all Government agencies to provide public information to requesters in electronic format, i.e., compact disk (CD) or floppy diskette. The EFOIA also requires that computer-based information in addition to paper records kept by agencies be subject to review. Further, all Freedom of Information/Privacy Act reading room material created on or after November 1, 1996, must be available in electronic format by November 1, 1997. The EFOIA does not allow for agency backlog of requests, nor does it allow agencies to claim exemptions under traditional precedents. Therefore, the President's 1998 budget proposes an increase of 239 positions and

\$15,453,000 to bring the FBI into compliance with the EFOIA. Funding totaling \$5,000,000 is also proposed to acquire necessary contractor services, equipment, and telecommunications services for implementation of the FBI's FOIPA Document Processing System (FDPS). The FDPS, which is also a Department of Justice National Performance Review laboratory, is expected to help the FBI reduce its backlog of FOIPA requests which currently exceed 15,000.

Executive Order 10450 and Office of Personnel Management regulations, Chapter 736, require that all persons in the Government in special sensitive positions be subject to reinvestigations every five years. All FBI employees and most contract personnel hold "Top Secret" and are in special sensitive positions. A program increase of \$8,000,000 is proposed to implement a full five-year reinvestigation program for FBI employees and contract personnel having access to classified materials and facilities. A program increase of \$2,000,000 is proposed to upgrade and strengthen the capabilities of the FBI's National Backstopping Program. The National Backstopping Program supports FBI undercover operations and undercover agents that are critical to many organized crime, drug trafficking, public corruption, and national security investigations. Finally, the FBI must begin replacing microwave radio communications equipment operating in the 1710-1755 megahertz bandwidth due to the reassignment of these frequencies by the Federal Communications Commission to non-Government users. The FBI uses the 1710-1755 bandwidth in 24 of its 56 field offices. A six-year transition plan is being proposed, beginning in 1998, in order to vacate these frequencies by 2004. To implement this transition plan, an increase of 2 electronics technicians and \$6,000,000 is proposed. The total cost for migrating from the 1710-1755 bandwidth is \$30,000,000. Private vendors are not required to reimburse the FBI for vacating this spectrum.

Telecommunications Carrier Compliance: \$40,000,000

The Communications Assistance for Law Enforcement Act (CALEA) (P.L. 103-414) clarified the duty of the telecommunication carriers to assist law enforcement agencies with the lawful interception of communications and the collection of call-identifying information in a rapidly changing telecommunications environment. This legislation was necessitated by the erosion of law enforcement interception abilities and the frustration of court orders for electronic surveillance as a result of the deployment of advanced telecommunications technologies. The FBI documented to Congress 183 cases where advanced telecommunications equipment had impaired or prevented execution of a wiretap court order. In just one locality alone, the FBI was unable to conduct, or was significantly delayed in conducting, 34 court-ordered interceptions over an 18-month period.

The President's 1998 budget proposes a program increase of \$40,000,000, for total direct appropriated funding availability of \$100,000,000. This funding level would allow the FBI to continue systems engineering and engineering development activities of priority telephone switching platforms.

Southwest Border: 138 Pos. (70 agent), \$16,717,000

The Southwest Border Project is a joint FBI, DEA, and United States Attorney initiative targeting the four most significant Mexican Drug Trafficking Organizations (MDTOs). These organizations are involved in the trafficking of bulk quantities of cocaine, marijuana, and heroin, as well as the laundering of money obtained from drug activities. MDTOs promote corruption of public officials through a combination of intimidation and violence, as well as through monetary payments to gain influence and access. These organizations operate internationally, principally with Colombian drug cartels. Mexican organizations are also interacting with Italian, Asian, and Nigerian criminal enterprises by providing transportation services and storage facilities for drug shipments and contraband, access to corrupt officials to facilitate the movement of illicit drugs and contraband, and illegal aliens.

To enhance ongoing Southwest Border Project efforts in 1998, the FBI requests an additional 104 positions (50 agent) and \$10,650,000 for drug trafficking investigations; 34 positions (20 agent) and \$1,567,000 for public corruption investigations; and \$2,500,000 for operational expenses and services provided by the Joint FBI/DEA Southwest Border Special Operations Division.

Construction: \$15,160,000

For 1998, the President's budget proposes a total of \$49,006,000 for FBI Construction activities, including increases of \$15,160,000 for two new projects. Recurring base level funding will complete the funding requirements for the new FBI Laboratory facility at the FBI Academy. The ongoing relocation of the Criminal Justice Information Services Division to Clarksburg, West Virginia, and the planned relocation of the Laboratory Division to new facilities at Quantico, Virginia, will necessitate the renovation of approximately 405,880 square feet of space in the FBI Headquarters Building that is being vacated by these components. A 1992 assessment by an architectural and engineering firm estimated the cost of this renovation effort at \$26,400,000. The FBI has developed a multi-year plan that combines the renovation of the vacated space with the consolidation of Headquarters divisions and offices into contiguous space for more efficient operations. Additionally, the FBI would consolidate components currently located in leased commercial space back into the FBI Headquarters building. This proposal is consistent with the Vulnerability Assessment of Federal Facilities Study, conducted by the Department of Justice in the aftermath of the bombing of the Murrah Federal Office Building in Oklahoma City, which recommends that Federal law enforcement agencies not be located in rental space with non-Federal tenants whenever possible. The President's 1998 budget includes \$10,500,000 to begin implementation of this multi-year plan.

The FBI's Los Angeles Field Office currently occupies space on several floors of the Federal Building in Los Angeles, California. An additional 40,000 square feet of space (two floors) are required to accommodate growth in the size of the agent and support workforce assigned to the Los Angeles Field Office and to provide enhanced security and technical capabilities. Total cost for the renovation and realignment project is \$9,460,000, of which the General Services Administration will provide \$4,800,000 for

asbestos removal and initial standard alterations. Funding totaling \$4,660,000 is included in the President's 1998 budget for the renovation and realignment for architectural and engineering design, construction administration, above standard build-out costs, and realignment of space.

Reimbursable resources. In addition to direct funded resources, the President's 1998 budget proposes a total of 3,556 reimbursable positions (989 agent) and 3,411 reimbursable workyears for the FBI. Under the reimbursable Interagency Crime and Drug Enforcement program, the 1998 budget proposes 981 total positions (592 agent), 981 workyears, and \$105,703,000 for FBI drug-related task force operations and related activities. Pursuant to the Health Care Portability and Accountability Act of 1996 (P.L. 104-191), the 1998 budget includes 569 positions (340 agent), 533 workyears, and \$56,000,000 for FBI health care fraud investigations, an increase of 72 positions (44 agent), 36 workyears, and \$9,000,000 from the previous year. The remaining reimbursable positions and workyears are used to facilitate a number of activities, such as pre-employment background inquiries, name checks, fingerprint checks, and detail assignments to other agencies. The President's 1998 budget proposes 300 new reimbursable positions and workyears to address the growing Criminal Justice Services user fee program workload.

Representation Fund Authorization

The President's 1998 budget proposes an authorization level of \$60,000 for reception and representation expenses, an increase of \$15,000 from the current authorization of \$45,000. This increase is necessary due to the proposed growth in the number of FBI Legal Attache offices from 23 in 1996 to 42 in 1998 and the significant increase in joint FBI/state and local task force and working group operations.

Federal Bureau of Investigation
Salaries and Expenses
Justification of Proposed Changes in Appropriations Language

The 1998 budget estimates include proposed changes in the appropriations language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and Expenses

For necessary expenses of the Federal Bureau of Investigation for detection, investigation, and prosecution of crimes against the United States, including purchase for police-type use of not to exceed [2,706] 3,094 passenger motor vehicles, of which [1,945] 2,270 will be for replacement only, without regard to the general purchase price limitation for the current fiscal year, and hire of passenger motor vehicles; acquisition, lease, maintenance, and operation of aircraft, and not to exceed \$70,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of, and to be accounted for solely under the certificate of the Attorney General, [\$2,451,361,000] \$2,713,748,000, of which not to exceed \$50,000,000 for automated data processing and telecommunications and technical investigative equipment and not to exceed \$1,000,000 for undercover operations shall remain available until September 30, [1998] 1999; of which not less than \$147,081,000 shall be for counterterrorism investigations, foreign counterintelligence, and other activities related to our national security, of which not to exceed [\$98,400,000] \$84,400,000 for the automation of fingerprint identification services and related costs and not to exceed \$14,000,000 for research and development related to investigative activities shall remain available until expended; and of which not to exceed \$10,000,000 is authorized to be made available for making [payments of] advances for expenses arising out of contractual or reimbursable agreements with State and local law enforcement agencies while engaged in cooperative activities related to violent crime, terrorism, organized crime, and drug investigations; and of which \$1,500,000 shall be available to maintain an independent program office dedicated solely to the relocation of the Criminal Justice Information Services Division and the automation of fingerprint identification services: Provided, That not to exceed [\$45,000] \$60,000 shall be available for official reception and representation expenses; Provided further, That not to exceed 81 permanent positions and 85 full-time equivalent workyears and \$5,959,000 shall be expended for the Office of Legislative Affairs and Public Affairs: Provided further, That the latter two aforementioned offices shall not be augmented by personnel details, temporary transfers of personnel on either a reimbursable or nonreimbursable basis or any other type of formal or informal transfer or reimbursement of personnel or funds on either a temporary or long-term basis.]

[For an additional amount for necessary expenses of the Federal Bureau of Investigation to prevent and investigate terrorism activities and incidents; provide for additional agents and support staff; protect key physical assets; establish a capability for chemical, biological and nuclear research; improve domestic intelligence; and improve security at Federal Bureau of Investigation offices, \$115,610,000, as authorized by the Antiterrorism and Effective Death Penalty Act of 1996 (P.L. 104-132): Provided, That the entire

amount is designated by Congress as an emergency requirement pursuant to section 251(b)(2)(D)(i) of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended.] Provided further, That no funds in this Act may be used to provide ballistics imaging equipment to any State or local authority which has obtained similar equipment through a Federal grant or subsidy unless the State or local authority agrees to return that equipment or to repay that grant or subsidy to the Federal Government.

Further, for the foregoing purposes, \$194,881,000, as follows: For the automation of fingerprint identification services and related costs, \$47,800,000, to become available on October 1, 1998, and remain available until expended; and for counterterrorism investigations, foreign counterintelligence, and other activities related to our national security, during fiscal year 1999, \$147,081,000. (Department of Justice Appropriations Act, 1997)

Explanation of Changes

1. Change in motor vehicle purchase authority is based upon increases proposed for 1998.
2. An increase in budget authority is based upon funding proposed for 1998.
3. Provides for two-year authority for funds available for the acquisition of automated data processing and telecommunications and technical investigative equipment and for undercover operations. Two-year authority is required due to the often lengthy nature of major contracts and procurements and to provide continuity of funding for sensitive undercover operations in the event of a lapse in appropriations.
4. Restores prior year language and funding for the automation of fingerprint identification services and related activities and research and development activities.
5. Technical language change to clarify the authorization to use funds for cooperative activities with State and local law enforcement activities.
6. Increases to \$60,000 the level authorized for official representation and reception expenses. The present authorization level of \$45,000 allows an allocation of \$16,500 for Legal Attache offices and \$28,500 for domestic field offices. An increase in reception and representation authorization is needed to facilitate the FBI's overseas expansion plan, endorsed by both the Department of Justice and Department of State, and submitted to Congress in June 1996. Domestically, the FBI has established a number of task forces with other Federal, State, and local law enforcement agencies that involve the assignment of hundreds of agents and officers to Joint Terrorism Task Forces, Safe Streets Task Forces, and other similar entities. In support of these efforts, the FBI field offices serve as host for events, meetings, and conferences that are extremely beneficial toward achieving task force and joint working group objectives and goals.
7. Deletes language restricting funding available for the Office of Legislative Affairs and Public Affairs.
8. Deletes emergency designation language not required for 1998.
9. Includes new language regarding the use of funds for ballistics imaging equipment and conditions under which State and local authorities may accept such funds. This language is intended to prevent State and local authorities from using Federal funds to

10. acquire duplicative ballistics imaging equipment. Similar language is also included for the Bureau of Alcohol, Tobacco, and Firearms, United States Department of the Treasury.
- Includes advance appropriations language for the automation of fingerprint identification services and related activities. Also includes advance appropriations language for defense discretionary funding consistent with P.L. 99-145 which requires the President to submit a two-year budget proposal for the Department of Defense and related agencies, including those having multifunction appropriations with national defense components.

Health Care Fraud Enforcement. Includes a transfer of 420 field positions (250 Special Agent) from Salaries and Expenses direct funding to reimbursable funding as required by the Health Care Portability and Accountability Act of 1996 (P.L. 104-191).													
Congressional Action													
The Violent Crimes program was increased by 86 support positions and \$1,967,000 to support Safe Streets Task Force. Items not approved by Congress included: International Law Enforcement Investigations Contract Services (\$4,136,000) also was denied by Congress.													
Congress appropriated funds to enhance the FBI's Anti-Terrorism efforts. To include the following initiatives: Double the "Violent Crime" (89) positions and 74,321,000; Improve Information Intelligence (\$2,167,000); Improve Crime Management (10) positions were funded but a reduction of \$12,142,000 for Equipment/Technology Aerial was cancelled; and a reduction of \$10,000 for Providing Secure Work Environment. The Congressional action also includes a procurement reduction of \$2,914,000 and funding transfer from the Salaries and Expenses account to the Law Enforcement Program account to support a base transfer (\$333,000) within the Violent Crimes Program; Supplemental Budget direct support funding (\$4,036,000); Supplemental Budget direct support funding (\$3,334,000) and two new NCIC 2000 fees (\$8,256,000).													
1997 Congressionally Approved Reprogramming include: TELU, NCIC 2000, FOIPA, Security and Personnel Services reprogramming (C-38) accounts and to the Management and Administration (MMA) and Technical Communications (MTC) accounts. The total reprogramming includes three agent profiles and from OCE and NCIC 2 agent profiles from VC, 46 support profiles from CJS to IT-S&S (8 agent and 21 support profile) and MMA (25 support profile) to support the TELU.													
The NCIC 2000 reprogramming includes reprogram for the development of NCIC 2000, adding 10 support profiles and \$77,000 from the CJS, account unit to Information Management, Automation and Telecommunications (MMA) decision unit. The Freedom of Information and Privacy Act (FOIPA) reprogramming includes reprogram of 308 positions/260 fee and \$18,167,000 from MMA, and a 1996 permanent reprogramming of an FOIPA program enhancement (179 profiles FTE and \$3,327,000) and maintenance (\$604,000). The Security Program reprogramming includes 38 support profiles and \$1,459,000 related to physical security functions of the FBI from MMA to the Training, Recruitment and Applicant (TRM) decision unit.													
In addition to the above 1995 reprogramming affecting 1997 and subsequent years, there was also a permanent 1996 approved reprogramming of 186 positions (72 agent) and \$14,367,000 from various Field and HQ program activities to other HQ programs. This reprogramming also included the transfer of 84 support positions from the Information Management Automated Telecommunications (MMA-T) decision unit to other HQ divisions and offices as a result of needs analysis study and personnel savings through the Automated Case Support Function.													
HOTA Transfer. Includes a one-year only transfer of \$3,526,000 to the Organized Criminal Enterprises program for the High Intensity Drug Trafficking Areas (HIDTA).

Changes in workyears, positions, and funding:								
There are program increases of 300 workyears for Identification User Fee, 75 workyears for the Health Care Fraud, and a transfer of three workyears from reimbursable to direct funding in the 1988 base								
to support the Northern Maritime Islands. Other increases include funding for the 1988 payraises and locality pay, except for the Health Care Fraud, Identification User Fee, and the Organized Crime								
Drug Enforcement, which have mandatory 1988 payraises. These increases would apply for the Collections by Program schedule on the next page as well.								
No Year funding:								
The reimbursable no year (NY) funding is estimated for the following two programs:								
Criminal Justice Information Services								
FY 1988 Attorney General's Counterterrorism Fund								
Working Capital Fund								
Office of National Drug Control Policy								
Office of Inspector General								

The FY 1988 reimbursable NY obligations of \$48,907 million were spread across all ten FBI decision units.

Justification of Increase, Organized Criminal Enterprises (OCE)

This program includes the loan of FBI personnel to other agencies and the background investigations performed of other agencies. "polity support is provided at the FBI Academy, Quantico, Virginia to accommodate the Drug Enforcement Administration (DEA) training functions. Costs include salaries and benefits, custodial maintenance, ammunition, and other costs based on training needs.

Justification of Increase, White Collar Crime (WCC)

On August 21, 1996, President Clinton signed the Health Insurance Portability and Accountability Act (HIPAA) of 1996. The HIPAA established a health care fraud enforcement fund with the United States Treasury Department. The FBI is reimbursed for personnel assigned to the National Drug Intelligence Center (NDIC). NDIC coordinates and consolidates drug intelligence from all national security and law enforcement agencies.

Justification of Increase, Training, Recruitment, and Applicant

This program includes the loan of FBI personnel to other agencies and the background investigations performed of other agencies. "polity support is provided at the FBI Academy, Quantico, Virginia to accommodate the Drug Enforcement Administration (DEA) training functions. Costs include salaries and benefits, custodial maintenance, ammunition, and other costs based on training needs.

Justification of Increase, Information Management, Automation, and Telecommunications

The IMAT personnel perform name checks for Federal agencies under the user fee function.

Justification of Increase, Criminal Justice Services

The user fee function includes reimbursable barge of fingerprint card examinations requested by state and local institutions. Fingerprint cards are also examined for defense contractors and other Federal Government agencies on a reimbursable user fee basis.

No Year Funding

The FY 1996 reimbursable NT obligations of \$48,907 million were spread across all ten FBI decision units.

Information Management

The Federal Name Check program was authorized by Congress in November, 1989, and began on January 1, 1990, with a fee charged for processing name checks against the FBI's Central Records Index for Federal Agencies for non-criminal justice and non-law enforcement purposes. At the inception of the program, an automated name check resulting in no record cost \$0.50, as did an indices check. A computer search cost \$8.00, while a manual search cost \$8.50.

Each year the fee is adjusted by indexing all costs associated with providing the service. These costs include personnel and non-personnel items, such as equipment, supplies, rent, communications, utilities, travel, maintenance, and other miscellaneous services. All costs incurred by the FBI are recovered by the user fee. The user fees associated with the Federal Name Check program were increased in 1992 as follows:

Fee Schedule- Information Management Program

Automated input/output check of Central Records	\$1.40
Indices popular (record)	10.85
Manual input/output check of Central Records Index	12.00
All submissions	22.35
Telephone expedite	

Criminal Justice Services

Non-Federal User Fee

The Non-Federal User Fee program began on October 1, 1982, with a \$12.00 fee charged for processing each applicant fingerprint card submitted by banking and securities institutions, the commodities futures trading industry, and authorized state/local employment and licensing authorities. Procedures were implemented so that fingerprint cards, whenever possible, would be submitted to the FBI through state identification bureaus, the American Bankers Association, stock exchanges, and other umbrella groups in an effort to minimize the FBI's accounting and billing burdens. To help offset handling expenses, the charging agencies were allowed to retain \$1.00 of the \$12.00 fee.

Each year the fee is determined by reviewing all costs associated with providing the service. These costs include personnel items, such as salaries, benefits, training, and handling, as well as non-personnel items, such as equipment, supplies, rent, communications, utilities, travel, maintenance, and other miscellaneous services. All costs incurred by the FBI are recovered by the user fee. Since initiation of the Non-Federal User Fee program, the fee for processing fingerprint cards has increased from the initial level of \$12.00 in 1982 to \$17.00 in 1990 and to \$18.00 in 1994. As part of the October 1990 fee increase, charging agencies were allowed to retain \$2.00 of the fee to offset their handling costs. Additionally, the FBI received authorization to add a surcharge to the fee to support the automation of fingerprint identification services. Beginning in March 1990, a \$8.00 surcharge for automation was implemented, bringing the total fee to the current level of \$24.00.

Federal User Fee

The Federal User Fee program was authorized by Congress in November 1989 and began on January 1, 1990, with a \$17.00 fee charged for processing fingerprint identification requests from Federal agencies that serve non-criminal justice and non-law enforcement related. Each year the fee is determined by reviewing all costs associated with providing the service. These costs include personnel items, such as salaries, benefits, training, and recruiting, as well as non-personnel items, such as equipment, supplies, rent, communications, utilities, travel, maintenance, and other miscellaneous services. All costs incurred by the FBI are recovered by the user fee. Since initiation of the Federal User Fee program, the fee for processing fingerprint cards has increased from the initial level of \$17.00 in 1990 to \$18.00 in 1994. Federal agencies are not assessed the special user fee surcharge for automation support. Also, beginning in 1993, Federal agencies submitting fingerprint cards accompanied by descriptive data on machine readable data (MRD) tape have been allowed to retain \$2.00 of the fee payment to offset handling costs.

MRD name searches are also accepted. The FBI charges \$2.00 for each response from an automated and manual system, with a \$4.00 charge for any MRD name search followed by a fingerprint card to be retained by the FBI. The fee for a name check submitted manually on paper is \$8.00. A MRD name search followed by a fingerprint card for verification purposes is \$9.00. The entire fee schedule is as follows:

Fee Schedule- Criminal Justice Services Program

Fingerprint card processing fee (Non-Federal)	\$18.00
Special user fee surcharge (Non-Federal)	6.00
Fingerprint card processing fee (Federal)	18.00
Identification records name search	
Automated or manual	2.00
Name search with fingerprint card	4.00
Name search without fingerprint card	6.00
Name search with fingerprint card for verification	9.00

FEDERAL BUREAU OF INVESTIGATION
Mission Statement and General Goals

MISSION: The mission of the FBI is to uphold the law through the investigation of violations of Federal criminal law; to protect the United States from foreign intelligence activities; to provide leadership and law enforcement assistance to Federal, State, local, and international agencies; and to perform these responsibilities in a manner that is responsive to the needs of the public and is faithful to the Constitution of the United States.

GENERAL GOALS:

- 1) Investigate violations of the laws of the United States within FBI jurisdiction, collect evidence in domestic and international cases in which the United States is or may be a party of interest.
- 2) Collect, analyze, and exploit information to identify and neutralize the activities of foreign powers and their agents, and domestic entities, that adversely affect the United States' national security through counterintelligence, counterterrorism, and security countermeasures investigations.
- 3) Provide forensic, identification, information, and training services external to the FBI.
- 4) Provide effectively and efficiently those supporting services necessary to the accomplishment of the FBI mission.
- 5) Provide effective national and organizational leadership, as well as, effective direction, control, and administration of resources.

1998 Estimate	4,054		3,916		408,730
Increase/Decrease	191		96		\$35,026

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: Organized Crime (OC) is a continuing and self-perpetuating criminal conspiracy employed by groups that are hierarchical in structure, which feed on fear and corruption, and which are motivated by the potential generation of profits, impacting particular locales/regions or the nation as a whole. OC groups maintain their position through the use of violence or threats of violence, corruption of public officials, and extortion. However, much like the multi-national conglomerates that they resemble, OC groups have expanded their activities into areas such as smuggling of drugs and other embargoed commodities, industrial and technological espionage, financial market manipulation and the corruption and control of groups within and outside of the legal state system. With their successful forays into these areas, tremendous revenues are laundered through multiple investments in banks, financial institutions and businesses around the globe.

The La Cosa Nostra (LCN) is the most significant organized criminal threat to American society. Despite a number of successful FBI investigations, less than 10 percent of identified LCN members are currently incarcerated. Approximately 600 LCN members are criminally active in New York City alone. When one factor in the estimated association of 10 nonmember criminal associates for each LCN member, the magnitude of the problem posed by the LCN takes on an even more compelling dimension. Reliable source information indicates that the five New York LCN families have recently inducted or plan to induct more than 70 new members. Similar intelligence suggests that other LCN Families throughout the country, previously damaged by successful prosecutions, are beginning to rebuild their criminal enterprises. Heaven's Gate, the FBI's five-year LCN strategic plan, will target racketeering activities of the New York-based Gambino and Genovese Families, the largest and most powerful LCN Families in the country. Their power derives, in large part, from their control over various labor unions. While other LCN Families are involved in labor racketeering, none has power or influence comparable to that possessed by the Gambino and Genovese Families. Heaven's Gate will specifically focus on reducing the LCN's influence in major labor unions and on reducing the LCN's size, wealth and broader influence in the U.S.

While the LCN remains the best known and most significant OC group in the U.S., Asian, Italian, European, Eurasian, South American, Mexican, African and other international and domestic crime groups now pose a serious threat to American society. The emergence in recent years of the other aforementioned OC groups is straining the FBI's base level

Organized Criminal Enterprises (OCE) resources. If the FBI does not do more to thoroughly address these emerging and rapidly expanding groups, there is a strong possibility these groups will gain a stronger foothold in the U.S. and become even more costly to dismantle. The extent of the problem is enormous. There are 24 LCN families with 1,200 members that influence numerous labor unions throughout six industries in 21 cities across the U.S. In contrast, Russian/Eurasian groups number up to 3,600 with a membership of approximately 100,000. These groups continue to increase their activity in illegal drug trafficking, violent crimes, control of labor unions and specific industries, and other criminal activity.

The national strategy for organized crime/drug enterprises utilizes a multi-faceted approach with the ultimate objectives of disrupting and dismantling criminal organizations, prosecuting the leadership, and seizing illegal profits through forfeiture proceedings. Efforts will be concentrated on reducing the scope of criminal activity, corruption and associated violence in Puerto Rico and the Virgin Islands, and preventing the Asian, Dominican, Mexican, Colombian and Nigerian criminal enterprises from perpetrating their activities within the U.S.

The FBI has exclusive investigative jurisdiction over all anti-racketeering violations contained in Title 18, U.S.C., and has concurrent jurisdiction over drug violations contained in Title 21, U.S.C. The FBI's experience in dealing with the LCN and our established database on the families and membership give the FBI a unique ability to address emerging organized criminal enterprises and traditional organized crime families. The FBI's experience in OCE investigations and its established databases of criminal enterprises and current investigations give it a unique ability to address emerging crime problems from a national and international perspective. In 1982, Attorney General William French Smith authorized concurrent jurisdiction to investigate Federal drug laws to the FBI and the Drug Enforcement Administration (DEA). The FBI has applied the same expertise and resources to drug enforcement that it had successfully used against organized crime. Additionally, the FBI has various investigative techniques, to include court-authorized Title III electronic surveillance and the offering of immunity to cooperating witnesses in an effort to secure needed testimony against serious offenders, that are unavailable to State, local or single mission investigative agencies. The FBI coordinates with international and national law enforcement to resolve the most complex, sensitive, organizationally focused and dangerous investigations.

The FBI has had a significant impact on the LCN through the use of sophisticated investigative techniques such as electronic surveillance and undercover operations. Through the use of such techniques, FBI investigations have resulted in successful Federal prosecutions of the hierarchies of most LCN Families.

The FBI and DEA are currently engaged in a number of coordinated and aggressive investigative efforts, targeting key elements of major drug trafficking organizations. For example, along the Southwest Border, the FBI and DEA are targeting key elements of four of the seven core Mexican trafficking organizations in Mexico and the United States. This initiative is having significant successes in identifying and disrupting core organizations, as well as secondary organizations providing transportation, distribution, and money laundering services throughout the United States. Based upon the size, strength and wealth of the targeted organizations, coupled with the international and interstate nature of their activities, Federal coordination is critical.

Another example of this coordination is in the investigation of Asian Criminal Enterprises (ACEs). ACEs are emerging as formidable criminal enterprises. The FBI's experience in investigating ACEs nationally and internationally, the formation of historical and current intelligence bases, the formation and/or participation in domestic and international task

forces and/or working groups, recruitment and use of ethnic Asian agents and linguists, the use of the Enterprise Theory of Investigation, and Racksteer Influenced and Corrupt Organizations (RICO) statutes, enables the FBI to provide Federal and State/local coordination to target the significant organizations. The FBI has recently initiated several Vietnamese Criminal Enterprise investigations after FBI assistance was requested by local police authorities who indicated that the nature and scope of the criminal activity rendered them ineffective in dismantling the enterprises. This activity would continue to confront local police agencies, in many cases without the assistance of the FBI.

The FBI is maximizing its efforts on Dominican Criminal Enterprise (DCE) activity by integrating existing investigative resources in both the Organized Crime/Drug and Violent Crime/Major Offender Programs to address all aspects of DCE activity in a closely coordinated and comprehensive manner. The result of this approach has been an ability to achieve "more" with the same level of resources. However, the scope and magnitude of the escalating DCE threat require the enhancement of specific resources in key geographic locations to target, on a full-time basis, the command and control elements of the most significant DCE. A significant disruption of DCE activity can only be achieved through a multi-agency approach which enlists the support of local, State and other Federal agencies. In summary, the international and interstate aspects of these criminal enterprises require Federal leadership and assistance to attain any measurable impact on the key infrastructure of these organizations.

Since 1980, Congress has addressed the surge in international crime by extending Federal jurisdiction extraterritorially to protect United States citizens and interests. Many of these statutes specifically vest the FBI with primary investigative authority. To ensure the FBI fulfills its mission, it is crucial that agent personnel are assigned to strategic locations overseas to secure the full and prompt cooperation of foreign authorities so domestic FBI operations can effectively investigate Federal crimes. The FBI has developed its Legal Attache program to assist domestic operations with international investigations and to develop relationships with our law enforcement partners around the world. Over the years, experience has shown that the level of cooperation and trust required to obtain desired results in critical investigations depends upon close working relationships developed by Legal Attaches and their foreign counterparts. The FBI's Legal Attache program consists of 23 offices. The relationships developed by these employees have enabled the FBI to gather information from foreign law enforcement organizations to assist with the investigation of crimes in the United States. In addition, these relationships have furthered the ability of the FBI to extradite criminals and return them to the U.S. to face prosecution.

Profound changes in the world over the past five years have directly impacted the FBI's ability to address problems associated with organized crime. These changes include: the fall of communism in the Soviet-bloc; the development and growth of the Internet and world-wide communications; the development and extensive use of electronic banking; the ease of global transportation; the increased opportunity for corruption in emerging nation states; the increase in revenues associated with illegal drugs; and the availability of nuclear, chemical and biological weapons of mass destruction. These factors have contributed to the exponential growth and complexity of organized crime both domestically and internationally, severely straining current resource levels and forcing the FBI into a primarily "reactive only" mode of operation.

During the last quarter of 1996, there have been significant accomplishments within the OCE Program. These accomplishments encompass a myriad of emerging criminal enterprises. Additional resources are required to sustain this level of effort and enable the OCE program to further the investigative efforts. Some of the recent accomplishments are included within this submission to show the outcome of several years of investigative effort.

The Joint Federal Bureau of Investigation, Drug Enforcement Administration (DEA) Department of Justice Southwest Border Project (SWBP) has had a significant impact on the

four targeted Mexican Drug Trafficking Organizations (MDTOs) during 1996. In fact, the SWB Project has resulted in the disruption of the four target organizations and the dismantlement of several related secondary organizations. These organizations are: Amado Carrillo Fuentes Organization (ACFO); Arellano Felix Organization (AFO); Miguel Caro Quintero Organization (CQO); and the Juan Garcia Abrego Organization (JGAO).

In December of 1995, multiple Title IIIs along the Southwest Border were instituted targeting key command and control elements of three of the four target organizations, to include the Amado Carrillo Fuentes Organization, Arellano Felix Organization and the Juan Garcia Abrego Organization. The code name for this operation was known as "ZORRO II." In January 1996, the leader of the Gulf Coast Cartel and an FBI "Top Ten" fugitive, Juan Garcia Abrego, was arrested in Mexico and extradited to the United States. On October 16, 1996, Juan Garcia Abrego was convicted on 22 counts. On January 31, 1997, Abrego was sentenced. On 9 of 22 counts he received a life sentence, on 11 other counts he received 20 years each with all sentences to run concurrently. A fine of \$128,312,098 was imposed.

Through the use of cooperating witnesses, confidential informants, undercover operations, electronic surveillance and other traditional and non-traditional investigative techniques, FBI/DEA field offices along the Southwest Border continue to aggressively target the four MDTOs of the SWBP. In Dallas, through Title III coverage, informants and undercover agents, the FBI's investigation has resulted in the successful dismantling of several cells of the Jose Paz Garcia drug trafficking organization, which was directly tied to the ACFO. This enforcement action disrupted ACFO illegal drug transportation and distribution activities in Denver, El Paso and Dallas. The El Paso office arrested several members of the Amado Carrillo Fuentes organization operating in the Juarez/El Paso area. El Paso FBI/DEA have established a team to collect and evaluate all information concerning Carrillo Fuentes which will be used to support a Continuing Criminal Enterprise (CCE) indictment and prosecution of Carrillo Fuentes and principals of his organization. The FBI and DEA in Phoenix are presently targeting high level associates and family members of Amado Carrillo Fuentes. This investigation recently dismantled the Southern California marijuana distribution cell of the ACFO. Phoenix is also targeting several key cell leaders for the ACFO and have identified several corrupt Border and Customs inspectors allowing ACFO loads to cross through the various Ports of Entry along the Arizona/Mexico border. In addition to the Abrego indictment, Houston is pursuing a multi-count money laundering indictment of Mario Ruiz Massieu, the former Deputy Attorney General of Mexico. The San Diego office of FBI/DEA have formed a team to collect and evaluate all information concerning the AFO which will be used to support a CCE indictment and prosecution of the Arellano Felix brothers. In an investigation targeting AFO related corruption, several U.S. Border Inspectors from the U.S. Immigration and Naturalization Service and the U.S. Customs Service were recently convicted. This deprived the AFO from utilizing these well established contacts in key ports of entry.

Tampa initiated a two and one-half year task force investigation in December 1993 to investigate a violent Vietnamese Criminal Enterprise (VCE) that operated in Southern Florida, Houston, New York City and elsewhere. The VCE was composed of 12 Vietnamese males from Tampa, Atlanta, New Jersey and California. They specialized in violent home invasions, armed robberies of Asian restaurants and businesses, extortion and the collection of debts for the On Leong Tong. The VCE was responsible for at least one murder. Its robberies were well planned, utilizing detailed information from the community and surveillance of the businesses and businessmen targeted by the VCE. Victims were murdered, assaulted, threatened with weapons, and subdued with flex cuffs and duct tape. Pen registers utilized during the investigation reflected telephone calls by the subjects throughout the United States, Canada and Asia. In December 1994, 11 members of this VCE were indicted for extortion, murder and multiple RICO and Hobbs Act violations. Six pled guilty and five were convicted on all counts on March 1, 1996. The 12th individual pled guilty to a RICO information. On July 16, 1996, ten members of the enterprise received sentences ranging from 41 months to life plus 45 years. The Task Force investigation was conducted in conjunction with the Hillsborough County Sheriff's

Office.

In June 1995, the New York FBI indicted and arrested seven members of the Vyacheslav Kirillovich Ivankov Russian Organized Crime (ROC) group for violations of Interference with Commerce by Threats or Violence. Vyacheslav Kirillovich Ivankov was identified as the head of one of the largest ROC groups in Russia and reportedly in charge of Russian organized crime operations in the United States. On July 8, 1996, Vyacheslav Kirillovich Ivankov, Sergey Ilgner, and Vleriy Novak were found guilty on all counts to include extortion and conspiracy and Vladimir Topko was found guilty on one count of conspiracy in United States District Court, Eastern District of New York. All defendants were ordered held and sentencing will be scheduled at a later date. Ivankov's exposure in this matter is twenty years. This case marks the first time that the FBI and the MVD have jointly worked side-by-side on a criminal investigation. Two senior Russian MVD officers were assigned temporary duty to the New York FBI office to support this investigation. MVD officers assisted in analyzing evidence gathered during the investigation, arrest and post-arrest phases of the Ivankov investigation. This case also marks the first time the head of a ROC group has been brought to trial in the U.S., and convicted.

The GAMTAX investigation was the major focus of the Detroit office's organized crime program for over five years. This case targeted LCN collection of "street taxes" from illegal gambling operations, loansharking, extortion, and acts of violence used to support these activities. A Group II UCO and 20 Title IIIs were used in this case. This investigation was conducted from the summer of 1991 until March 1996. On March 13, 1996, a 25 count indictment was returned by a Federal Grand Jury, Eastern District of Michigan, charging the following "made" members with violations of RICO: Jack Tocco (Boss), Anthony J. Zerrilli (Underboss), Vito Giacalone (Capo), Anthony Giacalone (Capo), Anthony J. Tocco (Capo), Anthony J. Tocco (Capo), Nove Tocco (Soldier), Paul Corrado (Soldier), and Peter J. Corrado (Soldier). Also charged were LCN associates Peter A. Corrado, John Sciarrotta, John Jajosa, Norman Bagdasarian, Paul J. Tocco, Thomas Lenhard, and Frank Whitcher. The significance of this case lies in the fact that the Detroit LCN family has been indicted as a criminal enterprise. The entire hierarchy of the family, with the exception of one Capo, has been charged.

On June 10, 1996, a Grand Jury in the Southern District of New York indicted the Acting Boss, the Acting Underboss, the Consigliere, and 16 other members and associates of the Genovese LCN Family on racketeering charges. The act of racketeering included murder, extortion, labor racketeering, gambling, loansharking, money laundering, the fraudulent operation of the Feast of San Gennaro, obstruction of justice and tax evasion. Liborio Bellomo, the Acting Boss; Michelle Genovese, the Acting Underboss; and James Ida, the Consigliere, make up the administration of the country's most powerful LCN Family. Other defendants arrested were Nicholas Frustaci, an acting Capo; and Thomas Cestaro and Colombo Saggese, both powerful Genovese soldiers. The indictment charges 12 of the defendants with 31 separate acts of racketeering committed on behalf of and in furtherance of the criminal activities of the Genovese Family. These charged acts include the murder of Antonio "Hickey" DiIorenzo, a former Genovese soldier allegedly killed because he was suspected of being an informant, and the murder of Ralph Desimone. The indictment also charges a separate conspiracy to murder two additional targeted victims and a solicitation to murder. Other racketeering acts charged included extortion, gambling, loansharking, money laundering, and labor racketeering. The indictment also seeks forfeiture to the United States of numerous assets of the defendants including approximately \$20 million representing the proceeds of the charged acts of racketeering, property, a boat, numerous bank accounts belonging to the defendants and approximately \$115,000 in cash seized from safe deposit boxes maintained by Cestaro.

The NICHOLAS COROZZO case was a two-year investigation of the racketeering activities of the South Florida faction of the Gambino LCN Family. This faction was controlled and directed by Gambino Family Capo NICHOLAS COROZZO. COROZZO'S South Florida crew was involved in loansharking, credit card fraud, trafficking in stolen property

and untaxed cigarettes. This investigation utilized the services of a cooperating witness and court-authorized electronic surveillance. On December 10, 1996, a Federal Grand Jury in Fort Lauderdale returned an indictment charging COROZZO, Acting Capo Lenny DiMaria, and seven others with RICO and conspiracy to murder the FBI's cooperating witness. At the time of his indictment, COROZZO was perhaps the most powerful member of the Gambino Family. Following John Gotti's conviction, COROZZO and two other Capos were appointed to serve as a three-man ruling commission for the Family. Following the denial of Gotti's appeals and the dissatisfaction with John Gotti, Jr.'s performance as acting Boss, the heads of the other New York Families were allegedly trying to arrange the elevation of COROZZO to Boss of the Gambino Family.

On October 11, 1996, a Nigerian Criminal Enterprise (NCE) Task Force representing the FBI, DEA, INS, U.S. Secret Service, U.S. Customs Service and local police agencies in Boston, Chicago, Minneapolis, New York, Detroit, Pakistan, and Bangkok executed numerous search warrants and arrested 34 subjects pursuant to complaints charging Distribution of and Possession with Intent to Distribute Heroin; Importation of Heroin; Conspiracy to Import Heroin; Money Laundering; Conspiracy to Commit Money Laundering; and Use of a Communications Facility. This joint investigation focused on a Nigerian heroin trafficking organization operating in Chicago, Illinois. This NCE smuggled multi-kilogram quantities of Southeast Asia heroin from Thailand through Europe and Mexico to Chicago, Illinois, where it is distributed throughout the United States. The investigation utilized several court-authorized Title IIIs, which resulted in the identification of various smuggling methods and routes used by couriers. On November 26, 1996, an additional eight subjects were arrested based on follow-up investigations.

LONG-RANGE GOAL: To reduce the influence of significant organized crime groups operating within the United States and prevent such groups currently not operating within the United States from establishing a presence here.

MAJOR OBJECTIVES:

- To penetrate the hierarchy of targeted OC groups.
- To identify the structure and membership of targeted groups to determine complicity and extent of interrelationships among other crime groups.
- To develop successful prosecutions for specific Federal violations, emphasizing the use of the Racketeer Influenced Corrupt Organizations (RICO) and the Continuing Criminal Enterprise (CCE) statutes.
- To disrupt and dismantle networks involved in the violation of Title 18 and Title 21 of the U.S. Code.
- To significantly reduce the wealth of the organized crime groups by using money laundering statutes to seize ill-gotten assets for eventual forfeiture.
- To expand existing liaison with appropriate domestic and international organizations and agencies to support the FBI's increased commitment to reducing the OC presence in the U.S.

PROGRAM INCREASES:

For 1998, the Organized Criminal Enterprises decision unit proposes program increases of 191 positions (107 agent), 96 workyears, and \$35,026,000 for several key FBI initiatives including: International Law Enforcement, La Cosa Nostra, and Southwest Border. These program increases include 34 positions (23 agents), 17 workyears and \$14,330,000 for Legal Attache expansion; 6 agents, 3 workyears and \$2,546,000 for implementation of the Office of Investigative Policies, Resolution Number Six; 47 positions (28 agent), 24 workyears and \$5,000,000 for LCN investigations; and 104 positions (50 agents), 52 workyears and \$13,150,000 for continuation of the Southwest Border initiative. An increase of \$2,000,000 is requested for National Backstopping in the Violent Crime Reduction Program.

Initiative: La Cosa Nostra (LCN)

Item: Field Investigations - 47 Pos., (28 agents), 24 FTE, \$5,000,000

The LCN OCE initiative includes a total of 28 field agent and 19 support positions and \$5,000,000 to enhance investigative resources addressing this significant organized criminal threat to American society.

A critical point has been reached in the FBI's commitment to eliminate the LCN as a significant threat to American society. Despite the successes discussed above, the LCN remains the most powerful and dangerous organized criminal enterprise in the United States. The FBI's LCN intelligence base, significantly enhanced and broadened by cooperating witnesses' information and testimony, can provide the basis for numerous Federal prosecutions and related civil and criminal forfeitures. However, the utility of this information and the availability of our cooperating witnesses cannot be viewed as permanent resources. The FBI must move forward in a timely manner if we are to take full advantage of these significant, but temporary, investigative opportunities.

Operation Heaven's Gate, the FBI's national LCN initiative, is designed to ensure that these investigative opportunities would be aggressively pursued. Operation Heaven's Gate represents a five-year strategic plan to reduce the LCN's influence in designated labor unions and related industries; to reduce the membership and national influence of the country's two most powerful LCN Families, i.e., the Gambino and Genovese Families; to reduce the membership of all LCN Families by 25 percent; and to reduce LCN wealth through the aggressive use of asset forfeiture.

Labor racketeering is the LCN's most fundamental source of national power and influence. The LCN continues to control major labor unions and exert influence over a number of related trades to include the Carling, Construction, Convention Center, Legalized Gaming, Garment, and Maritime Industries. This influence manifests itself in a variety of criminal activities including extortion, equipment and machinery theft, the peddling of payrolls with no-show and ghost employees, bribery, and union-related violence. These activities contribute to the corruption of union democracy, a less competitive labor market, higher labor/construction costs, higher crime rates, and a loss of security on the part of the citizenry.

Despite FBI successes against the LCN, less than ten percent of identified LCN members are currently incarcerated. Approximately 600 LCN members are criminally active in New York alone. When one factors in the estimated association of ten non-member criminal associates for each LCN member, the magnitude of the problem posed by the LCN takes on an even more compelling dimension. Reliable source information also indicates that the five New York Families have recently inducted or plan to induct more than 70 new members. Similar intelligence indicates that other LCN Families throughout the country which, at one time were seriously damaged by successful prosecutions, are beginning to rebuild their criminal enterprises.

The LCN's reliance on violence to further its illegal activities continues without abatement. The development of 14 high-level LCN members as cooperating witnesses provided an unprecedented view of the inner workings and operations of the LCN and has produced evidence of more than 200 LCN-related murders. For example, beginning in June 1991, the Colombo LCN Family in New York divided into two factions during an intra family war. Overall, the war resulted in the murders of 11 Colombo Family members/associates and the wounding of 13 others, including two innocent bystanders. The FBI investigation of this war was responsible for the development of 14 cooperating witnesses, 30 convictions, 75 arrests, and the solution of 47 murders. This war highlighted the complete disregard the LCN has for the lives of its own members and, more importantly, the lives of law-abiding citizens. More than 150 LCN-related murders in New York remain unaddressed or under addressed due to the volume of the information and the shortage of personnel to address these important matters.

One of the goals established for Operation Heaven's Gate is the reduction of the active membership of all LCN Families by 25 percent. The more ambitious goal of totally eliminating the LCN as a criminal threat during the five-year term of Heaven's Gate would be unrealistic. While total elimination is deemed unattainable during the next five years, a twenty-five percent reduction will represent a significant accomplishment. First, the FBI's practice of targeting ranking members of LCN Families would ensure that a significant number of LCN Bosses, Underbosses, Consigliere, and Capos would be incapacitated through incarceration. The loss of senior family members would force less experienced leaders to assume control of the Families. Second, based on recent experience, a number of these members will elect to cooperate with the FBI rather than face lengthy periods of incarceration. Such cooperation would then lead to the initiation of additional investigations and prosecutions, thus further reducing active LCN membership. Finally, successful prosecutions of LCN members would ultimately reduce the incentive for associates to aspire to LCN membership.

Investigations of racketeering activities within the designated unions and the LCN corruption of related industries are complex and labor intensive. Such investigations, however, are essential to the success of Heaven's Gate. Control of labor unions and related industries is the LCN's most fundamental source of national power and influence. These investigations would be conducted in addition to traditional LCN enterprise cases. The initiative also mandates the use of asset forfeiture in all appropriate cases. This usage would further increase the workload of LCN squads.

In 1995, LCN investigations utilized 406 agents. Heaven's Gate was officially implemented during the second quarter of 1996. The number of Agent personnel dedicated to LCN investigations rose to 445 in 1996. Based upon the resource intensive nature of labor racketeering cases, the renewed emphasis being placed on asset forfeiture, the 150 uninvolved LCN murders in New York, and the volume of unaddressed work generated by the cooperating witnesses (each of which must be addressed pursuant to Heaven's Gate) an additional 28 Agents are requested to adequately address this crime problem.

Successful implementation of the Heaven's Gate plan will reduce LCN membership by 25 percent and significantly reduce their wealth and influence in three organized labor unions in six industries. The intelligence information anticipated will be invaluable for making additional in-roads against the LCN and other organized criminal enterprises. These accomplishments should have far reaching impacts, from increasing competition in the labor market, to lowering the cost of labor and reducing the associated violent crimes, to reducing the amount of public corruption in the targeted areas, all of which should contribute to an increase in public safety.

Since the inception of Operation Heaven's Gate on March 6, 1996, the accomplishments of this initiative have been substantial. The following examples illustrate the quality of the initiative's accomplishments. The first seven months of Heaven's Gate saw the indictment or conviction of 4 LCN Bosses, 3 Underbosses, 3 Consigliers, 26 Capos, 25 Soldiers, and 168 LCN Associates. The number of agent personnel dedicated to LCN investigations rose from 406 in 1993 to 443 in 1996. In the area of asset forfeiture, Heavens Gate offices seized assets worth \$113,304,063. during this seven month period.

Item: Southwest Border Investigations - 104 Pos., (50 agents) 52 FTE, \$10,650,000

Southwest Border cases focus on key Mexican Criminal Enterprises (MCEs) command, control and communications elements. As a result, investigations necessarily rely heavily upon sophisticated investigative techniques such as Title III interceptions. The additional 50 agents and 54 support positions would be directed toward disrupting and/or dismantling MCEs to a level commensurate with the activity and threat level posed by the MCE. These resources would be used to form new squads and to augment existing ones. These squads would continue to use a variety of sophisticated investigative techniques, long term undercover operations, coordinated investigation with Mexican law enforcement counterparts through Bi-national Task Forces, and operation of highly placed Criminal Informants (CI) and Cooperating Witnesses (CW) in order to achieve measurable results.

Current investigative efforts require substantial commitments from limited resources, which results in significant investigative activity being unaddressed. Specifically, field offices are experiencing an inability to fully staff Title III monitoring of significant organization members, translate and analyze the information intercepted, and conduct physical surveillance to corroborate activity identified by interception and CW information. Field offices have also reported instances of having identified drug loads in semi-trailer load amounts through Title III intercepted conversations, however, due to insufficient staffing levels, they lacked the resources to surveil and seize these shipments.

Title III monitoring, coupled with CW information and reports from other Federal agencies with Southwest Border drug enforcement authority, has shown that despite the significant emphasis and resources already placed on these investigations, those current resources are inadequate. Agents have been unable to focus on all illegal activity of those four MCEs currently targeted, and secondary organizations directly supporting core organizations have not been adequately pursued. Nevertheless, even with this shortfall, FBI/DEA success under the strategy has been demonstrated by the significant impact already made. The additional resources would enable the FBI and DEA to more fully address the MCE crime problem and allow the FBI and DEA to continue providing the high level of coordination and leadership required for the success of the Southwest Border initiative.

Mexican Criminal Enterprises (MCEs) present an increasing threat to the United States due to the volume of drugs they transport, the violent crimes they perpetrate in furthering their drug trafficking, and the corruption of public officials they foster on both sides of the border in order to ensure the drugs arrive safely in this country.

Mexico is used by Colombian cartels as a staging or transshipment area for cocaine bound for the United States. MC's then transport drug loads, often in multi-ton quantities, across the U.S./Mexican border. Using semi-trailer trucks and aircraft, the organizations take one-half of each load in payment and deliver the remainder to Colombian groups in the United States for distribution. The MC's then distribute their share of each load of drugs throughout the United States themselves and by using the secondary groups associated with them. This relationship has resulted in unprecedented wealth and power among MC's in the international drug trafficking business. With this rise in strength has come a similar rise in violence and influence, with four major Mexican organizations now controlling an estimated seventy percent of cocaine importation into the United States.

Cine MC's also promote corruption through intimidation and violence in order to further their trafficking activities. They provide substantial monetary support to preferred political candidates in order to ensure uninterrupted operations in Mexico. Additionally, bribery of law enforcement officials on both sides of the border is commonplace, resulting in tons of cocaine, heroin, marijuana and precursor chemicals used in the production of methamphetamine to enter the United States undetected. FBI intelligence has identified prolific drug trafficking and public corruption occurring along the United States and Mexico border. The identified corruption involves principally major Mexican Drug Trafficking Organizations (MDTOs) and Federal law enforcement officials charged with the responsibility of preventing the flow of drugs across the border.

For 1997, SO agent positions were received to more fully address the other criminal enterprise activity of the Cine MC's, such as transportation and money laundering activities. The additional SO agent positions in this request would target additional cine and major secondary MC's, which investigations have not been able to pursue.

Item: Southwest Border Special Operations Division (SOB) - \$2,500,000

The SOB is a joint FBI/DIA operation located in Newington, Virginia. SOB's primary function is to support and enhance Joint FBI/DIA's A major drug investigations by providing operational intelligence. The Southwest Border Project (SWBP) was established to disrupt and dismantle major Mexican Criminal Enterprises responsible for 70 percent of cocaine imported into the United States through the southwest border region. The Southwest Border Project has been very successful in conducting significant investigations to combat illegal activity in the southwest border area. The SOB coordinates all SWBP investigations and provides operational intelligence to enhance investigations and is integral to the success of the SWBP. The FBI's portion of the SOB funding requirement for 1998 is \$2,500,000. As the SOB operation has expanded, the costs for each agency are also expanding. The FBI's reimbursement to DIA is based on percentage of staffing at the SOB. The FBI represents 25 percent of the staff at SOB. The 1998 request of \$2,500,000 is based on the 1997 estimated costs. The request would provide travel funds (\$275,000), equipment (\$772,000) and contract linguist funding (\$1,453,000). The program support costs include funds for Title III seminars to insure that all field offices are provided the training needed to successfully obtain and implement Title III authority, travel funds for case management/strategy meetings with national and international law enforcement counterparts to insure investigative strategies and prosecutive coordination is insured, and costs associated with data capacity, technical supplies, and the 1252 digital transcription system. Additional funds will be required to process work generated by the expanded data capacity that will be implemented during 1997. The expanded data capacity, along with the new telephone debit card surveillance system, will increase the workload of the contract linguists.

Initiative: International Law Enforcement

Item: Legal Attache Expansion - 34 Pos. (23 agents), 17 FTE, \$14,330,000

Anticipated Outcomes: The Legal Attache program contributes to the creation of a world-wide web of law enforcement relationships that can work together to stem the rising tide of international crime and terrorism. The Legal Attache program specifically enables the FBI to establish and foster strong working relationships with our foreign police counterparts. These relationships increase the FBI's ability to acquire information and assistance on increasingly complex crimes. No longer do criminals solely perpetrate crimes in their country of origin, they often cross borders and even continents to effectuate complex crimes. In addition, the ability of terrorist groups to orchestrate events may occur in many different countries. Our working relationships with other law enforcement organizations enhances our ability to investigate and prevent these types of crimes from occurring.

An increase of 23 agent and 11 support positions and \$14,330,000 is requested to open eight new Legal Attache offices and enhance eight existing Legal Attache offices during 1998. Total staffing needs for this proposal are 23 agents and 12 support personnel; however, reallocations of personnel from existing offices reduce the needed positions.

The FBI, with concurrence from the Department of State and the Central Intelligence Agency, submitted a Legal Attache expansion plan to the Congress on June 5, 1996. This four-year plan (1996 - 1999) proposed doubling the existing Legal Attache program. We have proposed adding a total of 23 offices, 53 (or 59) agents, and 25 support personnel to the current program. The FBI's 1998 request reflects this proposal and proposes implementation of the third year of the plan.

In formulating this strategy, the FBI relied on semi-annual reports that are prepared by the Legal Attaches which document their caseloads, regional travel and personnel requirements. Based on these reports, the FBI identified areas of weakness by comparing trends in international crime with current capabilities to respond to international investigative demands. In addition, the FBI evaluated the amount of time Legal Attaches spend traveling to the farther reaches of their territorial assignments and the number of leads and the types of cases to which they respond. When appropriate, additional personnel have been requested to the existing staff to reduce the strain being placed upon current operations. In other instances, we have recommended the opening of a new office.

While the FBI has recommended regional coverage by Legal Attache offices, we are limited by the desire of the host country and its Ambassador. When proposing to open a new office, the FBI does not know an office's permissible coverage area until completion of the National Security Decision Directive (NSDD) 38 process. This process requires the FBI to submit a written justification for the office to the Department of State. The Department of State then forwards the package to the respective Ambassadors for review and approval. Through this process, the Department of State and the FBI conduct a series of negotiations until all terms of the opening are agreed upon.

Of the new offices we are proposing to open in 1998, three offices are considered "provisional" offices. These offices would operate without the standard FBI communications equipment, instead using secure telephones and fax machines to communicate with nearby Legal Attache offices that have full communications capabilities. Installation of FBI communications equipment, with access to classified data bases and direct links to all FBI field offices, entails expensive structural modifications even within the controlled access area of an Embassy. By not installing this equipment, the FBI would be able to open these offices at a considerable savings. Although we do not have any provisional offices operating at this time, we have had TIDY personnel overseas who have had to operate under similar circumstances. Therefore, we believe that these offices will be successful. The

FBI currently plans to open two provisional offices in 1997, followed by three more in 1998.

Proposed locations for the establishment of new Legal Attache offices are: Brasilia, Brazil; Prague, Czech Republic; Copenhagen, Denmark; Almaty, Kazakhstan; Seoul, Korea; Lagos, Nigeria; Ankara, Turkey; and Tashkent, Uzbekistan. These proposed offices would each be staffed by two agents and one support employee. In the case of Brasilia, we plan to transfer one agent and one support position from the Legal Attache office in Montevideo. To ensure existing Legal Attache offices are able to provide adequate levels of support to domestic field offices on major case investigations, we propose adding an additional agent to the following offices: Bogota, Colombia; Mexico City and Monterrey, Mexico; Moscow, Russia; Madrid, Spain; and Bangkok, Thailand. In Vienna, Austria, the caseload is such that we propose adding two agents. In addition, we plan to transfer one agent from Rome to establish a sub-office in Milan. To assist the day-to-day operations of existing offices, we propose adding an additional office assistant to Vienna, Austria; Mexico City, Mexico; and Bangkok, Thailand; and an Intelligence Analyst to Mexico City, Mexico.

The requested personnel for the implementation of this plan fall into four categories: Legal Attaches, Assistant Legal Attaches, Office Assistants, and an Intelligence Analyst. In new offices, the FBI estimated the agent costs for a GS-15 Legal Attache; additional agents were coded as GS-14 Assistant Legal Attaches. In addition, the support staff for all the offices were GS-10 office assistants. The one exception to this rule is in Mexico City, where a GS-12 Intelligence Analyst is proposed to directly assist investigations.

New Offices

Brasilia, Brazil

To pursue effective, long-range investigations into organized criminal activity in Brazil, the FBI must establish direct, full-time links with Brazilian police. Organized crime involving Asian, Italian and Colombian groups have taken advantage of a growing Brazilian economy and relatively weak federal controls to establish themselves within the country. Italian organized crime groups have operated actively in Brazil for many years, but the FBI's distance from Brazil has hampered the ability to carry out the kind of sustained, cooperative investigations that have been so successful for the FBI in Italy. In addition, suspected members of terrorist groups linked to the United States are located in the tri-border area of Argentina, Brazil, and Paraguay. False immigration documents from the U.S. have been intercepted en route to this region. The FBI and Brazilian police are also examining major international financial crimes that cost millions of dollars in losses to both U.S. and Brazilian citizens.

Authorities in Brazil, including the Director General of the Brazilian Federal Police, have expressed their desire for expanded contacts with the FBI to counter these serious criminal threats. The FBI concurs with the Director General and proposes to establish a permanent presence in Brazil to expand our working relationship with Brazilian law enforcement authorities. Workload generated in Brazil is currently covered by periodic visits from Legat Montevideo. The FBI proposes the reallocation of one agent and one support position from Legat Montevideo's existing personnel complement and enhancement of one agent position in addition to nonpersonnel resources to establish a new Legal Attache office in Brazil.

Prague, Czech Republic

The Czech Republic has become a haven for international fraud as a result of its rapid privatization and entrance into the international banking community. Organized crime, tax

fraud and white-collar crime are also increasing rapidly in this nation. Several Russian organized crime groups are moving into the Czech Republic, and reportedly Russian and Italian crime figures have met in Prague to discuss the division of territory among them. Additionally, the Czech Republic lies on the "Balkan route" for transporting narcotics into western Europe and is also used for international drug trafficking.

President Havel, the Interior Minister, and Prime Minister Vaclav Klaus have expressed their support for opening a Legal Attache office. At the World Economic Forum in Switzerland, Prime Minister Klaus reiterated to the FBI the Czech Republic government's desire for closer ties with the FBI and stressed the urgency of a joint FBI-Czech law enforcement effort to address these problems. The FBI proposes establishing a provisional office in Prague to cover the Czech Republic, Slovak Republic, Romania, and Moldova. This office, to be staffed by two agents and one support person, would receive technical support from the Legal Attache office in Bern, Switzerland.

Copenhagen, Denmark

The FBI currently covers leads in Scandinavia through monthly visits from its London Legal Attache office. While this relationship was adequate in the past, the dissolution of the former Soviet Union and the resulting explosion of Russian organized crime have strained our ability to keep pace with the need for timely information. Police in Scandinavia form the first line of defense against Russian crime and terrorist organizations that seek to use this area as a route to Western Europe and the U.S. Opening an office will ensure that our police colleagues in Scandinavia have the data they require to identify organized crime members. At the same time, liaison with these authorities will supply us with details about the compositions and activities of groups in which the U.S. has an interest. Therefore, we propose the establishment of a Legal Attache office staffed by two agents and one support employee in the region.

In addition to their concerns about Russian organized crime, the Danish and Swedish Commissioners of Police have expressed concern to Director Freeth about rising levels of violence associated with motorcycle gangs that originate in the United States. The FBI's organized crime program can benefit from the information provided by the Scandinavian police and assist them as they investigate the gangs' illegal activities. In turn, the information we receive will help U.S. law enforcement investigations of these groups.

The FBI selected Copenhagen as the site for a Legal Attache office in part because of the support for our presence by Ambassador Elson. He has already approved our request to open a regional office in Copenhagen, which was submitted to him last year. Ambassador Elson has emphasized the importance he attaches to having an FBI office in the region, and particularly in Denmark. The office in Copenhagen would assume responsibility for Denmark, Sweden, Finland, Norway, and Iceland.

Almaty, Kazakhstan

Two agents and one support employee are required to establish a provisional Legal Attache office in Almaty, Kazakhstan. This office, along with one proposed in Tashkent, Uzbekistan, will cover the Central Asian Republics. Technical support would be provided through the Legal Attache office in Bonn, Germany. Central Asia is a pivotal region of major economic and strategic significance for the United States. Kazakhstan not only shares a border with Iran, but it also has a nuclear testing range as well as a space launching facility. Major law enforcement problems identified in Kazakhstan are organized crime, money laundering, drug trafficking, and terrorism. Maintaining stability in this region, in which United States businesses have a sizeable investment, will depend on the capacity of the government to control crime and maintain political stability. The FBI is currently assisting Kazakh officials as they establish their domestic law enforcement infrastructure. We have also offered training and technical assistance to Kazakh police through our

international training programs. Establishing an FBI presence in Almaty will further strengthen this relationship. In addition, Kazakhstan's President Nazarbayev personally extended an invitation to establish this office to Director Fretz in February 1996.

Seoul, Korea

Korean criminal organizations responsible for extortion, gambling, prostitution, narcotics, and labor racketeering have ties with groups that commit similar offenses in the United States. FBI investigative matters in Korea are currently covered by the Legal Attache office in Tokyo, Japan, through monthly visits; however, these visits are not sufficient to establish regular working relationships with our Korean law enforcement counterparts. Korean officials recently agreed to participate with the FBI in a working group on organized crime, and the Korean government has signed a Mutual Legal Assistance Treaty with the United States. Korea's participation in this treaty in conjunction with the implementation of money laundering and forfeiture statutes will enhance the FBI's ability to operate more effectively. To achieve the full benefit of this agreement and statutes, an official FBI presence is proposed as part of a comprehensive plan to upgrade our responsiveness to crime that affects Americans throughout Asia and the Pacific Rim. We have proposed establishing a fully operational office staffed by two agents and one support employee to continue this burgeoning relationship. This office received prior approval through the NSDD-38 process limiting its coverage to Korea; however, we must amend this request to reflect our Legal Attache expansion proposal.

Lagos, Nigeria

Nigerian Criminal Enterprises (NCE) are responsible for a variety of fraudulent schemes, including advance fees, credit card, bank, insurance, and student loan frauds. Many of the NCE's victims have been United States citizens, with overall worldwide losses ranging in the hundreds of millions of dollars. NCEs have also established contact with organized crime groups in Europe and Asia, forming temporary alliances that are linked with drug importation, distribution, and money laundering.

Nigeria's National Drug Law Enforcement Agency (NDLEA) has cooperated in the arrest and extradition of persons charged with drug crimes in the United States, including two FBI fugitives. The DEA and FBI have established a joint task force with the NDLEA to identify and dismantle NCEs that most seriously affect United States interests. The establishment of an FBI office in Lagos, Nigeria, staffed by two agents and one support employee, would assist the FBI's efforts to prevent the escalation of NCE activities in the United States. The FBI previously received NSDD-38 approval for the addition of one agent in Nigeria limited to in-country work; however, we will be amending this request to conform with our Legal Attache expansion plan.

Tashkent, Uzbekistan

Uzbekistan President Islam Karimov has requested the FBI open a Legal Attache office in Tashkent in an effort to confront terrorism in Central Asia. Uzbekistan law enforcement agencies are battling terrorists, efforts to infiltrate Uzbekistan's nuclear studies program, and drug smugglers. Based upon the strategic location of Uzbekistan along with the natural resources it possesses, the FBI believes a permanent presence is warranted. Under the current program, the FBI cannot cover this region adequately and offer, as well as receive, appropriate investigative assistance from Uzbekistan officials on nuclear smuggling or other terrorist activities. Therefore, the FBI proposes establishing a provisional Legal Attache office staffed by two agents and one support employee. This office, along with one in Kazakhstan, will give the FBI two offices from which to cover the Central Asian Republics. The Legal Attache office in Bonn, Germany, will provide technical support for Tashkent.

Ankara, Turkey

The FBI proposes opening a Legal Attache office in Ankara, Turkey, to reduce the number of countries currently covered by the Legal Attache office in Athens, Greece, and to improve the FBI's overall working relationship with Turkish officials. The FBI currently maintains a good working relationship with the Turkish National Police (TNP) and the Istanbul Police Department; however, many investigative matters must be addressed by facsimile instead of through regularly scheduled liaison visits. To date, the TNP has provided the FBI with invaluable information concerning Turkish/Greek terrorist activities in the region. In addition, the FBI has periodically sent temporary duty personnel to Turkey to work with Turkish authorities on counterterrorism matters. The FBI believes a full-time FBI office staffed by two agents and one support person in Ankara would facilitate even greater cooperation with Turkish authorities. We also anticipate covering Georgia, Armenia, and Azerbaijan through this office.

Enhancements to Existing Offices

Vienna, Austria

An increase of two agents and one support employee is requested for the Legal Attache office in Vienna, Austria. Austria's central location provides Eurasian criminals with a base location to carry out operations in Western Europe and the United States. FBI personnel in Vienna work closely with Austrian law enforcement officials to identify organized criminal groups whose activities adversely affect United States interests. In addition to Austria, the office is currently responsible for developing cooperative relationships with police officials in Hungary, the Slovak Republic, Slovenia, Moldova, Croatia, Macedonia, and Albania. The office also coordinates FBI training in these countries and provides administrative support to the agent stationed at the International Law Enforcement Academy in Budapest. To alleviate the burden on the existing staff of two agents and one support employee, additional personnel are being requested. Although the opening of the proposed office in the Czech Republic will reduce Vienna's territory, the current workload still warrants the addition of staff.

Bogota, Colombia

An increase of one agent is requested to supplement staff levels at the Legal Attache office in Bogota which is currently staffed by four agents and two support employees. Although the DEA maintains a substantial presence in Colombia and is the lead agency for all drug cases, the cartel and the criminal community that caters to them are also involved in many non-drug violations which fall within the FBI's jurisdiction. The most significant FBI problem in Colombia is the kidnapping of United States citizens who are often held for ransom by organized criminals. During the past year, the Bogota office required temporary duty assistance for a total of 320 days to assist with kidnapping investigations. The growing number of investigative matters and the need for liaison and investigative support in both Colombia and Ecuador have placed greater demands on the existing Legat staff. To address these requirements and effectively deal with the entrenched criminal syndicates operating in this region, one additional agent is requested.

Milan, Italy

For several years, the FBI and Italian authorities have forged a close and effective partnership in the struggle against Italian organized crime. Although much of the work in Italy is centered around Rome, the FBI expends a substantial amount of time and resources to work on criminal matters in Milan, Italy's financial and business center. Currently, personnel from the office in Rome regularly travel to Milan. To address the amount of criminal matters generated in this area, the FBI proposes reallocating one agent position from the Legat Attache office in Rome to the American Consulate in Milan. By opening a sub-office in Milan, the FBI can improve its efficiency and establish a direct link with Italian

investigators based in Milan.

Mexico City and Monterrey, Mexico

American law enforcement agencies, under the leadership of the Attorney General and the United States Ambassador to Mexico, and with the cooperation of the Mexican government and border states, have developed a complex, multi-dimensional response to the challenge of crime. To implement this plan, two agents and two support employees are required to supplement the existing complement of eight agents and five support employees. The Legal Attache's main priorities are fugitives and organized crime. The Legal Attache also actively participates in the Southwest Border Initiative. Of the additional four positions, one agent is needed to coordinate with DEA and Mexican authorities on FBI organized crime matters involving drug trafficking; one additional agent is needed for the Monterey Sub-office to focus on organized crime in Chihuahua and its involvement in vehicle theft, drug trafficking, fugitives, and kidnapping; an Office Assistant is needed to support Legal operations; and one Intelligence Research Specialist, fluent in Spanish, is needed to analyze information about Mexican trafficking organizations. These additional personnel have received the approval and support of the Ambassador and the Department of State.

Moscow, Russia

Opened in 1994, the Legal Attache office in Moscow is currently staffed with two agents and two support employees. At present, the existing agent complement is working twelve hours daily, sometimes six and seven days a week, to address a caseload exceeding over 200 investigative matters. Since the Moscow office was opened, domestic FBI officers across the country are requesting an ever increasing amount of information and assistance. Additional agents are urgently needed. The FBI proposes adding an additional agent in 1998 to work with Russian law enforcement authorities on violations of United States law, to assist the Russians with their investigations of international criminal groups, and to assist with large training programs for Russia. Without an increase in personnel, the FBI could lose the credibility necessary to maintain an effective relationship with its Russian counterparts.

Madrid, Spain

An increase of one additional agent is requested for Legat Madrid which is currently staffed by one agent and one support employee. This office handles all FBI liaison and investigative matters in Spain, Portugal, Andorra, Gibraltar, and both Portuguese and Spanish speaking African countries. At present, all matters in Portugal are being handled by the office through irregular visits, while investigative matters in Andorra, Gibraltar, and Africa are being handled by exchange of telephone and written communications.

The workload in Madrid has escalated steadily since the office reopened in 1993. The lack of sufficient personnel has forced the staff to work 14 hour days on a regular basis. During 1994 and 1995, temporary duty agents regularly assisted the Legal Attache or replaced him during required absences. The shortage of staff has limited the FBI's ability to extend and improve liaison outside of Spain. The Ambassador has previously approved the addition of this agent

Bangkok, Thailand

The Legal Attache office in Bangkok is responsible for a vast area of countries that include Bangladesh, Brunei, Indonesia, Malaysia, Myanmar, Pakistan, Singapore, Thailand, and Vietnam. The Legal Attache office in Bangkok is currently staffed by one agent and one support employee and was supplemented with a series of temporary duty agents during 1994 and 1995. Although the FBI is proposing to open an office in Pakistan during 1996, this office would be limited to covering Pakistan. The amount of territories Bangkok would still be required to cover is excessive for only one agent. Many of the investigations handled by Bangkok are sensitive and volatile, often involving terrorism, fugitive, organized crime, and white-collar crime matters. The increase of one additional agent would make this office's workload more manageable and reduce the need for continuous temporary duty personnel. It would also enable the FBI to devote more time to developing working relationships with his law enforcement counterparts.

Cost Estimates

Costs to open Legal Attache offices are divided into four categories: personnel, opening, housing, and International Cooperative Administrative Support Services (ICASS) costs. While the FBI can determine the opening and personnel costs quite well, ICASS and housing costs are difficult to assess. Housing costs fluctuate depending upon foreign real estate markets and the value of the U.S. dollar. The housing estimates for each office are based upon current lease figures supplied by the Department of State. Because ICASS has not been fully implemented, estimates are difficult to project. Current estimates were developed by dividing the 1996 estimate (\$1,687,547) for foreign affairs administrative support (FAAS) by the 23 offices to get an average figure.

Opening costs include costs to purchase office equipment, appliances, supplies, the construction of office space, and the installation of communications. While the costs for office equipment, supplies and appliances are similar for most of the offices, the construction of office space and installation of communications varies. Each office was allocated \$1,000 to purchase start-up supplies. In addition, \$4,550 was allotted for appliances for each employee. Office equipment costs varied by the type of office (fully operational, sub-office, provisional, or an employee enhancement) and the threat level assigned to it by the Department of State.

The primary factor influencing opening costs for the establishment of new Legal Attache offices is the technical threat level posed by foreign intelligence services within the country of location and the office space assigned to the FBI. The Department of State's Diplomatic Security Service measures the technical threat levels in four categories: low, medium, high, and critical. The ability to communicate with FBI Headquarters and domestic field offices and to access FBI database applications such as the Organized Crime Information System is a major contributing factor to the success of the FBI abroad. All FBI Legal Attache offices operate at the secret level and are located in the controlled access area of embassies, and the FBI must ensure that there is appropriate physical protection of equipment and documents. This protection would be of primary concern at all locations designated as either critical or high technical threat posts by the DOS's Diplomatic Security Service. Consequently, the higher levels of technical threat require more funds for construction than the lower leveled posts.

Item: Office of Investigative Agency Policies (Resolution Six) - 6 Pos. (6 agents), 3 FTE, \$7,546,000

An increase of six agent positions is requested to assign FBI agents to the DEA Country Attache office in Mexico under the auspices of DIAP Resolution Six. On May 24, 1994, the Director of the FBI, in his capacity as the Director of the OJAP, issued this resolution calling for the coordination of foreign drug investigations. Through this resolution, the

FBI has agreed to assign criminal investigative personnel to certain Drug Enforcement Administration (DEA) overseas offices. FBI personnel assigned to the DEA Country Attache offices would respond to requests for drug investigative activity from domestic FBI offices; would assist the DEA Country Attache in DEA drug investigations as assigned; and would not perform investigations under the purview of the FBI Legal Attache office, except on an emergency basis as authorized by FBI Headquarters in conjunction with DEA Headquarters. Consequently, the FBI does not have to establish a new office for these personnel; however, we must still provide housing and meet other basic necessities for the agents. Despite efforts by the Department of State to reduce staffing levels at post, the Ambassador to Mexico fully supports the increase of FBI agents to the DEA office since approximately 70 percent of the drugs entering the United States transit through or are grown in Mexico. The FBI proposes assigning two agents to Mexico City and one agent each to Guadalajara, Hermosillo, Mazatlan, and Monterrey.

A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS					
Legal Offices - Officially United Legal Attache offices. These offices are staffed by senior FBI Agents in an effort to assist cooperation and investigative information from host government law enforcement in support of domestic criminal investigations. Legats are located in U.S. Missions abroad and are members of the Ambassador's country team.					
B. FACTORS AFFECTING 1996 PERFORMANCE					
Ability to reach 1996 target level would be affected if the FBI does not receive Congressional approval to proceed with Legat expansion goals.					
Effective in 1996, leads are no longer counted in case benchmarks. Therefore, the numbers of investigative matters resolved are considerably lower.					
Training accomplishments were affected by the 1996 furlough.					
C. FACTORS AFFECTING SELECTION OF FY 1997 AND FY 1998 TARGETS					

NAME OF DECISION UNIT: Type of Measure	ORGANIZED CRIMINAL ENTERPRISES Performance Indicators					
	1994 Actual	1995 Actual	1996 Actual	1997 Target	1997 Estimate	1998 Target
Reaching FY 1997 and 1998 targets are contingent upon Congressional approval and authorization of appropriations to open and staff new or enhance existing Legal offices. Targets assume Congressional approval and funding Effective in 1996, leads are no longer counted in case summaries. Therefore, the numbers of investigative matters resolved are considerably lower.

OUTCOME

A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS

In enacting the Federal RICO statute, Congress provided criminal penalties of imprisonment, fines, and forfeiture. In addition, RICO also contains an extensive civil enforcement scheme. Civil RICO proceedings, like their criminal counterparts, must allege and prove a pattern of racketeering activity. Civil RICO proceedings have been used successfully by the Government to remove the corrupt influence of organized crime from labor unions. Once a judgment in favor of the Government is reached or a consent decree is entered, the court can begin to restructure the union through the use of injunctive relief that is not available in criminal RICO cases. Labor racketeering cases are criminal in nature. Labor racketeering prosecutions can charge RICO violations, labor-related violations such as Taft-Hartley, or other criminal violations such as Hobbs Act extortion. They may be directed against labor, management, or both. They may result in incarceration, fines, and criminal forfeiture. However, a criminal RICO conviction does not empower the court to impose injunctive relief as in a Civil RICO case.

Civil RICO trusteeships are created by the court and are empowered to remove the organized crime influence from a union. Trustees can appoint investigations officers to explore allegations of corrupt conduct on the part of union members and officers; to replace officers; to bar individuals from any future union activity; and to conduct union elections.

Labor racketeering is the LCN's most fundamental source of national power and influence. Prosecutions of LCN members on labor racketeering charges will result in the incarceration of the members and their removal from the union. REIs (Racketeering Enterprise Investigations) authorize FBI field offices to conduct investigations of various organized crime enterprises, including LCN-controlled labor unions. The purpose of an REI is to gather sufficient information about an enterprise to justify the opening of a substantive criminal investigation. Labor racketeering REIs will enhance a field division's labor racketeering intelligence base and promote the development of labor-related investigations.

The Teamsters Union, along with the ILA, LIUNA and HEREIU, are the four international unions identified by the FBI as being controlled by the LCN. The removal of LCN-influenced Teamsters officials/members is critical to the accomplishment of our goal to reduce the LCN's influence in certain unions and industries.

The Gambino and Genovese LCN Families are the two most powerful LCN Families in the country.

Court-authorized electronic surveillance (wiretaps or microphones) is often referred to as Title III coverage. Title IIIs are one of the most significant investigative tools available to the FBI.

Undercover operations (UCOs) directed against the LCN are employed in limited circumstances and after extensive review at the field division level and at FBI Headquarters.

The net reduction of active LCN members will be calculated by adding the number of active LCN members at the beginning of Heaven's Gate to the number of LCN members inducted in any given time period and then subtracting the number of LCN members incarcerated during the same time period.

Asset forfeiture has the potential to remove the profit incentive from organized crime. The number of cases in which forfeiture was sought can be compared with the total number of cases conducted. The percentage of cases in which forfeiture was actually sought will be an indicator of a field division's commitment to the forfeiture program. Additionally, the number of cases in which forfeiture is sought will not correspond on a case-by-case basis with the number of cases in which forfeiture is obtained. First, assets may ultimately be found to be nonforfeitable for legal reasons. Second, prosecutors may decline to seek forfeiture as part of a plea negotiation. Also, forfeitures are often not finalized in the same year in which the asset is seized. This also contributes to the difference in annual seizure and forfeiture statistics.

The RICO criminal forfeiture of assets such as union office or union pensions is significant because it removes the LCN from positions of power in a union and removes their ill-gotten gains by taking their pensions. Similarly, the imposition of Civil RICO trusteeships and the removal of LCN-controlled officers/members will further reduce the LCN's control/influence over unions.

Although the overall wealth of the LCN is difficult to estimate, substantial monetary forfeitures will undermine its financial power base and remove or reduce the profit incentive associated with organized crime.

New York City is home to five LCN Families. Accordingly, significant Heaven's Gate resources have been committed to the New York Division. To ensure a proper implementation of the New York phase of the initiative, an FBIHQ-based New York Program Manager has been selected. Among other things, this Program Manager will be responsible for securing forfeiture, intelligence, and financial analysts; formulating training; and identifying sources of funding to meet immediate and long-range resource requirements.

The Supervisors assigned to the LCN/OC/Labor Racketeering Unit at FBIHQ have been designated national Program Managers for each of (a) the five goals of Heaven's Gate, and (b) the six industries identified in Heaven's Gate. With their national perspective, these Supervisors will coordinate all FBI efforts in support of Heaven's Gate.

The additional Agents to be assigned to the New York Organized Crime Program will be used, in part, to staff five new OC squads.

These squads will address priority work which at this time is underaddressed. Each squad will be in support of Heaven's Gate. For example, the creation of a union/industry squad and a second Genovese squad is in direct support of Goals 1 and 2.

Each of the presently existing New York OC squads will be brought up to 16 Agents per squad and each of the proposed squads will also be staffed with 16 Agents. These additional Agents will be selected from Agents transferred into New York.

As budgetary considerations permit, all Agents assigned to LCN investigations will be afforded basic and advanced OC training, specialized training such as informant development and forfeiture training, and technical training on criminal intelligence data bases.

The development of a comprehensive LCN intelligence base is a critical component of Heaven's Gate. Efforts are currently underway to secure Department of Defense intelligence analysts to be assigned on a TDY basis to the New York Division. Additionally, the Intelligence Section in conjunction with NDIC is engaged in a project to load a voluminous amount of LCN-related materials into the CISP data base. This will result in a full text retrieval capability by all field divisions with CISP terminals.

Asset forfeiture is the subject of Heaven's Gate's fifth goal. Currently, LCN-related forfeitures are being underaddressed in the New York division. Funding has been identified which will support the hiring of ten contract forfeiture analysts to handle all LCN forfeitures in New York.

B. FACTORS AFFECTING 1996-1998 PERFORMANCE

LCN investigations fall within the FBI's Organized Crime/Drug Program (OC/DP). The cornerstone of all FBI LCN investigations is the Enterprise Theory of Investigation (ETI). The ETI requires that an LCN Family or an LCN-related "association in fact" be the enterprise in a RICO prosecution or a Civil RICO proceeding. Evidence of predicate criminal acts is developed to establish the criminality of the LCN enterprise pursuant to RICO. Limited FBI resources demand that LCN investigations not be diluted by unsupportive, target-of-opportunity investigations. Therefore, OC/DP cases are unique within the FBI when compared to other FBI investigative programs which target individuals rather than enterprises.

The number of statistical accomplishments, the relative speed of achieving such accomplishments, or the number of investigations conducted or initiated based on allocated resources should not be applied to labor intensive LCN investigations utilizing the ETI. This successful investigative approach translates into more intelligence driven investigations which often reflect fewer investigative matters due to the extended duration of each case. In accordance with the OC/Drug National Strategy, LCN investigations require the assignment of significant numbers of Agent and support personnel, as well as technical resources, to support the use of sophisticated investigative techniques such as electronic surveillance and undercover operations.

In 1994 FBI LCN investigations utilized approximately 597 Agents. In 1995 this figure dropped to approximately 406 Agents. As of the third quarter of 1996, LCN investigations are utilizing approximately 443 Agents. While the number of Agents working on LCN investigations has increased since 1995, the number is still substantially less than the 597 Agents utilized in 1994. While the quality of 1996 accomplishments is commendable, LCN investigations were not opened as a result of other domestic/international terrorism, training, and applicant matters ongoing within the FBI, requiring the temporary diversion of these investigations.

Operation Heaven's Gate is a five-year strategic initiative designed to significantly reduce the LCN's active membership and national influence. It has established five goals and identified six industries which will be addressed on a national basis. All FBI LCN investigations conducted in 1997 and 1998 will select targets which conform to the goals and objectives of Heaven's Gate.

OUTCOME	Number of events resulting in disruption or dismantlement of MCEs	N/A	N/A	N/A	N/A	12	12	
	The above performance measures compare only agents in the direct OC/Drugs Program SWB offices with the accomplishments for Mexican (281C) only Group I and II Undercover Operations are types of FBI investigative techniques generally using undercover agents or cooperating witnesses to obtain direct evidence of criminal acts. The two are distinguished by authority granted as to duration and scope.							
	Title IIIs are court authorized interceptions of criminal conversations and other electronically transmitted data among co-conspirators. They are an important investigative technique when obtaining evidence of complex criminal activity. For tracking purposes, "one" Title III is the monitoring of one communication line/microphone for one thirty day period.							
	Dismantlement of a criminal enterprise results when, because of the arrest of key members and seizure of assets, the enterprise no longer operates as a structured, organized and coordinated group. Disruption occurs when, due to the same law enforcement activity, the organization's effectiveness is significantly diminished for a period of time. In 1997 the FBI is preparing a method to retrieve statistical data on the number of events resulting in disruption or dismantlement of a Mexican criminal enterprise.							
	The FBI conducted a Southwest Border crime assessment in 1996, and may conduct a survey in the future.

Group I and II Undercover Operations are types of FBI investigative techniques generally using undercover agents or cooperating witnesses to obtain direct evidence of criminal; actu. The two are distinguished by authority granted as to duration and scope.							
Title IIIs are court authorized interceptions of criminal conversations and other electronically transmitted data among co-conspirators. They are an important investigative technique when obtaining evidence of complex criminal activity. For tracking purposes, "one" Title III is the monitoring of one communication line/microphone for one thirty day period.							
Changes in drug trafficking patterns based on successful investigative action refers to noted change in the drug trafficking activities of NCE as a result of law enforcement efforts, i.e., if Nigerian couriers carrying heroin into the United States via John F. Kennedy International Airport, New York City, are successfully identified upon entry into the United States, as drug couriers this would lead to a drug seizure and the courier's arrest. NCE would then realize the increased efforts of law enforcement in New York City and thus change their port of entry. NCE are very unique compared to other criminal enterprises in that they rapidly change their methods of operations to defeat the scrutiny of law enforcement.							
The National Narcotics Intelligence Consumers Committee (NNICC) provides a comprehensive assessment of worldwide illicit drug related intelligence. The figures supplied in this report have been agreed upon by the U.S. Government for use by federal agencies having drug related enforcement responsibilities. The percentage of heroin seized relates to the amount of heroin seized in the United States attributed to or traced to NCE.

DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS			
Criminal Enterprises are specific groups identified as continuing criminal organizations that thrive on a pattern of racketeering activity fed by fear and motivated by greed.			
All ACE analytical data available to all field and FBIHQ managers for ACE matters.			
Title IIIs are court-authorized interceptions of telephone conversations between criminal subjects and their associates. This electronic surveillance technique is highly effective in producing the evidence needed to convict criminal subjects of RICO and CCE counts. Spin-off investigations are those Title III's generated by the intelligence and information from an already existing Title III investigation.			
RICO, CCE, and Money Laundering counts are quality indicators for OC/Drug cases, because convictions under these statutes result in longer jail sentences, higher fines, forfeiture of assets and the removal of an ACE Criminal Enterprise and their economic base, and the disruption and destruction of the enterprise. These statutes are the means for implementing EII and prosecuting the hierarchy and membership of an enterprise, as opposed to prosecuting individual members for lesser crimes. Stripping significant organized criminal enterprise and subjects of their assets through forfeiture orders is a technique for disrupting and destruction of the enterprise. These statutes are the means for implementing EII and prosecuting the hierarchy and membership of an enterprise, as opposed to prosecuting individual members for lesser crimes. Stripping significant organized criminal enterprises and subjects of their assets through forfeiture orders is a technique for disrupting and dismantling their operations.

A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS

In enacting the Federal RICO statute, Congress provided criminal penalties of imprisonment, fines, and forfeiture. In addition, RICO also contains an extensive civil enforcement scheme. Civil RICO proceedings, like their criminal counterparts, must allege and prove a pattern of racketeering activity. Civil RICO proceedings have been used successfully by the Government to remove the corrupt influence of organized crime from labor unions. Once a judgment in favor of the Government is reached or a consent decree is entered, the court can begin to restructure the union through the use of injunctive relief that is not available in criminal RICO cases. Labor racketeering cases are criminal in nature. Labor racketeering prosecutions can charge RICO violations, labor-related violations such as Taft-Hartley, or other criminal violations such as Hobbs Act extortion. They may be directed against labor, management, or both. They may result in incarceration, fines, and criminal forfeiture. However, a criminal RICO conviction does not empower the court to impose injunctive relief as in a Civil RICO case.

Civil RICO trusteeships are created by the court and are empowered to remove the organized crime influence from a union. Trustees can appoint investigations officers to explore allegations of corrupt conduct on the part of union members and officers; to replace officers; to bar individuals from any future union activity; and to conduct union elections.

Labor racketeering is the LCN's most fundamental source of national power and influence. Prosecutions of LCN members on labor racketeering charges will result in the incarceration of the members and their removal from the union. REIs (Racketeering Enterprise Investigations) authorize FBI field offices to conduct investigations of various organized crime enterprises, including LCN-controlled labor unions. The purpose of an REI is to gather sufficient information about an enterprise to justify the opening of a substantive criminal investigation. Labor racketeering REIs will enhance a field division's labor racketeering intelligence base and promote the development of labor-related investigations.

The Teamsters Union, along with the ILA, LIUNA and HEREIU, are the four international unions identified by the FBI as being controlled by the LCN. The removal of LCN-influenced Teamsters officials/members is critical to the accomplishment of our goal to reduce the LCN's influence in certain unions and industries.

The Gambino and Genovese LCN Families are the two most powerful LCN Families in the country.

Court-authorized electronic surveillance (wiretaps or microphones) is often referred to as Title III coverage. Title IIIs are one of the most significant investigative tools available to the FBI.

Undercover operations (UCOs) directed against the LCN are employed in limited circumstances and after extensive review at the field division level and at FBI Headquarters.

The net reduction of active LCN members will be calculated by adding the number of active LCN members at the beginning of Heaven's Gate to the number of LCN members inducted in any given time period and then subtracting the number of LCN members incarcerated during the same time period.

Asset forfeiture has the potential to remove the profit incentive from organized crime. The number of cases in which forfeiture was sought can be compared with the total number of cases conducted. The percentage of cases in which forfeiture was actually sought will be an indicator of a field division's commitment to the forfeiture program. Additionally, the number of cases in which forfeiture is sought will not correspond on a case-by-case basis with the number of cases in which forfeiture is obtained. First, assets may ultimately be found to be nonforfeitable for legal reasons. Second, prosecutors may decline to seek forfeiture as part of a plea negotiation. Also, forfeitures are often not finalized in the same year in which the asset is seized. This also contributes to the difference in annual seizure and forfeiture statistics.

The RICO criminal forfeiture of assets such as union office or union pensions is significant because it removes the LCN from positions of power in a union and removes their ill-gotten gains by taking their pensions. Similarly, the imposition of Civil RICO trusteeships and the removal of LCN-controlled officers/members will further reduce the LCN's control/influence over unions.

Although the overall wealth of the LCN is difficult to estimate, substantial monetary forfeitures will undermine its financial power base and remove or reduce the profit incentive associated with organized crime.

New York City is home to five LCN Families. Accordingly, significant Heaven's Gate resources have been committed to the New York Division. To ensure a proper implementation of the New York phase of the initiative, an FBIHQ-based New York Program Manager has been selected. Among other things, this Program Manager will be responsible for securing forfeiture, intelligence, and financial analysts; formulating training; and identifying sources of funding to meet immediate and long-range resource requirements.

The Supervisors assigned to the LCN/IOC/Labor Racketeering Unit at FBIHQ have been designated national Program Managers for each of (a) the five goals of Heaven's Gate; and (b) the six industries identified in Heaven's Gate. With their national perspective, these Supervisors will coordinate all FBI efforts in support of Heaven's Gate.

The additional Agents to be assigned to the New York Organized Crime Program will be used, in part, to staff five new OC squads.

These squads will address priority work which at this time is underaddressed. Each squad will be in support of Heaven's Gate. For example, the creation of a union/industry squad and a second Genovese squad is in direct support of Goals 1 and 2.

Each of the presently existing New York OC squads will be brought up to 16 Agents per squad and each of the proposed squads will also be staffed with 16 Agents. These additional Agents will be selected from Agents transferred into New York.

As budgetary considerations permit, all Agents assigned to LCN investigations will be afforded basic and advanced OC training, specialized training such as informant development and forfeiture training, and technical training on criminal intelligence data bases.

The development of a comprehensive LCN intelligence base is a critical component of Heaven's Gate. Efforts are currently underway to secure Department of Defense intelligence analysts to be assigned on a TDY basis to the New York Division. Additionally, the Intelligence Section in conjunction with NDIC is engaged in a project to load a voluminous amount of LCN-related materials into the CISP data base. This will result in a full text retrieval capability by all field divisions with CISP terminals.

Asset forfeiture is the subject of Heaven's Gate's fifth goal. Currently, LCN-related forfeitures are being underaddressed in the New York division. Funding has been identified which will support the hiring of ten contract forfeiture analysts to handle all LCN forfeitures in New York.

B. FACTORS AFFECTING 1996-1998 PERFORMANCE

LCN investigations fall within the FBI's Organized Crime/Drug Program (OC/DP). The cornerstone of all FBI LCN investigations is the Enterprise Theory of Investigation (ETI). The ETI requires that an LCN Family or an LCN-related "association in fact" be the enterprise in a RICO prosecution or a Civil RICO proceeding. Evidence of predicate criminal acts is developed to establish the criminality of the LCN enterprise pursuant to RICO. Limited FBI resources demand that LCN investigations not be diluted by unsupportive, target-of-opportunity investigations. Therefore, OC/DP cases are unique within the FBI when compared to other FBI investigative programs which target individuals rather than enterprises.

The number of statistical accomplishments, the relative speed of achieving such accomplishments, or the number of investigations conducted or initiated based on allocated resources should not be applied to labor intensive LCN investigations utilizing the ETI. This successful investigative approach translates into more intelligence driven investigations which often reflect fewer investigative matters due to the extended duration of each case. In accordance with the OC/Drug National Strategy, LCN investigations require the assignment of significant numbers of Agent and support personnel, as well as technical resources, to support the use of sophisticated investigative techniques such as electronic surveillance and undercover operations.

In 1994 FBI LCN investigations utilized approximately 597 Agents. In 1995 this figure dropped to approximately 406 Agents. As of the third quarter of 1996, LCN investigations are utilizing approximately 443 Agents. While the number of Agents working on LCN investigations has increased since 1995, the number is still substantially less than the 597 Agents utilized in 1994. While the quality of 1996 accomplishments is commendable, LCN investigations were not opened as a result of other domestic/international terrorism, training, and applicant matters ongoing within the FBI, requiring the temporary diversion of these investigations.

Operation Heaven's Gate is a five-year strategic initiative designed to significantly reduce the LCN's active membership and national influence. It has established five goals and identified six industries which will be addressed on a national basis. All FBI LCN investigations conducted in 1997 and 1998 will select targets which conform to the goals and objectives of Heaven's Gate.

NAME OF DECISION UNIT: Type of Measure	ORGANIZED CRIMINAL ENTERPRISES: Southwest Border											
	Performance Indicators		1994		1995		1996		1997		1998

		Conduct a Southwest Border Crime Assessment	N/A		N/A		Yes		Yes		Yes	Yes
		Increase/strengthen Bilateral Task Forces	N/A		N/A		3		3		3	3
		Number of events resulting in disruption or dismantlement of MCEs	N/A		N/A		N/A		N/A		N/A	12
		The above performance measures compare only agents in the direct OC/Drug Program SWB offices with the accomplishments for Mexican (BIC) only. Group I and II Undercover Operations are types of FBI investigative techniques generally using undercover agents of cooperating witnesses to obtain direct evidence of criminal acts. The two are distinguished by authority granted as to duration and scope.										
		Title IIIs are court authorized interceptions of criminal conversations and other electronically transmitted data among co-conspirators. They are an important investigative technique when obtaining evidence of complex criminal activity. For tracking purposes, "one" Title III is the monitoring of one communication line/microphone for one thirty day period.										
		Dismantlement of a criminal enterprise results when, because of the arrest of key members and seizure of assets, the enterprise no longer operates as a structured, organized and coordinated group. Disruption occurs when, due to the same law enforcement activity, the organization's effectiveness is significantly diminished for a period of time. In 1997 the FBI is preparing a method to retrieve statistical data on the number of events resulting in disruption or dismantlement of a Mexican criminal enterprise.										
		The FBI conducted a Southwest Border crime assessment in 1996, and may conduct a survey in the future.

	Changes in drug trafficking patterns based on successful investigative active.	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A		
	Percentage of heroin seized as reflected in the current NNICCs report.	30%	N/A	N/A	N/A	N/A	N/A	N/A	N/A		
	Group I and II Undercover Operations are types of FBI investigative techniques generally using undercover agents or cooperating witnesses to obtain direct evidence of criminal acts. The two are distinguished by authority granted as to duration and scope.										
	Title IIIs are court authorized interceptions of criminal conversations and other electronically transmitted data among co-conspirators. They are an important investigative technique when obtaining evidence of complex criminal activity. For tracking purposes, one Title III is the monitoring of one communication line/microphone for one thirty day period.										
OUTCOME	Changes in drug trafficking patterns based on successful investigative action refer to noted change in the drug trafficking activities of NCE as a result of law enforcement efforts, i.e., if Nigerian couriers carrying heroin into the United States via John F. Kennedy International Airport, New York City, are successfully identified upon entry into the United States, as drug couriers this would lead to a drug seizure and the courier's arrest. NCE would then realize the increased efforts of law enforcement in New York City and thus change their port of entry. NCE are very unique compared to other criminal enterprises in that they rapidly change their methods of operations to defeat the scrutiny of law enforcement.										
	The National Narcotics Intelligence Consumers Committee (NNICC) provides a comprehensive assessment of worldwide illicit drug related intelligence.										
	The figures supplied in this report have been agreed upon by the U.S. Government and for use by federal agencies having drug related enforcement responsibilities.										
	The percentage of heroin seized relates to the amount of heroin seized in the United States attributed to or traced to NCE.

DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS			
Criminal Enterprises are specific groups identified as continuing criminal organizations that thrive on a pattern of racketeering activity fed by fear and motivated by greed.			
All ACE analytical data available to all field and FBIHQ managers for ACE matters.			
Title IIIs are court-authorized interceptions of telephone conversations between criminal subjects and their associates. This electronic surveillance technique is highly effective in producing the evidence needed to convict criminal subjects of RICO and CCE counts. Spin-off investigations are those Title IIIs generated by the intelligence and information from an already existing Title III investigation.			
RICO, CCE, and Money Laundering counts are quality indicators for OOD/Drug cases, because convictions under these statutes result in longer jail sentences, higher fines, forfeiture of assets and the removal of an ACE Criminal Enterprise and their economic base, and the disruption and destruction of the enterprise. These statutes are the means for implementing ETI and prosecuting the hierarchy and membership of an enterprise, as opposed to prosecuting individual members for lesser crimes. Stripping significant organized criminal enterprise and subjects of their assets through forfeiture orders is a technique for disrupting and destruction of the enterprise. These statutes are the means for implementing ETI and prosecuting the hierarchy and membership of an enterprise, as opposed to prosecuting individual members for lesser crimes. Stripping significant organized criminal enterprises and subjects of their assets through forfeiture orders is a technique for disrupting and dismantling their operations.

	Dismantlement of a criminal enterprise results when, because of the arrest of key members and seizure of assets, the enterprise no longer operates as a structured, organized and coordinated group. Disruption occurs when, due to the same law enforcement activity, the organization's effectiveness is significantly diminished for a period of time.						

**Federal Bureau of Investigation
Salaries and Expenses
Justification of Program and Performance
(Dollars in thousands)**

	Perm. Pos.	FTE	Amount
White-Collar Crime			
1997 Appropriation Anticipated	4,159	3,993	\$395,236
1998 Base Anticipated	4,160	4,010	404,948
1998 Estimate	4,250	4,055	414,460
Increase/Decrease	90	45	\$ 9,512

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: White Collar Crime (WCC) involves illegal acts characterized by deceit, concealment, or violation of trust, which are generally not dependent upon the application or threat of physical force or violence, which are committed by individuals and organizations to obtain money, property, services, or to secure personal or business advantages. White Collar Crimes cost U.S. citizens and businesses billions of dollars annually, and contribute to a potential loss of confidence in institutions, industry, and public officials. The FBI has identified eleven priority areas of White Collar Crime: financial institution fraud, securities and commodities fraud, insurance fraud, telemarketing fraud, bankruptcy fraud, fraud against the government/antitrust violations, international fraud/money laundering, computer crime, environmental crime, and public corruption and health care fraud.

The FBI's WCC Program includes funds in Salaries and Expenses and Health Care Fraud Enforcement reimbursable resources. The Health Insurance Portability and Accountability Act of 1996, P.L. 104-191, provides for 497 reimbursable positions (296 agent) and \$47,000,000 in 1997. This provision includes a base transfer of 420 direct positions/FTE (250 agent) from the White Collar Crime Salaries and Expenses to the Health Care Fraud Enforcement reimbursable account. In 1998, P.L. 104-191 provides the FBI 569 positions (340 agent), 533 FTE (318 agent) and \$56,000,000 for health care fraud enforcement.

Health Care Fraud: Health care expenditures in 1996 are estimated to exceed \$1 trillion, of which \$100 billion is estimated to be fraudulent. Left unchecked, health care expenditures could climb to \$1.6 trillion by the year 2000 and consume more than 16 percent of the gross national product. Large-scale fraud schemes are perpetrated in virtually every sector of the American health care delivery system. The most egregious and costly offenses in health care fraud involve: staged accidents, worker's compensation claims, laboratory scams, psychiatric hospitals, ambulance services and medical transportation fraud, home health care fraud, durable medical equipment (DME) fraud, and nursing home fraud.

Throughout the United States, organized criminal groups have compromised doctors, chiropractors and attorneys. These groups establish storefront clinics, diagnostic testing

companies and bogus law offices. They stage phony car accidents. As part of the scheme, phony patients visit the clinics, generating bills for exaggerated medical procedures provided, including unnecessary tests for MRI's, x-rays, and other sophisticated services billed to the insurers.

DME companies often pay kickbacks to doctors, nursing homes, and hospitals for obtaining supply contracts. These unscrupulous businesses easily target Medicare and private insurance companies. Subjects of DME fraud investigations have used aggressive telemarketing scams to fraudulently bill for unnecessary DME, supplies and services. Other subjects obtain patient lists from nursing homes and routinely bill for products or services that are neither needed nor rendered. In addition, frauds committed by clinics, particularly diet clinics involve the soliciting of patients with promises of weight loss at a nominal expense. The clinics may require patients to undergo a cursory psychological exam, a series of blood tests, x-rays, and other ancillary tests. These services are then billed to insurers under the false pretense of a manufactured psychological malady. A typical laboratory scan involves marketing schemes whereby doctors are encouraged to order a particular automated panel of blood tests to which extra tests which are not medically necessary have been added. The doctors are led to believe that there is little or no extra charge for the additional tests; however, the labs then bill Medicare and other health care plans the full price for the additional tests. This scheme results in the submission of hundreds of millions of dollars of false claims for medically unnecessary laboratory tests to federal, state, and private health care programs.

Private insurers and the Government lose millions of dollars annually to phony automobile accident and "slip and fall" claims. Ongoing proactive investigations show that Federal, State, and private insurers lose billions of dollars in medical and liability claims for bogus injuries. Nursing homes and hospitals often fraudulently bill insurers. False billing by health care providers generally occur when services were never rendered, or when service was rendered but a more expensive procedure was billed, or the diagnosis code was altered to justify a more expensive treatment or procedure. In addition, some instances allow home health care as an alternative for inpatient hospital treatment. In such instances, home health care providers have paid kickbacks to hospital staff and doctors for patient referrals.

Another area susceptible to health care fraud is the medical transportation business. Transportation companies bill for emergency conveyance when no "emergency" existed, trips involving nonexistent oxygen use, and charging for a higher than average mileage per trip. In a recent investigation, an ambulance company, as part of a massive Medicare fraud scheme, engaged in threatening employees of their competitors to establish territory.

The FBI has developed a national strategy designed to produce a long-term, extensive positive impact on health care fraud. The six elements of this strategy include: (1) a team approach involving State, and other Federal law enforcement and regulatory agencies; (2) the increased use of sophisticated investigative techniques, including undercover operations; (3) the aggressive use of asset forfeiture and money laundering statutes; (4) an effective blend of criminal, civil, and administrative enforcement; (5) the utilization of national initiatives; and (6) the identification of "target rich" areas of health care fraud. The FBI realizes the need to blend the efforts and talents of its agents with personnel from other law enforcement and regulatory agencies, including State law enforcement agencies. Although several law enforcement agencies, both Federal and State, have responsibility for investigating health care fraud allegations, the FBI is the only Federal investigative agency with plenary authority to investigate all health care offenses. For example, the U.S. Department of Health and Human Services (HHS), Office of Inspector General (OIG), is authorized to conduct civil, administrative and criminal investigations of frauds associated with the Federal Medicaid/Medicare program, while the Postal Inspection Service, which is authorized to investigate fraud schemes that use the U.S. mail system, generally investigates frauds perpetrated against private insurers, and the Defense Criminal Investigative Service (DCIS), investigates frauds committed against the military's CHAMPUS

program. The FBI's authority extends beyond specified Federal programs and includes all victims of the crime, whether Federal programs or private insurance companies, business entities or individuals are involved.

The FBI's strategy includes the use of sophisticated investigative techniques such as undercover operations, telephone intercepts and video and audio surveillance, to develop valuable evidence to prove beyond a reasonable doubt that health care fraud has been committed. Historical approaches often do not accurately account for the extent of fraud committed. In addition, proactive investigative techniques produce a greater positive impact and often serve as a deterrent to others. The FBI is using various sensitive and sophisticated investigative techniques to investigate cases involving false billings, false testings, kickback schemes, and over-billings. The FBI plans to expand these investigative techniques into the areas of patient referrals concerning fraudulent laboratory schemes and emergency and non emergency medical transport companies involved in the falsification of medical necessities, trips and medical services rendered.

The FBI has demonstrated that asset forfeiture and money laundering statutes are tremendously effective tools in criminal investigations. The FBI has expanded the use of asset forfeiture and money laundering statutes to include health care fraud investigations. Recent Supreme Court decisions have allowed law enforcement greater flexibility concerning asset forfeiture. The FBI expects to expand its use of asset forfeiture in the health care fraud to ensure that criminals do not retain their ill-gotten gains.

Resource availability and prioritization of criminal cases often result in prosecution being reserved for only those cases involving the most egregious instances of fraud. Other forms of corrective action are taken to address the less severe fraud cases and augment the deterrent effect of prosecution. Civil recoveries and fines, and exclusion from Government insurance programs are used against health care fraud violators.

Financial Institution Fraud: Financial institution failure investigations peaked in July 1992 with 758 active cases. As of September 30, 1996, there were 247 pending bank failure investigations. However, major financial institution fraud cases (losses in excess of \$100,000) have increased significantly during the past five years. Outsider fraud now accounts for more than 60 percent of the criminal referrals provided to the FBI by financial institutions. During the past several years, a number of new and complex financial crimes have developed, including negotiable instrument fraud, credit card fraud and money laundering. These schemes often involve sophisticated counterfeiting techniques. Advances in technology, use of computers and international banking have contributed to the complexity and severity of frauds being perpetrated. In fact, the financial industry continues to sustain losses annually of \$40 billion due to fraud.

Further increasing the problems posed to the law enforcement community is the increase in organized and international criminal groups involved in check fraud. There are \$0 billion checks written annually worldwide, 60 billion of which are written in the U.S. Many organized groups have immigrated to this country to study and analyze the American banking system, noting the deficiencies relative to negotiable instruments and the inherent fraudulent opportunities underlying our open system.

Another area of financial institution fraud is mortgage fraud. The banking industry estimates that it annually processes up to \$600 billion in mortgage loans, which result in estimated losses of \$30 billion. An FBI analysis of Criminal Referral Forms shows that 26.9 percent of reported losses are from loan fraud. Many mortgage loan fraud activities are committed by collusive groups of individuals involved in the loan application process, including loan brokers, appraisers, accountants, and attorneys.

In 1997, the FBI plans to continue to focus investigative resources on check fraud/counterfeit negotiable instruments. To combat this growing problem, the FBI has instituted a national check fraud/counterfeit negotiable instruments initiative. The initiative targets various organized ethnic groups involved in illegal activities. Regardless of ethnic origin, groups involved in check fraud maintain certain universal characteristics. These groups are loosely organized and are distrustful of anyone outside their ethnic heritage and, therefore, are difficult for the law enforcement community to infiltrate. To combat check fraud and counterfeiting by these groups, the FBI is utilizing a number of proactive and sophisticated investigative techniques, including undercover investigations, consensual monitoring and Title III wiretap interceptions. The FBI has also initiated a national loan fraud initiative, with specific concentration in mortgage loan fraud. These cases are predicated on information obtained from numerous sources in addition to criminal referrals and usually target loan brokers, appraisers, accountants, and attorneys engaged in conspiracies to defraud financial institutions for personal gain.

Securities and Commodities Fraud: Securities regulators estimate securities fraud losses as \$40 billion in the United States. With the internationalization of the securities market and the technological advances in computer and communication systems, the development of offshore "boiler rooms" and other investment schemes is an increasing concern to the FBI. Secrecy laws and regulatory differences in the international securities market make law enforcement efforts increasingly more difficult. Securities fraud investigations are becoming more complex as more complicated investment vehicles are developed to obtain higher yields. A 1994 Department of Justice (DOJ) study shows the groups committing this crime comprise 54 percent brokers, 14 percent issuers, 25 percent investment advisors, and 7 percent accountants.

The FBI and DOJ have adopted the position that the efficiency and effectiveness of the securities market are substantially enhanced by maintaining consistent levels of successful prosecutions of securities fraud violations. To that end, the FBI has concluded the first phase of a national securities fraud initiative, by which 11 brokers were charged and arrested regarding their misappropriation of monies from client accounts. In light of the success accomplished during the first phase of the national securities initiative "Rogue Brokers," the second phase of this initiative is being planned for June of 1997. It is anticipated that approximately 50 cases involving 20 field offices will be presented for prosecution. In utilizing proactive investigative techniques, 46 individuals were indicted relative to the undercover operation entitled "Thorcom." Thorcom was designed to target stock promoters who are paying kickbacks to brokers to induce the brokers to sell the promoters stock to the brokers retail customers. The FBI will continue to use investigative techniques that have proven successful in the past, such as undercover operations and other sophisticated techniques.

The FBI will continue to establish and maintain working relationships with State and Federal securities regulatory agencies that may not be active participants in ongoing working groups. In addition to conducting investigations targeting securities and commodities fraud, the FBI participates in the Securities Fraud Working Group, which is a multi-agency forum that meets quarterly to discuss emerging issues relative to securities fraud and growing trends within the financial markets. This working group is instrumental in educating the industry to monitor itself and alert law enforcement of fraudulent practices.

Insurance Fraud: The National Insurance Crime Bureau estimates at least 10 percent of all property and casualty claims are either inflated or fraudulent and result in an estimated \$18 billion a year in fraudulent claims. The insurance industry is uniquely susceptible to fraudulent abuse since the very nature of insurance involves prepayments for future services relating to events which may or may not occur at some later time. The United States has more than 5,000 insurance companies that hold almost \$700 billion in assets and employ 1.9 million people.

Public concern about the price of insurance and the solvency of the insurance industry has prompted both internal and external reviews of the various insurance cost elements. According to recently published studies and reports, fraud is clearly among the most prominent cost components. In part, because of its hidden nature, insurance fraud has become

one of the most prevalent and costly white collar crimes. A common trend in insurance fraud cases is the use of foreign corporations and entities to move stolen funds offshore to hinder regulators and law enforcement. Most FBI cases fall into areas where there is diminished regulation. These areas include offshore reinsurance treaties, insurance written on a surplus line basis, risk retention groups and multiple employer welfare arrangements.

The FBI is expanding its efforts in addressing emerging insurance fraud problems particularly in those cases in which the fraud identified has contributed to the insolvency of the insurance company. Through enhanced liaison efforts, the FBI participates in the Insurance Fraud Working Group, chaired by the DOJ Fraud Section, and has working relationships with other professional organizations such as the National Association of Insurance Commissioners.

The FBI has identified emerging crime problems through an expanded intelligence base and the ability to ensure that proactive techniques are being utilized to enhance these investigations. The FBI uses undercover operations and other sophisticated techniques to target unlicensed companies involved in the fraudulent use of assets and premium diversion schemes. Several proactive investigative techniques are being employed within the insurance fraud arena to include the undercover operation "Risky Venture," which was designed to identify and infiltrate the operations of individuals profiting as a result of fraudulent insurance activity.

Computer Crimes: The annual economic and security loss resulting from all computer crimes is difficult to ascertain due to the lack of reliable statistics. The commercial and financial sectors have declined to report their own vulnerabilities for fear of inspiring attacks. On June 5, 1996, the U.S. Senate Permanent Subcommittee on Investigations held a hearing on security in Cyberspace. The Subcommittee conducted an eight-month study on the vulnerabilities of our National Information Infrastructure (NII) and the efforts by our government to promote security. The Subcommittee reported that our Nation is in need of a comprehensive strategy that addresses vulnerability of our information infrastructure. Advances in computing and networking have affected virtually every aspect of our society, including civilian government, the military, communications, transportation, and commerce. The Cyberspace Achilles' heel is the NII, a ganglia of cables and wires that link computer systems including the public switched networks, cable and wireless and satellite communications. The United States infrastructure includes those systems and facilities comprising institutions and industries that provide a continual flow of goods and services essential to the defense and economic security of the United States and to the functions of government at all levels and to society as a whole. This includes telecommunications, energy, medical, transportation, and financial systems and government operations and national defense.

The Department of Defense created the Internet to maintain vital communications in case of nuclear war, but now that system has deteriorated. At its inception, the security aspect was not a primary focus. The national and economic security of the United States rests on the capability to rapidly exchange information in a consistent, secure, and reliable manner. The United States communications and information industries have developed the most technologically advanced systems in the world. The disruption of these capabilities and systems would have immediate and severe consequences for every facet of government and industry, and individual citizens. As the reliance on communications and information systems has grown, the vulnerability to subtle and hostile intrusions and attacks on these systems have grown proportionately. The Congress and the private sector have increased their concerns about the security of the Nations' infrastructure.

In 1995, the Computer Emergency Response Team (CERT), a federally funded team at Carnegie-Mellon University, Pittsburgh, Pennsylvania, reported a marked increase in intrusion activity and sparked a new call for heightened security on the global computer network. CERT noted that it anticipated a continued rise in intrusion reports, but that it believed more attacks are going undetected. CERT has tabulated intrusion reports since 1988, when only seven incidents were reported. In 1991, CERT received reports of 406 intrusion incidents, and in 1995 the number had risen to 2,412 incidents. During the same period, CERT reported a rise in intrusion incident-related mail messages from 9,629 to

32,084. During the first half of 1996, CERT received 850 intrusion incidents. CERT notes that an "incident" may involve an intrusion into one site or hundreds or even thousands of sites. When the CERT Coordination Center was established, the Internet had approximately 80,000 hosts. Since then, the Internet has grown to more than 9.5 million hosts and continues to grow at a rapid pace.

The FBI has identified illegal electronic intrusion into America's major computer networks as a current and rapidly escalating crime problem. White-collar crime criminals, economic espionage agents, organized crime members, foreign intelligence services, and terrorist groups have been identified as "electronic intruders" responsible for penetrations of America's major computer systems. The FBI has jurisdiction to investigate computer intrusions under the Computer Fraud and Abuse Act of 1986, Title 18, United States Code, Section 1030. Because of an increase in reported computer-related fraud, the FBI has established Computer Investigations and Infrastructure Threat Assessment Teams (formerly called National Computer Crime squads) in New York, Washington, D.C., and San Francisco FBI field offices to investigate illegal computer intrusions associated with white-collar crime.

While these squads are addressing illegal computer intrusions into the nation's major computer networks, no centralized location existed in the United States to coordinate and support their investigatory efforts or the related efforts of other Federal agencies within the law enforcement and intelligence communities. To protect the NII from intrusion by criminals and hostile foreign governments, along with providing effective support for the investigatory responsibilities of the FBI's computer crimes squads, the FBI established the Computer Investigations and Infrastructure Threat Assessment Center (CITAC), based at FBI Headquarters, Washington, D.C. CITAC represents an innovative and effective plan to coordinate national efforts involving computer crime investigation and threats to the NII.

The FBI has demonstrated its ability to coordinate resources from Federal, State and local law enforcement, and the private sector. Further, present law prohibits the monitoring of electronic communication systems without court authority. Therefore, the FBI's ability to use Title IIIs to monitor the data transmissions and thus identify an attacker's origin and identity provides the FBI with an effective tool to combat this crime.

Telemarketing Fraud: Telemarketing is a legitimate means of soliciting business. Industry estimates that 3.4 million people are employed in the telemarketing industry and that up to \$600 billion annually is spent on, or in response to, telemarketing. The mendacious and deceitful operators in this industry use telemarketing to facilitate their fraudulent activities and are estimated to cost consumers \$40 to \$60 billion per year. Telemarketing fraud significantly impacts the older Americans, who are estimated to comprise over one-third of telemarketing victims, based upon an FBI sample analysis and often lose their entire life's savings. Telemarketing fraud is defined as those crimes which rely on the use of the telephone to contact the victim during which the products or services offered are materially misrepresented. Since the telemarketer's tools of trade is the telephone, they can literally strike to and from anywhere in the country, at any time. A fraudulent telemarketer, armed with an assumed name, a fraudulent pitch and a prepaid phone card can call from a Las Vegas phone booth to a farm in Nebraska and follow up by bliking a victim in Vermont. By using mail drops and wire services, the perpetrators often take the money and disappear without a trace before a victim realizes they were defrauded. While efforts to combat telemarketing fraud have led to charges being filed against more than 800 individuals in "Senior Sentinel," the telemarketing fraud crime problem in America is continuing and pervasive.

Telemarketing fraud can be a difficult crime to investigate. The typical owner/operator of a fraudulent telemarketing firm uses multiple aliases, telephones, mail drops, and

business locations. Criminal telemarketers can change their method of solicitation, product line, and other recognizable traits overnight. Their operations are mobile and their schemes are complex. To further complicate matters, the victims are often too embarrassed or complacent to report the crime.

The FBI will continue its aggressive efforts targeted against telemarketing fraud by utilizing sensitive and proactive investigative techniques that have proven successful in the past. The FBI will target telemarketing schemes occurring over the Internet and will franchise the successful operation to decrease the number of telemarketing frauds committed in the U.S.

Fraud Against the Government: The U.S. government expends more than \$500 billion a year in discretionary domestic programs. Fraud within these programs affects the very stability of the economy and undermines the programs. Fraud Against the Government investigations cover programs administered by the Department of Defense (DOD), Department of Housing and Urban Development (HUD), Department of Transportation (DOT), Department of Education (DOED), and other Executive Branch entities.

The DOD spends more than \$240 billion annually. DOD operates 5,000 installations and employs more than five million people, including military and civilian workers. The large amount of surplus material valued at \$300 billion per year for the next five years will attract unscrupulous individuals, including extremist organizations looking to capitalize on this loosely monitored system. The FBI is maximizing its resources dedicated to Fraud Against the Government by identifying and targeting the most egregious frauds in connection with Government procurement and entitlement programs by using joint investigations with the Inspector General community and task forces with other Federal and local agencies. The FBI has initiated Fraud Against the Government investigations through joint efforts with the Defense Criminal Investigative Service (DCIS), the Naval Criminal Investigative Service (NCIS), the Army Criminal Investigative Division (ACID), the Federal Aviation Administration (FAA), and the various Offices of Inspector General (OIG). Currently, the FBI, DCIS and various military intelligence agencies are targeting procurement fraud on a national basis. The investigations encompass many FBI field offices in a coordinated undercover effort.

Programs within HUD are diverse and extensive. Insured loans and guarantees exceed \$750 billion a year. Housing subsidies serve more than four million families throughout the U.S. Virtually every State and city in the country receives some form of HUD grants.

"Bogus parts" represent a serious fraud problem negatively affecting DOT. This problem involves the substitution of inferior parts or surplus and scrap parts for certified aircraft parts by unscrupulous companies in an attempt to increase their profits illegally. This criminal problem negatively affects military and civilian aviation. The size of this problem is indicated by one company, serving the aircraft parts industry, that offered more than 26 million aircraft parts for sale. The FBI is involved in a defective critical aircraft parts initiative that began with a Group 1 undercover operation. This initiative continues to focus on aircraft parts suppliers who knowingly manufacture and distribute defective aircraft parts. Recognizing the grave implications associated with this type of crime, the FBI, DOD, and members of the civilian aviation community are addressing this crime jointly. Two additional major Group 1 investigations have just concluded: two are still ongoing, and may continue into 1998. The role of the FBI is to attempt to detect those persons and companies who knowingly engage in and fraudulently misrepresent airplane parts as tested and approved when they in fact are not. In addition, the FBI anticipates expanding the recent defective critical aircraft parts initiative through continued joint investigations with the DOD and members of the civilian aviation community.

Fraudulent activities negatively affect the \$3.0 billion in ship repair/ship management contracts awarded by the DOD and DOT annually. Corruption is endemic and involves corrupt contractors, union officials, Government officials, and uniformed military personnel. The FBI will expand its current maritime procurement fraud initiative along the eastern and gulf seaboard with DCIS, NCIS and the DOD Office of the Inspector General (DOOIG). This operational initiative addresses fraud and corruption in the maritime industry. Currently, five FBI field offices are involved in Group 1 undercover operations addressing the endemic corruption involving contractors, union officials, government officials, and uniformed military personnel.

Motor fuel excise tax fraud estimated to be at least \$1 billion annually continues to be a major investigative effort by the FBI, DOT, and the Internal Revenue Service.

The Department of Education (DOED) administrators, controls and disburses more than \$24 billion in student financial assistance programs, contracts, and awards. Additionally, in 1996, the DOED loan portfolio totaled more than \$40 billion. The amount of these financial assistance programs, contracts, and awards and the critical application of the products procured dramatically increase the potential for fraud and corruption.

Antitrust: The U.S. antitrust laws safeguard the competitive process in the U.S. economy. Since 1890, when Congress passed the Sherman Act, antitrust laws have played a crucial role in creating and preserving the environment of economic opportunity that has transformed the U.S. into the most open, dynamic, and competitive economy in the world. Antitrust investigations involve a conspiracy among companies in the same industry to engage in any or all of three types of criminal activity: collusion to fix the outcome of a competitive bidding process, allocating portions of a market between co-conspirators, and fixing prices. The antitrust laws affect most industries and apply to every phase of business, including manufacturing, transportation, distribution, and marketing. They prohibit a variety of practices that restrain trade, such as price-fixing conspiracies, corporate mergers likely to reduce the competitive vigor of particular markets, and predatory acts designed to achieve or maintain monopoly power. The DOJ Antitrust Division prosecutes serious and willful violations of the antitrust laws by filing criminal suits that can lead to large fines and incarceration.

In the past, U.S. antitrust enforcement was focused domestically. The rich U.S. domestic market is the most open in the world to international trade and, therefore, the most attractive and potentially most vulnerable to international cartels. Due to the globalization of the world economy, law enforcement concentration on international matters must continue to ensure that U.S. firms and consumers are playing on a level playing field with those foreign firms that enjoy access to the U.S. domestic market. Nearly one quarter of the Gross Domestic Product (GDP) is comprised of export and import trade. An increasing number of cases have international consequences, and concern about unfair competition for U.S. corporations abroad is increasing.

Antitrust violations can be difficult to identify and investigations tend to be lengthy, "document heavy," and heavily dependent on confidential witnesses. Costs to the public can be enormous, but are typically well hidden and/or spread widely. The investigation and prosecution of these cases are often substantially enhanced by using electronic monitoring techniques. Federal law, Attorney General Guidelines and the Code of Federal Regulations (CFR) confer the FBI the authority to investigate and DOJ the authority to prosecute violations of Federal criminal and certain civil law violations.

The FBI responds to the Antitrust Division's requests for investigative assistance by providing FBI agents trained to investigate antitrust violations. The Antitrust Division of the

DOJ has 776 positions (330 attorneys), the FBI's has eight agent personnel investigating antitrust violations. In 1996, the Antitrust Division filed 42 criminal cases, with the FBI assisting in 32. In 1996, the Antitrust Division imposed a record number of corporate fines totaling \$45 million.

Environmental Crimes: Cost estimates related to cleaning up the environment range in the hundreds of billions of dollars. As Government entities and private companies downsize, the pressure increases to cut overhead and production costs, and it adds to the temptation to handle and dispose of hazardous materials improperly to save money. Government contracts include provisions for the proper disposal of such materials. Failure to properly dispose of these materials is tantamount to fraud against the government. Moreover, clean up costs for the illegal dumping of hazardous materials, when responsible parties are not identified, are borne by local, State and Federal taxpayers.

Environmental crime is expected to increase as authorized hazardous disposal sites become full and as increased costs of legitimate disposal result in financial incentives for those dealing in hazardous waste disposal. To date, there is no good, quantified estimate of the extent of all types of environmental crimes, but best estimates are that 247-275 million metric tons of hazardous waste are generated every year. Environmental crimes vary from community to community and from industry to industry, but the five types of offenses most commonly occur are the illegal transportation and disposal of hazardous waste and hazardous materials, used tires, construction and demolition debris, used appliances, and vegetative waste.

The FBI's Environmental Crimes Program is shifting towards more complex investigations with larger community impact. An average of 400 to 450 matters are under investigation at any given time. The FBI's strategy for environmental crimes is to identify environmental crimes causing the greatest harm to the public and the environment and to increase FBI effectiveness through liaison and cooperation with government agencies whose expertise and resources can augment FBI environmental crimes program. The FBI initiates and coordinates investigations involving illegal disposal of hazardous materials by using sophisticated investigative techniques, including undercover operations.

Bankruptcy Fraud: Filings for bankruptcy relief exceeded one million in 1996, of which 10 percent are estimated to contain fraudulent information. There have been no reliable estimates of the total dollar costs of bankruptcy fraud. The U.S. Government is the largest creditor falling victim to bankruptcy fraud. Investigations are typically the result of referrals from many sources, but primarily originate from the Office of the U.S. Trustee or the bankruptcy panel trustees. The FBI charged more than 125 subjects in connection with "Total Disclosure" a bankruptcy fraud initiative and more charges will be filed in this continuing initiative in 1997.

Public Corruption: Public corruption matters are among the most sensitive and complex investigations conducted by the FBI. These investigations involve allegations that public officials have abused their position of trust violating Federal law. Betrayals of public trust, at any level, are extremely threatening to the existence of government and if allowed to exist, place the government at risk.

The financial impact of public corruption is difficult to ascertain and may not be the most serious consequence of the activity. Public corruption not only undermines the faith and confidence of the public in individuals in government, but it also destroys the public's belief in the democratic institutions upon which this country is founded. The public corruption crime problem focuses on allegations of corruption by Federal, State and local public officials in judicial, legislative, law enforcement, contractual, and regulatory positions.

Integrity in all law enforcement agencies is paramount to ensure public confidence and continued success in the mission of every law enforcement agency. To more clearly define and to appropriately address law enforcement corruption, the FBI has undertaken several initiatives to better understand the law enforcement corruption problem that has plagued police departments.

The FBI places emphasis on systemic law enforcement corruption, particularly law enforcement drug-related corruption. Historically, corrupt police officers were paid to "look the other way" as criminal enterprises conducted their business. FBI intelligence, recent studies, and the results of several major cases have confirmed a new breed of corrupt officers, more violent, more organized, and now more likely to participate in the crime rather than merely to protect it. A major element of the law enforcement corruption crime problem concerns the Southwest Border. FBI intelligence has identified prolific drug trafficking and public corruption occurring along the United States and Mexico border. The identified corruption involves principally Mexican Drug Trafficking Organizations (MDTOs) and Federal law enforcement officials charged with the responsibility of preventing the flow of drugs across the border.

Besides using creative and complex undercover operations targeting corrupt officers in many major police departments, the FBI collaborated with the Major City Chiefs Association that sponsored a group of ranking officers from various major law enforcement agencies around the country to research and discuss police corruption issues. The FBI participated in this group and published a collection of papers regarding the nature of the crime problem and proposals on how to maintain integrity in law enforcement agencies. The results of this study, which were distributed to approximately 2,000 police agencies around the country, clearly document the magnitude of this crime problem completed. Because of the egregiousness and potential impact of a corruption allegation, the FBI addresses each violation thoroughly and expeditiously.

The FBI is developing a preventive strategy in law enforcement corruption utilizing information from FBI investigators, local law enforcement officials, and other national experts. The strategy involves a plan to include one or more police officers to be assigned to FBI Headquarters to participate in a project to create a model strategy for the solution of endemic law enforcement corruption. This strategy would be based on and further develop the initiatives and study prepared with the Major Cities Chiefs of Police. The FBI is expanding this model strategy to help the international law enforcement community with the growing law enforcement corruption problem abroad.

Historically State and local law enforcement have held that public corruption allegations are a local problem and have tried to reduce Federal involvement. The FBI has found that State and local law enforcement personnel are not trained to handle corruption and that some agencies cannot police themselves. Because of the seriousness of the overall corruption crime problem, the FBI and Federal prosecutors have taken a more aggressive role in investigating and prosecuting widespread corruption at the Federal, State, and local levels. Often, the extent of the corruption is so pervasive that only an outside law enforcement agency, like the FBI, can address the problem.

Increasingly, because of the expertise the FBI has developed, State and local entities have begun to request the FBI to assist with the corruption problem, extensively law enforcement corruption. Often, police department Internal Affairs Divisions, which are charged with the responsibility of identifying misconduct and corruption and ensuring integrity within a department, seek FBI assistance to resolve these complex investigations.

The FBI is uniquely equipped to address sensitive and complex allegations of public corruption. Accordingly, the FBI has developed the necessary intelligence to authoritatively

address the overall corruption crime problem and to develop proactive successful investigations to resolve corruption allegations. These investigations have provided the FBI with a wealth of experience concerning the many sensitive issues that arise during such investigations. Also, the FBI has developed an effective procedure for corruption investigations that includes the creative use of sophisticated investigative techniques such as undercover operations and court-authorized electronic surveillance.

Three cases that exemplify FBI-developed successful procedures for corruption investigations are the "DIRTY THREE" in Atlanta, the "SHATTERED SHIELD" in New Orleans, and the "BROKEN FAITH" in Washington, D.C. In each of these cases the FBI used undercover operations. In the "DIRTY THREE," two officers have pled guilty and have cooperated with the investigation. As a result, four officers were tried and convicted. Eight additional officers were suspended and are still under investigation. In "SHATTERED SHIELD," 11 New Orleans Police Department officers were charged with corruption through drug conspiracy charges. One officer and two criminal associates were charged in a Federal indictment under civil rights statutes for the murder of a complainant in a civil rights matter. Two officers pled guilty, and the corruption cases on the other nine officers were delayed until the civil rights charges are adjudicated. In the "BROKEN FAITH," 12 police officers were convicted on 17 of 18 counts. Each defendant was sentenced to 49 years incarceration.

International Fraud/Money Laundering: White collar crimes produce billions of illicit dollars annually. To enjoy the fruits of these criminal activities without raising the suspicion of law enforcement, the undeserved profits must be laundered to make money appear legitimately gained. Money laundering is an inherent part of white-collar crime. The Office of Technology Assessment estimates that up to \$300 billion is laundered annually: \$85 billion relating to Drugs/Organized Crime activities and \$215 billion relating to White Collar Crime, Violent Crime and Terrorism activities.

The significant reasons to investigate and prosecute money laundering offenses include: (1) the ability to prosecute peripheral players that support criminal enterprises through laundering activity; (2) money laundering statutes have 20-year maximum terms of imprisonment; and (3) money laundering statutes are a predicate offense for asset forfeiture actions which can be used to dismantle criminal enterprises and recover losses. The FBI pursues money laundering investigations as an adjunct to substantive offenses for which it has investigative jurisdiction. The FBI is working with domestic and foreign intelligence agencies to identify financial institutions involved in international money laundering activities. The FBI works with the Financial Action Task Force (FATF) providing information concerning current trends and issues regarding international money laundering activities. The FATF serves to have countries around the world enact laws to address money laundering.

The FBI has identified money laundering havens around the world and developed initiatives to address these criminal activities. For example, the FBI has teamed with the United Kingdom authorities and formed the White Collar Crime Investigative Team (WCCIT). WCCIT investigates fraud and non narcotic money laundering activities that impact upon the U.S., the United Kingdom and its British Caribbean Dependent Territories (BCDTs). FBI agents, British police officers and BCDT officers jointly investigate complex and multinational fraud and white collar crime money laundering cases. This structure provides the necessary investigative expertise as well as the requisite access to pertinent evidence. Due to the success of this initiative, law enforcement representatives from other countries have approached the FBI to expand this team to other parts of the Caribbean. Discussions have taken place with officials from Bermuda and the Netherlands Antilles in this regard. Thus far convictions have been obtained in investment scams and insurance frauds. In another case involving an advance fee scheme, the FBI seized \$7.5 million dollars.

LONG-RANGE GOAL: To reduce the loss to the economy of the United States and the personal hardships brought on our citizens by white-collar crimes including: health care fraud, financial institution fraud, securities and commodities fraud, insurance fraud, computer crimes, telemarketing fraud, fraud against the government/antitrust, environmental crimes, bankruptcy fraud, public corruption, and international fraud/money laundering.

MAJOR OBJECTIVES:

- To identify, investigate, and prosecute organized groups involved in major priority WCC criminal activities.
- To further develop, refine, and maintain a quality national intelligence base to ensure FBI resources are applied to address the most serious WCC offenses.
- To increase investigative efforts on computer crimes, especially crimes involving theft, impairment and intrusions.
- To identify, investigate, and obtain prosecution of individuals involved in health care fraud.
- To concentrate additional investigative efforts on health care fraud, particularly fraudulent practices in ambulatory services, laboratory services, and worker's compensation
- To provide investigative assistance to the DOJ for investigations of antitrust violations.
- To strengthen FBI WCC intelligence and investigate capabilities through building partnerships with various industry segments victimized by such acts, especially in the health care and computer industries.

PROGRAM INCREASES: For 1998, the White Collar Crime decision unit proposes program increases of 90 positions (54 agents), 45 FTE, and \$9,512,000 for the FBI's Technology Crimes and Southwest Border initiatives. The Technology Crime increase includes 36 positions (34 agent), 28 FTE and \$5,945,000 to establish computer crime Teams to address computer crime matters related to criminal violations. The Southwest Border request includes an increase of 34 positions (20 agent), 17 FTE and \$3,567,000 to address public corruption of public officials by the Mexican Drug Trafficking Organizations along the Southwest Border of the United States.

Initiative: Technology Crime

Item: Computer Investigations and Infrastructure Threat Assessment Teams - 56 Pos., 28 FTE, \$5,945,000

On July 15, 1996, the President signed Executive Order 13010, which designates the FBI as the lead agency for coordinating and conducting the U.S. government's protection, prevention, response, and restoration actions against criminal, terrorist, and foreign power threats to the critical information and physical infrastructure of the Nation. The FBI has

developed a strategy for addressing its new mandate to protect the critical infrastructure of the United States. The FBI has identified illegal electronic intrusion into America's major computer networks as a current and rapidly escalating crime problem. While-collar crime criminals, economic espionage agents, organized crime members, foreign intelligence services, and terrorist groups have been identified as "electronic intruders" responsible for penetrations of America's major computer systems. Adding to the complexity of managing the investigation of computer crime is the number of "predicate offenses" under which computer-facilitated crime may be prosecuted. Violations of traditional computer crime often also involve predicate offenses such as bank fraud and embezzlement, extortion, mail fraud, racketeering enterprises, financial institution fraud, bankruptcy fraud, smuggling, antitrust violations, illegal interception of communications, money laundering, credit card fraud, public corruption, fraud by wire, copyright violations, and espionage.

The FBI views illegal electronic intrusion into America's major computer networks as a current and rapidly escalating crime problem. The NIJ is a sophisticated, interdependent system of telecommunication networks, advanced computer networks, and databases that the United States Government relies upon for the efficient, uninterrupted flow of electronic information for air traffic control, military communications, energy distribution, public safety, and other essential government services and programs. Intelligence and industry forecasts indicate the United States is just beginning to realize the potentially damaging effects of the computer crime problem.

A significant threat to computer information security is the theft of trade secrets, whether conducted by insiders or competitors. The case of William Gaede is an example. Gaede, a manufacturing engineer, was employed by Intel Corporation in 1994, when he was terminated for theft of proprietary information. After an FBI investigation, Gaede was indicted in October, 1995, for Mail Fraud and Interstate Transportation of Stolen Property. This indictment related to material valued at approximately \$20 million that Gaede had stolen from Intel.

The Science Applications International Corporation, a military contractor and technology security firm, surveyed more than 40 major corporations in 1996, which confidentially reported that they lost an estimated \$800 million because of computer break-ins, both in lost intellectual property and money.

Hackers Kevin Lee Poulsen and Kevin D. Mitnick have demonstrated how vulnerable the NIJ is. In 1991 the FBI found the Poulsen had crashed a major financial data base in the San Diego area and compromised almost all of the electronic surveillances being conducted by Federal and State law enforcement agencies in California. Poulsen accomplished this through computer hacking, burglaries of Pacific Bell Telephone Company offices, and the use of live-line monitoring equipment. Through the information he obtained from these techniques, Poulsen was able to identify specific telephone lines used by law enforcement for electronic surveillance associated with foreign counterintelligence and criminal investigations in the San Francisco area. His successful attack on NIJ data bases required the FBI to spend several million dollars to move existing technical monitoring facilities and install fiber optic "cut-outs" to preclude the location of these facilities from being compromised by other hackers. In 1995, the FBI arrested Kevin D. Mitnick, a notorious computer hacker associated with intrusions into government, corporate, and university computer networks. Mitnick came to national attention in 1982, when, as a teenager, he used a computer and modem to break into a North American Air Defense Command computer. He was first indicted for criminal activity in 1988, after officials at Digital Equipment Corporation alleged that he caused \$4 million in damage to computer operations at the company. Warrants were again issued for his arrest during and after 1992. At the time of his arrest, he had already stolen over \$1 million in proprietary software and thousands of credit card numbers, including the card numbers of some of the best-known millionaires in Silicon Valley.

In addition to the obviously orchestrated criminal activity, the NII appears to be becoming more vulnerable to NII users. Radio and television frequently carry stories of infrastructure vulnerabilities. Books, magazine and newspaper articles, electronic bulletin board messages, and hacker home pages on the Worldwide Web inform hackers, crackers, "phreakers," technophiles, and other interested individuals about the latest methodology for staging successful computer network attacks. These publicized efforts result in a myriad of attacks on susceptible networks, particularly Internet service providers. After the underground hacker magazines "2600" and "Phrack," published an article on "synflooding," over 20 Internet service providers were attacked.

Public Access Networks, the first Internet service provider in New York City, was disabled for more than a week by an anonymous intruder from Canada who became disgruntled when the service provider refused to allow racist hate messages to be transmitted.

To handle the increase of investigations under the new mandate, the WCC program requests 34 agents and 22 support positions to staff additional teams in areas with large banking, commerce, and technology industries. The 34 new WCC agents and 12 existing National Security agents would be assigned to identify the nature and scope of the computer crime problem, investigate significant intrusions or threats to major information infrastructures, or networks, and to pursue prosecution of computer crimes. The expansion is paramount to address the computer intrusions. The additional 22 WCC support personnel would provide technical and administrative support to the new teams.

Initiative: Southwest Border

Item: Southwest Border - 34 Positions (20 agents), 17 FTE, and \$3,567,000.

In 1990, the FBI identified the Southwest Border of the United States as an area where law enforcement corruption was growing at an alarming rate. In response, the FBI developed goals, objectives and an operational strategy to address corruption along the Southwest Border. This strategy calls for the initiation of coordinated undercover operations (UCOs) and other covert operations in five designated SWB offices: Albuquerque, El Paso, Phoenix, San Antonio, and San Diego.

In 1996, the FBI continued its two long-term covert, intelligence-gathering operations to further identify corrupt public officials. In addition, approval of a Racketeering Enterprise Investigation (REI) is pending to coordinate intelligence along the entire border. The SWB initiative has resulted in the identification of numerous potential subjects and ports of entry along the border where corruption has become systemic and pervasive. The most significant allegations involve Immigration and Naturalization Service, U.S. Border Patrol, and U.S. Customs officials involved with monitoring traffic across the U.S./Mexico border. The FBI is sharing this information with the Department of Justice Office of Inspector General and the U.S. Customs Service Internal Affairs to develop and coordinate joint cases in both overt and covert capacities.

The 1998 base includes 48 agents to address public corruption along the SWB. To extend this public corruption effort to the additional SWB offices, the FBI requires an additional 20 agent and 14 support positions to continue to address federal, state, and local law enforcement corruption along the U.S. Southwest Border.

In 1995, the San Diego FBI Office formed a Border Corruption Task Force (BCTF) to target U.S. officials illegally facilitating drug trafficking activity. The efforts of the San Diego BCTF resulted in the convictions of seven federal public officials and 12 nonpublic officials in 1996.

Type of Measure	Performance Indicators	1994	1995	1996	1997	1997	1998

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: Through the Other Field Programs, the FBI investigates crime in Indian Country, criminal street gangs, violations of the bank robbery statutes, carjackings, crimes on government reservations, thefts from interstate shipment, interstate transportation of stolen property and motor vehicles, assaults/threats to Federal officers, assaults on the President, theft of and/or destruction of government property, counterterrorism, and security countermeasures issues. The Other Field Programs is responsible for the location and apprehension of Federal, State and local fugitives charged under the Fugitive Felon Act with unlawful flight to avoid prosecution or confinement for violent crimes and other serious felony offenses. The FBI is able to conduct simultaneous investigations in multiple jurisdictions and has demonstrated its ability to coordinate and successfully resolve the most complex, sensitive and organizationally focused investigations. Given the ever changing nature of crime in the United States, the FBI mission responsibilities require the maintenance of full operational capabilities in each of these areas.

In addition, by Congressional mandate, the FBI is the only Federal law enforcement agency that conducts criminal investigations of violations of Civil Rights statutes. The Civil Rights Program investigates violations of the Federal Civil Rights Statutes and provides assistance in the investigation of allegations of violation of applicable Federal laws which protect the civil rights of all persons in the U.S. The FBI is mandated as the lead Federal agency to investigate and deter hostile acts of terrorism and, when necessary, to apprehend those individuals and groups whose aim is to harm the United States through the acts of terrorism.

The Other Field Programs also contains the FBI's Critical Incident Response Group (CIRG). CIRG was established in 1994 to facilitate the coordination of FBI responses to major law enforcement crises and special investigations. The CIRG responds to crimes which pose great dangers and require skills that are not routinely available in many law enforcement agencies. When faced with complex incidents, CIRG responds by providing trained, well equipped and experienced negotiators, crisis managers, tactical and aviation personnel, supported by pertinent research of successful techniques used in similar situations. Behavioral science experts advise tacticians, negotiators, and crisis managers regarding subjects and potential strategies. These resources greatly enhance the potential to successfully resolve complex crisis situations or investigations that require such

expertise.

Terrorism, violent crime and anti-government crime are priority areas of concern for the FBI. The bombs that damaged the World Trade Center and destroyed the Federal building in Oklahoma City are vivid examples of how these types of crimes impact on our society and give some indication of the minds of these criminals. To combat terrorism, the U.S. Postal Service has spent millions of dollars on personnel and equipment to protect postal employees and the public from the irrational tactics of criminals whose tactics include car/truck bombs, *river* letter bombs. Presidential Decision Directive (PDD)-39 and the Director of Investigative Agency Policies Resolution 12 reemphasizes the role of the FBI as the lead Federal agency in major domestic situations.

Violent crime is tearing away at the fabric of our society. Americans consistently list violent crime as one of their most significant concerns. As a result, their fundamental right to live their lives free from fear of violence has been placed in peril. The cost of these crimes have two dimensions: a dollar amount calculated by adding up property losses, productivity losses, and medical bills, and an amount less easily quantifiable because it takes the forms of pain, emotional trauma, injury and death. Researchers have found that crime victimization generates \$105 billion annually in property and productivity losses and outlays for medical expenses. This amounts to an annual "crime tax" of roughly \$425 per man, woman, and child in the U.S. From the small business owner who is literally crippled because he refuses to pay "protection" money to the neighborhood gang, to the families who are hostages within their homes, living in neighborhoods ruled by predatory drug trafficking gangs, the harmful impact of gang violence on its victims individually, and on society collectively, is both physically and psychologically debilitating. The destabilizing effect of criminal gangs on our communities, while difficult to quantify, is enormous. Perhaps the most disturbing trend is the rise in crimes related to the sexual exploitation of children and the growing use of the Internet to share pornographic pictures of minors and to use it as a tool to identify and recruit children into sexually illicit relationships.

Gangs and Juvenile Crime: While street gangs have been a part of the urban landscape for much of our country's history, in the past two decades, gangs have become an increasingly powerful and deadly force. Violent gangs are now having a major impact on the quality of life in communities throughout the Nation. The criminal acts of many gang members are both extraordinarily violent in nature and seemingly indiscriminate. A killing may be motivated by nothing more than the victim's presence in a particular neighborhood, choice of apparel, or facial expression. From the highly structured prison and motorcycle gangs that have a national presence, to the less-organized narcotics trafficking neighborhood "crews," gangs have brought a frightening level of violence to small towns and major metropolitan areas. Although most gangs can be traced to major urban areas, they have migrated throughout the country. According to a 1996 National Drug Intelligence Center (NDIC) study, gang activity was reported in 88 percent of the 301 jurisdictions responding to the survey and in 98 percent of the 120 responding jurisdictions with populations over 100,000. Through the survey, NDIC identified 7,400 individual gang sets. To address gang violence effectively, law enforcement's response must be a coordinated one. Municipal and local police departments, which represent the first line of defense from an enforcement standpoint, are not equipped to tackle this problem of enormous complexity alone. Most police departments lack the legal, financial, and technological resources to eradicate gang violence.

The FBI's Gang strategy was designed to incorporate the investigative and prosecutive theories of enterprise investigations which have proven to be successful in the Organized Crime/Drug Program National Strategy. Stated succinctly, the strategy is for the FBI, in conjunction with other Federal, State and local law enforcement agencies, to identify the major domestic violent street gang/drug enterprises which pose significant threats to the integrity of American society and pursue these gangs through the sustained, proactive,

multi-divisional, coordinated investigations that support successful prosecution.

Sexual Exploitation of Children (SEOC): The National Incidence Studies of Missing, Abducted, Runaway and Thrownaway Children reports between 3,200 and 4,600 short-term, non-family abductions annually. Of that number, it is estimated that 70 percent of those child victims are sexually assaulted. The 1995 UCR states that approximately 1,265 children under the age of 18 were murdered. The National Crime Information Center has on file approximately 71,000 missing children, all potential victims of sexual abuse or exploitation.

Crimes against children present some of the most tragic, complex, frustrating and emotional circumstances a law enforcement officer could ever face. While each individual FBI field office routinely respond to reported or suspected child abductions and other crimes against children within its jurisdiction, it is critically important to address crimes against children through a multi-disciplinary approach. A team approach utilizes multi-agency resources to ensure that these highly sensitive cases are appropriately investigated; suspects are quickly identified and apprehended; victims and their families are protected and afforded appropriate victim/witness assistance, and cases are presented to appropriate State and/or Federal attorneys for prosecution. These investigations often cross legal and geographical jurisdictional boundaries and involve extremely sensitive cases in which children are often brutally victimized, requiring the expertise of multi-disciplinary teams comprised of law enforcement, prosecutive and health care experts.

The team approach is also better able to treat the young victims of these crimes. Victimized children require care and treatment not typically afforded adult victims. In many cases, investigators must routinely interface with other professionals, including emergency room physicians, pediatricians, social workers, psychologists, child advocacy groups, victim-witness coordinators, and various other personnel. Many of these professionals will be involved in the post-trauma treatment of a victimized child, interviewing the child to elicit difficult-to-discuss facts concerning the offense and the offender, pre-trial preparation of a child victim as a witness, and interviewing serial offenders to identify other victims and crimes to be investigated, and other phases of the investigation or prosecution. Extremely successful Interagency SEOC Task Forces were initiated by FBI field offices in San Francisco and Los Angeles, California, during 1994 and 1995, and both continue their operations.

Indian Country: With respect to crimes in Indian Country, the FBI has jurisdiction over 558 separate sovereignities, 168 Indian reservations, upon which reside half a million Native American Indians. The FBI also has concurrent jurisdiction with tribal police in Indian Country. With the increase in violence and crime in Indian Country, State law enforcement agencies and tribal police are working with their Federal counterparts to stem the tide of associated violence. Through the cooperation between Federal and State law enforcement agencies and tribal police, an intelligence base can be established to more thoroughly investigate criminal activity.

The jurisdiction over crimes occurring in Indian country is governed by a complex arrangement among Federal, State and tribal law; therefore, it is imperative that the FBI continue to develop a shared and cooperative effort to combat violent crime, gangs, and child sexual abuse on Indian land. In 1996, the FBI opened 2,951 cases in regard to violence on Indian reservations including homicides, incidents of child sexual abuse, and gang-related criminal activity. Gang-related violence is a new phenomenon on reservations causing great concern. Drive-by shootings and aggravated assaults committed by Native American juveniles are becoming more common place on the reservations. Geography is also a contributing factor in the crime problem. For example, the Navajo Nation is an immense, remote area of 13,971 square miles in the States of Arizona, Utah, and New Mexico. There is a permanent population of 90,964 with frequent visitation by the 10,000 Navajos who do not reside within the reservation boundaries. The crime

problem is complicated by the long distances that agents must travel to reach crime scenes, which can be as far as 200 miles from remote areas of their territories, resulting in long response times.

Interstate Shipment of Stolen Property/Interstate Theft/Cargo Theft/High Tech Component Theft: The FBI is responsible for investigating theft from interstate shipment, interstate transportation of stolen property and motor vehicles, cargo theft, and computer component theft. In some parts of the U.S., the rise in cargo theft has reached alarming levels. The trade gateways of New York, Miami, and Los Angeles are particularly vulnerable, but this is a national concern afflicting countless businesses and, ultimately, the national economy and the American consumer. Particularly susceptible are the millions of freight containers, trucks, and rail cars that cross this country daily. Their goods are either stolen from the containers while awaiting shipment or armed hijackers commandeer the trucks and loot them of their cargo. Widespread cargo theft has also given rise to concomitant offenses such as robbery, kidnapping, homicide, interstate transportation of stolen motor vehicles, narcotics trafficking, money laundering and insurance fraud.

There are several reasons for the growth in cargo crime. First, the global marketplace and the ease of transportation have led to greater volumes of shipments, and thus more opportunities for criminals. Second, the potential profit is enormous. A single 40 foot freight container may carry goods worth up to \$1 million and can be picked clean and shipped all over the U.S. in just a matter of hours. Third, highly organized criminal organizations have entered into the arena. These organizations have the infrastructure and ability to move goods as efficiently as legitimate businesses.

Insurance underwriters have dubbed the area between New York, Miami, and Los Angeles as "the Bermuda Triangle" because cargo theft is a phenomenon occurring nationwide. Approximately 40 percent of the claims from motor truck cargo coverage involve theft, and that number is rising. The Maritime Security Report has identified an increase in the incidence of cargo theft and hijacking at ports primarily in Miami, New York, New Jersey, Los Angeles, and Long Beach.

Extensive and systematic criminality indicates that organized crime may be behind a significant amount of cargo theft activity. While the most serious incidences of cargo theft and truck hijacking have been noted in and around the seaports and airports of Miami, New York/New Jersey, and Los Angeles/Long Beach, in other cities serving as major transportation hubs, and along the U. S. border with Mexico, many other areas of the country are also seriously impacted. National annual cargo theft losses range from FBI estimates of \$3.5 billion to a National Cargo Security Council estimate of \$10 billion. Loss figures often understate the true scope of the problem because many cargo crimes go unreported by companies unwilling to risk bad publicity or higher insurance premiums or remain undetected until it is too late for investigation.

Since the 1980s, computer/electronic component theft and robbery has been on the rise in high technology regions including California's Silicon Valley, San Diego, New England, Dallas and Austin, Texas, Memphis, Minneapolis, Europe and the Pacific Rim countries. Computer/electronic information management components such as integrated circuits, Simms cards, flash memory, and disk drives are difficult, if not impossible, to identify because they have no common appearance or use, lack manufacturer logos, and often lack serial numbers. These factors make these items appealing theft targets. Once stolen, these components are essentially untraceable and subject to resale and can be incorporated into a vast number of computer products. Losses were once thought to be pilferage are now violently taken from warehouses by violent gangs who often tie up and pistol whip employees of the victim company. Computer components are considered one of the most highly "stealable" items because they are very small and easily transportable. One million dollars worth of computer chips can easily fit in the back of a van. Theft of computer components has become more prevalent because of the extremely high demand

placed on manufacturers for the parts. This is due, in part, to a very lucrative market for the resale of stolen computer parts. Often they are bought by legitimate companies because the industries profit margin is so small that the manufacturers can't get enough of them fast enough to quickly fill orders. The Chubb Group of Insurance Companies, the leading insurer of the electronics industry, estimates that consumers pay an additional \$100 on the average price of a computer due to high-tech component theft. The average claim filed with the Chubb Insurance Group increased from \$5,000 in 1992 to \$750,000 in 1996. Based on responses from 17 major domestic companies in the computer industry, losses due to theft, warranty fraud, and counterfeiting were estimated at \$4.8 billion in 1996 and are anticipated to increase to \$9.6 billion by the year 2000.

The principal crime problem in jewelry and gem theft revolves around organized groups of thieves targeting jewelry retail stores for larceny and individual jewelry and gem sales associates for robbery. These groups are sometimes ethnically identifiable, as in the case of South American "distraction" thieves. An organization comprised of Colombian, Peruvian and Chilean nationals involved in jewelry thefts has existed in the U.S. for more than 30 years. Current membership consists of a few thousand individuals who are very skilled and difficult to identify. Dollar losses resulting from the criminal activity are estimated to be in excess of \$500 million annually. Members of this organization have usually developed pocket picking skills and at an early age are brought into the group. They will often enter the U.S. after being provided with resources such as stolen travelers checks, airline tickets, credit cards and false identification documents. Upon entry into the U.S., many blend into diverse Latin communities in Houston, Los Angeles, Miami, Chicago and New York. The members of the organization are provided with support such as vehicles, expenses, fencing services and bail when arrested.

Civil Rights: The Civil Rights Program has been involved in an increasing number of joint investigations of hate crimes, most notably church burning cases occurring predominantly in the South. The FBI is currently investigating 328 church arson matters which have occurred since January 1995. To reduce the incidence of hate crimes nationwide the FBI is forging cooperative relationships with national and local civil rights organizations, as a part of the effort to educate the public so that all potential hate crimes are identified and fully investigated. In a proactive effort to reduce incidents of police brutality/misconduct nationwide, the FBI is increasing the awareness and sensitivity of local, state and federal law enforcement personnel through training and outreach with national law enforcement organizations and with the individual agencies and departments at the local level.

In addition, in the wake of the controversy stirred by the Fuhman tapes aired during the O. J. Simpson trial, the Attorney General directed the Civil Rights Division of the Department to undertake an initiative to develop an appropriate response to the broader problem of police misconduct. The goal of the Police Misconduct Initiative is to establish a comprehensive approach to combat and prevent law enforcement misconduct. To achieve this goal, the need for coordination between criminal and civil enforcement efforts, and among the different modes of civil enforcement, is critical. The FBI is fully participating in the Attorney General's Police Misconduct Initiative, and has been tasked with conducting some investigations of police departments and other law enforcement agencies in connection with allegations of pattern and practice violations and violations of Title VI of the Civil Rights Act of 1964.

The FBI is initiating an Involuntary Servitude and Slavery initiative to proactively identify and investigate abuses of migrant farm workers, sweatshop employees and illegal Thai immigrants. As part of the effort to identify potential cases, the FBI is working with the Department of Justice, the Immigration and Naturalization Service and the Department of Labor.

Crisis Incident Response Group (CIRG): Crisis incidents involving barricade situations are on the rise both nationally and throughout the world. This is evidenced by the Branch Davidian Incident at Waco, the shooting at Ruby Ridge, Idaho, and the militia standoff in Montana. These types of situations are highly complex, are extremely demanding on law enforcement at the Federal, State, and local level, and require a very unique expertise to resolve successfully. Based on the increasing numbers and complexity of these situations and Presidential directives that place the FBI in the lead Federal agency role in any major domestic situation, it is imperative that the FBI prepare itself and other agencies for these eventualities. The CIRG was established to provide the FBI with the specialized capabilities to address crisis situations. It accomplishes this task by providing operational assistance and enhanced training to the FBI at all levels in the area of crisis management, command and control, and crisis negotiation. Because many of these cases begin at the State, local or other Federal agency level and evolve into situations requiring FBI involvement, it is important that crisis management systems, wherever possible, closely parallel our own to allow for a smooth transition from one level to another.

Counterterrorism (CT): Terrorism investigations are conducted by the FBI in accordance with the Attorney General Guidelines for Domestic Security/Terrorism and Racketeering Influence and Corrupt Organizations. FBI investigations of terrorism focus on the criminal activity of the group, not on the ideology motivating the group. PDD-39 further emphasized the role of the FBI as the lead agency responsible for the investigation of terrorism within the United States and its territories. Terrorist groups are those groups which originate in the United States and direct their activities at elements of the U.S. Government or population with the intent to either overthrow the U.S. Government, interfere with the activities of a foreign government in the United States, substantially impair the functioning of the Federal Government, a state government or interstate commerce, or deprive citizens of the United States of their civil rights, as guaranteed by the U.S. Constitution.

The use of sarin nerve gas by the Aum Shinrikyo (Aum Supreme Truth) religious sect in the Tokyo subway on March 20, 1995, underscores the vulnerability of a populace to the use of chemical or biological weapons. Twelve people died, and approximately 5,500 people suffered minor effects as a result of the gas attack and the ensuing panic. The FBI opened a criminal investigation in response to the sarin gas attack based on a violation of Title 18, USC Section 2331, which authorizes FBI extraterritorial investigations. The FBI's extraterritorial jurisdiction in this matter related to the two U.S. citizens who were victims of the sarin gas attack. The FBI also opened a terrorism case on the Aum Shinrikyo branch in New York in order to identify its members, determine the nature of its activities, and assess the threat it posed to the United States.

The April 19, 1996, bombing of the Alfred P. Murrah Federal Building in Oklahoma City vividly demonstrated the magnitude of danger posed to the United States by terrorists. This incident marked the most deadly terrorist attack ever perpetrated in the United States, and awakened the public to the violence of many terrorist groups. Their activities are directed at elements of the U.S. Government or population and represent interests spanning the political spectrum, and focus on issues relating to U.S. political and social concerns. Terrorism (right-wing, left-wing, and special interest) in the United States historically has occurred on a cyclical basis with periods of terrorist incidents, followed by arrests, regroupings, reorganization, and consolidation, after which the cycle starts anew.

In 1995, PDD-39 was signed which provides further substantive authority to the FBI in countering the threat of terrorism in the United States. PDD-39 addresses a vigorous response to terrorism and strengthens the FBI's leadership role in combating terrorism in the United States. PDD-39 reaffirms the FBI as the lead Federal agency in both preventing terrorist attacks and investigating those attacks when they occur within the United States, in international waters, or against U.S. persons and establishments overseas. Among other measures mandated by PDD-39 was the creation of a Counterterrorism Center under the auspices of the FBI. The Center was established to further ensure the FBI's

overall readiness towards countering terrorism and will allow the FBI and other U.S. law enforcement and intelligence community members to more effectively counter threats of terrorism within the United States by expanding the FBI's real-time counterterrorism operational and analytical capabilities. The analytical function of the Counterterrorism Center is to obtain, analyze, disseminate, and manage all information related to individuals and groups involved in terrorism which may threaten any U.S. person or interest.

Operationally, the Counterterrorism Center will provide support and enhanced analysis to FBI and U.S. law enforcement agencies in order to prevent terrorist incidents and to support law enforcement actions against terrorist subjects. The Counterterrorism Center ensures the FBI's overall readiness towards countering terrorism and will allow the FBI and other U.S. law enforcement and intelligence community members to more effectively combat threats of terrorism within the United States by expanding the FBI's real-time counterterrorism operational and analytical capabilities.

The FBI's CT Program is responsible for countering the enormous threat posed to the national security of the United States by illegal proliferation of Weapons of Mass Destruction (WMD), to include nuclear, chemical, and biological weapons and source material, as well as launching systems, such as ballistic missiles. The CT Program is responsible for WMD smuggling, proliferation, and terrorism matters. The FBI derives its authority to investigate and deter nuclear, chemical, and biological proliferation and terrorism from various statutory authorities. The primary statute upon which the FBI bases its nuclear-related authority is the Atomic Energy Act. The primary statute upon which the FBI bases its biological-related authority is the Biological Weapons Anti-Terrorism Act. While no specific statute currently exists which addresses chemical terrorism and/or proliferation, the FBI employs a number of other statutes to investigate acts of chemical terrorism.

Among other matters, the CT Program has responsibility for the Special Event Management (SEM) Program. A "special event" is broadly defined as any major event occurring within the United States or abroad of such national or international importance that it becomes an attractive terrorist target. In 1996, the FBI was responsible for a number of important SEM events, such as the 1996 Summer Olympic Games in Atlanta, Georgia, as well as the Democratic and Republican National Presidential Conventions. However, the Olympic Games was the largest, most complex special event handled by the FBI. A substantial commitment of FBI resources was made, including approximately 800 agents and support personnel, most of whom were in Atlanta in a temporary duty capacity, as well as substantial nonpersonnel resources. Special Weapons and Tactics teams from various field offices were sent to Atlanta to serve in a stand-by status to respond to incidents requiring immediate tactical intervention. The FBI's Hostage Rescue Team also was present in Atlanta with all of its resources and capabilities. The FBI continues to dedicate substantial resources to the investigation into the bombing of the Olympic Centennial Park.

PDD-39 specifically highlights the need for the FBI to expand and/or create several key CT Program components. For example, PDD-39 emphasizes the importance of revitalizing the FBI's Infrastructure Vulnerability/Key Asset Program which is intended to identify key physical and informational industrial and government assets within this nation's infrastructure which pose attractive targets for terrorists. In general, the FBI's Infrastructure Vulnerability/Key Asset Program is a system of key asset identification and the development of a cooperative liaison with key asset owners/operators. By having key asset information readily available, should the FBI receive threat information directed at the infrastructure of the United States, it can readily determine the significance of a targeted key asset and the possible consequences of its destruction. Such information would provide a valuable tool toward interdiction and prevention of terrorist attacks.

The U.S. infrastructure is defined as a system of interdependent networks which are made up of identifiable industries and institutions that provide a continual flow of goods and services essential to the security and welfare of this country. These networks are generally categorized as electrical power, gas and oil, telecommunications, banking and finance,

transportation, continuity of government, as well as water supply systems. Within each of these networks, there are specific components which are so vital that their incapacitation or destruction would have a traumatic or debilitating impact on the United States, either regionally or nationally. These components are known as key assets. Although the FBI initially established this program in 1988, it lacked adequate personnel and nonpersonnel resources to ensure that the program flourished in the field until requested critical resources were appropriated in FY 1997.

The FBI also established a Domestic Emergency Support Team (DEST) pursuant to PDD-39. The DEST is a specialized interagency U.S. Government team configured and staffed dependent on the demands and/or needs of the entire range of potential acts of terrorism conducted within the United States. The DEST facilitates the dedication of expertise and resources necessary to respond rapidly to the scene of a terrorist incident within the United States. The FBI has oversight of the DEST.

The FBI has also increased the number and quality of Joint Terrorist Task Forces (JTTFs) across the United States. By bringing together Federal, State, and local law enforcement, JTTFs allow concerned agencies to network, combine resources, and work more efficiently against terrorists. The FBI has enjoyed a substantial degree of success in the investigation of terrorist organizations. These successes are attributable, in part, to JTTFs. Resources devoted to JTTFs will continue to be effective in countering the threat posed by terrorists in the United States.

The reactive portion of the CT Program utilizes all the resources and techniques of the FBI to investigate and prosecute terrorists who commit violent and illegal acts in the United States. These criminal acts include violations of the Protection of Foreign Officials, Neutrality, and Extortion statutes, as well as firearms and explosives laws. The ongoing investigation of the April 19, 1995, bombing of the Alfred P. Murrah Federal Building in Oklahoma City illustrates the strength of the FBI's CT Program. The FBI was able to initiate and pursue an investigation of the blast in the midst of chaos. Within days, the FBI, working with other Federal, State, and local law enforcement, had apprehended two suspects. This act of terrorism directly resulted in at least 169 deaths and injuries to hundreds of additional victims and in property damage estimated in the hundreds of millions of dollars. Even as the Federal Government readies to embark upon the prosecutorial phase of this case, the FBI continues its investigation.

The FBI recently arrested several members, including the two leaders, of the Freemen Organization in Montana. The Freemen are an anti-government group based in Montana who believe in the supremacy of local governments and claim to be "sovereign citizens" who are not obligated to abide by U.S. laws. Members of the Freemen have been involved in produced fraudulent monetary instruments for the purpose of clogging the financial system in the United States. The group holds classes in the production of these instruments, which have been attended by members of several militia groups throughout the United States. Some members have allegedly discussed the killing of Federal and State officials and judges. In acknowledgment of the possible threat posed by militia groups, the FBI now provides weekly summaries of militia criminal activities for distribution to appropriate Federal law enforcement agencies.

Hostage Rescue Team (HRT): Based on recent Presidential directives, the FBI is the lead Federal agency in major domestic crises and some overseas statutory matters. The HRT is the only authorized domestic counterterrorist team responsible for the most critical and dangerous tactical operations. The HRT provides operational support to FBI field offices in conducting successful rescues of persons who may be held illegally by a hostile force, either terrorist or criminal in nature. The team also performs other law enforcement activities as directed by appropriate authorities and is mandated to provide support to FBI Special Weapons And Tactics (SWAT) teams. HRT's capability is full-

time, expansive, multidimensional, and so unique that there is no other law enforcement team like this in the U.S.

The HRT provides tactical/operational support to FBI field offices in conducting successful rescues of persons who may be illegally held by a hostile force, either terrorist or criminal in nature, and performs other law enforcement activities as directed by appropriate authorities. HRT provides support in the areas of assault teams, observer/sniper teams, maritime operations, helicopter operations, tracked vehicle operations, mountain climbing, underwater operations and breaching. The team trains to be capable of conducting a hostage rescue in a variety of crisis environments such as aircraft, buildings, buses, ships, and oil rigs. The team's training program addresses each of these potential crisis sites and ensures the readiness of all HRT assets. These types of operations require HRT personnel to maintain and develop advanced skills in surgical shooting with a variety of weapons including handgun, submachine gun, shotgun, and automatic crew-served weapons, as well as techniques in vehicle driving, explosive breaching, climbing, maritime, and tactical helicopter operations. Since 1983, the HRT has participated in many high risk tactical operations including FBI Top 10 fugitive arrests, rural manhunts and barricades, gang raids, international terrorist arrests, and hostage rescue missions. The team has provided tactical assistance for events such as the 1987 Pan American Games, 1990 Goodwill Games, 1984 and 1996 Olympic Games, several Presidential inaugurations, annual State of the Union addresses, Los Angeles riots, and three Federal prison uprisings.

Child Abduction and Serial Killer Unit (CASKU): CASKU is a major component of the National Center for the Analysis of Violent Crime (NCAVC). Investigations of missing and exploited children matters are among the most complex investigations facing law enforcement agencies. The mobility and sophistication of many of today's offenders serve to further complicate the investigative process. The National Incidence Studies of Missing, Abducted, Runaway and Thrownaway Children estimate that between 3,200 and 4,600 annual, short-term, non-family abductions occur where approximately 70 percent of the child victims were sexually assaulted. Long-term abductions of children resulted in some 200 to 300 incidents. Of these incidents, between 43 and 147 cases resulted in the murder of the child. There are an estimated 114,500 attempted abductions each year, all involving strangers and usually involving an attempt to lure a child into a car. In a majority of these cases, the police were not contacted.

For the last 10 years, UCR has reported over 20,000 homicides annually. However, statistics are unavailable as to how many of these homicides are the result of a serial killer. In the 1990's, less than one-half of the murder victims were related to or acquainted with their killers. This is a major change from a decade ago and the rise in apparent stranger murders may reflect the existence of more serial killers. The nature and extent of the missing and exploited children problem in the U.S. has become an issue of significant concern for many citizens. The problem impacts not only on the immediate victim, but also on their family, friends, community, and law enforcement. Although this impact cannot be quantified, it clearly raises safety concerns of our citizens within their communities. Improvements in data collection, analysis, and research are necessary to better understand the scope of the problem. FBI jurisdiction has been legislated in abduction investigations through the Federal Kidnaping Statute.

CASKU has assembled 12 highly trained, and experienced investigators to respond to requests for assistance on cases of child abductions and serial and mass murder. Such a gathering of expertise in these areas does not exist anywhere else in the U.S. or in the world. These agents conduct daily consultations with investigators offering guidance ranging from violent crime analysis, criminal profiling, threat assessment, prosecutive strategies, and investigative strategies to major case management concerns. CASKU investigators respond to the investigative scene to offer assistance and coordinate the application of resources from the FBI Laboratory, Evidence Response Teams, and Rapid Start Team. These cases are complex investigations and are time-sensitive with respect to jurisdictional issues, local liaison, local law enforcement expertise, media concerns and other considerations. The CASKU investigators deploy on-site immediately to support field investigations as requested by the respective Special Agent in Charge. Agent investigators

conduct offender research interviews of child killers and serial killers for the purpose of gaining valuable insights into how these individuals were successful in order to apply this knowledge against future unsolved cases. At any time, CASKU is typically assisting field investigators in 25 time-sensitive serial murder case and 20 predatory child abductions. CASKU has identified approximately 231 cases of mass murder with 1,200 victims. There is no centralized collection of data on the number of child abductions or serial and mass murders, which increases the likelihood unreported incidents. The mobility of the offenders causes the involvement of multiple State and local jurisdictions. Federal assistance is necessary to coordinate investigative resources oftentimes lacking at the State and local level.

The Morgan P. Hardiman Missing and Exploited Children's Act was enacted as part of the Violent Crime Control and Law Enforcement Act of 1994. The Act created a Federal task force on Missing and Exploited Children. The Act was unfunded. It mandated a task force initially comprised of two members from each of the seven participating agencies, to include the FBI, U.S. Secret Service; Bureau of Alcohol, Tobacco, and Firearms; U.S. Customs Service; Postal Inspection Service; U.S. Marshals Service; and Drug Enforcement Administration. The FBI was directed to select the task force members and manage the task force. The legislation allowed for the task force to increase the number of assigned personnel to meet investigative needs. The task force uses the collective resources of each member agency to assist State and local governments in difficult missing and exploited children cases. The assistance to agencies investigating those cases is in the form of daily telephonic consultations with investigators explaining the availability of pertinent Federal resources, searches of member agency data bases, major offender time-line development, crime analysis, interview and investigative strategies, and major case management support. Task force members respond to the field office requests for on-scene assistance; conduct research, receive and provide training. The Unit Chief of CASKU serves as the head of the task force.

Special Weapons and Tactics (SWAT): The SWAT Training Unit (STU) provides operational support to FBI field offices and police and administers the field SWAT program consisting of 1,100 Agents. Management entails basic instruction at the FBI Academy or in the field; advanced instruction at 16 mandated regional training sessions each year; and participation in research projects (e.g., tactical body armor, SWAT weapons, less than lethal weapons, etc.). Operationally, the STU has been involved in incidents in St. Thomas, U.S. Virgin Islands; Phoenix, Arizona; and Jordan, Montana.

Undercover Operations Support: Law enforcement has identified undercover work as inherently stressful and extremely emotionally/physically, dangerous and, therefore, requires undercover certification through special selection assessments and monitoring procedures to support those personnel who volunteer for covert assignments. Once certified to operate in a covert capacity and assigned to an undercover operation, undercover employees (UCEs) are afforded continuing Undercover Safeguard Program support through regularly scheduled psychological assessments and debriefings. Additionally, undercover personnel are provided post-operation assessment, counseling, and training to facilitate their transition back to overt duties. Undercover Safeguard Unit (USU) personnel are highly experienced in the use of the undercover investigative technique and are prepared to provide consultation to UCEs. Undercover Safeguard Program team members, and management before, during and after Undercover Operations (UCOs). Undercover Safeguard Program personnel furnish rapid crisis intervention/assessment telephonically or on-site in support of all Bureau undercover activity and conduct liaison, consultation, and training with FBI Headquarters, field offices, and domestic and foreign government agencies involved in covert operations. The use of the undercover investigative techniques, including proprietary business entities, is essential to the detection, prevention, and prosecution of white-collar crimes, offenses involving controlled substances, public corruption, terrorism, organized crime, and other priority areas of investigation. The undercover technique is unique and highly complex in terms of the psychological risk to covert human resources. It is essential to select, monitor, and assess the right people for undercover assignments. The proper conduct of undercover investigations is a sacred trust between law enforcement

and the public which permits agents and officers to operate in other than their true identity. USTU operations ensure the public trust by monitoring the well being and conduct of individuals operating undercover every six months. If there is any indication that the UC's conduct is damaged, they are removed from the undercover program.

Initiatives with State and local assistance and services, remaining on the cutting edge of protecting the people of the U.S. and providing training to international counterparts, demand the leadership only the FBI can credibly provide. USTU personnel bring credibility to the unit's mission through their high levels of undercover experience and specialized assessment techniques specific to UCOs. The Unit is uniquely qualified to serve as a national and international model in support of covert operations. Recommendations are then made to appropriate management officials to continue or discontinue the use of FBI and State and local personnel assessed. Assessment includes psychological testing, counseling, consultations and training of the unit's client group. Unit members are uniquely qualified to make accurate decisions based on their special area of expertise. The number of Group I, Group II, and other covert investigation activity has a direct impact on the unit's ability to conduct operations effectively and efficiently.

The National Center for the Analysis of Violent Crime (NCAVC), Profiling and Behavioral Assessment Unit (PBAU): Violent crime remains at the top of the list of concerns for most Americans and is a cancer which infects a wide range of political, social, and economic issues on a national scale. Most violent crime is perceived as singular acts and is more often categorized as homicide/murder, rape, assault, robbery, and destruction of property. Consequently, violent crime is believed to be primarily a problem impacting individual localities and jurisdictions. However, any violent act can assume a larger and more ominous character when evaluated collectively within the framework of identified patterns and/or common "environments."⁴ The violent act then falls within the confluence of a much larger issue such as domestic and international terrorism, gang violence, domestic violence, organized crime, serial murders and rapes, violence in the workplace, child abuse, hate crimes, or a host of other existing or yet to be identified violence related categories impacting on a national scale. All of these crimes involve unique and aberrant behavior based patterns which are in need of further study and exploration. The knowledge gained from the close study of these behavioral aspects of violent crime have become instrumental in the way law enforcement deals with each situation. This includes all aspects of the crime, from the act itself, through the investigation, prosecution, and eventual incarceration of the violent offender.

State and local jurisdictions lack the resources, ability and legal authority to effectively address violent crime on a comprehensive, national basis. When viewed from a strategic perspective, it is important for law enforcement to address many violent crime issues from a more comprehensive and multi-functional posture. This would include the need to conduct research necessary to better understand the underlying causes of violence and to develop more effective methodologies for dealing with it. Also required is the ability to interact and coordinate between numerous different agencies and jurisdictions in order to effectively investigate the types of violent crimes which involve different States and localities.

The PBAU is an appropriate vehicle by which to address the above stated deficiencies. The services rendered by the PBAU satisfy a variety of needs which cannot be met within the law enforcement system addressing violent crime. The PBAU addresses the crime problem through a variety of programs and processes. There are two components in the PBAU. The first is Criminal Investigative Analysis Program (CIAP). Individual cases are submitted by local, State and Federal law enforcement agencies for CIA. These cases are assessed and provided with input to facilitate their resolution. Another component is the Violent Criminal Apprehension Program (VICAP) which is a computer based tracking system designed to identify serial or repeat violent offenders throughout the country. Also, part of the CIAP is the Arson Bombing/Weapon of Mass Destruction area which will develop threat assessment capabilities attendant to the chemical, biological, and nuclear areas of potential violent crime victimization. Analyses provided by PBAU give needed

investigative support for unsolved cases and appropriate strategies for pursuing the investigation more effectively.

The current capabilities of the PBAU stem from a substantial base of knowledge and experience in researching, studying and addressing violent crime problems. It is a process which employs a variety of resources applicable to the investigative process, i.e., psychology, forensic pathology, deductive reasoning, criminal investigative experience, computer technology, and anything else which can be used to facilitate the identification and capture of a violent offender. All of these processes are employed to help the requesting agency with all of the expertise and assistance necessary to facilitate its investigation.

The profiling process of the CIAP, involves techniques that have experienced consistent growth and acceptance since its formalization in 1985. However, with the recent spate of publications focusing on this process and the increasing acceptance of it as a viable investigative resource, this growth process has begun to accelerate. The PBAU services the entire U.S. law enforcement community on all levels. It is utilized to facilitate a wide range of investigative demands which can span the entire criminal investigative process from crime scene analysis to the prosecutive strategy, sentencing processes, and even an occasional probationary issue. The services include a range of expertise and technological applications that most local and State and Federal agencies do not have at their disposal. These may include profiling a criminal offender in an unsolved case, assessing a threat, linking a number of related cases from different jurisdictions, facilitating communication between different agencies, offering new investigative techniques, effective interviewing and interrogation strategies, researching data in support of search warrant affidavits, and a number of other features which work to ensure that violent crime is addressed on a comprehensive, interactive and nationally appropriate level of service. Also, there are emergency situations which arise on a daily basis which may entail a couple of hours or a number of analysts for up to a number of days or weeks of constant full-time attention.

Security Countermeasures (SCM): The FBI's Security Countermeasures program is a nationally-directed and coordinated program consisting of eight operational activities targeting specific high threat areas subject to compromise and penetration by persons, groups, or organizations whose interests are inimical to the United States. These eight operating activities are as follows: Personnel Security; Industrial Security; Security Clearance Investigations; Physical Security; Information Security; Sensitive Compartmented Information and Special Access Programs; Operations Security; and, Automated Data Processing and Telecommunications Security.

Recognizing that one of the two most significant intelligence threats within the United States stems from human intelligence gathering, the FBI Security Countermeasures (SCM) Program is dedicated to making FBI employees and FBI contract employees sensitive to that threat. The FBI has set as a priority the strengthening of security countermeasures in all areas involving personnel and has developed new initiatives in this area. The primary focus is on the proper handling and safeguarding of all National Security Information (NSI) and other sensitive data, by ensuring all FBI applicants, employees, contract employees, and other individuals with access to NSI and other sensitive data are trustworthy.

The strengthening of security countermeasures in all areas involving personnel is a top priority within the FBI's SCM Program. The greatest threat for compromise are employees of the U.S. Government and its contractors who, in many cases, have access to sensitive national security information. The SCM Program is dedicated to combating these security compromise threats through the implementation of an effective, enhanced SCM Program. For instance, in accordance with EO 12968, EO 10450, and Director of Central Intelligence Directive 1/14, the FBI conducts reinvestigations of its employees at least once every five years. These investigations are designed to ascertain if there are potential security concerns relating to whether an employee should continue to maintain a "Top Secret" clearance or access to Sensitive Compartmented Information. The SCM Program

has identified the Five-Year Reinvestigation Program as a top priority for the FBI.

The safety and well-being of FBI employees is of paramount importance. The goal of the FBI's Physical Security Program is to protect national security information (NSI) and other sensitive data as well as to ensure the safety and integrity of all FBI facilities, equipment, and personnel through the use of physical barriers or specified procedures designed to prevent unauthorized access to FBI space or data by an individual or group whose interests may be inimical to those of the United States.

The November 1994 murders of FBI agents and local police officers in Washington, D.C., and the April 19, 1995, bombing of Alfred P. Murrah Federal Building in Oklahoma City painfully illustrated the vulnerability of Federal workers in the workplace. Following these incidents, the FBI began augmenting physical security in all overt FBI facilities, an effort which will affect all 56 field offices, approximately 400 resident agencies and off-site facilities, and regional computer centers and other specialized facilities.

Attorney General Security: The position of the U.S. Attorney General (AG) is a high-profile, high-threat-level position. The AG is highly visible to the public and instantly recognized by the public, thereby increasing the threat-level to her security. The present AG has been involved in several controversial issues and situations that were, and are, intensely covered by the media. While the AG's actions in these matters were popular with the general public, these same actions have made her a target for threats by some extremist individuals and organizations, both within and outside the borders of the U.S. The Special Detail Unit (SDU) provides personal protection to the AG whenever she is outside of her residence, including official functions, recreational and other personal activities; and it provides advance security assessments and arrangements for security prior to all movements. The AG travels extensively, averaging four domestic trips per month and three foreign-country trips per year, often traveling to multiple cities during these trips. Additionally, the present AG enjoys hiking, boating, and other outdoor activities, on a regular basis throughout the year. During regular business hours, the AG is transported in a DOJ vehicle, driven by a deputized DOJ employee, always accompanied by a member of the SDU, and followed by a member of the SDU in an FBI vehicle. During non-business hours, the Special Detail is responsible for transporting the AG in FBI vehicles. Because a Special Detail Agent is always with the AG, the Special Detail is looked upon by the AG as a constant link between the AG and the Justice Command Center (JCC) and the FBI Strategic Information Operation Center (SIOC). The FBI was chosen to provide security for the AG because of the extensive training afforded FBI agents and the FBI's vast intelligence network.

Crisis Management: The FBI's Crisis Negotiation Program, consisting of 389 agents, and the Crisis Management Program provide operational support to FBI field offices and other law enforcement agencies. The management of these programs entails responding operationally to crises worldwide, providing basic instruction at the Academy, conducting advanced instruction at eight mandated regional training sessions annually, and participating in essential research projects needed to support these programs. In 1998, the Crisis Management Unit anticipates training the SAC Crisis Response team and DOJ officials. This training will continue to standardize crisis management concepts throughout the FBI and other law enforcement agencies, both nationally and internationally. Current Crisis Management Unit complement supports and maintains Bureau operations and training needs, with limited training assistance being offered State and local agencies, based on personnel and budgetary constraints. Training conducted by the Crisis Management Unit has a direct impact on the FBI's ability to safely and effectively handle crisis situations that range from single-office involvement to highly complex multi-agency situations.

Aircraft Operations and Special Operations Group (SOG): The Aircraft Operations Program base level capabilities provide 400 flight hours per year for each aircraft assigned to field offices. NightStalker is funded for 700 hours per year, while the emergency transportation and undercover multiengine aircraft are funded for a 250-300 hour level of

operation. This level of operation allows the funding necessary to complete all necessary maintenance and overhauls. Actual demand for field office aircraft is 500-600 hours per year.

Aerial surveillance accounts for over 70 percent of the total flight hours each year. This form of surveillance supports and reduces the number of ground personnel necessary to maintain a covert surveillance. Investigations facilitated in this manner include drugs and organized crime, domestic and international terrorism, violent crime and national security. The SOG consists of 40 surveillance squads operating in 34 field offices. There are currently 376 SOG agents that make up 75 ground surveillance teams. There are 125 full-time pilots assigned to the SOG that provide aviation support. Surveillance is a necessary and useful investigative technique. To be most effective, it is best conducted by a group trained and dedicated to that function working with aviation assets. The SOG and the FBI air operations are the two major components of the FBI's surveillance capability. Utilization of the surveillance investigative technique has proven critical to the success of the FBI's mission in investigations in all of its investigative programs. Surveillance is the real time first hand observation of subject(s) and their activity bearing investigative interest to the FBI by specially trained law enforcement officers. It has proven to be the most reliable source of information that law enforcement has at its disposal as this information takes on instant credibility. Agents are able to provide direct testimony regarding their actual observations. Surveillance is a technique that becomes very valuable in a variety of situations: (1) It provides immediate results and feed back on the location and/or activities of subject(s); (2) It serves as verification of information provided by other individuals and/or informants; (3) It serves as the verification process of information gleaned from Title III investigations; and (4) It enables law enforcement officers the means to obtain photographs and/or video of subjects and/or activities pertinent to investigations.

The SOGs operate covertly and provide the most effective physical surveillance coverage of subjects as a result of their training, experience and working as a team on a daily basis. SOGs provide critical testimony and evidence in the form of photographs, video and recovered documents successfully in the most sensitive investigations. The SOG responds to investigative requests and priorities of the field office; however, during major FBI investigations, SOGs often travel to assist other offices and, other than funding, require no equipment or logistical support from the host office.

LONG RANGE GOAL: To mitigate the prevalence and the effect of violent crime in the United States, to reduce the number of civil rights violations, to collect, analyze, and exploit information to identify and neutralize the activities of terrorist groups, and to sustain continuity and consistency in the crisis response of the FBI throughout the United States and the world.

MAJOR OBJECTIVES:

- To reduce the rate of violent crimes in those areas which the FBI can proactively address and investigate with emphasis on sexual exploitation against children, bank robbery groups, violent fugitives, terrorism, and murder for hire schemes.
- To identify and dismantle street gangs that are classified by the FBI as criminal enterprises.
- To more effectively and efficiently investigate those violent crimes in our society which require an immediate reactive response by the FBI, including kidnappings.

extortions, threats and assaults of designated government officials and officers, bank robberies, crimes aboard aircraft, police killings, product tampering, murder-for-hire and the sexual exploitation of children.

- To identify the scope and impact of thefts from interstate shipment and the interstate transportation of stolen property on national/international commerce, and to investigate/prosecute those individuals and criminal enterprises involved in those crimes.
- To reduce the incidence of serious and violent crimes occurring in Indian country through proactive and joint investigative strategies.
- To effectively identify and manage investigations of Government Reservation Crimes (other than crimes occurring in Indian Country) which have a national or regional impact using both reactive and proactive investigative strategies.
- To improve the investigative responsiveness to allegations in violation of applicable Federal laws which protect the civil rights of inhabitants of the U.S., with particular emphasis on addressing racial and religious violence to include FACE Act violations, particularly church burnings, allegations of law enforcement misconduct, particularly color of law violations, and violations of the Involuntary Servitude and Slavery statutes.
- To provide operational assistance to include on-site expertise and advice, as needed, and enhanced crisis management training to each field office.
- To increase and enhance operational assistance and negotiation training throughout the U.S. and the world, to include the development, promotion, and use of the Hostage Barricade System (HOBAS) database and the most current and state-of-the-art negotiation techniques.
- To provide an effective aerial surveillance capability for up to 90 percent of investigative activity in which use of this technique has been requested whether using unaided pilot observation or FLIR equipment.
- To provide readily available transport capability to 95 percent of those investigations which have time critical needs or require sensitive equipment on-site.
- To contribute to the reduction of the number of incidences of children abduction, and serial and mass murder, including rendering assistance to lawmakers in the creation of legislation designed to further protect children and stop predatory violent offenders.
- To have a positive impact on the missing and exploited children problem in the U.S.
- To maintain excellence in the accurate and timely assessment of UCEs and advocate for UCE well being; furnish comprehensive national and international consultation and training; and, meeting the demand increased U.S. monitoring of the increased use of the UIC investigative technique.

- To maintain/increase the effectiveness of SWAT while ensuring agent safety by enhancing current equipment inventories, addressing training requirements, and standardizing weapons systems.
- To provide operational support functions to law enforcement agencies confronted with unusual, high-risk, vicious, or repetitive violent crimes.
- To maintain/increase the effectiveness of the HRT while ensuring the safety of the public, suspects, and law enforcement officers by enhancing current equipment inventories and addressing training requirements.
- To neutralize through investigations the ability of terrorist groups to adversely affect the interests of the United States by detecting, preventing, and/or reacting to unlawful, violent acts and criminal activities of terrorist groups or individuals.

PROGRAM INCREASES: No program increases are requested for the Other Field Programs Decision Unit in Salaries and Expenses for FY 1998. However, a program increase of \$13,900,000 is requested in the Violent Crime Reduction Program.

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: Crime continues to be a significant problem facing the United States. The issue of crime has permeated American culture; media reports of crime dominate the print and broadcast news media. The success of television shows such as "Cops" and "America's Most Wanted," in addition to the television news magazine shows such as "Dateline," demonstrate America's obsession with crime. This concern is not unwarranted. In the 1995 Uniform Crime Report, statistics show that a violent crime occurs every 18 seconds and a property crime every three seconds. Few Americans born today will be unaffected by crime during their lives.

Domestic violent crime and its financial impact place an overwhelming burden on most State and local police agencies. Moreover, the weakening or elimination of borders in many parts of the world and the growing availability of electronic forms of communication and commerce allow criminals significant degrees of domestic and international mobility. Social, political, religious and economic factors are generating changes that stretch the ability of the United States and foreign law enforcement agencies to respond to the crime problems generated by these developments. The FBI must take a leadership role in the development of knowledge and operational capabilities for law enforcement to attack these crime problems and develop programs to train our counterparts in these techniques.

In the days of the American West, law enforcement officers were selected because of their physical prowess. However, law enforcement personnel today must enter the job prepared to face mental as well as physical challenges. In addition, law enforcement increasingly needs technical experts to assist the solving of crimes. The competency of these individuals often means the difference between a solved and unsolved case.

As the FBI continues to grow both in size and complexity, it is increasingly evident that professional dedicated employees with specific areas of expertise are vital to the continued success in the FBI's efforts to support the criminal justice community in the fight against crime and violence. The FBI's total funded staffing level for 1997 is 11,308 special agent positions and 16,183 support positions for a total of 27,491 positions. The FBI's on-board staffing level at the end of 1996 was 10,695 special agents and 14,359 support

employees for a total of 25,054 employees. As a result, the FBI entered fiscal year 1997 under the funded staffing level for special agents by 613 and under the support complement by 1,824.

The FBI plans to continue an aggressive hiring effort through 1997 and 1998 to achieve and maintain the funded staffing levels. Simultaneously, the FBI is hiring contract Special Investigators to deploy the Background Investigations Contract Services (BICS) concept to all 56 Field Offices and 38 different types of background investigations by the end of 1997. BICS will allow the FBI to provide cost-effective background investigations while redirecting agents from applicant processing and background investigations to higher priority investigations.

Under the BICS concept, the FBI will use contract investigators to conduct background investigations of persons being considered for all but the most sensitive Government positions. The FBI will continue to provide recruitment processing, overall management and assignment of background investigations. Additionally, FBI personnel specialists will review the results of contract background investigations for completeness and to determine the need for further inquiries.

The FBI fills many positions, to include the agent position, general clerical positions, and dozens of diverse specialty support positions such as scientists, computer experts, intelligence analysts, automotive specialists, attorneys, industrial psychologists, and nurses. With such diversity in positions, the hiring mechanisms are also diverse, but share the same basic procedure. This procedure involves the selection of effective mediums for recruitment; the identification of people with the required interest, education, and qualifications; and, the employment of an initial screening, written test, and interview to measure an applicant's knowledge, skills, and abilities (KSAs). After satisfactory completion of these steps, a conditional letter of employment is issued. The applicant must then successfully complete a polygraph examination and drug test; a background investigation examining the applicant's adult life in order to qualify for a security clearance, and for many positions, a fitness for duty physical.

An individual selected as a new agent must report to the FBI Academy for 15 weeks of training. The FBI new agent training program provides comprehensive instruction to ensure that entry level agents possess the basic knowledge and skills required to serve the American public. Among the components of the new agent training curriculum are behavioral science, communications/interviewing, ethics, legal instruction, informant development, physical fitness/defensive tactics, evidence, firearms, Equal Employment Opportunity/sensitivity training, field office administrative operations and procedures, practical problems, and emergency vehicle operations. Agent trainees also receive instruction for each of the FBI's investigative programs: organized crime, drugs, violent crimes, white-collar crimes, counterintelligence, terrorism, civil rights, and applicant.

There is a continuing and critical need to provide training and development courses for FBI personnel assigned to field offices and FBI Headquarters. This training is necessary to maintain and enhance the professional skills of FBI personnel in their present assignments, to equip personnel to handle new investigative and administrative requirements, and to develop the leadership and management skills of potential supervisors, managers, and executives. The large-scale hiring of new agents during the last two years means that 17% of the FBI's agent workforce has less than two years experience. The FBI must be prepared to offer continuous education for these less-experienced agents to enhance their development and improve their ability to solve complex crimes.

The FBI currently has approximately 5,000 agent and support employee managers who represent the target population for the Comprehensive Bureau Management Training

Program. In recent years the turnover of management employees has been increasing rapidly because of retirements and promotions. However, the volume of new agents' training has necessitated the curtailment of management training programs, resulting in the promotion of many employees who have not received critical management and leadership training before assuming their new responsibilities.

The FBI also provides instruction for State and local criminal justice practitioners, both at the FBI Academy and throughout the United States at State, regional, and local training facilities. The FBI is presently the only agency at the Federal level that offers continual assistance to approximately 20,000 police agencies for training. The principal course of study for State and local law enforcement officers is the FBI National Academy Program, an 11-week multi-disciplinary program for officers who are considered to have potential for further advancement in their careers by their nominating agency heads. During 1998, 1,040 State, local and international law enforcement officers are projected to attend the FBI National Academy.

Other training opportunities at the FBI Academy also exist for State and local law enforcement personnel. The National Executive Institute (NEI) and the Major City Chiefs (MCC) Programs provide a forum for the development of the chief executive officers of the 150 largest law enforcement agencies in the United States and selected international law enforcement agencies. The focus of these programs is to provide an opportunity to discuss contemporary law enforcement issues, to exchange ideas, concepts and strategies for successful leadership, and to foster a networking of executives for future consultations. The Law Enforcement Executive Development Seminar (LEEDS) is designed for police chiefs from mid-sized agencies. In addition, the National Law Institute is a one-week, specialized training program for State and local police, legal advisors and prosecutors.

The Field Police Training Program (FPTP) serves as the foundation for the FBI's Comprehensive Law Enforcement Training Program. Training sessions cover the full range of law enforcement training topics, such as hostage negotiations, computer-related crimes, death investigations, violent crimes, criminal psychology, and forensic science. During 1998, the FBI anticipates training 125,000 criminal justice personnel at State, regional, and local training facilities.

The FBI conducts high-impact research in the behavioral sciences to support training initiatives and to build specialized knowledge in violent crime that will help the FBI and all law enforcement in performing their operational and administrative functions. In support of the FBI's Violent Crime Initiative, training and research is conducted in gangs and gang violence; youth violence; community policing; hate crime; killing and felonious assault of law enforcement officers; homicide; predictability of dangerousness; and crime analysis. The demand for this training and supporting research has exceeded the capacity of the program and is continuing to grow.

Stressing a cooperative effort, the FBI must increase law enforcement effectiveness by providing large-scale training and education not only in identifying and combating traditional criminal activity, but also the most sophisticated activities of criminal enterprises. As computer technology continues to develop and expand at seemingly exponential speed, more and more law enforcement agencies will need to participate in the automated environment if they are to remain current. The FBI should be at the vanguard of making computers, computer training, relevant software and access to the "Information Highway" available to all students.

The FBI conducts its training programs at the FBI Academy in Quantico, Virginia, field offices and off-site locations, at local, State, and regional facilities throughout the Nation and at various international sites. At the FBI Academy, training is provided for FBI new agent training, the FBI National Academy, Drug Enforcement Administration (DEA)

basic agent training and as capacity permits, in-services/comprehensive FBI management training, and specialized schools, conferences, and symposia. In addition, the International Law Enforcement Academy in Budapest, Hungary, began operation in April 1995.

The FBI Academy is located approximately 40 miles south of Washington, D.C., on approximately 400 acres amid the sprawling United States Marine Corps Base at Quantico, Virginia. The Academy's mission of training, research and operations is accomplished in 21 major buildings housing not only the FBI's Training Division, but also the Information Resources Division's Engineering Research Facility (ERF); the Laboratory Division's Forensic Science Research Training Center; and the Critical Incident Response Group (CIRG). In addition, the Drug Enforcement Administration (DEA) Office of Training is located at the Academy. Approximately 1,200,000 gross square feet of floor space are enclosed, which includes office, classroom, laboratory, firearms, forensic, engineering research, library, auditorium, gymnasium, dormitory, dining and recreation space. Exterior facilities include a firearms training range, driver training track and recreation fields and facilities.

The FBI Academy's primary complex of buildings were completed in 1972, 24 years ago. The Firearms Range became operational 40 - 50 years ago. Facilities are becoming out dated and in need of repair, maintenance and modernization. Due to expanded needs of the FBI, DEA and mandated Priority Law Enforcement Training (PLET), facilities need expansion as well as improvement to bring state-of-the-art training capabilities to the FBI Academy. Currently the FBI is unable to accommodate over 25 percent of the requests for training.

The capacity of the FBI Academy is set at approximately 203,500 Student Training Days (STDs) made up of FBI, DEA, National Academy Program, in-services for FBI personnel and other PLET and special events participants. The primary training categories (FBI New Agents, National Academy, and DEA Entry Level) will occupy 80 percent of the lodging capacity in 1998. Because of Academy capacity limitations and the emphasis on new agent training, most priority in-service training must be done regionally in 1997 and 1998.

The FBI mandates that all agents "must demonstrate proficiency with Bureau-issued or approved weapons" quarterly. More than 1,200 SWAT agents train 2-3 times per month in addition to fulfilling their quarterly requirements. Many ranges used by FBI agents are "spartan" at best and may not be compatible with FBI training requirements or schedules. To begin to address this shortfall, the FBI will begin modernizing the existing outdoor ranges at the FBI Academy with funds received in 1996.

The FBI provides and maintains sophisticated audiovisual presentation systems in 25 classrooms and two auditoriums at the Academy as well as designing and producing new training and internal information materials in many media including vugraph and 35mm transparencies, monochrome and color photography, video tape recordings, and computer-based multimedia programs. The FBI's Distance Learning Training Program (DLTP) uses satellite and video teleconferencing technologies to provide training and education to FBI personnel, agent and support and the law enforcement community, domestic and international. Many, if not most, of the training activities conducted at the Academy are dependent upon the equipment, systems, and services.

To enhance our ability to reach our law enforcement partner across the country, the FBI has produced 59 "Viewpoints from the FBI Academy" programs since March 1991. The programs are 30-minute taped programs shown on the Law Enforcement Television Network (LETN) which features FBI Academy instructors. LETN is a 7-day, 24-hour per day

law enforcement training network based in Carrollton, Texas, that supports approximately 5,000 law enforcement subscribers. The FBI Academy anticipates continuing its production of 12 programs per year for LESTN.

Since March 1986, the FBI has produced 56 live, two-hour, interactive teleconferences for the Law Enforcement Satellite Training Network (LESTN), which is operated at the Academy. In June 1995, the FBI began originating its LESTN teleconferences live from the Academy television studio. The topics for both programs are geared toward the FBI and general law enforcement community. LESTN has approximately 1,500 down sites on the training network. These down sites include Federal, State, and local law enforcement departments and corrections, law enforcement training academies, universities, community colleges, libraries and local school systems. An estimated 15,000 to 30,000 viewers watched LESTN programs live and many more viewers watch the programs on tape at later times. LESTN and LESTN programs are kept in law enforcement resource libraries for future viewing.

To combat international crime, law enforcement around the world must be prepared to work cooperatively. One of the most effective methods of building rapport and eliciting cooperation from law enforcement in these new countries is through training. Such training not only results in liaison successes for the FBI, but increases the effectiveness and efficiency of these police services to make them better partners with the FBI on operational matters. As a result of the geo-political changes in Eastern Europe, the FBI continues to receive requests for training and assistance from countries in this part of the world. Besides these emerging democracies, the Peoples Republic of China (PRC), Central and South America, Pacific Rim countries, and the Caribbean States have requested assistance in the fight against transnational crimes, such as financial crimes, drug smuggling, and organized crime.

The FBI also manages the operation of the International Law Enforcement Academy (ILEA) which opened in April 1995 in Budapest, Hungary. The facility hosts specialized training and seminars in addition to a professional development program similar to the National Academy conducted at Quantico. In 1995, three classes of officers from eight different countries graduated from the Academy. In 1996, five classes with officers from 13 countries are currently planned. In both 1997 and 1998, five classes are also planned. The ILEA is a combined effort of the Department of State and all Federal law enforcement agencies within the U.S. Government. Instruction has been provided by the FBI, other U.S. law enforcement agencies, as well as law enforcement personnel from Canada, Germany, Hungary, Ireland, Italy, Russia, the United Kingdom, and the European Law Enforcement College, in Brussels, Belgium. The FBI is the lead agency for coordinating all activities at the ILEA.

LONG-RANGE GOALS: To effectively recruit, process, investigate and appoint the highest quality individuals to meet FBI staffing needs, and to obtain and maintain a diverse work force at an acceptable operating level; and, to conduct thorough, penetrative, and timely background investigations of FBI applicants and candidates for employment with other Federal Government entities, i.e., the White House, the Department of Justice, certain Congressional committees, Department of Energy, Nuclear Regulatory Commission, and the Administrative Office of the U. S. Courts.

To provide initial and advanced professional training and investigative support for FBI agent and support personnel; and to provide training and retraining sessions to Federal, State, local and international law enforcement officers through the FBI National Academy and International programs, enabling them to carry out their increasingly complex responsibilities in an efficient, professional, and effective manner.

MAJOR OBJECTIVES:

- To recruit, process, investigate and hire qualified applicants to obtain/maintain the 1998 appropriated funded staffing levels for both agent and support positions.
- To process a minimum of 80 percent of the background investigations initiated within the deadlines established.
- To procure sufficient contract medical professionals to address the physical examination and drug testing requirements of the hiring process and Special Investigators and typists to ensure timely background investigations.
- To utilize FBI Academy facilities to the maximum and fund other regional training initiatives to support mandated and backlogged in-service training consistent with the Bureau's overall mission.
- To continuously refine and expand the level of training provided to State and local law enforcement agencies, as well as to create and maintain the requisite conditions to facilitate cooperation between FBI and local agencies in areas of mutual concern and interest.
- To insure that all agents and other law enforcement personnel involved in practical applications training are fully capable of conducting successful investigations utilizing sound investigative techniques and utilizing the skills taught and reinforced through practical applications, firearms training, physical training and other academic topics at the FBI Academy.
- To illustrate to Federal, State, and local executive law enforcement participants the most current techniques of leadership and futures research, broaden the view of the law enforcement executives to issues beyond those of immediate interest to law enforcement, explore alternative presentation styles and speakers' capabilities geared to adult learning, continue and expand the law enforcement executive networking, and to provide two NEI programs to Eastern European Law Enforcement Executives per year.
- To expand investigative training capabilities to state-of-the-art instructional technology and distance learning techniques, and to identify and develop the curriculum which will be delivered via distance learning.
- To execute a five-to-ten year recurring cycle of replacing production and presentation equipment and systems to ensure effective delivery of well-produced professional materials so that the FBI Academy can continue to enjoy the reputation as the premier law enforcement training institution.
- To increase the availability of computer technology for training law enforcement, to increase the complement of skilled computer support personnel, to increase the complement of Computer Instructors and to develop a core staff that would facilitate the development of materials on behalf of the FBI.

- To develop new and innovative training programs and to engage in critical behavioral science-related research focusing on gangs and gang violence; youth violence; killing and felonious assault of law enforcement officers; crime analysis; homicide; community policing; hate crime; and predictability of dangerousness.
- To serve as the clearinghouse for all requests for international training; coordinate the responses to those requests with appropriate FBIHQ entities; through continuous assessment of FBI operational interest identify those countries where active investigations might occur; identify operational personnel with substantive experiences to deliver FBI training programs; develop and sponsor effective Instructor Development and Cultural Awareness Seminars to prepare FBI instructor personnel program delivery; for each substantive program, design state-of-the-art curriculum modules and course materials for teaching in the international police community; develop pre/post-evaluation protocols to be utilized in international police training program evaluations; identify and assign personnel to provide leadership and direction in the development of future FBI-sponsored International Law Enforcement Training Academies; administer the International Law Enforcement Academy (ILEA), Budapest, Hungary.

PROGRAM INCREASES: No program increases are proposed for 1998.

	PRODUCTIVITY/ EFFICIENCY RATIO						

- A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS
- 1.1 None of the data includes DEA training at the FBI Academy, but Academy-based FBI in-service training and training provided to other law enforcement was substantially curtailed during 1986-1990 and is projected through 1999 to accommodate DEA training at the FBI Academy.
- A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS
- 1.1 None of the data includes DEA training at the FBI Academy, but Academy-based FBI in-service training and training provided to other law enforcement was substantially curtailed during 1986-1990 and is projected through 1999 to accommodate DEA training at the FBI Academy.
- Specialized-FBI is In-Service/Comprehensive Bureau Management Academy-based training. This training includes specialized, technical, management, and executive related courses for FBI Special Agents and support personnel.
- Other Priority Law Enforcement Training (PLET) consists of specialized, technical, forensic and executive training for State, local, Federal and international law enforcement personnel. This training also includes forums and symposia for emerging issues confronting the national and international law enforcement community.
- The International Law Enforcement Academy (ILEA) in Budapest, Hungary, began operations in April 1995.
- 1.2 Three months after FBI employees attended various in-services at the FBI Academy a questionnaire is sent to them for their evaluation of the in-service they attended. These questions were only two of those asked on the survey. The survey was curtailed in 1996 due to a lack of resources; however, it was resumed in 1997.
- 1.3 At the end of each National Academy session, students complete a questionnaire evaluating their courses.
- 1.4 National Academy students are asked these questions concerning each course they attended.
- B. FACTORS AFFECTING 1996 PERFORMANCE
- The acceleration of New Agent training classes decreased specialized training for FBI personnel and priority law enforcement training.
- The FBI remains supportive of the Field Police Training Program. However, the current emphasis of New Agent training has prevented many units from sending instructors to conduct field schools.
- C. FACTORS AFFECTING SELECTION OF FY 1997 AND 1998 TARGETS
- Specialized training for 1997 is affected by FBI Academy capacity, New Agent training requirements, availability of instructors, and funding. The estimates in 1998 will meet FBI requirements.

- A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS
 - I.1 None of the data includes DEA training at the FBI Academy, but Academy-based FBI in-service training and training provided to other law enforcement was substantially curtailed during 1986-1990 and is projected through 1999 to accommodate DEA training at the FBI Academy.
 An increase of 10 students per National Academy session has been proposed effective April 1997.
 In addition to the eight-week ILEA program, the FBI and other agencies will conduct shorter (1-2 week) regional seminars at the ILEA. Additional bed space will allow for approximately 140 such seminars annually. The FBI will be allocated a share of this additional bed space by the ILEA Steering Committee, which is composed of representative from the Department of State and other Federal law enforcement agencies.

A.	DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS
1.1	None of the data includes DEA training at the FBI Academy, but Academy-based FBI in-service training and training provided to other law enforcement was substantially curtailed during 1986-1990 and is projected through 1999 to accommodate DEA training at the FBI Academy.
A.	DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS
	DEMAND/WORK-LOAD
1.1 & 1.2	Due to the two-year hiring freeze (1992-1994), a backlog of applications were pending. Actual numbers not maintained for 1994.
3.1 & 3.2	DEMAND/ WORK-LOAD & OUTPUT Reimbursable background investigations are those in which the FBI is compensated for the cost of providing the service by the user. The FBI is reimbursed by the Department of Energy, Nuclear Regulatory Commission, Administrative Office of the U. S. Courts, the Department of Justice, and the White House.
3.2 & 3.3	DEMAND/WORK-LOAD & OUTPUT Non-reimbursable background investigations are funded through the FBI's base level funds. Non-reimbursable background investigations include FBI Special Agent and support background investigations, various Congressional Committees and certain background investigations conducted for the Department of Justice and the White House.
1.1	OUTPUT Special Agent Applicants are processed in phases. Phase I is a battery of tests comprised of three written tests and Phase II consists of an interview and written simulation tests.
3.1 & 3.2	OUTPUT One contributing factor to the reduced number of reimbursable and non-reimbursable investigations received from OGEs could be the month-long shutdown of many Federal agencies in 1996, inclement weather and the uncertain budget atmosphere during the first half of the fiscal year.
3.1 & 3.2	DEMAND/WORK-LOAD & OUTPUT During the FY 1995 budget process, the Level II Presidential appointment background investigations (subclassification 161 B) were converted from direct funded to reimbursable. These include Assistant Secretaries of Executive Branch departments and independent establishments of Government corporations wherein the requests emanate from the White House.
1.1	OUTCOME Special Agent Applicants Resolved represents Special Agent applicants who passed Phase II and receive a conditional letter of employment pending background investigation and polygraph results.

A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS

- 1.1 None of the data includes DEA training at the FBI Academy, but Academy-based FBI in-service training and training provided to other law enforcement was substantially curtailed during 1986-1990 and is projected through 1999 to accommodate DEA training at the FBI Academy.
- 1.2 Support Applicant Resolved represents support applicants who receive a conditional letter of appointment pending background investigation and polygraph results.

DEMAND/WORK-LOAD, OUTPUT & OUTCOME

- 2.1, 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.1, 3.2, 3.3, 3.4, 3.5, & 2.2 The different types of background investigations are broken down to subclassifications for Time Utilization Record Keeping. As the BICS Program expands into additional Field Office territories, not all types of background investigations (subclassifications) are handled by BICS immediately. Reimbursable subclassifications are handled first, followed by non-reimbursable subclassifications in 30 to 60 days.
- Currently, the BICS Program is addressing 27 background investigation subclassifications. However, because of shortages in personnel resources, not all 27 subclassifications are handled in each field office where BICS has established a presence.

PRODUCTIVITY/EFFICIENCY RATIOS

- 3.3 Satisfaction rate currently based upon verbal liaison with points of contact with other Government entities. A survey is to be developed by the end of 1996, to solicit customer satisfaction rates.

3.1 & 3.2

Following the 1992-94 hiring freeze, and since the Director appropriated Congressional authorization to hire additional Special Agent personnel, the Applicant Program's emphasis in meeting deadlines shifted to Bureau applicants. These shifting priorities impacted on meeting deadlines in background investigations for OGEs. Established deadlines vary for each type of background investigation classification. These deadlines have been negotiated with the non-FBI entities for which background investigations are conducted to accommodate their needs, and are assigned to FBI Special Agent and support applicant background investigations to accommodate FBI hiring needs.

B. FACTORS AFFECTING 1996 PERFORMANCE:

INPUT & OUTCOME

- 1, 1.3 & 1.4 During the two-year hiring freeze, the FBI realigned resources previously assigned to the Applicant Program to higher priority areas. Implementation of the FBI's escalated hiring plan has placed a significant strain on the resources currently available for this program. Streamlining efforts and realignment of resources contributed to the FBI's success in meeting the hiring demands.

OUTCOME:

- 1.4 Support hires for 1996 include 100 Honors Interns and 1,201 summer employees. Full background investigations are not required for the FBI's summer employee program.

C. FACTORS AFFECTING SELECTION OF FISCAL YEAR 1997 AND 1998 TARGETS:

- A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS
- 1.1 None of the data includes DEA training at the FBI Academy, but Academy-based FBI in-service training and training provided to other law enforcement was substantially curtailed during 1986-1990 and is projected through 1999 to accommodate DEA training at the FBI Academy.
- 1.1.3 1.4, 2.1
& 2.2 INPUT & OUTCOME
Shortages of personnel resources could impact upon the schedule for full implementation of BICS to all Field Offices. To adequately address the FBI's escalated hiring plan and deploy the BICS concept to all field entities, a realignment/reprogramming of work years could be required.
- 3.2, 3.3, 3.4, DEMAND/WORK-LOAD, OUTPUT & PRODUCTIVITY/EFFICIENCY
3.2 & 3.3 The 1996 Presidential election is expected to impact the number of background investigations requested during 1997. Traditionally, during the first year of a Presidential Administration, whether or not a new President is elected, requests for background investigations dramatically increase.
- 1.1, 1.1.1 2. DEMAND/WORK-LOAD, OUTPUT & OUTCOME
1.3, 1.1 & 1.3 There is the potential for a higher attrition rate for Special Agents in 1998 and 1999. This stems from the number of Special Agents reaching mandatory retirement age (200 in 1998 and 231 in 1999).

Federal Bureau of Investigation
Salaries and Expenses
Justification of Program and Performance
(Dollars in thousands)

Forensic Services	Perm.		EIE	Amount
	Pos.			
1997 Appropriation Anticipated	722	665		\$76,585
1998 Base Anticipated	722	684		76,508
1998 Estimate	722	684		76,508
Increase/Decrease

BASE-LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: The Forensic Services program also has 1998 base funding in other FBI appropriations accounts, including \$34,369,000 in VCRP and \$32,559,000 in Construction.

The FBI Laboratory provides forensic examinations and related services to Federal, State, and local law enforcement agencies through a total commitment to quality service; prompt, accurate and thorough response to all requests; technical leadership; innovative use of technology to facilitate investigations; sharing information and technology with the Federal and non-Federal criminal justice community; and a work environment which fosters open communication, creativity, individual initiative and personal achievement.

The successful investigation and prosecution of crimes requires, in most cases, the collection, examination, and scientific analysis of evidence recovered at the scene of the incident and obtained during the course of the investigation. Oftentimes, the availability and presentation of physical evidence is used in court to demonstrate the guilt, either directly or circumstantially, of the person on trial. The Forensic Services program supports the operations of the FBI Laboratory, one of the largest and most comprehensive crime laboratories in the world and the only full-service Federal forensic laboratory. The FBI Laboratory performs examinations of evidence for all duly constituted law enforcement agencies -- Federal, State, and local -- in the United States.

The FBI Laboratory is recognized as a leader in the scientific analysis and solution of crime in the United States. Since its inception, the FBI Laboratory has consistently strived to enhance its service to the law enforcement and criminal justice communities. Through exhaustive analysis, appropriate methodologies are developed to apply the most recent scientific and technological innovations to the examination of forensic evidence in criminal investigations. The reliability of these techniques is crucial, not only to the law enforcement profession, but also the public it serves.

Examinations of evidence are performed, free of charge, for all duly constituted law enforcement agencies in the United States, that do not have access to the sophisticated instrumentation and/or expertise necessary to perform forensic examination(s). During FY 1996, the FBI Laboratory examiners and technicians conducted 696,543 examinations

of evidentiary items submitted. Additionally, 2,184,998 latent fingerprint examinations were performed.

The FBI Laboratory also provides investigative support for such programs as the Polygraph Program, the Special Photo Unit, and the Foreign Language Services Program. In FY 1996, the FBI Laboratory conducted 8,307 polygraph examinations and processed 1,353,271 photographs. Additionally, 9,492 pages from written and oral communications were translated by qualified FBI foreign language specialists and contract linguists.

The FBI Laboratory is organized into five functional groups: Scientific Analysis; Investigative and Operational Support; Latent Fingerprints; Forensic Science Research and Training; and Special Projects.

THE SCIENTIFIC ANALYSIS SECTION

The Scientific Analysis Section (SAS) supports the examination of physical and biological evidence, primarily from violent crime. Approximately 70 percent of the SAS work is submitted by State and local law enforcement. The SAS conducts forensic examinations in the following areas: chemical, biological, nuclear (CBN) hazards; chemistry/toxicology, including product tampering; explosive devices, including bomb materials and construction; firearms and toolmark identification, including DRUGFIRE, an investigative database that links serial shooting incidents and identifies weapons used in gang and drug-related crimes; materials analysis, including explosive residues, metals, paints, plastics, soils, and glass; hairs and fibers; DNA analysis; and the Combined DNA Index System (CODIS), a national database containing DNA profiles of convicted sex offenders and other violent offenders, as well as data regarding unsolved cases and missing persons.

Hazardous Materials Response: The services of the FBI Laboratory have proven to be crucial to law enforcement agencies in the United States, especially in counterterrorism investigations. Since September 1995, the FBI Laboratory has been developing basic capabilities for responding to and resolving the scientific, forensic and technical aspects of incidents involving chemical, biological, and nuclear (CBN) materials. This effort is consistent with the FBI's counterterrorism roles and responsibilities articulated by Presidential Decision Directive (PDD) 39, "U.S. Policy on Counterterrorism."

The 1997 Counterterrorism Amendment provided the FBI with a program increase of 18 positions (6 agent) and \$6,846,000 to establish an effective, multifaceted forensic technical response capability within the FBI Laboratory for CBN terrorism incidents and environmental crimes. This capability, managed by the recently formed Hazardous Materials Response Unit, is regarded as a long term investment with personnel, equipment, research and development, as well as training. Eventually, the HMRU will manage program areas in biological hazards, chemical hazards, radiology hazards, environmental crimes, and health, safety, and information management.

The FBI Laboratory has collaborated with the FBI's National Security Division (NSD), the Criminal Investigative Division (CID), FBI field offices and selected external organizations to develop a multi-pronged approach to problems involving CBN materials. The FBI Laboratory generally divides these into two categories of investigations: CBN materials involved in terrorist situations and hazardous materials involved in environmental crimes. The FBI recognizes the significant threat these situations pose to public safety for which mitigation is the primary concern; however, the FBI also takes the approach that all reasonable scientific and technical capabilities should be applied to their resolution. Successful resolution of CBN incidents and environmental crimes will be significantly more probable when substantive and technical (including forensic) investigative techniques

are cohesively and effectively applied.

The FBI believes the most effective response to CBN hazards will occur from scientific and technical operational expertise within the FBI Laboratory. In concert with the FBI's National Security Division (NSD) as the CBN investigative program manager, the FBI Laboratory has set about developing a flexible and holistic scientific and technical response to CBN events. The FBI Laboratory has attacked CBN problems from a number of perspectives, which address the spectrum of issues of interest within the Laboratory, field response, and access to and from other agencies. While the FBI currently relies on the support of other Federal agencies who possess specific technical expertise and equipment to respond to an CBN incident, such agencies have neither the law enforcement authority nor the expertise to collect and preserve evidence at a crime scene, or subsequently to testify in court proceedings. Trained and equipped FBI Laboratory personnel and Evidence Response Teams (ERT), both of which would have the capability to operate in potentially contaminated environments, will provide a leadership role with other appropriate responders to exploit these crime scenes for the spectrum of forensic evidence that may be present.

The FBI views the site of an CBN or environmental hazard not only as a threat to the safety and health of the public, but also as a crime scene that must be comprehensively exploited to characterize, identify and/or associate those involved to ensure the identification, apprehension, and successful prosecution of responsible parties. The establishment of the Hazardous Materials Response Unit (HMRU) provides the capability for meeting these objectives. The FBI is aggressively pursuing specialized training and equipment for Laboratory personnel and ERTs to enable them to operate safely and effectively within potentially contaminated environments. Training is being pursued via the military, civilian contractors and the Environmental Protection Agency (EPA). Additionally, FBI personnel have begun training with military CBN responders in field exercises.

CBN events can potentially involve multiple agencies for both threat assessment and incident management response. Therefore, it is imperative that all parties understand each others' roles, responsibilities and capabilities. For example, prior to and during the 1996 Summer Olympic Games in Atlanta, Georgia, the FBI Laboratory played key leadership roles in the first-ever organization of a multiagency capability, the definition of roles and responsibilities of partner agencies, and the staging of CBN incidents. These hazardous materials exercises and response methods are now considered the model upon which future CBN planning and preparations will be derived. HMRU was also the catalyst for the acquisition and receipt of hazardous materials response training for itself and several ERTs, some of whom were deployed in Atlanta, giving the ERTs a new dimension.

Currently, considerable attention is being given to CBN response to support counterterrorism response and preparations for future special events. The FBI Laboratory is expected to serve as the leader in the Federal civilian government in CBN planning and response and is continuing its commitment to a fully capable, national program supported by several key agencies. The FBI is aggressively pursuing interaction with several aspects of the Department of Defense, EPA, Public Health Service, World Health Organization, and academic experts to obtain or develop needed equipment, expertise, fieldable responses or other resources. FBI Laboratory personnel are being asked to discuss CBN topics in a number of forums, such as the American Academy of Forensic Sciences Annual Meeting, U.S. National Laboratories Conferences, and the International Conferences on Nuclear Smuggling. FBI Laboratory personnel have also attended a number of high-level scientific symposia involving pertinent biomedical disciplines.

Of the \$6,846,000 received in 1997, approximately \$500,000 will be used to initiate a study to determine the need and feasibility of a specialized FBI-Department of Defense (DOD) CBN Containment Facility. This will enable the FBI to determine the requirements of a containment facility; the size, scope, and cost estimates for a containment facility; potential locations for a facility; and the availability of existing Government facilities that could meet the forensic requirements of the FBI Laboratory. Due to the extreme toxicity

and sensitivity of CBN materials, these examinations could not be conducted in the new FBI Laboratory facility. The rapid evolution of the HMRP has only recently resulted in the identification of a need for a hazardous materials containment and forensic analysis facility.

CODIS: The FBI has developed CODIS to function as a national DNA database system containing indices of DNA profiles from convicted offenders and unsolved crime scenes. A missing persons index is under development. CODIS permits State and local law enforcement crime laboratories to exchange and compare DNA profiles electronically, thereby linking serial violent crimes (especially rapes) to each other and identifying suspects by matching DNA from crime scenes to convicted sex offenders. As of January, 1997, there are 57 CODIS sites in 27 States and the District of Columbia. The FBI anticipates that an additional 27 laboratories will install CODIS in 1997, bringing the total CODIS sites to 84. The FBI Laboratory manages the CODIS program. Computer support and maintenance are provided through a service contract with Synetics Corporation. The continued success of CODIS rests on having sufficient contractor personnel to sustain software development and maintenance, conduct installations and user training, and provide technical support to the FBI and State and local crime laboratories.

DNA testing is provided free of charge to any law enforcement agency in the U.S., including travel for examiners to testify in court. From 1991 to 1993, DNA cases submitted to the FBI Laboratory increased by 53 percent. From 1995 to 1997, it is projected that DNA cases submitted will increase by another 92 percent. This increase is due largely to the introduction of new DNA testing techniques that will permit testing on smaller quantities of DNA, as well as new tissues (e.g., bone, teeth, hair, and skin). Due to these new techniques, more cases will be addressed than ever before, and the demand for new testing information will increase significantly. The forensic science and law enforcement communities are already aware of these new DNA technologies being brought on-line and are preparing to utilize this valuable service.

DRUGFIRE: DRUGFIRE is a computer database system which allows laboratories within a region or large metropolitan area to exchange and compare images of fired ammunition casings. The microscopic machining marks on cartridge cases or bullets, resulting when a gun is fired, are scanned, and the image is stored in the DRUGFIRE database. After searching the database, these images are then electronically recalled, transmitted, compared, and matched to other evidence, thereby connecting shootings previously thought unrelated or linking crimes to certain weapons. The FBI acquired the services of Mnemonic Systems, Inc. (MSI) to develop the DRUGFIRE system. Color reference libraries of the FBI Laboratory's ammunition and firearms collections (stored on CD-ROM) will be an additional feature of the DRUGFIRE system. Also, networking capabilities will be expanded to allow inter-regional exchange of DRUGFIRE images and data between any two DRUGFIRE sites in the United States. As of December, 1996, there were 73 DRUGFIRE sites within the United States, with another 73 laboratories expected to install DRUGFIRE by the end of calendar year 1997. MSI will develop the networking capability through the existing contract. This development would essentially migrate DRUGFIRE from a regional system to the first fully integrated, national firearm and cartridge case/bullet database system. The FBI is also beginning to examine the possibility of re-engineering the algorithms used to search, select, and rank candidate matches. Preliminary results are very promising that all true matches can be ranked very close to the top of the list of candidate images. Following testing to document sensitivity and accuracy, these advances would be included in future releases of DRUGFIRE software.

DRUGFIRE has linked nearly 1,400 cartridge cases, matching one of every eight cartridge cases entered from crime scenes and providing police with investigative leads that would otherwise have gone undetected. In some cases, the match shows that the same gun was used repeatedly in criminal activity. In other cases, a seized gun was test-fired and linked to one or more previous shootings. For example, during "Operation Clean-Up," the FBI used DRUGFIRE to assist the Washington Metropolitan Police Department in working through its backlog of over 2,000 firearms cases. DRUGFIRE proved to be highly successful, recording 38 hits and linking 57 cartridge cases of the 247 cartridge cases entered, a

23 percent hit rate.

Forensic Database Development: The FBI's 1998 budget includes \$1,400,000 to begin development of a forensic database that would share information on evidence (explosives, firearms, latent fingerprints) in terrorist incidents with other forensic laboratories. In cooperation with the FBI's National Security Division (NSD), the Laboratory Division (LD) will develop and deploy proven forensic database systems to allow foreign national police organizations to share information from evidence collected in international terrorist incidents. Initially, this initiative will focus on the so-called P-8 countries, i.e., Canada, Germany, Italy, United Kingdom, Japan, France, Russia, and the U.S. After the International Terrorism Forensic Database Program is established, other countries will be invited to join, possibly including other members of the European Union, countries in Eastern Europe, certain Middle East countries, and Mexico.

At first, the program will include the following forensic database systems: (1) EXPRESS, which correlates information from bombing crime scenes and undetonated explosive devices, and provides a reference database for explosives; (2) DRUGFIRE, which automatically matches firearms evidence (i.e., cartridge cases and bullets) from serial shooting incidents and seized firearms; and (3) AFIS, which automatically matches latent fingerprints from crime scenes and evidence against 10-print cards from known individuals, and links latent prints to each other, thereby linking individuals to multiple crime scenes.

NSD will serve as liaison with the foreign intelligence and law enforcement communities and receive all information to be stored in the forensic databases. NSD will also review match results and provide guidance and/or instruction for returning information to requesting or contributing agencies regarding possible linkages between cases. The FBI Laboratory will be responsible for entering all forensic information in the three database systems, maintaining and operating the terrorism databases, and providing technical support to NSD and foreign contributors regarding system use or operation.

Explosives Unit/Bomb Data Center: In 1997, the FBI received a program increase of 10 positions (six agent) and \$1,390,000 for the FBI Laboratory's Explosive Unit/Bomb Data Center (EU-BDC). This funding enables the FBI to improve the quality of training at the Hazardous Devices School (HDS), Redstone Arsenal, through equipment upgrades, instructor training, and facility improvements, and provides advanced tools, crime scene gear, techniques and instruction for public safety explosives personnel. The FBI Laboratory examines evidence in bombing matters and presents expert testimony in courts concerning forensic finds. Forensic examinations of Improvised Explosive and Incendiary Devices and their remnants involve the identification of the components used in the construction of these devices which include detonators, initiators, wires, tapes, timing mechanisms, electronic components, power sources, containers, and the main charge explosives. This mission includes direct field support in bombing matters, crime scene investigations, and searches of bomb factories and safe houses where bombs and explosives may be encountered. Additionally, the FBI's Bomb Data Center (BDC) provides training and assistance to public safety bomb disposal technicians.

The FBI must be able to conduct programs that keep the FBI Laboratory at the forefront of technology with regard to Improvised Explosive Devices (IEDs) and to continue to provide on-site support in crisis situations such as the Oklahoma City bombing, the crash of TWA Flight 800, the Centennial Park Olympic bombing, and the search and upcoming prosecution of Ted Kaczynski (UNABOMB).

The FBI currently has approximately 90 Special Agent Bomb Technicians assigned to field offices and resident agencies. In addition to their primary duties as an investigator in

their office of assignment, these bomb technicians are tasked with providing training at regional classes, technical assistance at special events, crisis management and liaison and support functions. With the increased threat from sophisticated IEDs, such as chemical/biological devices and large vehicle bombs, the FBI must make a commitment to provide advanced technology to the United States bomb technician community.

Currently, in order to advance the understanding of IEDs, the EU-BDC is conducting research programs into improvised explosive residues, fertilizer-type explosives, pipe bomb damage assessment, render safe methods and equipment, personal protection apparel (bomb suits) and other matters pertaining to IED examinations, both prior to and subsequent to the explosion. Additionally, the EU-BDC has a responsibility to provide Post Blast Investigator's School training to FBI Agents, Evidence Response Teams, other Federal agencies, and State and local law enforcement. This type of explosives training is necessary to ensure that proper measures are taken at a bombing crime scene to prevent loss of evidence or contamination of evidence and to ensure proper packaging and handling.

Due to increased sophistication and advanced technology deployed by international and domestic extremist groups, it is essential that the FBI provide the best possible training for State and local public safety officers as bomb squad technicians. This training is conducted through an Inter-Service Agency Agreement with the U.S. Army at the HDS, Redstone Arsenal. The current budget for the school is \$1,525,000, which covers personnel compensation/benefits for civilian instructors, consumables/supplies, and some reimbursable services to the Army. For 1998, the FBI anticipates having to increase the civilian workforce at HDS due to the loss of two military instructors as a result of the downsizing of the U. S. Army at Redstone Arsenal.

An integral part of the FBI's bomb program is to provide advanced training to State and local bomb squads. There is a tremendous demand for training in both bombing crime scene procedures as well as IED disposal methods. Through regional seminars and training, the FBI Laboratory plays a major leadership role in the bomb technician/investigator community. Base funding provides the deployment of advanced tools, techniques and instruction directly to the public safety personnel who represent the front line in the counterterrorism battle. Additionally, the funding enables the FBI to upgrade its forensic and pre-blast capabilities by purchasing advanced diagnostic and electronic systems, crime scene gear and forensic analysis equipment.

THE INVESTIGATIVE AND OPERATIONS SUPPORT SECTION

The Investigative and Operations Support Section supports examinations of evidence in criminal investigations, including the analysis of computer-based records seized from criminal enterprises or financial institutions (e.g., banks, savings & loans, and insurance companies); polygraph service, including training and quality assurance of field agent polygraph examiners; racketeering records, including analysis of encrypted records of drug trafficking, gambling, prostitution, money laundering, and other criminal enterprises; and, special photography, including crime scene photography, aerial surveillance, and training and equipping field photographers.

Computer Analysis and Response Team (CART): The widespread use of computers and the rapidly developing technology of computer systems have combined to dramatically increase the volume and complexity of computer evidence. Today, FBI Agents routinely encounter computers in cases dealing with health care fraud, child pornography, terrorism, drugs, financial institution fraud, public corruption, and in almost every other investigative classification for which the FBI is responsible. CART provides forensic examinations and on-site field support to all FBI investigations and programs where computers and storage media are encountered. CART is staffed by a cadre of specially trained field examiners assigned to major field offices and a supporting technical staff within the FBI Laboratory. The FBI proposes to continue expanding CART capabilities in the field so that fully equipped and qualified examiners are available in each of the 56 field offices.

The 1997 Appropriation provided a program increase of \$1,180,000 for CART equipment, training, and upgrades to the CART forensic network. This amount includes \$600,000 for CART equipment; \$280,000 for training required to secure and maintain status as qualified experts in this subject area; and \$300,000 to upgrade the CART forensic network. Of the \$1,180,000, the FBI proposes a removal of \$490,000 in 1998 to maintain the CART program. Growth in the number of CART examiners, workload and complexity of computer systems encountered require a formal and consistent funding level for this program. Since CART's inception in 1984, the program at FBIHQ has grown from two examiners working part time to a staff of 11 certified examiners within the FBI Laboratory. Several years ago, the FBI Laboratory recognized that field offices required the capability to perform analysis of electronic media seized as evidence which could most efficiently be performed locally rather than at FBI Headquarters. Through the CART program, training and specialized equipment were provided to Special Agents in targeted offices. This effort to place forensic computer expertise as close to the investigation as possible has proven very successful. Unlike other types of forensic examinations, data recovery from computers is most efficient when it is limited by the evidentiary objectives of the investigation and narrowly focused on information which is probative and case related. In order to sustain this focus, it is desirable and in some instances necessary, to have the forensic examiner and the investigator work as a team in the recovery of information. Cases addressed by the FBI Laboratory have increased from two in 1985 to 520 in 1996.

During 1998, the FBI proposes adding 20 CART field examiners to bring the total complement of field examiners to 60. In addition, the FBI plans to hire an additional ten CART examiners at FBIHQ, bringing the total to 20 examiners at FBIHQ. To support this effort, the FBI requires specialized equipment, training, and upgrades to CART's forensic network server to accommodate the increase in examiners. Each CART examiner requires specialized equipment consisting of:

Item	Price	Purpose
- Pentium desktop computer with IDE and SCSI drives, SVGA monitor, and associated hardware.	\$3,700	Examinations in field offices
- Fully configured laptop with 4 GB hard drive docking station.	9,700	For use at crime scenes to collect evidentiary material
- 2 and 4 external SCSI tape drives and external Magneto Optical drive.	4,100	Backup evidence on site
- Laser printer, adapters, cables, terminators, tapes and Optical media, etc.	2,500	Print out reports at workstations in field
Total	\$20,000	

Each CART examiner is required to become a Certified Network Engineer. This certification is considered essential for these specialists to testify as expert witnesses in court and before grand juries. Training costs address not only newly established examiner positions, but also the continuing training needs of CART examiners already on board, both at FBIHQ and in the field.

The Investigative and Operations Support Section is also responsible for applying forensic photographic principles to evidence; planning and conducting aerial mapping surveys for raids or intelligence gathering; photo/grammetric computations; examining evidence and testifying to those results; the research, procuring, inventory and distribution of all FBI photo equipment; conducting on-site searches for photographic evidence in foreign counterintelligence matters; limited undercover assignments to gather necessary photographs; management of the field office photographers and photographic training; design, construction and installation of photographic concealment, camera modifications and repairs; and tactical and evidentiary photographic support for the Crisis Management Teams, Evidence Response Teams (ERT), regional Special Weapons and Tactics (SWAT) and the Hostage Rescue Team (HRT).

THE LATENT FINGERPRINT SECTION

The Latent Fingerprint Section (LFPS) examines crime scene evidence to identify fingerprints, palm prints and footprints. This section also conducts research to develop automated methods for matching latent fingerprints to files of known fingerprints. The Latent Fingerprint Section Disaster Squad responds to disasters to help identify human remains.

THE FORENSIC SCIENCE RESEARCH AND TRAINING CENTER

The Forensic Science Research and Training Center (FSRTC), located at the FBI Academy in Quantico, Virginia, conducts research to develop new techniques of forensic analysis and provides training to FBI personnel and forensic scientists from State and local crime laboratories. State and local crime laboratories and law enforcement personnel receive FBI Laboratory training in forensic science courses, some of which are not available anywhere else in the country. During FY 1996, the FBI trained approximately 3,300 students in basic and advanced forensic science courses. Without this training, jurisdictional laboratories would find it difficult to improve and expand their capabilities and develop staff expertise. In addition, FSRTC sponsors international training symposia to exchange the technical and scientific information on topics of interest to the forensic community and publishes the quarterly *Crime Laboratory Digest*.

The FBI must continue its leadership role in forensic research and the application of emerging technologies to current and anticipated crime problems. As the field of forensic science continues to undergo technological advancement, the FBI Laboratory must focus its research and development on more expansive and technologically based investigative support. For example, the FBI Laboratory is a recognized leader within the worldwide forensic community in DNA analysis and has established court accepted standards and protocols for forensic application of this technology through the Combined DNA Index System (CODIS). In addition, through extensive research and development, the FBI Laboratory has developed and enhanced the capabilities of a Computer Analysis and Response Team (CART) and DRUGFIRE, an automated scanning and retrieval system for ballistic comparisons.

SPECIAL PROJECTS SECTION

The Laboratory's Special Projects Section provides a wide range of investigative and operational support services to the FBI including photo processing for Headquarters and field offices; design and construction of trial exhibits and models; video image enhancement; fabrication of specially-designed devices and investigative equipment; and language services, including translation, training and testing of language specialists. Multilingual translators furnish verbatim or summary translations of foreign language materials submitted by the field and Legal Attaché offices and act as interpreters as required in FBI investigations. Language proficiency of applicants and on board personnel is tested and evaluated relative to suitability for hiring and assignment. Contract agreements are made with non-FBI translators proficient in critical foreign languages where current personnel are unable to handle requirements. The Section affords overall management to the FBI's corps of Language Specialists assigned to field offices. This includes recruitment, testing, deployment, utilization, production evaluation, selection for temporary duty assignments, and approving promotions. The Section plays a similar role in the management of the Special Agent Linguist program.

LONG-RANGE GOAL(S): To support the Federal and non-Federal criminal justice systems by: conducting scientific analysis of physical evidence to develop probative information to reconstruct a crime and to identify those responsible for such crimes; providing specialized scientific and technical support to ongoing investigations; developing an automated database of DNA patterns from evidence and/or individuals for examination and comparison; providing expert testimony in court; developing a database and network software to match and exchange images of firearms evidence from violent crimes; and providing specialized forensic science training, analysis, and technical assistance to crime laboratory personnel and crime scene training to law enforcement personnel.

MAJOR OBJECTIVES:

- To perform forensic and latent fingerprint examinations for Federal, State and local investigations for duly constituted and authorized law enforcement agencies.
- To provide technical assistance and instruction services to the law enforcement community through specialized forensic science schools, scientific conferences and symposia.
- To increase the number of State and local laboratories participating in the FBI's Combined DNA Index System (CODIS), DRUGFIRE, and other forensic database programs.
- To provide FBI Laboratory examiners, technicians, and support employees with the most modern state-of-the-art forensic laboratory facilities, equipment, instrumentation and techniques.
- To enhance the ability of FBI investigations to collect evidence and counter foreign intelligence efforts and terrorism threats through enhancement of programs such as Hazardous Materials Response, Language Services, Evidence Response Teams (ERT) and the Computer Analysis and Response Teams (CART).

- To provide FBI Evidence Response Teams (ERT) with the appropriate protective gear, technical equipment, supplies, and training necessary to conduct crime scene preservation and collection of evidence.
- To continue research, development, and implementation of mitochondrial DNA, Polymerase Chain Reaction (PCR) DNA and chemiluminescence techniques.
- To improve the timeliness of the FBI Laboratory's case turnaround time.
- To establish, manage, and administer a Federal DNA Database program.

PROGRAM INCREASES: No program increases are requested in 1998.

A. Definitions of Terms or Explanations for Indicators

INPUTS

- 1.1 Beginning in 1994, the FBI Laboratory no longer accepted State and local property crime casework.

OUTPUTS

- 1.2 In 1994, in order to reduce turnaround, the Photo Processing Unit no longer processed microfilm for the Criminal Justice Information Services (CJIS) Division.
- 1.8 The dramatic increase in the number of Polygraph Exams and Polygraph Chart Reviews is due to the implementation of the Applicant Program whereby all persons being considered for employment by the Bureau are given a Polygraph examination as part of the interview process.
- 1.10 The Language Services Unit, in an effort to compensate for its shortage of personnel, is performing more summary translations as opposed to verbatim translations, thereby reducing the number of translated pages produced.
- 2.1 Includes Advanced Latent Fingerprint Schools
- 3.1 Forensic DNA Records are DNA profiles developed from evidence recovered from crime scenes. DNA Profile Comparisons are the number of DNA profiles compared by the CODIS software in an attempt to solve violent crimes.
- 3.5 During FY 1996, the FBI sponsored a DRUGFIRE equipment grant program through the Bureau of Justice Assistance to provide equipment to state and local crime laboratories wishing to install DRUGFIRE.

OUTCOMES

- 3.1 A CODIS "hit" is a match made by searching Forensic Profiles and Convicted Offender Profiles. CODIS "hits" represent leads generated in violent crime cases that would

otherwise not be solved.

3.2 CODIS-aided investigations are the number of police investigations for which CODIS "hits" provided information.

3.3 A "cold hit" is defined as the association of a pair of cases that were not previously known or suspected of being related. A "warm hit" is defined as the association of a pair of cases that were suspected of being related prior to comparison in the DRUGFIRE system.

B. Factors Affecting 1996 Program Performance

The current transition to non-agent examiners has affected 1996 performance. The 1994 downsizing of FBIHQ divisions reduced the Laboratory Division's (LD) Special Agent (SA) staffing level from 118 to their current level of 63. The transfer of SAs to the field was to be accomplished concurrently with the selection and training of professional support examiners to perform forensic examinations of evidence and to testify as witnesses in Federal, state and local courts. In FY 1995, Congress appropriated 92 support personnel to replace the agent examiners sent out to the field. Currently 44 of the 92 have been certified as Forensic Examiners.

In addition to the 92 support positions appropriated in FY 1995, the LD also received an increase of 75 support positions and 38 workyears in the President's 1996 Counterterrorism Amendment. The FBI Laboratory's performance and turnaround times (i.e. DNA analysis and typing) are expected to decrease after new examiner hiring and training are completed.

Congressional support has had a positive approach on the FBI's Combined DNA Index System (CODIS) and DRUGFIRE performance measures. CODIS allows State and local crime laboratories to store and match DNA records from convicted offenders and crime scene evidence. VCRP base funds for the FBI's CODIS program total \$15,000,000, of which \$5,500,000 is spent on contract ADP services to continue software development and operate CODIS for State and local crime laboratories. The remaining \$9,500,000 is transferred to the Bureau of Justice Assistance (BJA), Department of Justice, to conduct a grant assistance program for States to establish, develop, and upgrade computerized identification systems compatible with CODIS, the FBI's National Crime Information Center (NCIC), and automated fingerprint systems.

The FBI also has \$4,200,000 in base funds for the FBI's DRUGFIRE program. The FBI plans to spend approximately \$2,200,000 to fund the acquisition of DRUGFIRE equipment for state and local crime laboratories and retain \$2,000,000 to cover the FBI's expense of operating the program. The FBI provides DRUGFIRE software together with installation, training and user support, free of charge. State and local forensic laboratories are responsible for the purchase of computer hardware, maintenance and telephone line charges.

C. Factors Affecting Selection of FY 1997 and FY 1998 Targets.

The Anti-Terrorism and Effective Death Penalty Act of 1996 will affect the number of performance measure activities related to CODIS. This Act provides that "the Director of the Federal Bureau of Investigation may expand the Combined DNA Identification System (CODIS) to include Federal crimes and crimes committed in the District of Columbia". Based on data provided by the U.S. Bureau of Prisons and the Administrative Office of the U.S. Courts, the FBI projects a requirement to collect and type approximately 14,500 DNA samples in 1998. The 14,500 DNA samples include: 11,500 samples from the current Federal inmate population, plus an estimated 3,000 samples from defendants convicted in U.S. District Courts during 1998. The FBI estimates that there will be between 2,500 and 3,000 convictions annually in the U.S. District Courts for offenses which would qualify for inclusion in the Federal convicted offender DNA database.

Increase/Decrease

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: The Information Management, Automation, and Telecommunications (IMAT) decision unit serves the American public through its support to all functional areas of the FBI, investigative, law enforcement support, and management and administration. The IMAT program managers have responsibility for carrying out support functions for all FBI program activities as well as other Federal agencies. Some IMAT services include: the National Name Check Program (a reimbursable function); automation support for administrative and investigative purposes (CISP, DRUGFIRE, CODIS, and FOIPA Document Processing System), including Legal Attache posts; information hardware and software acquisitions; crisis response (Rapid Start deployments) and special case support (OKHOMB, UNABOM, MOZARK, and the Olympics); secure and non-secure telecommunications, mail services, and office equipment and pagers. Finally, the IMAT decision unit is the sole administrator for the FBI's information technology budget, acquisition, networking, and implementation.

In recent years, as investigations have become more complex, investigative efforts have increasingly required more complex information processing capabilities. Since these investigations often involve massive volumes of information and multiple jurisdictions, the FBI uses computers to facilitate the collation and analysis of information within the central file system. These systems produce only "temporary" information and have not been listed by the FBI as a separate system of record, despite the fact that it maintains more than 100 such subsystems.

In addition, criminal organizations have embraced automation as a means to enhance their operations and have spawned new categories of crimes the FBI is required to investigate. Examples are illegal data manipulation, software piracy, embezzlement by computer and deliberate break-ins to computer networks by hackers. As the world becomes computerized, so must the FBI to keep pace and to maintain preeminence in the field of law enforcement.

The IMAT provides the means for FBI agents and analysts to gather, store, process, and analyze information to successfully investigate, arrest, and prosecute criminals. With the

expansion of the FBI's responsibilities into the international arena and the broadening of its role in such significant areas as counterterrorism, drugs, and the threat to the nation's infrastructure, today's law enforcement activities are becoming increasingly multi-jurisdictional. DRUGX (a common FBI/DEA database), the establishment of a direct link between the FBI and the Treasury Enforcement Communications System (TECS), and the use of the INTELINK system for enhanced information sharing are especially beneficial when compared to duplicative and time-consuming procedures used to accomplish this exchange without information technology. The FBI has acquired a base technical infrastructure of desktop and portable workstations, mainframe computers, and local and wide area networks. In order to continually meet the challenges presented to investigators, the FBI must acquire and implement more sophisticated investigative support tools, have the capability of sharing information electronically with other agencies, and continue to provide security for the information gathered.

An initial capability in information sharing is being achieved with IMAT base funding. The FBI will begin efforts to comply with the Information Technology Management Reform Act of 1996 with available base resources. The IMAT has implemented a Trusted Guard, which permits networks operating at dissimilar classification levels to share information with DEA and to allow the FBI to access TECS. The IMAT is implementing the Novell network operating system in field offices and at FBIHQ to support a client-server architecture. Base level funding has also provided for a prototype of the document information management capabilities at FBIHQ only.

The FBI provides ongoing efforts to include a Litigation Support prototype as a part of the FBI's prototyping within this initiative. The FBI is working on the development of a secure link to the Internet through the FBI network. This connection will provide access to the private and commercial world. The FBI is building the Law Enforcement Online (LEO) system which provides information sharing capabilities to State and local law enforcement groups.

The FBI is also committed to following the technology of voice processing and voice input to digital and communications equipment. The same is true for multimedia technology, which includes a capability to create, transmit, and present electronic documents or files that integrate information in various forms, including text, images, audio, and video. FBI files contain mainly text documents, but are supplemented with non-textual materials such as videotapes, photographs, and audio tapes. The FBI's electronic case file needs to incorporate such non-textual materials.

Several factors in the current environment mitigate against the continued complete reliance on the existing mainframe environment of the FBI. First, the size of the FBI network has grown to near capacity. The FBI field offices currently use almost 20,000 personal computers and processed more than 2 million documents in 1995. Additionally, the increasing size and number, the increasingly diverse types of applications, and data have made information retrieval vastly more complex.

The FBI utilizes a central records system for maintaining its investigative, personnel, applicant, administrative, and general files. This system consists of a numerical sequence of 281 subject matter files, an alphabetical index to the files, providing cross reference, and a supporting abstract system.

The IMAT is responsible for the operation and management of three mainframe computer centers. These centers, which include the FBI Computer Center located at FBIHQ, as well as regional support centers located at Pocatello, Idaho and Clarksburg, West Virginia support communications and network requirements of the 56 FBI field offices and 400 resident agencies. Each of the regional support centers contain two independent systems. These systems provide internal back-up within each of the centers and allow each center

to back up the critical applications of the other. All applications and databases are copied to tape and stored at offsite locations.

Information collected and analyzed by FBI Agents in criminal investigations and used by U.S. Attorneys in the prosecution of cases, is a basic commodity of the FBI. Without reliable and timely information, the FBI as an organization cannot be effective. As executive department budgets shrink, and the FBI continues to operate under fiscal constraints, there is little doubt that enhanced technological capability - and the associated productivity increases - will become the primary vehicle for the FBI to maintain its leadership position in the law enforcement community.

LONG-RANGE GOAL: To develop and implement a comprehensive, global information system that supports the FBI's major criminal investigative and counterintelligence initiatives, shared access and shared processing of investigative information among law enforcement and criminal justice agencies and of national security information within the intelligence community.

MAJOR OBJECTIVES:

- To modernize and augment computer equipment and software applications, and telecommunications networks within the FBI's current infrastructure to facilitate the necessary transition to a distributed computing environment which will use state-of-the-art tools for information collection, management, analysis, and exploitations.
- To expand and broaden the FBI's current environment for multi-agency cooperation and collaboration essential for dealing with such initiatives as counterterrorism (including threats from chemical or biological agents), economic crime, organized crime, drugs, international law enforcement, and the growing threat to the nation's information infrastructure.
- To provide the necessary tools to analyze investigative and intelligence information as thoroughly as possible to ensure that innocent American citizens are protected from acts of terrorism, threats of hostile foreign governments, dangers of illegal drugs, violence in the streets, and criminal attacks on their financial interests.
- To protect the privacy of citizens and secure sensitive and classified data from hostile elements.
- To provide all the information necessary to ensure that the American national infrastructure is properly protected.

PROGRAM INCREASES: No program increases are requested for 1998.

Technical Field Support and Services			
1997 Appropriation Anticipated	321	275	\$130,236
1998 Base Anticipated	321	309	124,733
1998 Estimate	321	309	\$124,733
Increase/Decrease

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: The Technical Field Support and Services (TFS&S) decision unit supports FBI investigations and operations through the acquisition, development, installation, and maintenance of technical and related investigative support equipment and services, including the FBI's nationwide Digital Voice Privacy (DVP) radio system, other specialized radio communications, physical and electronic surveillance, advanced telephony, tactical operations, forensic examinations of audio and video recordings and devices, crisis response, automotive fleet, and general equipment and furniture. The FBI uses a variety of technical equipment to aid agents and support personnel conducting criminal, counterterrorism, and national security investigations. For example, agents increasingly rely upon the availability and use of closed circuit television (CCTV) systems for conducting surveillance; recording devices and transmitters for monitoring conversations between cooperating witnesses and targets; and hand-held, mobile, and base radios for tactical communications during raids, arrests at multiple locations, and surveillance. The FBI also provides technical equipment and assistance to multi-agency task forces. Technical equipment often serves as part of a critical safety net to agents who must operate under life-endangering or high-risk situations. FBI field offices are equipped with computer workstations, local area networks, and telecommunications equipment that facilitate both inter- and intra-office communications and information sharing. The value of technical equipment and systems is directly dependent upon its availability and operability.

Increasingly, field electronics technicians (ETs) are directly involved in the planning and execution of operations due to the complexity of some technical systems being deployed and the need to ensure that those systems function properly. Installation, operation, and maintenance of FBI technical equipment are currently provided by field ETs. However, the workload of the field ETs is increasing as a result of the acquisition of additional computer workstations, other technical equipment, and the requirement to perform scheduled maintenance of equipment and systems. Finally, the FBI provides and maintains vehicle resources in support of investigative requirements.

The TFS&S decision unit utilizes base funding to provide technical investigative support to the FBI field offices and maintains centralized management of all field equipment to maximize its use and to expedite the completion of complex investigative matters. Virtually without exception, investigative programs are dependent upon technical support, engineering, distribution, and the installation of technical equipment for the successful accomplishment of the FBI's investigative mission, as well as the development of an

adequate and trained staff to install, maintain, and assist in the operation of that equipment. Much of the equipment in the FBI's inventory is antiquated and obsolete. Current base funding is sufficient to replace small portions of outdated equipment and to purchase small amounts of new technologies.

The Radio Engineering Unit (REU) supports the FBI's Strategic Plan by planning and implementing land mobile radio communications systems and by providing general and site specific systems in support of criminal law enforcement and foreign counterintelligence. The REU provides field investigative personnel with a user friendly, reliable, flexible radio system capable of handling all tactical communications requirements. The FBI encrypted land mobile radio system (ELMRS) or DVP system is one of the largest non-military privacy radio systems in the world, comprised of more than 10,000 mobile radios, 13,000 hand-held radios and an extensive backbone network in each of the FBI's 56 divisions, resulting in geographic coverage of about 80 percent of the land mass of the United States.

The ELMRS is undergoing continuing modification and enhancement to meet the changing requirements of FBI investigations. Additional coverage to extend communications into rural areas, enhanced coverage in metropolitan areas to provide hand-held communications, additional radios for task forces, and radios for FBI to local police communications are key drivers for this upgrade. By 1998, many of the FBI's radio systems will have been operational in excess of 10 years, requiring more frequent and costly maintenance. Certain items of equipment, such as the Syntor-X mobile radios, some of which were first installed in 1984, are no longer manufactured and require replacement.

In the coming years, the FBI will place a high priority on the maintenance, support and enhancement of these existing systems to carry them into the next century, at which time the next generation radios based on narrowband digital technology will have been identified. Mobile radios, an essential component of the ELMRS infrastructure, and portable radios are vital to the day-to-day operations of investigative personnel and provide the only means of communication with the field office and/or other law enforcement agencies in normal or life-threatening situations. In addition, the REU supports all FBI radio antenna sites and all data circuits associated with the FBI's ELMRS.

It will be five to ten years before the FBI will be prepared to install a new generation radio system employing narrow band digital technology and offering the features of interoperability with other Federal, State and local law enforcement agencies that are yet to be defined by the Public Safety Wireless Advisory Committee (PSWAC) and the Federal Law Enforcement Wireless Users Group (FLEWUG). Until such time as this next generation system can be analyzed, defined, and engineered, the only option left to the FBI is to maintain the existing system, making selective improvements and technology insertions when there are warranted operational requirements.

The Surveillance Support Unit (SSU) develops, procures, and deploys technology systems to the field which allow for wide area tracking, surveillance, and location of subjects, vehicles, and packages used in the furtherance of criminal activity and operates the Rapid Prototyping Facility. The SSU is responsible for the following major programs. The Rapid Prototyping Facility provides in-house, quick reaction customized solutions for field investigations, by providing a distributed design environment, both mechanical and electrical. The Radio Surveillance Aids Program provides covert physical surveillance generally requiring custom adaptations of emerging technologies, as well as experience with investigative deployments. The Special Cellular Application Team provides on-site assistance to field offices in cases involving cellular telephones. The Fabrication Group provides an in-house quick response capability for the design, development, fabrication, assembly and test of specialized, unique, custom, and one-of-a-kind devices to support covert intelligence collection and technology. The Specialized Technical Surveillance Vehicles Program is responsible for the conversion of vehicles into forward surveillance platforms and other mobile concealments which directly support field investigations in conducting audio, video, and other electronic surveillance. The Antenna Test Facility

maintains a modern state-of-the-art antenna design, test, and fabrication facility.

The Special Operations Unit conducts research and development and provides FBI field offices with technology which includes miniature transmitters, CCTV, electro-optics, and concealments required to conduct investigations. Funding allows the redirection of personnel resources used for physical surveillance as well as associated costs of listening posts and lookouts.

The Signal Analysis and Processing Unit performs complex analyses and provides testimonial support on the interception of communications/electronic devices used to perpetrate crimes such as bomb detonators, modified cellular telephones, audio transmitters, and electronic organizers. This Unit is also responsible for the Special Search Techniques Program, which assisted in the Polly Klass murder investigation, and the Technical Security Countermeasures Program which inspects FBI space in the United States and overseas. The Interception of Communications/Electronic Devices (IOC/ED) Program was initially formed to address the need for a national center to examine all types of electronic devices used to perpetrate crimes. These devices include items such as bomb detonators, modified cellular telephones and audio transmitters. The IOC/ED program conducted over 1,100 forensic examinations in the past fifteen years. In the last five years, a new device has been submitted to the IOC/ED program with alarming regularity. This device is the electronic organizer, a password protected, personal memory device. These devices are rapidly taking the place of the Rolodex type card file that is common on all office desks. These electronic organizers are currently capable of storing up to two megabytes of digital data. The criminal element uses these electronic organizers to store information such as names and addresses of known associates, drug-related information, and information related to terrorist attacks. Electronic organizers range in cost from \$10 to \$1,000, and their complexity varies as much as their cost. There are currently over two hundred different models being manufactured by a dozen different companies. In addition, this Unit performs complex analyses and provides testimonial support on forensic audio/video evidence in support of field investigations.

The Signal Analysis and Processing Unit is also responsible for the solution of encryption problems. Commercial cryptography has been introduced which provides protection to conventional and cellular telephone, facsimile, data, and radio communications systems. Today, approximately 500 different encryption schemes are offered on the market to the public, commercial, and government customers. Therefore, in order to maintain court-ordered electronic surveillance capabilities, law enforcement must continue an aggressive development effort to keep pace with rapidly changing products and services of the telecommunications industry. The FBI and law enforcement have seen a marked increase in the demand and use of encryption over the past four years. The advances in, and proliferation of, digital technologies have vastly complicated law enforcement's task of processing lawfully intercepted communications and electronically stored information. Encryption, once solely the purview of military and the government, is now readily available and accessible commercially to the general public. Today the encryption market offers products to protect voice communications, digital data communications, disk files, electronic mail, video, and facsimile. A 1996 survey of law enforcement agencies conducted by the National Institute of Justice revealed that 28.4 percent of the survey's respondents have encountered encryption, voice scrambling, or other surveillance countermeasures during criminal investigations. Criminal elements are employing encryption and other digital technologies, and that usage is likely to increase.

The Technical Programs Unit provides specialized training to ETs and Technically Trained Agents (TTAs) in crucial radio communications disciplines and advanced telephony issues. Failing to address these rapid technological changes through an aggressive and dynamic training program will result in criminal and national security investigations that fail to meet the high success standards of the FBI. Funding in this program supports specialized TTA training in the areas of Integrated Services Digital Network (ISDN), digital

telephony, digital switching, advanced intelligence networks, fiber optics, digital theory and other advanced issues. The FBI has an urgent need to respond to the technological advances to guarantee the FBI's continued ability to perform court-approved electronic surveillance, an integral part of almost every successful investigation. The existing electronic surveillance techniques and related technological capabilities are rendered useless against new digital telecommunications and security systems.

The Crisis Response Program provides on-scene support, training and furnishes technical expertise to the field in support of special events, major cases, such as the Oklahoma City bombing, and interagency tactical exercises. The request for services from the Crisis Response Program went from two or three operations annually to 47 deployments in 1996, which has severely strained the program's resources. In 1996, the Crisis Response Team deployed on major cases worldwide to include the hostage taking of Americans in Peru and the bombing in Dhahran, Saudi Arabia and performed eight renditions in support of extraterritorial offices. These responses caused a large increase in the purchase of new communications equipment to support these types of operations.

The Tactical Operations Unit conducts research and development and provides access control equipment to all FBI locations. Funding is utilized for research and development and will aid in addressing current workloads compounded by rapid changes in lock and alarm technology.

The Advanced Telephony Program (ATP) focuses on the emergence of digital technology and new telecommunications services that are flooding our society and their impact on law enforcement. In order to maintain court-ordered electronic surveillance capabilities, law enforcement must continue an aggressive development effort to keep pace with the rapidly changing products and services of the telecommunications industry. Until recently, the telecommunications industry had remained virtually unchanged for approximately 30 years. For the most part, the services offered were wireline analog voice; however, the 1980s witnessed the emergence of cordless and cellular telephones, the proliferation of facsimile machines, and the promise of high speed transmission of video, voice, and data. The factors driving these changes are twofold. First, the presence of computers and related digital technology has caused a transition to the information age and a need for timely and voluminous exchanges of information. A second factor in the emergence of new telecommunications services is the increased need for mobility as evidenced by the usage of cordless and cellular phones and paging devices.

In 1998, it is estimated that approximately 65 million cordless phones, 30 million cellular phones, 30 million paging devices, and 8 million personal communications services phones will be in use in the United States. These new services and the need for mobility are the driving forces responsible for the 1990s emergence of advanced telecommunications technologies, such as the ISDN, advanced cellular and personal communications networks, and enhanced services and features as a result of intelligent networks. The impact that this technology is having, and will continue to have, on law enforcement cannot be overstated. This technology is expanding; the industry is fiercely competitive with new products and services introduced continuously. These products represent fundamental changes in the way people and businesses communicate, and they pose unprecedented challenges to the electronic surveillance capabilities of the FBI and the entire law enforcement community. Because electronic surveillance is utilized by all levels of law enforcement to combat illegal drugs, violent crime, espionage, white-collar crime, and organized crime, the loss of these techniques would have a devastating impact on the fight against crime.

Recognizing the potential impact of emerging telecommunications technology on law enforcement and public safety, the Communications Assistance for Law Enforcement Act (CALEA) (Public Law 103-414; 47 U.S.C. 1001-1010) was enacted to preserve law enforcement's ability, pursuant to a court order or lawful authorization, to access

communications content and associated call-identifying information in an ever-changing telecommunications environment. The Attorney General delegated management and administration responsibilities of CALEA to the FBI. The CALEA initiative and the FBI's implementation efforts are on behalf of all Federal, State and local law enforcement agencies. The Telecommunications Industry Liaison Unit, which consists of engineers and industry experts, implements and oversees CALEA responsibilities.

The Network Access Development Unit is charged with ensuring the ability of the FBI to collect evidence and intelligence through the development, deployment, and support of intercept capabilities on communications networks. This includes the development of public and private communications network intercept capabilities which are independent of carriers access solutions developed under CALEA, private communications network capabilities developed through cooperation with Internet access providers and information service providers, and deployment and support of unique, application-specific public and private communications network intercept systems.

Individuals are becoming increasingly sophisticated in the use of state-of-the-art technology to implement and conceal their illegal activities. Not only are high technology systems used for voice communications, but increasingly, more information is recorded, stored, copied and/or transmitted by electronic means. The Sensor Development and Deployment Unit is responsible for providing the technology to support covert audio and plain text machine intelligence collections from all criminal, counterterrorism, and counterintelligence targets. The Collection and Information Management Unit provides the advanced telephony equipment and systems required to insure that the FBI is able to maintain electronic surveillance capabilities.

Finally, the FBI's vehicle fleet continues to age and compile mileage at an alarming rate. The number of vehicles which exceed the FBI's internal mileage ceiling of 80,000, the maximum mileage for operating safe and reliable vehicles for law enforcement purposes, must be reduced. In 1998, the FBI will have 1,252 vehicles with mileage exceeding 80,000. Increased vehicle downtime forces the FBI to use costly rental vehicles which lack the proper law enforcement equipment, such as DVP radios, for some mission requirements. Base level funding of \$28,225,000 would enable the FBI to purchase 1,598 vehicles, of which 1,393 are replacement vehicles. The total motor vehicle base funding will allow the FBI to reduce the number of vehicles exceeding 80,000 miles from 1,252 to 533. This level of funding greatly enhances the ability of the FBI to replace older high mileage vehicles. Recurring these funds through 1999 would enable the FBI to eliminate all vehicles with mileage of 80,000 or greater. With this level of funding, the FBI's replacement cycle decreases from eight to five years. Automobile base level funding reflects a transfer of \$6,715,000 from the Salaries and Expenses appropriation to the Violent Crime Reduction Program.

LONG-RANGE GOALS: To provide engineering services, technical support, and equipment to FBI field offices and conduct necessary research and development to adapt technology for deployment against criminal and terrorist activities.

To provide safe and reliable vehicles to support FBI investigative requirements.

MAJOR OBJECTIVES:

To provide radio communications and technical equipment in support of field investigations.

To provide new technologies and address critical shortfalls in technical investigative capabilities including digital telephony, tactical operations, surveillance, special search techniques and training of personnel.

To extend the lifecycle of already deployed equipment which cannot be replaced, by providing preventative and corrective maintenance.

To conduct research and development in support of new technologies in an effort to produce state-of-the-art investigative techniques.

To provide continuing technical support to the most essential criminal investigations.

To provide safe and reliable automobile transportation with less vehicle downtime and cost for repairs and maintenance costs, thereby increasing investigative ability.

To reduce the number of vehicles with mileage exceeding 80,000 miles.

PROGRAM INCREASES: No program increases are requested for 1998 under the Salaries and Expenses appropriation; however, two positions, one F.T.E. and \$6,000,000 are requested under the Violent Crime Reduction Program to support the Mandated Replacement of Microwave Equipment and a direct appropriation of \$40,000,000 is requested for the Telecommunications Carrier Compliance Fund.

A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS AND OTHER TERMS THAT MAY NEED CLARIFICATION

1.1 The Radio Program is considered to be an essential resource in law enforcement activities. The purchase of radio equipment is essential in maintaining the ELMRS infrastructure. These radios provide agents and investigative support personnel with essential secure radio communications, ensuring their safety and investigative success. Radios and systems maintenance support day to day FBI investigations and operations of a field office. In addition, they provide essential communications for task forces and also provide critical communications between Federal, State, and local law enforcement. The FBI radio system constantly requires upgrades to be efficient and effective so that agents and support can rely upon it.

2.1 The FBI provides technical equipment to the field for daily use and special cases and is critical to obtain case evidence. This equipment consists of Physical Surveillance equipment, which is comprised of Remote Surveillance Systems, CCTV equipment, Microphones, Day and Night vision equipment and concealments, also Electronic Surveillance equipment which consists of Dialed Number Recorders, Pen Registers, Intercept Devices, and Recorders.

3.1 Field EITs support the FBI radio systems by performing necessary installation, maintenance, and repair down to the component level for all associated communications equipment, including portable, mobile, fixed, and remote. The FBI FM radio system requires continuous enhancement and upgrading in order to maintain optimum performance. These actions serve to enhance the system's overall area of coverage, thereby providing maximum communications capability to field office personnel. These systems link the entire FBI through a complex and secure network which uses cryptographic equipment and fiber optic cables which pass through strategically located field offices and regional computer centers.

4.1 A. Refers to the number of projects/field requests being developed to deploy and support unique, application specific public and private communications network and private communications networks intercept systems.

4.1 B. Refers to the number of capabilities provided to the field with engineering/technical support in response to requests for assistance in support of unique, application specific public and private communications networks intercept systems.

4.2 A. Refers to the number of capabilities provided to the field and Network Access and Development Program to intercept communications which utilize commercial information services such as America Online and CompuServe, etc.

5.1 and 5.2 The number of requests for Audio/Video and IXC/ITD exams are indicators which demonstrate the workload for these programs.

B. FACTORS AFFECTING 1996 PERFORMANCE

Over the past eight years, the field investigative accounts have suffered severe reductions in funding due to a variety of reasons. As a direct result, less equipment is procured and

deployed to the field for investigative operations. In addition, equipment that is currently in the field is becoming antiquated and in need of replacement.

C. FACTORS AFFECTING SELECTION OF FY 1997 AND FY 1998 TARGETS

The factors are not expected to change with the approval of program changes.

**Federal Bureau of Investigation

1998 Estimate	1,734	1,626	191,365
Increase/Decrease

BASE-LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: Criminal activity is not limited to specific geographic locations in the United States. Criminals are capable of committing crimes in one State or local jurisdiction and within hours relocating to, or committing crimes in, another jurisdiction. Over the past several years, the demand for timely and reliable information for criminal investigations has dramatically increased, fueled by the alarming number of incidents occurring in this country every year. For example:

- A report by the National Incidence Studies of Missing, Abducted, Runaway and Thrownaway Children (NISMA) estimated 3,200 to 4,600 non-family child abductions occur annually. Of these, an estimated 200 to 300 are "stereotypical" kidnappings in which the child was gone overnight, killed, transported a distance of 50 miles or more, ransom, or there was evidence the perpetrator intended to keep the child permanently.
- Every 15 seconds, a woman in this country is battered. Almost two million women are severely assaulted every year. One-third of female homicide victims are killed by a husband or partner.
- One in every 25 elderly persons is victimized. According to the National Aging Resource Center of Elder Abuse, almost one-third of this maltreatment is committed by adult children of the elderly.

In each of these areas, speed and reliability of information services are often critical factors in an effective investigative response that safely returns the kidnapped victim, reduces the homicides associated with battered women, and allows more of the elderly to live out their lives in dignity. Unfortunately, such is not the case today. During 1995, for example, an estimated 64,700 fugitives were identified; however, approximately 39,000, or 60 percent, of these individuals were released prior to the arresting agencies becoming aware of their fugitive status. The magnitude of these unfortunate occurrences are attributed to the length of time it takes to process the fingerprint cards under the current system at the local, State, and Federal levels.

To address this documented need for more efficient and effective identification and information services, most States have acquired their own systems for fingerprint identification and criminal history record information. For example, in the area of fingerprint identification, many States have begun purchasing their own automated fingerprint identification systems using different vendors, each containing unique communications systems and networks. These State systems are often incompatible with each other and with the FBI's system; therefore, they can only provide a service to a specific jurisdiction. Until these automated systems have the ability to communicate with each other and the FBI, crime fighting will remain of limited jurisdictional value instead of global.

Recent Federal and State legislation heightened the importance of criminal history record information in such areas as firearms sales (Brady Handgun Violence Prevention Act) and employment qualifications (National Child Protection Act). By 1998, the FBI anticipates new Federal and State legislative mandates will result in additional requirements for access to the FBI's national criminal history record repository.

To address these problems, the law enforcement community requires a single, national organization to assume responsibility for maintaining identification services in a system which supports rapid identification of individuals. This demand from the national law enforcement community led to the enactment of legislation to establish a central repository for criminal data. The Attorney General, charged with establishing this repository, delegated the responsibility to the FBI. This repository allows for either the timely retention or release of detainees and relieves an already overburdened judicial system.

The FBI's Criminal Justice Information Services (CJIS) Division serves as the nation's centralized repository and clearinghouse for fingerprint records. In that capacity, CJIS furnishes identification and criminal history record services to over 75,000 users which are authorized by Federal statutes, regulations, and Executive Orders to utilize these services. The CJIS Division's fingerprint files serve as a locator or index of criminal arrest activity throughout the United States, thus avoiding time-consuming and costly checks of all 50 States' records to ascertain an individual's complete criminal history. The CJIS Division provides services which include arrest and applicant fingerprint card identification and record keeping; posting of wanted and parole/probation notices; training in fingerprint science; maintaining fingerprint records of persons currently reported missing; identifying amnesia and unknown deceased persons; and information-based support to the latent fingerprint community. Through the years, the FBI has expanded its identification and information systems and programs to include a fingerprint identification program, the development and maintenance of a National Crime Information Center (NCIC), and the collection of law enforcement statistics, and the annual dissemination of Uniform Crime Reports (UCR). However, these systems are semi-automated, highly labor-intensive, lacking in complete data, or require a great deal of time to assimilate or provide the requested services.

The CJIS Division maintains a repository containing approximately 87,000,000 civil fingerprint cards, representing more than 39,000,000 individuals, including military personnel, applicants for federal employment, and other non-criminal justice purposes. Also, this repository retains over 130,000,000 fingerprint cards with related criminal history records information on more than 35,000,000 individuals represented in the criminal file. Currently, the FBI processes fingerprint cards through its Identification Automated System (IDAS), which is a semi-automated system requiring a high degree of manual intervention. IDAS, operational since June 1989, was designed to support average daily receipts and throughput of 31,000 fingerprint cards, with infrequent "spikes" in receipts of up to 37,500 submissions. However, the FBI now averages over 57,000 fingerprints card submissions daily. The criminal file continues to grow, with approximately 5,000 new individuals added per day. Besides criminal submissions from law enforcement agencies, requests are received through law enforcement and other authorized entities for such purposes as handgun purchases, banking institution employees, child care providers and numerous others. During 1996, the FBI received approximately 11,243,500 fingerprint cards. Of this number, more than 5,535,000 criminal fingerprint cards were received, of which approximately 3,140,000 identifications were matched with existing records. Over 5,708,000 civil fingerprint cards were received in 1996. Of these civil submissions, approximately 448,000 individuals were identified as having criminal records. It is noteworthy that of approximately 320,000 individuals checked for law enforcement employment, 26,938 were found to have existing criminal history records.

As of January 1997, the FBI had a backlog of 2,900,000 fingerprint cards either in process or waiting processing. The CJIS Division is currently operating with a system designed for a staffing level of 3,045; however, it has never achieved this staffing level. Currently, the CJIS Division has approximately 1,700 personnel assigned to address the greatly increased volume of identification work within the FBI. In addition to the increased workload, the FBI is in the process of transitioning its CJIS Division operations from FBI Headquarters (FBIHQ) in Washington, D.C., to Clarksburg, West Virginia (WV). With this relocation comes the loss of experienced personnel who do not wish to resettle in another area. Additional contributing factors, such as hiring and training new fingerprint card examiners, as well as the learning curve of new personnel, continue to negatively influence the backlog. As of January 1997, it takes approximately 140 calendar days to process a criminal card and approximately 43 calendar days to process a civil card, once the FBI receives each card. In the meantime, the fingerprint backlog is growing, even though the Division's fingerprint and related document processing personnel worked an average of 45,000 hours of overtime a month for all of 1996. This overtime utilization equates to more than 20 hours a month per fingerprint examiner.

These workload figures represent a backlog increase of 1,300,000 fingerprint cards and an increase in processing times of 78 days for criminal and 29 days for civil prints since July 1996. In addition to the current staffing level, throughout the six-year transition and relocation period, the requirement to transport fingerprint cards back and forth between FBIHQ and the CJIS Division Complex in Clarksburg, WV, has caused additional delay in processing times. This transition period has contributed to the growth of the huge backlog of work awaiting processing.

The FBI is the established leader in the area of identification services. The FBI's leadership provides States with the direction necessary to develop their automated fingerprint identification systems using nationally accepted and FBI certified standards. This uniformity will allow States access to information across jurisdictions, as well as internationally. As a result of the FBI's direction, advancements in automated fingerprint identification technology hold the promise of more timely services and expanded functionalities in the future. In order to ensure uniformity of fingerprint standards and improve upon existing technology, the FBI has embarked upon a series of automation initiatives to continue to

serve the law enforcement community into the 21st century.

In 1990, the FBI initiated a Revitalization and Relocation (R&R) Project to improve its fingerprint identification and related services to the Nation's criminal justice community in response to the demand for these services. As a result of this initiative, the Congress appropriated \$185 million in the Dire Emergency Supplemental Appropriations Act of 1990 for the construction of a new fingerprint identification facility. The CJIS Division Complex was built in Clarksburg, WV, and opened in July 1995. The FBI is currently transitioning CJIS Division functions from FBIHQ to the new site and will complete this relocation and transition initiative in 1998.

Simultaneously, the FBI is developing the Integrated Automated Fingerprint Identification System (IAFIS). At Final Operational Capability (FOC), IAFIS will completely replace the CJIS Division's existing fingerprint identification system (IDAS) and improve processing capacities and turnaround time. IAFIS is designed to process an average volume of 60,000 fingerprint records per day within two to 24 hours.

IAFIS is a large, technologically complex information system originally planned, budgeted and managed as a number of discrete segment development efforts. The FBI's had estimated the cost to modernize fingerprint identification services and operations at \$520,500,000. This estimate was based upon a Life Cycle Cost Estimate formulated in 1993 and included \$467,116,000 for development of IAFIS. The remaining \$53,384,000 was to fund employee relocations to WV, system transitions to the new building and operations and maintenance of the WV facility until 1998. The FBI, Department of Justice, and Congress are pursuing a long-term funding strategy for IAFIS development. To date, Congress has appropriated \$461,000,000 for the automation and related costs. A user fee surcharge on civil fingerprint card submissions has made available an additional \$31,200,000.

A comprehensive Red Team review of the IAFIS program was commissioned in late 1995 to assess the status of the program. This Red Team consisted of outside experts and internal IAFIS program office employees to determine future actions that would minimize program risk and maximize development success. As a result, several problem areas were identified, and corrective actions were immediately implemented. The project schedule was modified, resulting in the shift of system FOC from 1998 to 1999. The original acquisition strategy was modified, altering the IAFIS development segment FOC strategy to an Incremental Development/Deployment strategy. The major advantages to the new strategy are that it materially reduces the technological risk associated with the system's integration, it provides the opportunity to deliver improved operational functionality to the user community earlier than under the Initial Operating Capability (IOC)/FOC approach, and it brings costs under control by developing, integrating, and testing in smaller increments so each build is completed prior to the next. These efforts will insure the user community's requirements are fully integrated into the system design and will facilitate earlier delivery of the IAFIS in modular form. Additionally, the FBI has established a contract with Lockheed Martin Corporation for the complex task of system integration, rather than continuing to rely on an inadequately staffed and overutilized internal IAFIS program office for these responsibilities. The FBI commissioned a second Red Team review in the early fall of 1996 to assess the progress of the IAFIS project and modifications implemented since the 1995 Red Team review. The second Red Team found that the IAFIS Program remains viable; however some additional changes should be made to the project's organizational structure and greater emphasis should be placed upon establishing a well-defined process for interacting with the systems integrator contractor. The FBI has formulated an action plan to implement the recommended changes.

Current projections for IAFIS development, using the Incremental Development/Deployment strategy, would deliver a fully operational IAFIS in 1999. The slippage in program development was driven by increased requirements from the user community and the enactment of Federal statutes, as well as the integration of all IAFIS development efforts. The FBI solicited engineering change order proposals from each of the major IAFIS development vendors to reflect any cost and schedule changes resulting from the new incremental development strategy. The FBI reviewed and verified these proposals and negotiated a change modification to each existing contract with each of the IAFIS segment vendors. Additionally, the FBI has awarded a contract to Lockheed Martin Corporation for external integration services. As a result, the FBI has updated the original cost estimate to reflect these additional costs. The updated cost estimate for IAFIS is currently approximately \$640 million, which includes \$567,100,000 for developmental activities, \$44,400,000 for system integration, and \$28,500,000 for non-development costs. The non-development funding includes \$13,100,000 for employee relocations to WV, \$6,900,000 for the transition of existing hardware and systems, and \$8,500,000 for operations and maintenance of the new facility in WV. As a result of these continued funding requirements, the FBI will recur base-level funding of \$84,400,000 in 1998 to continue the IAFIS development effort. A 1999 advance appropriation of \$47,800,000 will complete funding for the project.

In 1967, the FBI established the National Crime Information Center (NCIC) as a nationwide database containing data and information files, such as wanted and missing persons, foreign fugitives, unidentified persons, and stolen property, among other files. Today, the NCIC system is a nationwide criminal justice information system linking the criminal justice information systems of six Federal agencies, 50 States, the District of Columbia, the Commonwealth of Puerto Rico, and Canada through a mainframe computer database located at FBI Headquarters. The NCIC system contains over 32 million records stored in 14 information databases. It provides the law enforcement community with immediate access to documented information vital to effective criminal justice operations. NCIC operates under a shared management concept and provides virtually uninterrupted operations, 24 hours a day, seven days a week. The NCIC databases now contain documented information regarding wanted/missing persons, known gang/terrorist associates, stolen vehicles, boats, guns, license plates, securities, and other data. The system is accessed by law enforcement agencies and officers resulting in over 600,000,000 annual transactions.

The NCIC system has become outdated and has exceeded its normal life cycle by a factor of three; however, the information stored in its data base remains vital to the criminal justice community. It is imperative to the law enforcement community that the existing NCIC system remain operational until the new generation system, NCIC 2000, reaches IOC, anticipated in July 1999. The NCIC 2000 system will replicate the current NCIC system by providing the capabilities of NCIC for the compilation, dissemination, and exchange of timely and critical criminal justice and law enforcement information. Additionally, the new system will also provide significantly advanced and expanded functionality, such as mug shot and fingerprint identification, to serve the criminal justice community into the twenty-first century.

The FBI awarded a development contract for the NCIC 2000 system to the Harris Corporation in March 1993. Since that time, the FBI and Harris have experienced developmental and staffing difficulties, which have resulted in reorganizations within the program management at both the FBI and Harris. The FBI has reassigned NCIC 2000 developmental responsibility from the CJIS Division to the Information Resources Division (IRD). This reassignment will allow the FBI to more efficiently utilize its developmental and technical expertise in the IRD for this critical project. At this same time, the Harris Corporation has elevated the status of the NCIC 2000 project, reassigned its previous program

manager, and rededicated its organization to the successful completion of NCIC 2000 development.

In conjunction with the new program management and elevated status of the NCIC 2000 project at Harris, the FBI directed the Harris Corporation to submit a final change order proposal (COP) delineating the level of services, schedule and payment necessary to complete project development. In August 1996, the FBI and Harris finalized negotiations on this final COP. The FBI has formulated a final cost and schedule estimate for NCIC 2000 development. An additional funding requirement of \$29.6 million, above the \$58 million made available in 1996, will be required to complete development of NCIC 2000. Funding available in the FBI's two-year account and the Department of Justice's Working Capital Fund, provided \$57 million of the identified requirement of \$58 million in 1996. As a result, \$1 million was added to the new requirement for \$29.6 million and a total of \$10.6 million will be provided from the Working Capital Fund for NCIC 2000 development in 1997. This new cost estimate is based upon milestones that were mutually agreed between the FBI and the Harris Corporation throughout the remaining development process. Additionally, the Congress appropriated \$8,250,000 to the FBI's Violent Crime Reduction Program in 1997 for development of two NCIC 2000 files, the Departed Felon File and the Protective Order File.

The FBI has reimbursed previous developmental activity costs to the Harris Corporation on a Cost Plus Fixed Fee contract arrangement. Beginning in January 1996, the FBI and Harris entered into a Cost Plus Incentive Fee contract arrangement for the remainder of the NCIC 2000 program development effort. Under this contract, the FBI and Harris have agreed to a target schedule, and the FBI has encouraged the contractor to manage the remaining effort in the most economical and efficient manner possible. This arrangement will provide maximum benefit to the FBI in terms of cost and schedule. In return, Harris could potentially earn greater profits for enhancing its performance and reaching project milestones at earlier dates. According to the proposed Harris target schedule, the FBI expects the NCIC 2000 system to reach Final Operational Capability in August 1999.

The FBI provides assistance to law enforcement agencies on such matters as NCIC policy and procedures, the National Fingerprint File Program, and firearms sales programs. Technical assistance is also provided to the States on transition planning, procurement, and software development. The IAFIS, NCIC 2000, Uniform Crime Reporting (UCR)/National Incident Based Reporting System (NIBRS), and other automated programs are being developed and implemented in direct response to the needs of the national criminal justice community, as well as background checks required for licensing and employment purposes in the private sector. These systems will assist the FBI in addressing the ever increasing demands for identification and related services. The FBI Director established the CJIS Advisory Policy Board (APB) to make recommendations to him and ensure user input on policy and user requirements for these systems. UCR/NIBRS crime reporting information, collected and retrieved through local, State, and Federal systems, provides the criminal justice community with consistent crime statistics, which are essential if these entities are to continue to effectively and efficiently serve the public. The CJIS APB has recommended audits of all participants of these systems. The FBI currently travels to each State to provide training and audit the users of NCIC and UCR to ensure the integrity of the data.

The maintenance of these systems and the services provided by the FBI allow expeditious access by law enforcement and criminal justice agencies to vital information, including criminal history data, wanted person information, stolen vehicle data, and uniform crime reporting information. Through these FBI systems, pertinent and necessary information is provided from one jurisdiction to another, thereby ensuring the detection, apprehension, detention, and prosecution of accused persons or criminal offenders. The success of these

efforts depends on a high degree of cooperation among Federal, State and local law enforcement agencies. The use of the CJIS Division's systems and the sharing of data among law enforcement agencies is voluntary. Thus, every effort is made to provide levels of services benefiting its users. This is particularly difficult in the management and operation of national systems because every user has its own unique needs and capabilities to address those needs. Therefore, it is essential the CJIS Division obtain input and guidance from the users on the management and operation of its national criminal justice systems and programs.

The FBI is recognized throughout the law enforcement/criminal justice community for managing criminal justice information for the following reasons:

- 1) Law enforcement agencies have long supported and identified the FBI as the most appropriate and capable agency to provide these services;
- 2) The FBI possesses the infrastructure and expertise to provide needed systems/services and the leadership to ensure they interact with the national as well as international law enforcement/criminal justice community; and
- 3) The FBI is internationally recognized as the leading authority on law enforcement and identification services.

The Criminal Justice Services decision unit's base-level resources will address problems consistent with its strategic assessment as follows:

- 1) Continue to operate and maintain the existing semi-automated systems,
- 2) Continue to process current workload as resources allow;
- 3) Continue to utilize overtime to minimize and reduce the backlog of fingerprint records;
- 4) Continue to relocate CJIS Division's operations and personnel to West Virginia;
- 5) Continue to hire and train required staff to replace large numbers of experienced personnel involuntarily separating from the Division;
- 6) Continue to support the development of automated initiatives; and
- 7) Continue to interact with criminal justice users for improved services and requirements definitions.

LONG-RANGE GOAL. To provide accurate and timely identification and information services for the criminal justice community and authorized components of the private sector.

MAJOR OBJECTIVES:

- I. Maintain current operations

- ◆ Ensure NCIC is fully operational until NCIC 2000 reaches Full Operational Capability (FOC) in August 1999.

- ◆ Maintain credible performance with the existing IDAS until IAFIS reaches FOC in the 4th quarter of 1999.
- ◆ Upgrade and maintain office automation capabilities as resources allow.
- ◆ Complete the transition and relocation of the CJIS Division from FBI Headquarters to Clarksburg, West Virginia by 1998.

2 Automation and transition to new systems

- ◆ Achieve a one-day response time for 95 percent of fingerprint card and related criminal history submissions.
 - ◆ Expand user participation, services, and analytical capabilities.
 - ◆ Train new employees and retrain existing staff, in accordance with the new systems' implementation schedules.
3. Obtain input and guidance from the users on the management and operation of national criminal justice systems and programs.

PROGRAM INCREASES: An additional 300 workyears for fingerprint technicians are required to address the increase in reimbursable fingerprint and name check workload. These reimbursable submissions require a comparison between the submitted fingerprints and name checks and those maintained in the FBI's central repository.

Initiative: Infrastructure

Item: Federal and Non-Federal User Fee Program - 300 Reimbursable FTE (No positions; no budget authority)

As a result of Public Law 101-515 (1990 Appropriations Act), the Congress reduced the FBI's base funding for fingerprint identification card processing by \$30 million and authorized the FBI to charge for certain background checks unrelated to criminal law enforcement (non-criminal justice, non-law enforcement employment and licensing purposes and for certain employees of private sector contractors with classified government contracts). In January 1990, the FBI implemented a new Federal User-Fee Program. The funds generated from the user fees were made available for employees' salaries and other expenses incurred in providing identification services. The Congress had previously granted authority in 1982 for collecting fees for similar State and local purposes (non-Federal User Fee Program). The assessment of fees in connection with the processing of Federal and non-Federal name checks and fingerprint submissions is derived based on a number of factors, including: personnel costs, payroll, travel, rent, communications, utilities, training, maintenance, research, etc.

The demand for fingerprint identification and related services to the Nation's criminal justice community continues to escalate year after year due to the increase in crime and the enactment of new legislation such as the National Child Protection Act of 1993 and the Housing Opportunity Program Extension Act of 1996 (P.L. 104-120), as well as other law enforcement initiatives. As an example, the Housing Opportunity Program Extension Act of 1996 requires the FBI to provide information to public housing agencies regarding criminal conviction records of adult applicants for, or tenants of, public housing for purposes of applicant screening, lease enforcement, and eviction. Through discussions with Housing and Urban Development officials, the FBI has learned there are 3,500 Public Housing Agencies in the United States, with more than 800,000 applicants on the waiting list. There are also over one million people living in public housing covered under this legislation.

In February 1992, the CJIS Division had a backlog of 934,000 fingerprint cards awaiting processing. In an effort to alleviate this growing backlog situation, several innovations (consolidation of units, overtime, combining functions and taking work home for processing) were implemented, resulting in a drastic reduction in the turn-around time for the fingerprint identification program. However, by August 1, 1995, the fingerprint card backlog in the Division had increased again to more than 1,100,000. In the ensuing two month period up to September 30, 1995, CJIS Division employees worked 141,239 overtime hours, and the backlog was reduced to approximately 720,000 fingerprint cards. Through the judicious use of overtime, FBI fingerprint personnel were able to complete more work than was received. However, due to the government furlough, the continued increase in revenue-producing fingerprint submissions, the loss of experienced personnel caused by the relocation, the learning curve of new personnel, and the delay in the development of the Integrated Automated Fingerprint Identification System, the backlog continues to increase. As of January 1997, the backlog had increased to more than 2,900,000 fingerprint cards. CJIS Division personnel continue to work overtime (approximately 45,000 hours per month) to reduce the growing backlog. Even though overtime has been and is being used successfully to reduce the backlog, such use can only be a short-term approach. It is not an effective long-term solution.

By May 1996, the FBI processed 3,317,256 revenue-producing fingerprint cards and name checks, resulting in the CJIS Division earning its authorized allocation of 1,002 reimbursable workyears during the first three quarters of Fiscal Year 1996. A total of 1,224 reimbursable workyears were earned in 1996, exceeding the CJIS Division's authorized allocation by 222 workyears. An average of over 100 reimbursable workyears was earned monthly. The FBI scheduled substantial levels of overtime (equating to an additional 237 workyears) for the CJIS Division employees allocated to the reimbursable User Fee Program to process the additional workload. Through the first two months of 1997, the FBI had earned a total of 366 reimbursable workyears, including overtime workyears. This figure far exceeds the workyears earned at that stage in every previous fiscal year during the same time period and equates to earning a yearly total of 2,196 reimbursable workyears (with overtime). At this rate, the FBI would earn 1,194 more reimbursable workyears, both allocated and overtime, than the authorized allocation of 1,002.

The FBI anticipates that civil fingerprint cards will continue to increase in 1997 and 1998. As such, an additional 300 reimbursable workyears will aid the CJIS Division in meeting the needs of the criminal justice community and authorized components of the private sector. Without these additional workyears, it is expected the backlog of reimbursable submissions would continue to elevate and become unmanageable. As mentioned, much of the additional workload is currently met through the use of overtime for CJIS Division employees. It is anticipated, if continued, that the current use of overtime will eventually become untenable and lead to adverse productivity rates for fingerprint card processing. The FBI projects that the 300 additional employees will be able to process approximately 1,134,000 more fingerprint cards annually than are being processed

today and enable the FBI to decrease its reliance on overtime utilization to process incoming workload. Initially, the additional workyears will enable the FBI to reduce its backlog of fingerprint cards. Eventually, the additional fingerprint examiners will enable the FBI to decrease the turnaround time for civil fingerprint card submissions, resulting in more efficient delivery of identification services to authorized recipients.

The following chart identifies the reimbursable workload, the workyears allocated for this program, the number of reimbursable workyears earned and the reimbursable workload volume produced since 1991. As the chart depicts, the FBI has received increasing numbers of civil fingerprint card submissions since 1994. The projections for 1997 indicate an increase of approximately 39 percent over 1995. The majority of these additional fingerprint card submissions are due to the increasing requirements for employment candidates and identification purposes, such as welfare and public housing recipients, gun permits, child care, etc. As mentioned, to date, the FBI has processed this additional workload through extensive overtime utilization of the existing personnel workforce.

REIMBURSABLE PROGRAM

YEAR	REIMBURSABLE (WORKYEARS) AUTHORIZED	TOTAL EARNED	FEDERAL WORKYEARS EARNED	NON-FEDERAL WORKYEARS EARNED	YEARLY REIMBURSABLE SUBMISSIONS RECEIVED	YEARLY REIMBURSABLE SUBMISSIONS COMPLETED *	BACKLOGGED REIMBURSABLE SUBMISSIONS
1991	1,349	973	561	412	3,644,976	3,094,827	74,500

A. DEFINITIONS OR TERMS OF EXPLANATION FOR INDICATORS

DEMAND/WORK-LOAD

11. The UCR data is to be reported according to a requirement in the FBI's UCR program. There exists a Congressional mandate to report crime investigated by Federal law enforcement and investigative agencies. In addition, the UCR statistical reports are received both electronically and via hard copy on a monthly basis.
2. Limited information (name checks) received on individuals for comparison to that information retained by the FBI for criminal identification purposes.
9. Information or requests received from various contributors, Congress, and the general public, all of whom provide information to update the criminal records, or request access to certain record information retained by the FBI.

DEMAND/WORK-LOAD & OUTPUT

- 4 & 16. Complete criminal history record requests received on individuals for comparison to that information retained by the FBI for criminal identification purposes.
- 5, 17. Information received from various law enforcement entities updating dispositions of criminal actions. This information is entered into FBI records so as to maintain a current and complete criminal history record. During 1995, the State of California began submitting Machine Readable Data Project submissions and the FBI's backlog of California records was eliminated.
- 6, 18. Authorized law enforcement personnel accessing NCIC for criminal information.

OUTPUT

19. Training provided to the law enforcement community on the NCIC system.
20. Travel involves CJIS personnel going to various places to collect criminal data, conduct studies, and provide training and assistance to law enforcement agencies.

Each State receives trained every other year. Due to the loss of experienced employees, 2 experienced instructors, as well as 2 inexperienced instructors, travel to each State. This enables the inexperienced instructors to gain on-site training while training is being provided to the State.

22. The conversion of fingerprint cards and biographical data from hard copy records to microfilm. This effort is made to save storage space. The CJIS Division initiated a major microfilm project to convert inactive criminal history records to microfilm.

23. Conversion of fingerprint cards and biographical data from hard copy to an automated system.

24. Each State is audited every two years. FBI personnel travel to each state to determine if law enforcement agencies are complying with NCIC policies and procedures.

OUTCOME

57. The IAFIS is the development and implementation of the most technologically advanced, large-scale automated criminal justice information services system, based upon image capture, storage and retrieval. IAFIS will provide continuous, accurate and timely fingerprint identification and criminal history services to the law enforcement community. The key concept is the electronic submission of fingerprint images and related information, rapid search, identification, and response while an offender is still in custody.

OUTPUT & OUTCOME

31 & 56. The current NCIC System is being upgraded and called NCIC 2000. This new system will provide on-the-spot fingerprint checks of those persons with active records in the missing and wanted persons files.

OUTPUT

30. Criminal information collected and compiled for trend analyses from State and local law enforcement agencies. UCR statistical information is distributed to 16,000 law enforcement agencies, who had submitted 20,000,000 plus reports, as well as the media and the general public.

27. The large increase between 1994 and 1995, and 1996 and 1997 is attributed to the necessity to provide training and orientation support at the State and local level for

NCIC 2000, helping address improvements for data entry quality, ease of use and system security for Law Enforcement contributors.

B. FACTORS AFFECTING 1996 PERFORMANCE

OUTPUT/OUTCOME

31 & 56. Detailed Explanation of Factors Affecting NCIC 2000 Completion:

Responsibility for NCIC 2000 development was transferred from the CJIS Division to the Information Management, Automation and Telecommunications decision unit of the Information Resource Division. The FBI and the Harris Corporation (development vendor) agreed to a new schedule that represents the revised project baseline. The system development effort was changed from a cost plus fixed fee to a cost plus incentive fee via a letter contract modification. This contract arrangement specifies distinct schedule, quality, and performance milestones for the contractor to meet. The FBI identified a requirement for \$58 million in additional funding for completion of NCIC 2000. In 1996, the Congress earmarked \$57 million in the Department of Justice Working Capital Fund and FBI internal Automated Data Processing funding for NCIC 2000 development in response to the FBI's new cost estimate. Negotiations on the latest Change Order Proposal (COP #8) are now complete and the FBI has identified a requirement for an additional \$29.68 million to complete development of NCIC 2000. The Attorney General notified the Congress of her intentions to transfer \$30.68 million to the FBI for completion of NCIC 2000 and Congress approved this action on January 15, 1997.

DEMAND/WORK-LOAD, INPUT & OUTPUT

1, 6-8, 20-27, 31, 52, 53, 56, 57. Budgetary Constraints

DEMAND/WORKLOAD

7. The projected UCR training requests in 1996 are less than those received in 1995 due to the Government furlough and the loss of personnel during the transition to WV.

OUTPUT

1 & 13. Movement of fingerprints from Headquarters (HQ) to WV and back to HQ during the transition.

26, 27. Lack of sufficient resources at the Federal and State levels (Implementation of NIBRS and the UFCR Act)

DEMAND/WORKLOAD & OUTPUT

1 & 13. Unpredictable and uncontrollable fingerprint work increases.

1 & 13. Reductions of staffing level due to the relocation of the CJIS Division and transition overhead for the relocation process.

1 & 13. Increasing receipts and personnel transition efforts have contributed to the current 2,900,000 card backlog reached on 1/15/97. As a result, average processing time for all fingerprint cards has increased to 113 days (146 days for criminal and 48 days for civil). From 10/1/95 until 9/30/96, the FBI received 5,535,362 criminal fingerprint cards and 5,708,177 civil fingerprint cards. These figures indicate a 3.8 percent increase in criminal fingerprint card submissions and a 27 percent increase in civil fingerprint card submissions over 1995. The loss of experienced personnel during the transition to West Virginia has also had an immense effect on the FBI's ability to keep up with these increasing demands.

C. FACTORS AFFECTING SELECTION OF FY 1997 AND FY 1998 TARGETS

OUTPUT & OUTCOME

31 & 56. Detailed Explanation of Factors Affecting NCIC 2000 Completion:

Through internal reallocations, the FBI plans to assign five additional positions to the Project Office. The NCIC 2000 contractor plans to hire additional staff in 1997, when full software development is expected to begin. Based on the outcome of COP #8 negotiations, the Attorney General will transfer a total of \$10.6 million to the FBI to complete NCIC 2000 development. Other project milestones depend on continued successful progress in system and software development.

DEMAND/WORK-LOAD, INPUT & OUTPUT

1, 6-8, 20-27, 31, 52, 53, 56, 57. Budgetary Constraints

DEMAND/WORKLOAD

12. The III inquiries for firearms is going to increase from 1998 to 1999 due to the new disqualifying factors. It is unlawful to sell firearms to anyone who is (1) under indictment or has been convicted of a felony with a sentence of at least one year; (2) a fugitive; (3) a user of or addicted to any controlled substances; (4) adjudicated as a mental defective or committed to any mental institution; (5) an alien who is illegally or unlawfully in the U.S.; (6) dishonorably discharged from the Armed Forces; (7) a citizen who has renounced citizenship; and (8) subject to a court order restraining such person from harassing, stalking, or threatening an intimate partner or child of such partner or person.

OUTPUT

25 & 26 Lack of sufficient resources at the Federal and State levels (Implementation of NIBRS and the UFCR Act)

DEMAND/WORKLOAD & OUTPUT

1 & 13. Unpredictable and uncontrollable fingerprint work increases

1 & 13. Reductions of staffing level due to the relocation of CJIS Division and transition overhead for the relocation process

1 & 13. Movement of fingerprints from FBI Headquarters (HQ) to WV and back to HQ during the transition

1 & 13. Increasing receipts and personnel transition efforts have contributed to the current 2,000,000 card backlog reached on 1/15/97. As a result, average processing time (10/1/95 through 9/30/96) for all fingerprint cards is almost 113 days (146 days for criminal and 27 for civil). From 10/1/95 until 9/30/96, the FBI received 5,535,362 criminal fingerprint cards and 5,708,177 civil fingerprint cards. These figures indicate a 3.8 percent increase in criminal fingerprint card submissions and a 26.8 percent increase in civil fingerprint card submissions over 1995. The loss of experienced personnel during the transition to West Virginia has also had an immense affect on the FBI's ability to keep up with these increasing demands.

Federal Bureau of Investigation
Salaries and Expenses
Justification of Program and Performance

1997 Appropriation Anticipated	1,797	1,591	\$143,984
1998 Base	1,807	1,582	149,319
1998 Estimate	2,046	1,802	160,713
Increase/Decrease	239	120	\$11,394

BASE-LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: The Management and Administration (M&A) functions of the FBI are extremely varied and performed by separate components throughout the organization. Matters related to personnel, finance, planning, evaluation, compliance, public affairs, and the law all fall under the Management and Administration function. Significant and numerous changes in each of these fields are, in most instances, increasing the administrative workload of the FBI. The base-level capabilities and then, the strategic assessment of each M&A entity are detailed below.

Executive Direction--Director's Office The Director and the Deputy Director's Offices provide the executive management and organizational leadership for all FBI activities.

Equal Employment Opportunity The base-level resources of the Office of Equal Employment Opportunity Affairs (OEEOA) are divided between two units, the Complaint Processing Unit (CPU) and the Special Programs Unit (SPU). The CPU is a reactive unit which handles the top priority of the OEEOA - complaints alleging discrimination. The SPU handles all EEO training matters, monitors FBI employment policies, procedures and practices, and oversees the Special Emphasis Programs.

The FBI must maintain a continuing affirmative action program to promote equal opportunity and to identify and eliminate discriminatory practices and procedures. EEO matters are handled by the FBI's OEEOA. Each and every complaint received must be reviewed for acceptance or dismissal. Accepted complaints require that a complete and thorough investigation be conducted. Following the investigation, the complainants may request a Final Agency Decision (FAD) with, or without, a hearing before an Administrative Judge of the EEO Commission. All FADs can be appealed or pursued in Federal Court. All EEO complaints must be processed within prescribed deadlines as mandated by Title 29, CFR, Section 1614.

The FBI is also mandated by Congress and Presidential Executive Orders to provide various Special Emphasis Programs (SEPs). These programs are designed to ensure that equal employment opportunity and equal treatment of employees exists within the Federal employment sector. These programs also ensure that minorities, women, and persons with disabilities are fairly represented in all occupations and at all levels within the organization.

The FBI is currently carrying out its responsibilities required as part of the settlement agreement reached in connection with the litigation entitled, *Emmanuel Johnson, et al vs Stuart Gerson, Acting Attorney General*, (U.S.D.C., D.C. Civil Action No. 93-0206), commonly referred to as the "Black Agents Don't Get Equality" or "BADGE" litigation. Legal mandates call for regular monitoring and evaluation, over a five-year period, of various employment practices, procedures and policies in an effort to avoid adverse impact on any protected groups of employees.

Public Affairs. The Public and Congressional Affairs (OPCA) manages FBI media affairs, fugitive publicity, Congressional relations regarding pending or proposed legislation, tours, General Accounting Office (GAO) liaison, and the Freedom of Information and Privacy Acts (FOIPA) function. The FBI's OPCA is responsible for responding to public, media, and Congressional inquiries. Requests from the public for information on FBI investigations, programs and services are received from a wide spectrum of American society to include individual citizens, special interest groups, business and industry, the academic community, foreign interest groups, and State and local government, among many others. Requests from the media, whether from the news, informational, educational, or entertainment industry, are at exceptionally high levels. The national and international news media interest in FBI investigations, such as OKBOMB and the UNABOM, is regarded as the most intense in FBI history. Requests from the Congress for FBI expert testimony, substantive information, special briefings and other various inquiries are also at very high levels. Many of these requests are due to global political changes, especially throughout Europe. International criminal and national security issues are matters receiving great attention and study by both Houses of Congress. OPCA also responds to requests from the GAO.

The FBI's FOIPA function further promotes the people's democracy by providing access to information as the public requests information on themselves, family members, movie stars, court cases, and other material which the FBI holds as government documents. The Freedom of Information Act of 1966 and subsequent amendments have provided for a public review of the Federal government's operations and consequently, opportunities to challenge current practices that have proven wasteful or unsafe for the American public. FBI material relevant to each request is reviewed by paralegal specialists at the FBI Headquarters location and field offices against statutes under the Freedom of Information and Privacy Acts and, most currently, the Electronic Freedom of Information Act (EFOIA) of 1996. This optimization of public records is essential in order to create more openness throughout the Federal government and to comply with Presidential directives mandating such disclosure. The FOIPA function is one of the FBI's most vital public relations functions.

Legal Matters. With the base level of resources, the Office of General Counsel (OGC) will continue to provide adequate and timely legal advice on all FBI investigative and administrative operations, defense to all personnel litigation, provide adequate support to the defense of litigation brought against the FBI, its programs and its personnel, and legal instruction to FBI New Agents, DEA Basic Agents, the National Academy, In-Service Classes and a number of specialized schools.

The OGC is responsible for providing accurate and timely legal advice to the Director and all other FBI officials and personnel to insure that all FBI investigative and administrative operations are conducted within legal constraints, for insuring that the FBI and its programs and personnel are adequately defended in litigation, and for providing essential legal training to FBI and DEA personnel, the National Academy and other law enforcement groups. The OGC is currently facing a severe increase in workload related to the following

areas, increases in operational advice and reviews for legal sufficiency of such techniques as electronic surveillance pursuant to the Foreign Intelligence Surveillance Act, significant increases in the number and complexity of Congressional requests for FBI documents and the number of personnel file reviews in federal criminal prosecutions required by the Hefthorn decision, and significant increases in the amount of litigation the FBI is involved in as a result of expanded responsibilities and the FBI's increased commitment to counterterrorism.

FINANCE. The Finance Division manages property, procurement, accounting and budgeting activities for the FBI. Finance Division base level resources are adequate to address existing workload. However, the increased workload resulting from the planned Laboratory and Criminal Justice Information Services (CJIS) facilities and other FBI infrastructure changes is stretching existing resources. The continued implementation of the Standard General Ledger (SGL) will have a significant effect on FD resources.

Planning, Evaluation and Compliance. The FBI's Inspection Division (INSD) is responsible for strategic planning and the auditing and evaluation of all FBI programs. INSD is also responsible for investigating allegations of criminal or other misconduct activities involving FBI employees. INSD is tasked by executive management to conduct evaluations where significant opportunities to improve FBI operations exist. Each program evaluation or major project requires the employment of various data gathering methodologies that frequently produce hundreds or perhaps thousands of pages of text material that require intensive analysis. The ability to carry out effective evaluations require a highly experienced and trained staff. The Budget and Accounting Act of 1950 and OMB Circular A-73 dated March 15, 1978, require agencies to maintain audit staffs which independently conduct internal examinations. In addition, GAO standards for audits of government organizations, program activities, and functions require periodic audits. The INSD is required to conduct inspections of field office and Headquarters entities every three years.

Personnel. The FBI's Personnel Division is responsible for providing a host of administrative services for all FBI employees. Included are health care, counseling, career guidance, employee benefits, pay administration, position classification, staffing, and facilities management. Additionally, the Personnel Division is responsible for security of the FBI JEH Building and the Washington Metropolitan Field Office, planning, design, and construction/renovation projects Bureau wide, management of all matters associated with the 56 field offices and approximately 400 resident agencies, oversight of the operations, maintenance, repair and alterations of the JEH Building, and printing and reproduction service functions.

The Personnel Division recently contracted for functions related to facilities management, such as laborers, outside maintenance of the JEH Building, and custodial workers for cleaning restrooms. To support these contracts, funding from the building maintenance account was reallocated from other nonpersonnel funding within the facilities management function, leaving a significant shortage of funds to address building deficiencies. Building maintenance/repairs are becoming more and more frequent as the building ages and deteriorates, prolonging maintenance costs.

LONG-RANGE GOAL: To more effectively and efficiently meet the expanding administrative needs of the FBI.

To facilitate lawful public access to FBI records in response to Freedom of Information and Privacy Acts (FOIPA) requests and to comply with the Electronic Freedom of Information Act (EFOIA) of 1996.

MAJOR OBJECTIVES:

- To ensure that the FBI work environment meets or exceeds standards of conduct as set forth by the EEOC and to ensure that deviations from that standard are handled appropriately
- To establish and maintain an effective relationship with the public, Congress and oversight entities and to identify and formulate legislative proposals that confront modern crime problems not addressed or inadequately addressed in current law
- To develop long-range information management strategies that facilitate the transition from manual records management practices to modern information technology such as the FOIPA Document Processing System (FDPS), which provides automation support to the current, labor-intensive process of handling FOIPA requests
- To streamline the FOIPA process through procedural and technological changes
- To improve the quality and timeliness of all FBI legal services
- To provide more timely, accurate, and user oriented financial products and services
- To conduct inspections of every FBI entity on a three-year cycle
- To publish an FBI strategic plan
- To conduct program evaluations and management assistance studies
- To improve the health, safety and well-being of all FBI employees
- To meet the internal staffing needs of the FBI
- To ensure the physical security of the JEH Building and the Washington Metropolitan Field Office (WMFO)
- To acquire, alter, and maintain appropriate space to house the FBI's 56 field offices and approximately 400 resident agencies
- To provide for printing, warehousing and supply services

PROGRAM INCREASES: For 1998, the Management and Administration (M&A) decision unit is requesting 239 support positions, 120 support FTE, and \$11,394,000 for the Management Infrastructure Initiative. These resources are being requested in the Freedom of Information and Privacy Acts program activity in order to support the implementation of the Electronic Freedom of Information Act (EFOIA) of 1996. Also, for 1998, the M&A decision unit Facilities Management and Security Section) is requesting a total of \$15,160,000 in Construction funding for the renovation/realignment of the Los Angeles Field Office (\$4,660,000) within the Federal Building and the JEH FBI Headquarters Building (\$10,500,000).

FOIPA analysts protect information essential to the law enforcement mission of the FBI, while complying with laws mandating review for classification. The processing of FOIPA requests is labor-intensive, requiring a line-by-line review of each document in order to make classification determinations. The FBI is deluged with more FOIPA requests each year and has accumulated a mounting backlog of requests. The FBI received for the FOIPA program in the 1997 Justice Appropriations Act, a program increase of 129 positions and \$1.3 million. The FBI anticipates hiring all 129 support positions by the end of FY 1997. These positions will address a portion of the FOIPA backlog.

More recently, during 1996 the Attorney General recognized the FOIPA program, as well as, the FOIPA Document Processing System (FDPS) development as a major Department of Justice initiative. The Attorney General called for more strict management of the FOIPA program and a significant decrease in the backlog of requests by late fiscal year 1997. As a result, the FBI has performed an internal analysis of its FOIPA operations and determined some procedural changes could be made to make the process more efficient. Consequently, the FBI is in process of streamlining to streamline the operation. The FBI expects this business process re-engineering effort would result in at least ten percent productivity gains during fiscal year 1997.

The FBI's focus on FOIPA issues was further emphasized during late 1996 with the passage of the Electronic Freedom of Information Act (EFOIA) of 1996. The EFOIA institutes a number of modifications to the Freedom of Information Act of 1966 (5 U.S.C. Section 552). The EFOIA requires all agencies to provide public information to requesters in electronic format (Compact Disc (CD) or floppy diskette). The EFOIA requires that computer-based information in addition to paper records kept by agencies be subject to review for classification. This includes electronic mail. If an agency cannot currently produce responses in electronic format, a method must be instituted immediately. Each agency is encouraged to begin automating its public reading rooms and FOIA libraries for ease in public access. In fact, all "reading room" material created on or after November 1, 1996, must be available in electronic format by November 1, 1997. In addition, the Act places increased emphasis on (1) a speedy response time to requesters, (2) expedited processing for those with special circumstances, and (3) a longer response time for agency compliance.

The 1966 law provides ten days for agencies to respond to requesters. However, the EFOIA doubles that response time to twenty days, but contains a provision that would specifically disallow "predictable agency workload of requests" from serving as an exceptional circumstance for purposes of a court-ordered stay of proceedings under the Open America decision. The Act provides an exemption for agencies when attempting to meet the twenty day time limit. By this, an agency would negotiate with a requester to narrow the scope of the request. This requirement necessitates the formation of a team to negotiate with requesters. The group would try to minimize the scope of the request in order to effect a proper turnaround time to the requester. Currently, the FOIPA staff is not able to allocate personnel to this negotiation team because every employee is performing functions critical to eliminating the chronic backlog of requests.

The EFOIA would require agencies to indicate the amount of information deleted in response to a FOIA request, unless such an indication would harm an interest protected by an exemption. The Act imposes a technical feasibility standard for such specifications. Upon completion, the FBI's FDPS will satisfy all technical standards required by EFOIA statutes. The FBI's FDPS was designed to show the quantity of redacted material from each page of responses presented a requester. The redacted portion appears as a gray-shaded area on the page.

Despite the FBI's re-engineering efforts, the EFOIA places additional demands on the FBI's FOIPA operation that can only be remedied by an enhanced staff of trained professionals. The FBI's streamlining will allow for a ten percent reduction in the backlog of requests, however, the EFOIA does not allow for agency backlogs of requests nor does it allow agencies to claim exemptions under traditional precedents under the Open America decision. For these reasons, the FBI requires 219 positions and \$11,394,000 to comply with the EFOIA of 1996 and other provisions under the FOIPAs. The FBI's successful acquisition, training, and utilization of these personnel resources would promote a higher level of operating efficiency and ultimately optimal public confidence and satisfaction.

NAME OF DECISION UNIT		EEO		Performance Indicators		1994		1995		1996		1997		1998

Status of Congressionally Requested Studies, Reports, and Evaluations

The Senate Report 104-353 directed the FBI to continue submitting quarterly reports regarding the status of the National Crime Information Center (NCIC) 2000 and Integrated Automated Fingerprint Identification System (IAFIS) projects to the House and Senate Committees on Appropriations. The fourth quarter Fiscal Year (F Y) 1996 NCIC 2000 status report was submitted on December 19, 1996. The third quarter F Y 1996 IAFIS status report was submitted on August 8, 1996.

The House Report 104-676 directs the FBI and Secretary of State to provide a plan, by February 1, 1997, to ensure that Consular Offices will have access to information currently available to the FBI to prevent the illegal entry of criminals and terrorists into the United States. On February 6, 1997, the FBI forwarded an issue paper to the Department of Justice detailing FBI input for the joint report.

The House Report 104-676 and Conference Report 104-863 directed the FBI to examine the following proposals and submit a report on intentions for the 1) North Carolina Criminal Justice Information Network Mapstrate Project; 2) North Carolina Criminal Justice Information Mobile Data Network; 3) Center for Forensic Science Standards in Central Florida; and 4) South Carolina State DNA identification record base.) Funding provided to the FBI for grants to State and local authorities for identification systems and DNA laboratories was appropriated for formula grants authorized by Section 811(b) of the Antiterrorism and Effective Death Penalty Act of 1996. Due to the formula nature of this funding, these individual proposals were not reviewed by the FBI; rather, block funding provided to eligible States will be allocated to projects selected by the State's chief executive officer. However, the Office of Justice Programs will examine these projects for discretionary grant funding in F Y 1997.

Transfers to and from other accounts.			
1 Transfer to Violent Crime Reduction Program In 1998, a total of \$6,715,000 from the Technical Field Support and Services program is being transferred from Salaries and Expenses to the Violent Crime Reduction Program			-\$6,715
Total transfer			-\$6,715
Increases			
1 1998 Pay Raise This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$33,017,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$36,274,929 for pay and \$6,742,071 for benefits)			\$33,017
2 Annualization of 1997 Counterterrorism Increases This provides for the annualization of 1,264 additional positions approved in the 1997 Counterterrorism Amendment. The annualization of 111 covers agent and support 111 for Training, Recruitment and Applicant, Forensic Services, Management and Administration, and other field programs. This request includes nonrecurring costs for one-time items associated with increased positions		834	83,338

Supplies/Materials	1,006	1,569			
Equipment	\$26,287	301			
Total costs subject to annualization	\$89,823	\$83,338			
3. Annualization of 1997 Pay Raise					
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$10,654,000 represents the pay amounts for three quarters of the year \$8,478,453 for compensation and \$2,175,547 for benefits)					
4. Annualization of 518 additional positions approved in 1997					
This provides for the annualization of 518 additional positions provided in 1997 Congressional Action. This annualization of FTE covers the agent and support FTE for Organized Crime, White Collar Crime, Technical Field Support and Services, Management and Administration, and other field support. This request includes nonrecurring costs for one-time items associated with the increased positions.					
				258	9,636

Justification of Adjustments to Base (continued)
(Dollars in Thousands)

Required	Approved 1997 Increases	Annualization Required	Perm. Pos.	WY	Amount
Net Compensation.....	10,695	\$5,731			
Associated employee benefits.....	5,485	1,960			
Travel.....	532	251			\$99
Transportation of things.....	1,007	15

Other Services.....	3,813	461			
Supplies/Materials.....	336	186			
Equipment.....	9,139	24			
Total costs subject to annualization.....	33,183	\$9,636			
5. Foreign Allowances					
Allowances for Government employees in foreign areas are determined by the Department of State (DOS). The requested increase of \$99,000 provides a 1.7 percent increase over the obligations of \$5,824,000, which are committed for 1996.					
6. Mileage Allowance Rate Increase					
The mileage allowance rate has increased from 30 to 31 cents per mile. An increase of \$160,000 is requested in 1998 to cover this rate adjustment.					
7. General Services Administration (GSA)					
GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$422,000 is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates frozen at 1997 levels.					

Justification of Adjustments to Base (continued)
(Dollars in Thousands)

		Perm. Pos.	W.Y.	Amount
8	Correspondence Management System An increase of \$27,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system, provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping and improved reporting capability.	\$27
9	ICASS Increase for Staffing Under the ICASS an annual charge will be made by the DOS for administrative support based on the overseas staff of each Federal agency. Because the law enforcement operations of the Department of Justice have increasing international demands, additional overseas staffing since 1995 will result in increased ICASS costs in 1998. Based on the additional overseas staffing, DOS has provided an increased cost estimate of \$487,000 for this organization in 1998.	487
10	General Pricing Level Adjustments This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.	8,018
11	Spectrum Frequency Management Public Law 104-134 authorizes the Secretary of Commerce to charge Federal agencies for spectrum management services. The National Telecommunications and Information Administration estimates that the Department of Justice costs for 1998 will be \$723,000 based on the annual number of frequency assignments. Given the dependence of the Department's law enforcement operations on efficient and dependable frequency management, this funding is necessary to continued operations. Funding of \$170,000 is requested for the FBI.	370
12	Northern Mariana Islands Prior to 1998, the Department of Interior reimbursed the Department of Justice for the costs of addressing serious crime problems in the Commonwealth of the Northern Mariana Islands (CNMI). However, beginning in 1998, reimbursement of these costs will not be available. Funding of \$510,000 is requested to maintain current efforts in CNMI. The three positions and workyears are being moved from reimbursable to direct funding.	3	3	510

A-197

Justification of Adjustments to Base (continued)
(Dollars in Thousands)

	Perm Pos.	W.Y. 10	Amount
13. Technical Adjustment for Financial Preparation Statements			
This request is for the preparation of Department-wide consolidated financial statements as required under the Government Management Reform Act of 1994 (GMRA). The GMRA requires that the Attorney General submit to the Director of the Office of Management and Budget an audited financial statement for 1996, which covers all accounts of the Department, by no later than March 1, 1997, and each year thereafter. The GMRA financial statement audits intend to produce complete reliable and useful information for decision makers at all echelons of the government and restore citizen confidence in the financial affairs of the Federal Government.
Total Increases	13	1,105	\$146,738
Decreases			
1. One-time transfer for High Intensity Drug Trafficking Areas (HIDTA)			
The Office of National Drug Control Policy provided funding for HIDTA transfers in 1997. For 1998, these transfer amounts have not been determined and are not reflected in the components budget requests	- \$3,526
2. Nonrecurrence of 1997 Increases			
In 1998, a total of \$8,152,000 will nonrecur from Organized Criminal Enterprises, White Collar Crime, Violent Crimes, Technical Field Support and Services, and Management and Administration	- 8,152
3. Nonrecurrence of 1997 Counterterrorism Amendment			
In 1998, a total of \$41,026,000 will nonrecur from the following programs: Training, Recruitment and Applicant, Forensic Services, Management and Administration and other field programs.	- 41,026
Total Decreases	- \$52,704

Construction
Summary Statement
Fiscal Year 1998**

The President's 1998 budget proposes a Construction appropriation that requires \$49,006,000 to continue on-going projects, principally the relocation of the FBI Laboratory and necessary maintenance and upgrades for FBI Academy, and to initiate two new renovation projects involving FBI Headquarters and the Los Angeles Field Office.

Forensic Services

FBI Laboratory facility. The FBI has undertaken an initiative to relocate the FBI Laboratory from its present space in the FBI Headquarters Building in Washington, D.C., to a new, stand-alone facility. Relocation is necessary due to safety, health, and environmental concerns of operating the current laboratory in a densely populated office building and operational needs relating to new forensic examination techniques and technologies. In June 1996, the FBI selected a 28-acre site for the new laboratory facility on vacant space available at the FBI Academy in Quantico, Virginia. In September 1996, the FBI awarded an architectural and design contract to the firm of Hellmuth, Obata, and Kassabaum, following a competitive process.

The FBI's revised estimated construction cost for the new facility is \$130,000,000. This estimate represents a decrease from the earlier estimate of \$150,200,000. The current cost estimate reflects construction assumptions that are specific to the 28-acre site selected for the new FBI Laboratory facility. The current design concept for the facility is for a multi-building complex consisting of: (1) a main office and forensics laboratory building; (2) a multi-level parking garage; and (3) a stand-alone central utilities plant. The FBI anticipates beginning site preparation activities in September 1997. Site preparation activities include site clearing, site grading, and utility installations. Funding totaling \$97,441,000 has been provided to date for architectural and engineering services, site preparation, and initial construction. For 1998, the President's budget proposes \$32,559,000 to complete funding for the construction of the new facility. Under the current timeline for construction of the FBI Laboratory facility, the FBI plans to award a construction contract in Summer 1998, at which time all construction funding must be available.

Training, Recruiting, and Applicant

FBI Academy necessary maintenance and upgrades. In 1996, the FBI began an initiative to perform necessary maintenance and upgrades to the facilities of the FBI Academy located in Quantico, Virginia. The FBI Academy, which began

operations at Quantico in 1972, is used to train FBI and Drug Enforcement Administration (DEA) agents, State and local law enforcement officers, and other criminal justice personnel. Also located at the FBI Academy are the Critical Incident Response Group and the Engineering Research Facility. The existing FBI Academy campus includes: classrooms, offices, and dormitory buildings; indoor and outdoor firearms ranges; a practical problems training center; a tactical and emergency vehicle operators course; library; dining hall; and warehouse, service, and support facilities. Among the recurring maintenance and upgrade projects needed are: replacement and retrofit of air conditioning chillers, exterior masonry waterproofing, asphalt repairs, security fencing and surveillance, and compliance with the Americans with Disabilities Act. Aggressive hiring and new agent training efforts by the FBI and DEA are placing a significant stress on facilities. Consequently, funding is necessary to maintain and upgrade existing training facilities and capabilities at the FBI Academy. Funding totaling \$1,287,000 is proposed in the President's 1998 budget to continue addressing recurring maintenance and upgrades that are necessary for FBI Academy structures. This funding level, the same as appropriated in 1997, will ensure the FBI Academy provides a safe and modern educational environment.

Management and Administration

Renovation of FBI Headquarters Building. The on-going relocation of the Criminal Justice Information Services Division to Clarksburg, West Virginia, and the planned relocation of the Laboratory Division to Quantico, Virginia, will necessitate the renovation of approximately 405,880 square feet of space in the FBI Headquarters Building vacated by these components. A 1992 assessment by an architectural and engineering firm estimated the cost of this renovation effort at \$26,400,000. The FBI has developed a multi-year plan that combines the renovation of the vacated space with the consolidation of Headquarters divisions and offices into contiguous space for more efficient operations. Additionally, the FBI would consolidate components currently located in leased commercial space back into the FBI Headquarters building. This proposal is consistent with the Vulnerability Assessment of Federal Facilities Study, conducted by the Department of Justice in the aftermath of the bombing of the Murrah Federal Office Building in Oklahoma City, which recommends that Federal law enforcement agencies not be located in rental space with non-Federal tenants whenever possible. The President's 1998 budget includes \$10,500,000 to implement the first phase of this multi-year plan.

Renovation and realignment of Los Angeles Field Office. The FBI's Los Angeles Field Office currently occupies space on several floors of the Federal Building in Los Angeles, California. An additional 40,000 square feet of space (two floors) are required to accommodate growth in the size of the agent and support workforce assigned to the Los Angeles Field Office and to provide enhanced security and technical capabilities. Total cost for the renovation and realignment project is \$9,460,000, of which the General Services Administration will provide \$4,800,000 for asbestos removal and standard alterations. Funding totaling \$4,660,000 is included in the President's 1998 budget for architectural and engineering design, construction administration, above standard build-out costs, and realignment of space.

**Federal Bureau of Investigation
Construction
Justification of Proposed Changes in Appropriations Language**

The 1998 budget estimates include proposed changes in the appropriations language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Construction

For necessary expenses to construct or acquire buildings and sites by purchase, or as otherwise authorized by law (including equipment for such buildings); conversion and extension of federally-owned buildings; and preliminary planning and design of projects; [~~\$41,639,000~~] \$49,006,000, to remain available until expended. (Department of Justice Appropriations Act, 1997.)

Explanation of changes

1. Includes funding totaling \$49,006,000, as follows: \$32,559,000 for construction of a new FBI Laboratory facility at the FBI Academy, Quantico, Virginia; \$10,500,000 for renovations and space realignment to the J. Edgar Hoover Building, Washington, D.C.; \$4,660,000 for renovations and space realignment to the Los Angeles field office; and \$1,287,000 to continue necessary maintenance and upgrades at the FBI Academy, Quantico, Virginia.

Total			\$55,616			\$55,616			(\$16,037)			\$41,639
1997 Congressional Action												
The Laboratory Division received \$40,352,000 for construction of the new FBI Laboratory. This increase represented a reduction of \$3,337,000 from the amount requested for Lab construction. Additionally, the FBI received \$1,287,000 in base funding for maintenance of FBI Academy buildings in Quantico, Virginia. The Congress did not appropriate \$10,500,000 for renovation of space within the J. Edgar Hoover Building in Washington, DC.												
Counterterrorism Amendment												
Included \$2,000,000 for the Violent Crime Program for an architectural and engineering study of a proposed Critical Incident Response Group (CIRG) building, of which the request was not funded.

1998 Base			32,559
1998 Estimate			32,559
1998 Increase/Decrease			

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: The successful investigation and prosecution of crimes require, in most cases, the collection, examination, and scientific analysis of evidence recovered at the scene of the incident or obtained during the course of the investigation. Oftentimes, the availability and presentation of physical evidence is used in court to demonstrate the guilt, either directly or circumstantially, of the person on trial. The Forensic Services program supports the operations of the FBI Laboratory, which is one of the largest and most comprehensive crime laboratories in the world and which is the only full-service Federal forensic laboratory. The FBI Laboratory performs examinations of evidence for all duly constituted law enforcement agencies -- Federal, State, and local -- in the United States.

During 1996, FBI Laboratory examiners and technicians conducted 696,543 examinations of evidentiary items submitted. Additionally, 2,184,998 latent fingerprint comparisons were performed. FBI Laboratory personnel also provide training to other law enforcement and crime laboratory personnel at the FBI Academy in Quantico, Virginia, at regional and local training sites, and at the Hazardous Devices School in Redstone, Alabama. During 1996, the FBI trained approximately 3,300 students in basic and advanced forensic science topics. Additionally, the forensic research and development program focuses on the development and implementation of improved and new examination techniques and forensic technologies. For example, the FBI Laboratory is a leader in the forensic application of DNA identification technology.

The ability of the FBI to continue to provide forensic examination services to Federal, State, and local law enforcement and criminal justice personnel requires an adequate facility where examinations and services can be performed. Presently, the FBI Laboratory is situated in the FBI Headquarters Building in Washington, D.C. However, the Forensic Science Research and Training Center is located on the campus of the FBI Academy, Quantico, Virginia. The existing location of the FBI Laboratory suffers from severe space limitations, safety and health risks, and inadequate utility and environmental support. For example:

- Space constraints at FBI Headquarters preclude expansion of the existing laboratory to accommodate necessary examination facilities, storage capacity, and integration of advanced forensic science services and techniques. Space constraints also preclude the flexibility needed to configure laboratory functions and operations to promote the most effective use of space, movement of evidence through the laboratory, and ready access of examiners and technicians to evidence lockers and reference files.

- Examinations involving potentially infectious biological specimens present heightened opportunity for exposure of FBI Laboratory staff, other FBI Headquarters personnel, and visitors to diseases, such as hepatitis, tuberculosis, HIV, and venereal diseases.
- Utility and environmental capacities at the FBI Headquarters building are not able to satisfy special air conditioning and power requirements of the FBI Laboratory. For example, difficulties in meeting equipment cooling needs have occurred. Although the FBI has installed large water-cooled units to meet temporary requirements, these units take up space needed for examination services and provide no capacity for meeting future environmental needs.
- Similarly, ventilation and exhaust systems are inadequate. Many evidentiary items examined are in a putrefied condition that require their processing under exhaust hoods vented to the outside. In addition, noxious and/or highly volatile chemicals and industrial-type solvents used in processing evidence or in other laboratory operations also require special ventilated hoods or processing areas. Recent safety inspections by the National Institute of Safety and Health and the General Services Administration have identified inadequacies in exhaust and ventilation systems which are either difficult or impossible to remedy in the existing building.

In recognition of the inadequacies of the present FBI Laboratory facility within the FBI Headquarters building, the Administration endorsed the FBI's proposal to construct a new state-of-the-art, stand-alone FBI Laboratory facility. The current estimated cost for constructing a new FBI Laboratory facility is \$130,000,000. The FBI has revised this cost estimate to reflect current plans for the facility, including the construction of a laboratory, parking garage, and a power plant. To date, the FBI has received \$97,441,000, including \$57,089,000 in 1996 and \$40,352,000 in 1997. Base-level funding of \$32,559,000 is required in 1998 to complete project funding requirements for the facility. The FBI anticipates issuing a construction solicitation in April 1998, at which time all construction funding must be available.

FUNDING PROFILE - FBI LABORATORY FACILITY (Dollars in millions)					
Funding Requirements	Cost Estimate	FY 1996 Funding	FY 1997 Funding	Funding to Date	Total Funding

AdE	16.0	16.0	0.0	16.0	16.0
Construction	103.0	30.089	\$40.352	70.441	\$32.559
Total	\$130.0	\$57.089	\$40.352	\$97.441	\$130.0

* The Senate Appropriations Committee report 104-353 directs the Administration to request the full funding required for construction in 1998.

TIMELINE

In accordance with House and Senate Appropriations Committee report instructions, the FBI developed and provided to Congress a revised *Construction Report and Timeline* in December 1996. Within this report, the FBI advised that the most definite timeline and cost information will be made available upon completion of final construction documents in the Winter of 1997/1998. The FBI has updated its initial timeline for construction of the new FBI Laboratory facility as follows:

**PLANNING TIMELINE FOR CONSTRUCTION
OF NEW FBI LABORATORY**

	Summer/Fall '00	

SITE SELECTION

The FBI has selected a 28-acre site at the FBI Academy in Quantico, Virginia, as the site for the new FBI Laboratory facility. Site selection was completed in June 1996, following

the evaluation of several potential parcels of land at the FBI Academy. These evaluations were conducted by the architectural and engineering firm of Einhorn, Yaffee, and Prescott. In addition to providing data used to support site selection, these evaluations also yielded geotechnical data that was made available to the facility architectural and engineering firm. This data will be used to complete design concept development and construction documents.

ARCHITECTURAL AND ENGINEERING

In September 1996, the FBI awarded an architectural and design contract to the firm of Hellmuth, Obata, and Kassabaum (HOK), following a competitive process. HOK is presently performing programming studies of the FBI Laboratory. Programming studies will determine the amount and type of space required to support each of the various units and functions of the FBI Laboratory. Upon review of the programming studies by the FBI, HOK will proceed to developing a design concept for the new FBI Laboratory facility. The design concept will bring together the programming requirements and the specific site into an overall building design concept. The FBI anticipates completion of the design concept phase by March 1997.

FBI CONSTRUCTION MANAGEMENT TEAM

The FBI recently selected a Project Manager/Chief Engineer for the FBI Laboratory project. This individual most recently served in the same capacity for the construction of the FBI's Criminal Justice Information Services (CJIS) facility in Clarksburg, West Virginia. This latter project, which cost approximately \$200,000,000, included the planning and construction of the main office complex and computer center, a service center, a day care center, and related infrastructure.

The newly designated Project Manager is in the process of selecting a Construction Management Team, initially consisting of four other positions, including a mechanical engineer, analysts, and support staff to track schedules, monitor construction quality, administer change orders, execute budget and financial transactions, and perform related tasks associated with this multi-year project. This management approach is patterned after the team that was established to oversee the CJIS facility in West Virginia.

DESIGN CONCEPT

The current design concept for the FBI Laboratory facility is for a multi-building complex consisting of: (1) a main office and forensics laboratory building; (2) a multi-level parking garage; and (3) a stand-alone central utilities plant.

Main office and forensics laboratory building. The main office and forensics laboratory building will have approximately 427,400 square feet of space which will house the existing staff of approximately 700 Laboratory Division employees. Additionally, the design and location of the main office and forensics laboratory building will be situated in a position that will allow for, if necessary, future expansion and renovations.

The main building will also include a cafeteria and 500-seat auditorium. The existing dining facilities at the FBI Academy are operating at capacity and can not accommodate the

FBI Laboratory staff. The 500-seat auditorium will provide a facility for forensic symposia and conferences, as well as FBI Laboratory employee conferences. The FBI Laboratory sponsors six forensic symposia annually and attendees typically number 250-300 law enforcement personnel at each event.

Multi-level parking garage Construction of a 900-vehicle capacity parking garage is necessary to accommodate the current and future FBI Laboratory staff, visitors, and students attending forensic symposia and conferences. The existing parking facilities at the FBI Academy are already at capacity and are not sufficient to accommodate the additional demand that will result from the relocation of the FBI Laboratory to the FBI Academy campus. Further, the FBI Academy and Quantico Marine Corps Base are not served by public transportation. A multi-level structure is planned due to the 28-acre size of the site for the FBI Laboratory facility. Earlier plans based upon a 60-acre site assumed graded parking lots.

Central utilities plant The FBI intends to construct a stand-alone central utilities plant for the FBI Laboratory facility. This plant will support electrical and natural gas services required by the FBI Laboratory. The FBI is also considering interconnecting this plant with the central utilities plant that services the FBI Academy complex. This would provide emergency back-up capabilities that are presently lacking at the FBI Academy complex.

The relocation of the FBI Laboratory to the FBI Academy, Quantico, Virginia, will require infrastructure improvements to the United States Marine Corps Base. The FBI will be responsible for upgrading roads; providing natural gas; connecting and improving the water and sanitary systems; and improving the reliability of electrical services provided to the FBI Academy. On October 15, 1996, HOK began the vehicular analysis phase of the laboratory construction project.

Hazardous Materials Response Due to the extreme toxicity of chemical/biological/nuclear materials and the large population of the FBI Academy complex/Quantico Marine Corps Base, the FBI does not believe the new laboratory facility is an appropriate site in which to conduct forensic examinations of such agents. The FBI plans to task HOK to: (1) assess the requirements of the FBI to conduct these types of examinations; (2) inventory existing U. S. Government defense and non-defense laboratory facilities and capabilities; and (3) prepare general cost estimates for establishing a separate FBI chemical/biological/nuclear materials containment laboratory that could serve law enforcement and national security investigations. The FBI will work closely with the Department of Defense on this review. The current plans for the FBI Laboratory facility at the FBI Academy do not include the specialized capabilities to address these types of examinations. Costs associated with studying the establishment of a chemical/biological/nuclear materials containment facility will come from FY 1997 research and development enhancements provided for the Laboratory Division's Hazardous Materials Response Unit.

COST ESTIMATES

The current cost estimate for the new FBI Laboratory facility is \$130,000,000. This represents a decrease of \$20,200,000 from the earlier estimate of \$150,200,000. The change in cost projections can be attributed to further refinement of the assumptions upon which cost estimates are made.

The initial cost estimate of \$150,200,000 included the following major assumptions: (1) a 60-acre site (to be acquired or Government-owned); (2) collocation of the existing Forensic Science Research and Training Center at the new facility; (3) a single building design of 470,268 gross square feet; (4) capacity for 800 staff; (5) availability of nearby

hotels and motels for housing conference attendees and conducting large group meetings and symposia.

The current cost estimates reflect assumptions that are more specific to the 28-acre site at the FBI Academy complex. Specifically, the FSRTC will remain in its current building at the FBI Academy and not be collocated in the new facility. Moreover, the site will require changes in the approach to the building design, i.e., multi-level parking garage versus graded surface parking lot and a standalone central utilities plant versus utilities included in the main structure. The FBI will continue to lodge students attending training classes, conferences, and symposia at the FBI Academy; however, it plans to construct a 500-seat auditorium in the new facility so these sessions may be integrated into the laboratory environment.

LONG-RANGE GOAL: To construct a new, state-of-the-art, stand-alone, full-service forensic laboratory that will increase efficiency of FBI Laboratory services provided to users, provide a safe working environment for FBI employees, support the development and integration of new forensic technologies and techniques, and serve as a learning center to facilitate the training of forensic science and law enforcement personnel.

MAJOR OBJECTIVES:

- To complete construction of a new state-of-the-art, stand-alone, full-service forensic laboratory at the FBI Academy, Quantico, Virginia, by the Summer of 2000.
- To plan and achieve the orderly transition and relocation of FBI Laboratory services and staff to the new FBI Laboratory facility by June 2000.

PROGRAM INCREASES: No program increases are requested in 1998. Funding of \$32,559,000 is recurred in the base for construction of the laboratory facility.

Increase/Decrease

BASE LEVEL CAPABILITIES/ STRATEGIC ASSESSMENT: Crime continues to be a significant problem facing the United States. The issue of crime has permeated American culture; media reports of crime dominate the print and broadcast news media. The success of television shows such as "Cops" and "America's Most Wanted," in addition to the television news magazine shows such as "Dateline," demonstrate America's obsession with crime. This concern is not unwarranted. In the 1994 Uniform Crime Report, statistics show that a violent crime occurs every 17 seconds and a property crime every three seconds. Few Americans born today will be unaffected by crime during their lives.

Domestic violent crime and its financial impact place an overwhelming burden on most State and local police agencies. Moreover, the weakening or elimination of borders in many parts of the world and the growing availability of electronic forms of communication and commerce allow criminals significant degrees of domestic and international mobility. Social, political, religious and economic factors are generating changes that stretch the ability of the United States and foreign law enforcement agencies to respond to the crime problems generated by these developments. The FBI must take a leadership role in the development of knowledge and operational capabilities for law enforcement to attack these crime problems and develop programs to train our counterparts in these techniques.

Changing crime problems, new law enforcement and investigative techniques, and increasing emphasis on practical problems require the FBI to have modern training facilities. In addition, census trends show growth of one percent per year in the U.S. population. Thus, the population will increase about 20 percent in the next 20 years. This trend can be expected to lead to comparable increased demands for law enforcement services from the public. Effective and efficient delivery of these services will require comprehensive basic and advanced training for law enforcement personnel, including employees of the FBI.

The FBI conducts its training programs at the FBI Academy in Quantico, Virginia, field offices and off-site locations, at local, State, and regional facilities throughout the Nation and at various international sites. At the FBI Academy, training is provided for FBI new agents, the FBI National Academy, and Drug Enforcement Administration (DEA) basic

agents. As capacity permits, the FBI also offers in-services/comprehensive FBI management training, and specialized schools, conferences, and symposia. In addition, the FBI administers the International Law Enforcement Academy in Budapest that began operations in April 1995.

The FBI Academy is located approximately 40 miles south of Washington, D.C., on approximately 400 acres amid the sprawling United States Marine Corps Base at Quantico, Virginia. The Academy's mission of training, research and operations is accomplished in 21 major buildings, housing not only the FBI's Training Division, but the Information Resources Division's Engineering Sections, the Laboratory Division's Forensic Science Research and Training Center, and the Critical Incident Response Group (CIRG). In addition, the Office of Training, Drug Enforcement Administration is located at the Academy. Approximately 1,200,000 gross square feet of floor space are enclosed and include office, classroom, laboratory, firearms, forensic, engineering research, library, auditorium, gymnasium, dormitory, dining and recreation space. Exterior facilities include a firearm training range, driver training track and recreation fields and facilities.

The FBI Academy's primary complex of buildings was completed in 1972, 24 years ago. The Firearms Range predates the Academy and became operational 40 - 50 years ago. Facilities are becoming outdated and in need of repair, maintenance and modernization. Due to expanded needs of the FBI, DEA and mandated Priority Law Enforcement Training (PLET), facilities need expansion and improvement to bring state-of-the-art training capabilities to the FBI Academy. Currently the FBI is unable to satisfy more than 25 percent of the needs for training.

The capacity of the FBI Academy is set at approximately 203,500 Student Training Days (STDs) made up of FBI, DEA, National Academy Program, in-services for FBI personnel and other PLET and special events participants. The primary training categories (FBI New Agents, National Academy, and DEA Entry Level) will occupy 80 percent of the lodging capacity in 1998. Because of Academy capacity limitations and the emphasis on new agent training, most priority in-service training must be done regionally in 1997 and 1998.

In 1995, the FBI Academy developed a five-year \$165,000,000 plan for Necessary Improvements and Maintenance and Capital Improvements and Expansion of Facilities. This plan would provide for a Multi-Purpose Building to increase dormitory capacity, classrooms, and offices; expand and modernize the Firearms Range and Firearms Range Training Center Building; renovate and expand the Dining Hall/Kitchen; expand the Gymnasium and provide additional equipment; increase the library capacity and provide computer study carrels; and expand Hogan's Alley, the practical applications training area. Additionally, the plan provided for necessary maintenance and improvement to existing facilities, the updating and revision of the Academy Master Plan, and program management and construction contract management to oversee design and construction activities.

In FY 1996, the FBI received \$16.85 million to begin the modernization of the existing outdoor firearms ranges. The FBI published an announcement in the Commerce Business Daily on August 23, 1996, to solicit responses for a construction firm. The modernization of the outdoor ranges will include the removal of lead from the existing berms, the construction of a DOD-approved ammunition storage facility, and the relocation of the existing ranges.

The FBI also received \$4.5 million in 1996 for the completion of the Tactical Firearms Training Center (TFTC) and \$9.15 million for necessary maintenance and improvements at the Academy. The contract for the construction of the TFTC was awarded on July 17, 1996, and is proceeding. The necessary maintenance funds have been used to re-roof six

buildings in the Academy complex and to complete the construction of the garage for the Tactical Emergency Vehicles Operations Center (TEVOC). Plans are progressing to waterproof the exterior masonry, repair asphalt, and install security fencing at the Academy. These funds have also been used to fund an assessment of the Academy's compliance with the American with Disabilities Act in order to plan for the construction and alterations needed throughout the Academy complex. The funding recurred in the base is being used to continue to reduce the backlog of repairs and necessary maintenance needed throughout the facility.

LONG RANGE GOAL: To provide law enforcement with the most up-to-date facilities from which to learn their skills and knowledge necessary to perform investigative and management functions.

MAJOR OBJECTIVES:

To complete modernization of the firearms training facilities.

To continue to complete necessary maintenance and improvement projects at base-level funding permits.

PROGRAM INCREASES: No program increases are proposed for 1998.

**Federal Bureau of Investigation
Construction
Justification of Program and Performance
(Dollars in thousands)**

Management and Administration	Perm Pos.	FTE	Amount
1997 Appropriation Anticipated		
1998 Base	
1998 Estimate		..	\$15,160
1998 Increase/Decrease		..	\$15,160

BASE-LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: The Management and Administration decision unit includes resources for the acquisition, alteration, and lease of space provided by the General Services Administration (GSA), including FBI Headquarters, 56 Field Offices, and approximately 400 resident agencies. Base funding in the Salaries and Expenses appropriations is used to perform routine renovations and alterations for this space. However, base level funding is not adequate to address major renovation efforts, and project-specific funding is required. For 1998, funding is required for two projects: (1) renovation and realignment of the Los Angeles Field Office, and (2) renovation of the FBI Headquarters Building.

The FBI has initiated a very aggressive hiring plan to staff up to its authorized position level to address increasing criminal and terrorist acts. International expansion of FBI focus on counterterrorism has placed increasing demands to ensure appropriate security measures through renovation/realignment of existing space as well as new space obtained for task forces and storage areas in order to comply with the Department of Justice's Vulnerability Assessment of Federal Facilities Study. The FBI currently spends approximately \$4,000,000 annually to lease commercial space for multiple FBIHQ components. Consolidation of these entities back into the JEH FBI Building would free up these funds to pay GSA rent charges currently covered by the user fee programs of the CJIS Division. However, the increasing Headquarters staff could impact the number of FBIHQ rental agreements that can be eliminated. GSA rent charges previously paid by CJIS Division user fees that are in excess of savings on commercial rent would have to be paid by direct appropriations.

To ensure a secure/healthy working environment for FBI employees to support investigative activities, the FBI has initiated a major renovation project for the Los Angeles Field Office (LAFO). An additional 40,000 square feet of expansion space are required for the LAFO. In addition to the FBI's request for the LAFO, GSA must provide \$4,800,000 to cover asbestos removal and standard alterations.

LONG-RANGE GOAL(S): To support the FBI's investigative mission by implementing a construction/renovation project for expansion of the LAFO, and to renovate and reprogram space within the JEH Building vacated by the relocation of the CJIS and Laboratory Divisions

MAJOR OBJECTIVES:

- To coordinate with the GSA the acquisition, renovation and realignment of 40,000 square feet of space for the LAFO ensuring security/technical enhancements
- Through a contract with an architectural and engineering firm, obtain updated site surveys, programming, tentative design and budget estimates for renovation of 405,880 square feet of vacated space within the FBIHQ Building
- Following procurement guidelines, ensure that construction documents are ready for competition by early fiscal year 1998
- Award contract(s) for renovation of the space vacated by relocation of the CJIS Division
- Coordinate with the GSA the upgrading of the electrical, heating, ventilation and air conditioning systems of the JEH FBI Building
- Coordinate realignment of renovated space and subsequent transfer of outside entities back into FBIHQ

PROGRAM INCREASES: For 1998, the Management and Administration (M&A) decision unit (Facilities Management and Security Section) is requesting a total of \$15,160,000 in Construction funding for the renovation/realignment of the LAFO (\$4,660,000) within the Federal Building and the JEH FBI Building (\$10,500,000)

Initiative: Management Infrastructure

Item: Renovation/Realignment Funding for the LAFO

A total of \$4,660,000 is requested for renovation/realignment of the LAFO within the Federal Building. The LAFO currently occupies floors 14 through 17, and a portion of the 9th floor within the building. Each floor comprises approximately 20,000 square feet of space. An additional 40,000 square feet of space (floors 12 and 13) is being obtained by the FBI to accommodate the special agent and support personnel increases for white-collar crime, violent crimes, organized criminal enterprises, and health care fraud investigations. Additional security/technical modifications will also have to occur in the LAFO in order to comply with the Department of Justice's Vulnerability Assessment of Federal Facilities Study.

In accordance with established government policies, the GSA is responsible for funding the removal of all asbestos from the building and the initial standard alterations to allow the FBI to acquire the additional 40,000 square feet of space. The FBI is solely responsible for renovation costs associated with the realignment of the existing space on floors 14

through 17. No changes are planned for the 9th floor, other than securing the perimeter walls, which would result in minimal costs. The funding requested for the FBI (\$4,660,000) would be used for the following: \$1,200,000 for renovation/realignment of 40,000 square feet of space on the 14th and 15th floors, \$2,600,000 for realignment of 40,000 square feet of space on the 16th and 17th floors which includes mechanical, electrical and above-standard build out for FBI technical and computer facilities, and \$860,000 for architectural and engineering design and limited construction administration which is 10 percent of the estimated construction costs and in conformance with standard construction practices. To complete the project, GSA must provide \$3,600,000 for asbestos removal from 120,000 square feet of space and \$1,200,000 for the initial standard alterations to 40,000 square feet of expansion space.

Initiative: Management Infrastructure

Item: Renovation/Realignment for JEH FBI Building

The FBI has initiated two separate projects to relocate the CJIS and Laboratory Divisions from the JEH FBI Building to new, stand alone facilities. Relocations of the CJIS Division to West Virginia and the Laboratory Division to Quantico, Virginia, require renovation of 405,880 square feet of space in the JEH FBI Building that these components will vacate. The FBI plans a phased, multi-year effort for renovation/realignment of the vacated space. Renovation of the CJIS Division space will begin in 1998 and continue through 1999. Renovation of the Laboratory Division is expected to begin in year 2000 and completed by 2002. A 1992 architectural and engineering study by Smith, Hinchman and Grylls (SH&G) Associates, Inc., estimated that a total of \$26,400,000 (based on 1996 dollars) would be required to renovate 405,880 square feet of space. This estimate was based upon an industry-wide standard of \$65 per square foot for office-to-office renovation cost. The FBI requires \$10,500,000 in 1998 for the first phase of the JEH Building renovation and realignment.

On February 2, 1996, the FBI awarded a \$530,000 contract to Daniel, Mann, Johnson, and Mendenhall (DMJM) to perform the first phase of the architectural and engineering programming study. This study provided a master plan to be used as a guideline to backfill/realign space within the JEH FBI Building. In September 1996, the FBI awarded a \$1,900,000 contract to DMJM for preparation of final construction documents and budget estimates. The construction documents are anticipated to be ready for competition in October/November 1997. The funding used to initiate this project was made available from 1996 base funding of the Salaries and Expenses appropriations by delaying other renovation efforts.

The CJIS Division began a phased relocation effort in 1991. Construction of the new facility in Clarksburg, West Virginia was completed in late 1995, and the relocation effort was escalated during 1995/1996. Most of its work functions and the fingerprint files have now been relocated, leaving large open area for the majority of the vacated space. As of January 1997, 440 CJIS Division employees remained at FBIHQ, of which 300 would be subject to separation from the FBI's rolls at midnight September 30, 1997. The remaining 140 employees are currently assigned to the Integrated Automated Fingerprint Identification System (IAFIS) Program Office and the Office of Communication and Technology. It is anticipated that these CJIS Division entities would remain at FBIHQ through 1999 which is the projected date of completion for the IAFIS development effort.

The FBI plans to relocate FBIHQ components currently located in leased commercial space back into the JEH FBI Building. This proposal is consistent with the Vulnerability Assessment of Federal Facilities Study, conducted by the Department of Justice in the aftermath of the bombing of the Murrah Federal Office Building in Oklahoma City, which recommends that Federal law enforcement agencies not be located in rental space with non-Federal tenants whenever possible. In order to relocate entities that are currently housed

outside the JEH FBI Building back into the facility, it is necessary to create an office working environment. The FBI requires \$10,500,000 in 1998 to compete/award the contract to begin the construction/renovation for the CJIS Division space. The vacated space will be renovated/realigned to accommodate the planned consolidation and additional personnel for multiple FBIHQ programs, i.e., National Security, Applicant, White-Collar Crime, Organized Criminal Enterprises, Violent Crimes, etc. The specific space allocations will be reprogrammed upon completion of the renovation.

1. Nonrecrural of 1997 FBI Laboratory Construction funds.			
The estimated cost of the new FBI Laboratory is \$130,000,000. To date, the FBI has received \$97,441,000, including \$57,089,000 in 1996 and \$40,352,000 in 1997. Of the \$40,352,000 appropriated in 1997, a total of \$7,793,000 will not recur in the FBI's base funding. This leaves the FBI with \$32,559,000 in 1998 to complete projected funding requirements for the facility.			- \$7,793
Total, decreases			- \$7,793

**Federal Bureau of Investigation
Telecommunications Carrier Compliance Fund
Summary Statement
Fiscal Year 1998**

The Communications Assistance for Law Enforcement Act (CALEA) (P.L. 103-414) clarified the responsibility of the telecommunication carriers to assist law enforcement agencies with the lawful interception of communications and the collection of call-identifying information in a rapidly changing telecommunications environment. This legislation was necessitated by the erosion of law enforcement interception abilities and the frustration of court orders for electronic surveillance as a result of the deployment of advanced telecommunications technologies. The FBI documented to Congress 183 cases where advanced telecommunications equipment had impaired or prevented execution of a wiretap court order. In just one locality alone, the FBI was unable to conduct, or was significantly delayed in conducting, 34 court-ordered interceptions over an 18-month period. To facilitate compliance with the provisions of the CALEA by telecommunications carriers, the Act authorized the appropriation of \$500,000,000 between 1995 and 1998 to pay for reasonable costs directly associated with the modifications performed by carriers in connection with equipment, facilities, and services to establish the necessary capabilities and capacities identified by law enforcement. The Attorney General delegated management and administrative responsibilities of the CALEA to the FBI.

The Omnibus Consolidated Appropriations Act of 1997 (P.L. 104-208) established the Department of Justice Telecommunications Carrier Compliance Fund for making payments to telecommunications carriers, equipment manufacturers, and providers of telecommunications support services pursuant to Section 109 of the CALEA. Additionally, the Congress authorized any agency of the United States with law enforcement or intelligence responsibilities to deposit into the Fund any unobligated balances that are available until expended, consistent with Congressional notification requirements for reprogramming of funds.

The 1997 Appropriations Act also required the submission of an implementation plan for CALEA prior to the expenditure of funds. In January 1997, the FBI submitted a draft implementation plan to the Department of Justice for review prior to forwarding the document to Congress. The Conference Report (104-863) accompanying the 1997 Appropriations Act, specifies that the contents of the plan include: "(1) the law enforcement assistance capability requirements and an explanation of law enforcement's recommended interface; (2) the proposed actual and maximum capacity requirements for the number of simultaneous law enforcement communications intercepts, pen registers, and trap and trace devices that authorized law enforcement agencies may seek to conduct, set forth on a county-by-county basis for wireline services and on a market service area basis for wireless services, and the historical baseline of electronic surveillance activity upon which such capacity requirements are based; (3) a prioritized list of carrier equipment, facilities, and services deployed on or before January 1, 1995, to be modified by carriers at the request of law enforcement based on its

investigative needs; (4) a projected reimbursement plan that estimates the cost for the coming fiscal year and for each fiscal year thereafter, based upon the prioritization of law enforcement needs as outlined in (3), of modification by carriers of equipment, facilities, and services, installed on or before January 1, 1995." The implementation plan is undergoing Department review.

The FBI expects to begin entering into cooperative agreements with carriers, equipment manufacturers, and telecommunications service providers in the Spring of 1997 to initiate systems engineering efforts of priority telephone switching platforms and related intelligent network peripherals. It is anticipated that a minimum of \$100,000,000 will be available for these efforts in 1997, consisting of \$60,000,000 in direct appropriations and \$40,000,000 in funds to be made available from the Department's Working Capital Fund.

The President's 1998 budget proposes a direct appropriation of \$100,000,000 to the Fund for payments to telephone carriers, equipment manufacturers, and providers of telecommunications support services for costs incurred in complying with the C.A.L.E.A. This funding will be used to continue systems engineering activities involving priority telephone switching platforms and intelligent network peripherals and to initiate systems development activities involving priority telephone switching platforms.

**Federal Bureau of Investigation
Telecommunications Carrier Compliance Fund
Justification of Proposed Changes in Appropriations Language**

The 1998 budget estimates include proposed changes in the appropriations language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Telecommunications Carrier Compliance Fund

For necessary expenses, as determined by the Attorney General, [\$60,000,000] \$100,000,000, to remain available until expended, to be deposited in the Telecommunications Carrier Compliance Fund for making payments to telecommunications carriers, equipment manufacturers, and providers of telecommunications support services [pursuant to section 110 of this Act: Provided, That the entire amount is designated by Congress as an emergency requirement pursuant to section 251(b)(2)(D)(i) of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended: Provided further, That the entire amount not previously designated by the President as an emergency requirement shall be available only to the extent an official budget request, for a specific dollar amount that includes designation of the entire amount of the request as an emergency requirement, as defined in the Balanced Budget and Emergency Deficit Control Act of 1985, as amended, is transmitted to Congress], as authorized by 47 U.S.C. 1009, as amended. (Department of Justice Appropriations Act, 1997.)

Further, for the foregoing purposes related to national security, \$50,000,000 for deposit in the Telecommunications Carrier Compliance Fund, to become available October 1, 1998, and remain available until expended.

Explanation of changes

1. Includes proposed funding level of \$100,000,000 for payments to telecommunications carriers, equipment manufacturers, and telecommunications support service providers.
2. Deletes emergency designation language not required for 1998 and inserts authorization cite.
3. Includes advance appropriations language for defense discretionary funding consistent with P.L. 99-145 which requires the President to submit a two-year budget proposal for the Department of Defense and related agencies, including those having multifunction appropriations with national defense components.

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: Lawfully authorized electronic surveillance is one of the most valuable tools in America's arsenal for combating crime and terrorism. Such crimes present ever greater challenges in our society as the 21st Century approaches. Public safety is increasingly dependant upon law enforcement's ability to prevent violent acts and to investigate criminal activity. In an era of high-speed global communications, many of the groups engaged in the most serious and violent crimes conduct their illegal activities using the same communications systems which propel our society forward. Similarly, foreign intelligence services and their agents engage in espionage using these very systems.

Even though it is used sparingly, electronic surveillance is crucial to effective law enforcement. This vital investigative tool is used to penetrate closely controlled, highly sophisticated organizations which might otherwise engage in wholesale criminal activity with impunity. Evidence collected through electronic surveillance has resulted in the convictions of approximately 26,000 felons during the 14 year period ending in 1995. Recently, electronic surveillance provided critical clues leading to arrests in a deadly terrorist incident. Other evidence collected through the use of electronic surveillance gave law enforcement the time and evidence they needed to prevent still another terrorist act. Electronic surveillance evidence also proved critical in the investigation and prosecution of Aldrich Ames, one of the most serious espionage threats to national security in this or any other decade.

Law enforcement's ability to conduct electronic surveillance to protect both the public safety and national security is seriously threatened by rapid changes in telecommunications technology. Although today's communications networks are an important aid to law enforcement in fulfilling its mission, the continuous technological advances in telecommunications systems and the introduction of new digitally based services and features are making it increasingly difficult, if not impossible, for law enforcement to conduct court-ordered electronic surveillance. The loss of this investigative tool would be devastating to law enforcement in the fight against crime. In its efforts to evaluate the extent of this growing problem, the FBI documented 183 cases where advanced telecommunications equipment prevented or impaired execution of court orders. In a recent 18-month period, in one locality alone, the FBI was unable to conduct, or was significantly delayed in conducting, 34 court-ordered interceptions.

Recognizing the potential impact of emerging telecommunications technology on public safety and national security, Congress passed the Communications Assistance for Law Enforcement Act (CALEA) which the President signed into law October 25, 1994 (Public Law 103-414, 47 U.S.C. 1001-1010). Enacted to preserve law enforcement's ability, pursuant to a court order or other lawful authorization, CALEA clarifies the responsibilities of telecommunications carriers in the interception of communications for law enforcement. CALEA vests law enforcement's implementation responsibilities in the Attorney General, on behalf of all Federal, State, and local law enforcement agencies. The Attorney General has delegated these responsibilities to the FBI.

To facilitate implementation of CALEA, Congress authorized the appropriation of \$500,000,000 between Fiscal Years (FYs) 1995 and 1998 to pay for certain costs associated with CALEA compliance. These funds will be disbursed to telecommunications carriers and manufacturers based upon a prioritized spending plan which addresses the greatest technological problems facing law enforcement. At present, the FBI has identified 15 switching platforms (major switching systems) with their supporting intelligent network peripherals (INPs) in use by the telecommunications industry. However, historical interception activity shows that 18 (14 wireline and 4 cellular) of these switching platforms are associated with approximately 97% of interceptions conducted by law enforcement. Therefore, the FBI is focusing upon these 18 switching platforms for potential reimbursement. Currently, these 18 switching platforms are being further prioritized based upon a number of factors, including historical interception activity analyzed for the period between January 1993 and March 1995, extent of technical impediments to law enforcement, platform market share, manufacturer support for the platform, platform architecture, service provider market share, and potential for solution transfer to other platforms. Once such prioritization is complete, reimbursement for CALEA implementation efforts can begin. The following chart displays the prioritization factors utilized.

PRIORITIZATION FACTORS OF THE FOUR MAJOR STEPS RELATED TO IMPLEMENTATION PLANNING

EQUIPMENT PRIORITIES	SYSTEMS ENGINEERING PRIORITIES	ENGINEERING DEVELOPMENT PRIORITIES	SYSTEMS DEPLOYMENT PRIORITIES
Priorities based on: <ul style="list-style-type: none"> - Interception activity - Features offered - Existing surveillance techniques - Market share - Current - Projected - Product life cycle 	Priorities based on: <ul style="list-style-type: none"> - Priority equipment - Estimated costs - FY funding availability - Industry willingness to enter into cooperative agreements - Adaptation of existing solutions 	Priorities based on: <ul style="list-style-type: none"> - Systems engineering products - Extent to which requirements are met (cost/benefit) - Adaptation of existing features - Cost quotes for engineering development - Annual funding availability 	Priorities based on: <ul style="list-style-type: none"> - Engineering development products - County/market interception activity - Switch type - Equipment replacement plans - Existing surveillance techniques - Cost quotes for deployment - Annual funding availability

The following chart lists the 18 priority switching platforms in alphabetical order.

NORTEL DMS200	
SIEMENS DCO	
SIEMENS EWSD	

Subject to the availability of appropriations, CALEA authorizes the Attorney General to reimburse telecommunications carriers and others for: (1) all reasonable costs directly associated with the modifications performed by carriers in connection with equipment, facilities, and services installed or deployed on or before January 1, 1995, to establish the

capabilities necessary to comply with section 103 of CALFA; (2) additional reasonable costs directly associated with making the assistance capability requirements found in section 103 of CALFA reasonably achievable with respect to equipment, facilities, or services installed or deployed after January 1, 1995, in accordance with the procedures established in CALFA section 109(b), and (3) reasonable costs directly associated with modifications of any of a carrier's systems or services, as identified in the Carrier Statement required by CALFA section 104(d), which do not have the capacity to accommodate simultaneously the number of interceptions, pen registers, and trap and trace devices set forth in the Final Notice of Capacity published in accordance with CALFA section 104.

CALFA further provides that, if a carrier requests payment for modifications eligible for reimbursement in accordance with the cost recovery rules promulgated by the Attorney General under CALFA section 109(e) and the Attorney General does not agree to reimburse for the needed modifications, the equipment, facility or service will be considered to be in compliance. In the case of equipment, facilities, and services installed or deployed on or before January 1, 1995, this compliant status lasts only until the equipment, facility or service is replaced or significantly upgraded or otherwise undergoes major modification. The final CALFA cost recovery rules are currently under review and are expected to be released by the end of the first quarter of calendar year 1997.

Under CALFA, the Attorney General may agree to pay the telecommunications industry for eligible compliance efforts. Therefore, the FBI intends to enter into cooperative agreements for reimbursement of modifications to equipment platforms that are deemed high priority to law enforcement. Cooperative agreements help structure joint efforts between telecommunications carriers, equipment manufacturers, support service providers, and law enforcement. The Federal Grant and Cooperative Agreement Act (31 U.S.C. 6301 et seq.) states the cooperative agreements are to be used when "the principal purpose of the relationship is to transfer a thing of value to the recipient to carry out a public purpose of support or stimulation authorized by a law of the United States," and "substantial involvement is expected between the executive agency and the recipient when carrying out the activity contemplated in the agreement." (31 U.S.C. 6305). Cooperative agreements will serve as the vehicles for development and deployment of CALFA solutions in telecommunications networks. Cooperative agreements will be instituted in a manner that is consistent with the well-established business processes used by the telecommunications industry to make modifications to the network equipment.

The Government, under CALFA, intends to rely on the telecommunications carriers to influence equipment manufacturers to invest in equipment modifications. Business processes for equipment modifications are relatively "standardized" throughout the telecommunications industry. Both the telecommunications carriers (for their networks) and equipment manufacturers (for their equipment platforms) have specific methods and time frames for developing solutions. Therefore, CALFA implementation initiatives will be consistent with the established relationships and schedules of the telecommunications industry. Industry business processes can be summarized into three primary stages: systems engineering, engineering development, and systems deployment.

In general, **systems engineering** is the stage when the manufacturers respond to a customer's requirements for a new service with an analysis of the technical approach and estimated price of development. Systems engineering is generally viewed as a six-month process. The definition of requirements will assist equipment manufacturers in developing the technical approaches on specific switching systems and other equipment used by a carrier to provide telecommunications services. The completed systems engineering analyses will articulate for the industry and law enforcement the potential costs for development and uncover the technical issues associated with compliance. Systems engineering efforts are expected to begin in the second quarter of 1997.

Engineering development is the stage when the manufacturers create detailed designs for hardware and software based on the systems engineering analysis. From the detailed design, the manufacturers make modifications or additions to systems. This stage might result in new software, new hardware, or in many cases, a combination of hardware and software. Typically, engineering development requires an average of 12 months to complete. Engineering development efforts directly follow systems engineering efforts in the industry business process. These efforts will be based on the documentation and quotes completed in systems engineering.

Systems deployment begins following engineering development. In this stage, the solutions are available for installation in telecommunications carriers' networks. For CALEA, systems deployment activities will be reimbursed in the geographic regions of priority for law enforcement based upon the availability of appropriations.

For 1997, \$100,000,000 is anticipated for CALEA implementation. This funding includes both a direct appropriation for the Telecommunications Carrier Compliance Fund (TCCF) and transfers to the TCCF. The Omnibus Consolidated Appropriations Act of 1997 established the TCCF and appropriated \$60,000,000 to the FBI as "start-up" funds to begin CALEA implementation that are available until expended. The 1997 Act also authorized agencies with law enforcement and intelligence responsibilities to deposit unobligated balances into this Fund, subject to applicable Congressional reprogramming requirements. The Attorney General is proposing to make available an additional \$40,000,000 from the Department of Justice Working Capital Fund in 1997.

Additionally, the FBI is working with other Federal law enforcement agencies and agencies with intelligence responsibilities to identify eligible funds to transfer to the TCCF. On November 27, 1996, the Attorney General sent a letter to all qualified Federal law enforcement and intelligence agencies advising them of the TCCF and soliciting funding support. As of this date, the level of contributions to be transferred to the TCCF during 1997 by other Federal law enforcement and national security agencies is undetermined.

The Omnibus Consolidated Appropriations requires the submission of an implementation plan, with no specified due date, that must be submitted prior to the obligation of any funding from the TCCF. The CALEA implementation plan has been drafted and submitted to the Department of Justice for review.

General cost and schedule estimates for systems engineering and engineering development have been developed based on current information available about the telecommunications industry business process. Using these estimates, the \$100,000,000 available in 1997 will be allocated between systems engineering and engineering development activities. The dollar amount allocated to each specific platform for systems engineering and the engineering development in 1997 will not be known until the execution of cooperative agreements in early 1997. In addition, since the cooperative agreement process has not yet begun, it is not possible to specify which carriers, manufacturers, and support service providers will receive reimbursement. Reimbursement depends, in large measure, upon carrier, manufacturer, and support service provider responsiveness to the cooperative agreement process. The FBI has already initiated discussions with carriers, manufacturers, and support service providers to facilitate the cooperative agreement process. It is anticipated that 1998 base funding of \$60,000,000 would be utilized to continue systems engineering and systems development efforts for priority switching platforms and INPs.

LONG-RANGE GOAL: To preserve the existing capabilities of Federal, State and local law enforcement to lawfully conduct court-authorized electronic surveillance in a rapidly changing telecommunications environment and to effectively articulate law enforcement's electronic surveillance capacity requirements and deployment priorities to the

telecommunications industry in support of CALEA.

MAJOR OBJECTIVES:

- To consult with Federal, State, and local law enforcement agencies to develop and issue capacity requirements and a deployment priority plan.
- To consult with the telecommunications industry to clarify requirements, participate in standards development, and provide capacity requirements.
- To issue cost recovery rules under which telecommunications carriers, equipment manufacturers, and providers of telecommunications support services may receive reimbursement for eligible CALEA compliance efforts.
- To reimburse systems engineering, engineering development, and deployment of solutions for switching platforms and their associated INPs through the established cost reimbursement procedures and so that reimbursement is conducted in the most efficient and cost-effective manner possible.
- To support the Attorney General during resolution of disputes in proceedings before the Federal Communications Commission and, if necessary, the courts.
- To assist the Attorney General in the preparation of annual reports to the Congress detailing the disbursement of funds to telecommunications carriers, equipment manufacturers, and providers of telecommunications support services.

PROGRAM INCREASES: The President's 1998 budget proposes a program increase of \$40,000,000 for the TCCF.

Initiative: Telecommunications Carrier Compliance
Item: Telecommunications Carrier Compliance - \$40,000,000

The 1998 base funding of \$60,000,000, plus the enhancement of \$40,000,000 would fund payments to telephone carriers, equipment manufacturers, and providers of telecommunications support services for costs incurred in complying with CALEA. This funding will be used to continue systems engineering activities for priority switching platforms and INPs and to initiate systems development activities for priority switching platforms. The following chart displays the CALEA timeline.

Telecommunications Carrier Compliance
Status of Congressionally Requested Studies, Reports, and Evaluations

The Omnibus Fiscal Year 1997 Appropriations Act (P.L. 104-208) included three reporting requirements for the FBI regarding the Communications Assistance for Law Enforcement Act (CALEA) of 1994. The first is an implementation plan, with no specified due date, that must be submitted prior to the obligation of any funding from the Telecommunications Carrier Compliance Fund. The CALEA implementation plan is undergoing review within the Department of Justice. The second report, due by June 30, 1997, requires the FBI to develop, in consultation with the telecommunications industry, an estimate of reasonable costs of modifications to carrier equipment, facilities, and services based on law enforcement assistance capability and capacity requirements. The final reporting requirement is the submission of an annual report to the Congress regarding deposits to and expenditures from the Telecommunications Carrier Compliance Fund. The annual report is due within 60 days after the close of the fiscal year (1997). It is anticipated that these two latter reports will be submitted on or before the due dates.

**Federal Bureau of Investigation
Violent Crime Reduction Programs
Justification of Proposed Changes in Appropriations Language**

The 1998 budget estimates include proposed changes in the appropriations language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Violent Crime Reduction Programs

For activities authorized by the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322), as amended ("the 1994 Act"), and the Antiterrorism and Effective Death Penalty Act of 1996 ("the Antiterrorism Act"), [§169,000,000] \$179,121,000, to remain available until expended, which shall be derived from the Violent Crime Reduction Trust Fund; of which [§76,356,000] \$102,127,000 shall be for activities authorized by section 190001(c) of the 1994 Act and section 811 of the Antiterrorism Act; [§53,404,000] \$57,994,000 shall be for activities authorized by section 190001(b) of the 1994 Act, of which \$20,240,000 shall be for activities authorized by section 103 of the Brady Handgun Violence Prevention Act (Public Law 103-159), as amended; \$4,000,000 shall be for training and investigative assistance authorized by section 210501 of the 1994 Act; \$9,500,000 shall be for grants to States, as authorized by section 811(b) of the Antiterrorism Act; and \$5,500,000 shall be for establishing DNA quality-assurance and proficiency-testing standards, establishing an index to facilitate law enforcement exchange of DNA identification information, and related activities authorized by section 210501 of the 1994 Act. (Department of Justice Appropriations Act of 1997.)

Explanation of changes

1. An increase in budget authority is based upon funding levels proposed for 1998.
2. Delete language for Brady Handgun Violence Prevention Act (National Instant Check System) which is not required in 1998.

Congressional Action

The Congress appropriated funding in the Violent Crime Reduction Program which had been requested in the President's 1997 Salaries and Expenses Budget Request to Congress for 1997. Salaries and Expenses for the program were included in the VCRP included \$8,250,000 for two National Crime Information Center (NCIC) 2000 and \$8,334,000 for the National Crime Information Center (NCIC) 2000. The Congress did not fund a request of \$1,500,000 for investigation of Telemarketing Fraud scams.

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: Since the FBI began using the undercover technique to conduct investigations, backstopping has evolved from that which the undercover operative could set up on their own to implementation of the National Backstopping Program. Backstopping is essential to protect undercover operatives and the viability of the investigation. Until recently, the FBI has been able to provide a fairly sophisticated level of backstopping to an undercover operation and its operatives. However, with the growing availability of the Internet and the "Information Super Highway," literally hundreds of databases are readily available to anyone with a computer and the appropriate software. As a result, the effectiveness and efficiency of the private investigative industry has been greatly enhanced, and the new industry of "Data Mining" or "Information Brokering" has been born. Data miners are professionals at browsing through the Internet and extracting data for whatever purpose they are hired. It is becoming common for business executives to hire the services of data miners or private investigators to check through the various Internet databases before meeting with someone they do not know as a defensive measure against fraud. The recent technological advancements combined with the resulting new data mining phenomena are of grave concern to law enforcement entities trying to backstop undercover operations.

Professionals within the private investigator and data mining industry are already publishing a great number of how-to books in laymen's terms teaching people how to use and search for information on the Internet. For the most part, the information obtained from Internet databases is retrieved legally; however, some of the literature also teaches people how to extract information illegally. Information such as complete credit histories, local telephone toll records, and bank account information can be obtained by placing a call to the right person and saying the right things. The examples used in this literature are very similar to the scripts used by telemarketers. With as little information as a name and an address, a data miner, to a fairly accurate degree, can determine within minutes if a business or individual is real. Recent research indicates that the true location and ownership of telephone service can be determined legally; that long distance toll records can be obtained legally from the major service providers such as AT&T; that an address can be determined to be a mail drop or a multiple family residence such as an apartment complex; where and when a Social Security Account Number was issued; all manner of public records such as marriage, birth, divorce, death, and other personal records are available; and all manner of public business records such as corporate filings and partnership filings, can be easily and legally obtained. Using the Internet, a data miner can collect bits and pieces of information from all sorts of databases and put together the background of almost

any individual or company. In short, the wealth of information available through the Internet is a great investigative tool legally available to anyone from most places in the world.

The wealth of information is also making current and traditional methods of backstopping obsolete. Consequently, FBI undercover operations and operatives are facing serious danger. Currently, backstopping sources and methods used by the FBI's National Backstopping System are among the best within the law enforcement and intelligence communities. However, there is an alarming rise in the instances where targets of criminal investigations are using the Internet or hiring data miners to thwart the backstopping efforts of law enforcement. For example, members of certain South American International Organized Crime entities are contracting with data miners in other countries to do research for them. It is logical to assume that if international organized crime figures have started to use the resources in the Internet, then foreign intelligence operatives and/or terrorist organizations are doing the same.

The Internet is available to anyone from almost anywhere, and the learning curve is relatively short; therefore, the amount of time that the FBI has to react and adjust its backstopping methods and sources is commensurately very short. As use of the Internet spreads throughout the world, the effectiveness of the FBI's undercover technique, as well as those of other agencies, will correspondingly be eroded until a point is reached where relatively unsophisticated targets will have the ability to penetrate the FBI's backstopping veil and defeat the FBI's undercover efforts. It will not be long before fairly sophisticated targets such as International Criminal Enterprises, white collar criminals and public corruption subjects, and/or terrorist and intelligence organizations are fully armed with this counter law enforcement technique and the rate of investigative success enjoyed by the FBI will begin to dwindle. The FBI must become proactive in developing a backstopping system that will counter the undesirable effects of the Internet.

LONG-RANGE GOAL: To reduce the influence of significant organized crime groups operating within the United States and prevent such groups currently not operating within the United States from establishing a presence here.

MAJOR OBJECTIVES:

- To penetrate the hierarchy of targeted OC groups.
- To identify the structure and membership of targeted groups to determine complicity and extent of interrelationships among other crime groups.
- To develop successful prosecutions for specific Federal violations, emphasizing the use of the Racketeer Influenced Corrupt Organizations (RICO) and the Continuing Criminal Enterprise (CCE) statutes.
- To disrupt and dismantle networks involved in the violation of Title 18 and Title 21 of the U.S. Code.
- To significantly reduce the wealth of the organized crime groups by using money laundering statutes to seize ill-gotten assets for eventual forfeiture.

PROGRAM INCREASES:

Initiative: Investigative Infrastructure
Item: National Backstopping - \$2,000,000

As discussed in the strategic assessment, the Internet is making current and traditional methods of backstopping obsolete and is placing FBI undercover operations and operatives in serious danger. Currently, backstopping sources and methods used by the National Backstopping System are among the best within the law enforcement and intelligence communities. However, there is an alarming rise in the instances where targets of criminal investigations are using the Internet or hiring data miners to thwart the backstopping efforts of law enforcement. Recent research has indicated that members of certain South American International Organized Crime entities are contracting with data miners in other countries to do such research for them.

The FBI's National Backstopping Program brings together all of the currently existing functions used to support undercover operations and establish new functions necessary for the continued successful use of the undercover technique. The safety and security of agents while in an undercover capacity are of the utmost importance. In order to insure the continued success and safety of those agents through the use of effective backstopping capabilities, additional funding is required.

The 1997 base in the Salaries and Expenses appropriation for existing undercover backstopping operations is \$2,000,000. An increase of \$2,000,000 is requested for contractors and data base subscription costs (\$1,718,602), equipment (\$181,398), and training (\$100,000) for research/development and quality control functions to upgrade backstopping operations. In backstopping operations, the availability and accessibility of public and commercial records through the Internet and other public databases is critical. To achieve a level of backstopping which will sufficiently protect FBI covert operations, the backstopping program relies heavily on analysts familiar with the Internet, what the sources of information are, and how the FBI can best use these tools when providing backstopping for covert operations. Analysts would be supported by a cadre of contract consultants representing various fields to include banking, investment, legal, and other areas where the FBI requires specialized backstopping expertise.

Along with the enhanced support of the contract personnel, backstopping operations require a comprehensive library of CD ROM databases, trade journals, and industry information from which to glean necessary information when designing backstopping, profiling, and conducting quality control checks. This operation would also require access to the Internet and other on-line public access databases to conduct research and quality control functions. Existing systems and access to these systems would not be available to backstopping operations, as no guarantee can be made that "footprints" or an audit trail would not be left when the FBI makes a query. The alternative is to set up covert operations to accomplish these functions. Establishing and maintaining covert contracts with the various database vendors would make the FBI's queries appear the same as any of the hundreds of other queries being made by private investigators, information brokers, and marketing companies using this service.

Violent Crimes Reduction Program
Justification of Program and Performance**
(Dollars in thousands)

Other Field Programs	Perm.		EIE	Amount
	Pos.			
1997 Appropriation Anticipated	\$22,058
1998 Base	\$20,632
1998 Estimate	\$20,632
Increase/Decrease	\$13,900

BASE-LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: In the Violent Crimes Reduction Program, the Other Field Program's FY 1997 base level funding provides \$5,419,000 for Safe Streets Task Forces; \$2,700,000 for Joint Terrorism Task Forces (JTTFs); \$4,780,000 for a field transition center; \$3,000,000 for aircraft maintenance; \$2,000,000 for Infrastructure Vulnerability database; and \$1,500,000 for State/local Counterterrorism Center participation; \$1,000,000 for the Violent Criminal Apprehension Program (VICAP) demonstration project; \$500,000 for automation upgrades to the hostage/barricade database; and \$363,000 for the Attorney General Protection Detail; \$250,000 for Indian Tribal Police Training; and \$165,000 for the Child Abduction Serial Killer Unit (CASRU).

The FBI is mandated as the lead federal agency to investigate and deter hostile acts of terrorism and, when necessary, to apprehend those individuals and groups whose aim is to harm the United States through terrorism. Given the ever changing nature of the threat to U.S. national security, the FBI mission responsibilities require the maintenance of full operational capabilities in this area.

In 1995, Presidential Decision Directive (PDD)-39 was signed which provides further substantive authority to the FBI in countering the threat of terrorism in the United States. PDD-39 addresses a vigorous response to terrorism and strengthens the FBI's leadership role in combating terrorism in the United States. PDD-39 reaffirms the FBI as the lead federal agency in both preventing terrorist attacks and investigating those attacks when they occur within the United States, in international waters, or against U.S. persons and establishments overseas.

The VCRP provides funding which enables the FBI to expand its major violent crime initiative, the Safe Streets Task Forces (SSTFs) and Joint Terrorism Task Forces (JTTFs). In particular, this funding allows the FBI to reimburse State and local law enforcement agencies for extraordinary expenditures caused by participating in the SSTFs and JTTFs. The Safe Streets Initiative addresses the multitude of violent crime problems occurring throughout the U.S. SSTFs are designed to address street gang and drug-related violence, as

well as seek the most significant fugitives wanted for crimes of violence through the establishment of long-term proactive and coordinated teams of Federal, State, and local law enforcement officers and prosecutors. The SSTF have been extremely successful in maximizing the collective efforts of Federal, State, and local resources addressing violent criminal offenders.

The Other Field Programs are responsible for investigating and preventing violent acts, as well as other criminal activities, of terrorist and their organizations. In support of this mission, the FBI is currently participating in JTTFs around the country. These task forces are established in an effort to promote a coordinated effort among FBI field office personnel and its respective local counterparts. Specifically, task forces strive to increase the effectiveness and productivity of scarce personnel and logistical resources; avoid duplication of investigative effort; as well as expand cooperation and liaison among Federal, State and local law enforcement. In addition, with the formation of task forces, the local law enforcement community has been provided with sophisticated investigative techniques which are frequently not available to local police agencies.

The JTTF approach has proven its effectiveness during the course of major terrorism investigations. The New York and Newark JTTFs were the prime FBI entities investigating the bombing of the World Trade Center and the plot to bomb several sites in and around New York City in 1993. The existence of the New York JTTF allowed the law enforcement response to the TWA Flight 800 disaster to be swift, coordinated, and powerful. A JTTF was formed in Atlanta two years prior to the 1996 Summer Olympic Games to facilitate a coordinated approach to security and contingency planning between Federal, State, and local law enforcement agencies. The JTTF was able to establish set lines of responsibility among the multitude of law enforcement agencies and groups present for the Olympic Games and is currently spearheading the investigation into the July 27, 1996, bombing at the Centennial Olympic Park in Atlanta.

The field translation center in New York provides the FBI with an effective, real-time response to identifying potential terrorists and terrorist activities, both of which require that the FBI have the ability to translate documents and other written or audio material. Many times information obtained is time-sensitive, and the information loses value to investigators, analysts, and decision makers if not translated in real time. The centralization of the FBI's translators would streamline and improve the FBI's ability to provide timely translation support to FBI counterterrorism investigations.

PDD-39 emphasizes the importance of revitalizing the FBI's Infrastructure Vulnerability/Key Asset Program which is intended to identify key physical and informational industrial and government assets within this nation's infrastructure which pose attractive targets for terrorists. In general, the FBI's Infrastructure Vulnerability/Key Asset Program is a system of key asset identification and the development of a cooperative liaison with key asset owners/operators. By having key asset information readily available, should the FBI receive threat information directed at the infrastructure of the United States, it can readily determine the significance of a targeted key asset and the possible consequences of its destruction. Such information would provide a valuable tool toward interdiction and prevention of terrorist attacks.

The U.S. infrastructure is defined as a system of interdependent networks which are made up of identifiable industries and institutions that provide a continual flow of goods and services essential to the security and welfare of this country. These networks are generally categorized as electrical power, gas and oil, telecommunications, banking and finance, transportation, continuity of government, as well as water supply systems. Within each of these networks, there are specific components which are so vital that their incapacitation or destruction would have a traumatic or debilitating impact on the United States, either regionally or nationally. These components are known as key assets. Although the FBI

initially established this program in 1988, it lacked adequate personnel and nonpersonnel resources to ensure that the program flourished in the field until requested critical resources were appropriated in FY 1997. This funding for the key asset database enables the FBI to upgrade the database to be state-of-the-art. This database provides up-to-date information concerning the importance of a target and the possible consequences of its destruction. The new database allows for multiple users, cross-referencing, and networking capabilities which provides site specific details.

As a result of PDD-39, the FBI was mandated to develop an interagency Counterterrorism (CT) Center. The goal of the CT Center is to place the FBI in a stronger position to deploy its resources in the most effective way possible to counter threats of terrorism in the United States and abroad, as well as to provide assistance to State and local law enforcement agencies with respect to countering terrorism. State and local law enforcement agencies generally lack any resources to support activities that stray from their prescribed law enforcement duties. The funding received in the FY 1997 Appropriation enables the FBI to offset various overhead costs. For instance, the FBI is able to fund the travel and per diem of State and local law enforcement officials who travel either to the CT Center or at the behest of the CT Center. The FBI is also able to underwrite the expense of providing counterterrorism training to State and local law enforcement officials.

The Critical Incident Response Group facilitates the coordination of FBI responses to major law enforcement crises and special investigations. The Critical Incident Response Group is comprised of two branches, Special Investigations and Tactical Support, which consolidates all FBI units and functions that deal with crisis situations and certain major case investigations. The Special Investigations Branch consists of the Crisis Management Unit, Child Abduction and Serial Killers Unit (CASKU), Aviation and Special Operations Unit, and Investigative Support Unit. The Tactical Support Branch consists of the Hostage Rescue Team, Special Weapons and Tactics Unit, and Special Detail Unit.

Crisis incidents involving barricade situations are on the rise both nationally and throughout the world. This is evidenced by the Branch Davidian Incident at Waco, the shooting at Ruby Ridge, Idaho, and the standoff in Montana. These types of situations are highly complex, are extremely demanding on law enforcement at the Federal, State, and local level, and require a very unique expertise to resolve successfully. Additionally, the investigation of missing and exploited children matters are among the most complex investigations facing law enforcement agencies. The mobility and sophistication of many of today's offenders serve to further complicate the investigative process. The National Incidence Studies of Missing, Abducted, Runaway and Thrownaway Children estimates that between 3,200 and 4,600 annual, short-term, non-family abductions occur where approximately 70 percent of the child victims were sexually assaulted. Long-term abductions of children resulted in some 200 to 300 incidents. Of these incidents, between 47 and 147 cases resulted in the murder of the child.

The Critical Incident Response Group's CASKU has highly trained and experienced investigators to respond to requests for assistance on cases of child abductions and serial and mass murder. The Morgan P. Hardiman Missing and Exploited Children's Act was enacted as part of the Violent Crime Control and Law Enforcement Act of 1994. The Act created a Federal Task Force on Missing and Exploited Children. Task force members respond to field office requests for on-scene assistance, conduct research, receive and provide training. The task force is collocated with the CASKU.

Most violent crime is perceived as singular acts and is more often categorized as homicide/murder, rape, assault, robbery, and destruction of property. Consequently, violent crime is believed to be primarily a problem impacting individual localities and jurisdictions. However, any violent act can assume a larger and more ominous character when evaluated

collectively within the framework of identified patterns and/or common "environments." All of these crimes involve unique and aberrant behavior based patterns which are in need of further study and exploration. The knowledge gained from the close study of these behavioral aspects of violent crime have become instrumental in the way law enforcement deals with each situation. This includes all aspects of the crime, from the act itself, through the investigation, prosecution, and eventual incarceration of the violent offender. When viewed from a strategic perspective, it is important for law enforcement to address many violent crime issues from a more comprehensive and multi-functional posture. This approach includes the need to conduct research necessary to better understand the underlying causes of violence and to develop more effective methodologies for dealing with it. Through the Violent Criminal Apprehension Program (VICAP), a computer based tracking system is being designed to identify serial or repeat violent offenders throughout the country.

Also, through the Other Field Programs, the FBI investigates crimes in Indian Country, criminal street gangs, violations of the bank robbery statutes, carjackings, crimes on government reservations, thefts from interstate shipment, interstate transportation of stolen property and motor vehicles, assaults/threats to Federal officers, assaults on the President, and theft of or destruction of government property. The FBI is able to conduct simultaneous investigations in multiple jurisdictions and has demonstrated its ability to coordinate and successfully resolve the most complex, sensitive and organizationally focused investigations.

The FBI has jurisdiction over 558 separate sovereignities, 168 Indian reservations, upon which reside half a million Native American Indians. The FBI also has concurrent jurisdiction with tribal police in Indian Country. With the increase in violence and crime in Indian Country, State law enforcement agencies and tribal police are working with their Federal counterparts to stem the tide of associated violence. Through the cooperation between Federal and State law enforcement agencies and tribal police, an intelligence base can be established to more thoroughly investigate criminal activity. A Memorandum of Understanding between the Department of Interior, Bureau of Indian Affairs, and Department of Justice directs the FBI to assist the BIA by providing training to their criminal investigators and police officers. This coordinated training effort results in more cohesive investigations of Indian Country crimes.

LONG RANGE GOAL: To mitigate the prevalence and the effect of violent crime in the United States and to sustain continuity and consistency in the crisis response of the FBI throughout the U.S. and the world.

MAJOR OBJECTIVES:

- To more effectively and efficiently investigate those violent crimes in our society which require an immediate ~~reactive~~ response, in conjunction with State and local law enforcement, through the Safe Streets Violent Crime Initiative.
- To neutralize through investigations the ability of terrorist groups to adversely affect the interests of the United States by detecting, preventing, and/or reacting to unlawful, violent acts and criminal activities of domestic terrorist groups or associated individuals.
- To provide investigative training to Bureau of Indian Affairs and Tribal Police resulting in more cohesive investigations of Indian Country crimes.

- To provide operational assistance to include crisis management, negotiations, criminal investigative analysis, and child abduction matters.
- To maintain an effective aerial and emergency response capability in support of investigative activities.
- To provide personal protection to the Attorney General of the United States.

PROGRAM INCREASES: For the 1998 budget, the Other Field Programs proposes program increases of \$13,900,000 for two key FBI initiatives: Technology Crimes and Investigative Infrastructure. The program increase for the Technology Crimes Initiative is \$5,900,000 for Critical Investigations and Infrastructure Threat Assessment Center operational funding. The program increase for the Investigative Infrastructure Initiative is \$8,000,000 for security reinvestigations.

Initiative: Technology Crimes Initiative

Item: Computer Investigations and Infrastructure Threat Assessment Center (CITAC) - \$5,900,000

The CITAC is one of the most ambitious projects ever undertaken by the Federal government to counter the threats posed by foreign powers, terrorist groups, criminal organizations, and non-state entities to the National Information Infrastructure (NII). As envisioned, the CITAC will serve as a focal point for identifying and neutralizing these threats through the following:

- (1) Initiating appropriate intelligence and criminal investigations to counter the activities of NII intruders;
- (2) establishing cooperative arrangements with domestic/foreign law enforcement and computer incident response agencies who are responsible for investigating cases involving intrusion incidents;
- (3) engaging subject-matter-experts from the private sector to determine their knowledge concerning the nature and extent of foreign involvement in attacks on commercial, financial, and higher education institutions; and
- (5) identifying legal and policy issues which impact on our ability to effectively neutralize data base threats.

Background. Over the past 30 years, the United States has become critically dependent on interconnected telecommunications and automated information systems. This interdependent network, termed the NII, includes systems identifiable with communications, transportation, power, water, banking and finance, manufacturing, government, and emergency services that provide a continual flow of goods and services essential to the defense and economic security of the United States.

As this infrastructure is deemed to be so vital that its partial incapacity or destruction would have a debilitating regional and/or national impact, Executive Order 13010, titled "Critical Infrastructure Protection," directed that the government and industry cooperate to develop a strategy for protecting and ensuring continued NII operation. An interim government agency task force, chaired by the FBI, was formed to coordinate infrastructure protection efforts. Within the FBI, the CITAC has assumed these responsibilities. Prior to the establishment of the CITAC, the response to NII threats within the FBI was managed on an ad hoc basis, that is generally, the circumstances of each individual case determined which Bureau entity would respond to a matter. For example, under FBI investigative jurisdiction, the Bureau responds to the traditional computer crime violations of Title 18, Section 1030, which deals with "Fraud and Related Activity in Connection with Computers," and Section 2701, which deals with "Unlawful Access to Stored Communications." For violations related to the unauthorized access of computers used in national defense, foreign relations, or any restricted data, the Other Field Programs generally assumes investigative responsibility. For violations related to criminal acts using a Federal-interest computer (a computer used exclusively for the use of a financial institution or the United States Government), the White Collar Crime Program (WCC) generally responds.

In order to ensure a coordinated, comprehensive response to NII threats, the efforts of both the Other Field Programs and WCC were required. This was accomplished by integrating personnel from both divisions into a single section, with that section being directed by a senior FBI manager reporting to both operational divisions. The CITAC serves as the focal point for FBI computer-related counterterrorism and criminal investigations, as well as manages functions integral to providing a nucleus for government and industry response to NII threats and vulnerabilities.

A major issue associated with identifying the threat posed by foreign powers to the NII is the inability of experts, both in government and the private sector, to adequately define the nature of the threat and the vulnerability of computer networks to intrusions. An electronic intrusion could be purely malicious hacking; the work of a negligent or disgruntled insider; part of an extortion or other criminal effort; a terrorist act; part of a clandestine espionage program; or, in time of international crisis, part of an attack by a hostile foreign power. Any broadly successful effort by an individual, group, or country to destroy, disrupt, or deny access to the NII could have serious defense, national security, or economic consequences. These multiple threats require that any comprehensive infrastructure assurance effort goes beyond the threat posed by terrorists and consider threats from all manner of individuals or groups.

A significant threat to computer information security is theft of trade secrets, whether conducted by insiders or competitors. For example, in 1994, Wang Liao Sheng and Cui Jing, Chinese nationals residing in the U.S. as permanent resident aliens, were indicted for Computer Fraud and Abuse, and, Fraud by Wire after an FBI investigation determined that they had transferred proprietary source codes, via the Internet, from Ellory Systems, Incorporated (ESI) to a Chinese firm, Beijing Machinery Import and Export Group. ESI was developing the codes, with support from Hewlett Packard, IBM Digital Equipment, Sun Microsystems, and other industry leaders, as part of an effort to provide integrated applications for the NII. The source codes represented almost \$1 million in ESI research and development efforts and were deemed to have a potential market value of tens of billions of dollars.

In April, 1996, Subrahmanyam M. Kota signed a plea agreement relating to charges of Conspiring to Transport Stolen Property, Income Tax Evasion, and Fraud by Wire. Aluru J. Prasad and Vemuri Bhaskar Reddy, two of his associates, are waiting for trial, on similar charges, with Prasad also being charged with espionage. This charge emanated from the attempt to sell classified information relating to aerospace surveillance technology to the Soviet Intelligence Services.

In 1995, the FBI arrested Kevin D. Mitnick, a notorious computer hacker associated with intrusions into government, corporate, and university computer networks. Mitnick came to national attention in 1982, when, as a teenager, he used a computer and modem to break into a North American Air Defense Command computer. He was first indicted for criminal activity in 1988, after officials at Digital Equipment Corporation alleged that he caused \$4 million in damage to computer operations at the company. Warrants were again issued for his arrest during and after 1992, and at the time of his arrest, he had already stolen over \$1 million in proprietary software and thousands of credit card numbers, including the card numbers of some of the best-known millionaires in the Silicon Valley.

Although possessing limited resources, computer hackers have demonstrated the capability to extensively compromise sensitive computer data bases and telecommunications networks. It appears that the NII is becoming more vulnerable to users that may not have been previously disposed toward disruptive and/or illegal activities. These individuals are influenced by the continuous succession of books, magazine and newspaper articles, electronic bulletin board messages, and a staggering list of hacker home pages on the World Wide Web that are targeted at informing hackers, crackers, "phreakers," technophiles, and other interested individuals about the latest methodology for staging successful computer network attacks. These publicized efforts result in a myriad of attacks on susceptible networks, particularly Internet service providers. After an article on "synflooding" was published in the underground hacker magazines "2600" and "Phrack," over twenty Internet service providers were attacked. Although most attacks lasted only several hours, the Public Access Networks, the first Internet service provider in New York City, was disabled for more than a week by an anonymous intruder from Canada who became disgruntled when the service provider refused to allow racist hate messages to be transmitted.

Based on the CITAC's infrastructure protection responsibilities, an enhancement of \$5.9 million is being requested for FY 1998 for contractor support (\$2,930,000); technical equipment acquisition (\$1,830,000); training (\$620,000); and, travel (\$520,000).

Contractor Support - \$2,930,000

Of particular importance is a minimum of \$2,930,000 for contractor support. As previously articulated, the extremely complex and technical nature of NII attacks requires the coordinated response of numerous law enforcement, intelligence, and commercial entities in order to be effective. Sufficient funding to procure contractor support to assist in the processing of some types of evidence emanating from sophisticated attacks is integral to the success of intelligence and criminal investigative efforts.

Additionally, protection of the telecommunications infrastructure presents unique challenges for the FBI. Obviously the mediums for the storage, processing, and movement of information have changed dramatically over the past few decades, and even more dramatically over the past several years. In the early computer age, information was processed and stored on mainframe computers with almost no movement capabilities. The emergence of modern-connected personal computers decentralized some of this processing and storage into what are now referred to as client/server environments. Local area networks were invented to facilitate communication among devices in local environments, and wide area networks interconnected these local environments into large networks with enormous potential for distributed processing, storage, and retrieval of information. More recently the public Internet, private organizational Intranets, and the World Wide Web have collectively demonstrated the power and potential of electronically-connected devices.

Technical Equipment - \$1,830,000

It is estimated that a minimum of \$1.8 million is required for the purchase of technical equipment, maintenance, and equipment upgrades to support CITAC efforts. This includes the purchase of technical workstations for CITAC personnel.

Training and Travel - \$1,140,000

In addition, the CITAC requires \$620,000 for training and \$520,000 for travel to ensure that personnel continue to enhance their investigative abilities and institutional knowledge concerning state of the art NII developments. This training will include a series of formalized courses comprising basic and advanced computer investigator modules which will provide agents with skills relating to such issues as computer search, seizure, and forensic analysis; encryption; systems administration; Internet and Intranet issues; information warfare threats and vulnerabilities; and infrastructure protection issues. The funding for travel will allow individuals to represent the FBI's infrastructure interests to private industry and trade groups, as well as to provide on-site technical, operational, and administrative expertise to field elements involved in sensitive CITAC investigations.

Initiative: Investigative Infrastructure

Item: Security Reinvestigations - \$8,000,000

The FBI SCM Program is the first line of defense against espionage and other threats to compromise the FBI, its personnel, and its information. As clearly demonstrated by the Aldrich Hazen Ames investigation, betrayal of the security of the United States through the deliberate compromise of national security information (NSI) and other sensitive U.S. Government information cannot be tolerated. One of the two primary intelligence threats within the United States stems from human intelligence gathering; therefore, the FBI remains dedicated to sensitizing its employees and its contract employees to this threat. The strengthening of security countermeasures in all areas involving personnel remains a top priority within the FBI's SCM Program. The greatest target for compromise are employees of the U.S. Government and its contractors who, in many cases, have access to sensitive NSI.

The reinvestigation of FBI personnel, all of whom hold a "Top Secret" clearance and are in "special-sensitive positions," began in 1989 with minimum compliance of Office of Personnel Management (OPM) regulation, Chapter 736, which implements Executive Order (EO) 0450. This requires that all persons in the Government in special-sensitive positions be subject to a reinvestigation every five years. To be in full accord with the EO, a complete reinvestigation program has begun. This would include inquiries and interviews of neighbors, co-workers, social acquaintances, as well as, national agency checks. The base line program is inadequate to address the OPM regulation and EO, as field resources would be required to do the complete reinvestigation.

The SCM Program is currently funded in the amount of \$705,000 for contract reinvestigations, which is inadequate to support the level of reinvestigations required. The FBI anticipates requiring \$271 five-year reinvestigations and contractor background investigations in 1998. Contractor investigators would be used to conduct these investigations at an approximate cost of \$8,271,000. A program increase of \$7,566,000 is needed to offset the contractual costs associated with contract investigations. This figure reflects the funding required less the base level funding. If approved, all of the FBI's required background investigations and five-year reinvestigations would be conducted by contract investigators at a cost of \$8,271,000, or \$1,000 per case. If FBI agents were required to conduct the same number of investigations, the cost to the FBI would be approximately \$20,677,500 or \$2,500

PRELIMINARY:

An additional \$434,000 is also requested to support field level operations. A total of \$129,000 is requested to offset expenses associated with assessing program management performance, as well as recruiting contractors. Further, \$305,000 is needed to support the polygraph examinations in connection with the reinvestigations of FBI employees focusing on national security issues. Polygraph examinations are limited to national security screening examinations in all reinvestigations. The value of a polygraph in this application is that it could reduce security concerns about those employees who are "cleared" by polygraph while focusing available security/investigative resources in those areas where the possibility of threat does exist.

Given the current budgetary climate and the extensive workload involved in meeting the security countermeasures requirements for personnel and contractors, the FBI has concluded that the use of contract investigators is the most realistic means of addressing the workload in an economical manner. This enhanced level would allow the SCM Program to more aggressively address background reinvestigations of FBI personnel without reducing the level of effort currently afforded to the investigations of non-FBI personnel who have access to FBI facilities or information.

Full funding of the SCM Reinvestigation Program would ensure that the FBI could complete all initial security background investigations and five-year security reinvestigations in the year in which they were initiated. Currently the FBI does not possess the resources to do so. The lack of a dedicated reinvestigations/initial security investigations workforce leads to the continuation of cases from one year to another. The full \$8,000,000 would provide the FBI with the ability to possess a workforce dedicated only to the conduct of initial security background investigations and five-year security reinvestigations.

In 1995, 1996 and 1997, the FBI redirected 73 agent workyears within Other Field Programs to its SCM Field Program in order to meet the requirements of EO 10450 to conduct full-field five-year security reinvestigations on government employees with access to classified material. This redirection of workyears increased the FBI's SCM Program's field element from 23 agent workyears to 96 agent workyears. Despite this increase in agent workyears, the FBI continues to over utilize agent workyears in its SCM Program.

Based on the above, the FBI is requesting \$8,000,000, which includes \$7,566,000 for contract investigators to address reinvestigations and \$434,000 for related field operations. Fiscally, the FBI would be able to redirect investigative (agent) resources while at the same time substantially reducing the costs associated with complying with the DOJ Order 2610.2A and NSD 63.

1998 Base	1,644
1998 Estimate	3,644
Increase/Decrease

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: Crime continues to be a significant problem facing the United States. The issue of crime has permeated American culture, media reports of crime dominate the print and broadcast news media. The success of television shows such as "Cops" and "America's Most Wanted," in addition to the television news magazine shows such as "Dateline," demonstrate America's obsession with crime. This concern is not unwarranted. In the 1995 Uniform Crime Report, statistics show that a violent crime occurs every 18 seconds and a property crime every three seconds. Few Americans born today will be unaffected by crime during their lives.

Domestic violent crime and its financial impact place an overwhelming burden on most State and local police agencies. Moreover, the weakening or elimination of borders in many parts of the world and the growing availability of electronic forms of communication and commerce allow criminals significant degrees of domestic and international mobility. Social, political, religious and economic factors are generating changes that stretch the ability of the United States and foreign law enforcement agencies to respond to the crime problems generated by these developments. The FBI must take a leadership role in the development of knowledge and operational capabilities for law enforcement to attack these crime problems and develop programs to train our counterparts in these techniques.

In the days of the American West, law enforcement officers were selected because of their physical prowess. However, law enforcement personnel today must enter the job prepared to face mental as well as physical challenges. In addition, law enforcement increasingly needs technical experts to assist the solving of crimes. The competency of these individuals often means the difference between a solved and unsolved case.

As the FBI continues to grow both in size and complexity, it is increasingly evident that professional dedicated employees with specific areas of expertise are vital to the continued success in the FBI's efforts to support the criminal justice community in the fight against crime and violence. The FBI's total funded staffing level for 1997 is 11,308 special agent positions and 16,183 support positions for a total of 27,491 positions. The FBI's on-board staffing level at the end of 1996 was 10,693 special agents and 14,359 support

employees for a total of 25,054 employees. As a result, the FBI entered fiscal year 1997 under the funded staffing level for special agents by 613 and under the support complement by 1,824.

An individual selected as a new agent must report to the FBI Academy for 15 weeks of training. The FBI new agent training program provides comprehensive instruction to ensure that entry level agents possess the basic knowledge and skills required to serve the American public. Among the components of the new agent training curriculum are behavioral science, communications/interviewing, ethics, legal instruction, informant development, physical fitness/defensive tactics, evidence, firearms, Equal Employment Opportunity/sensitivity training, field office administrative operations and procedures, practical problems, and emergency vehicle operations. Agent trainees also receive instruction for each of the FBI's investigative programs: organized crime, drugs, violent crimes, white-collar crimes, counterintelligence, terrorism, civil rights, and applicant.

There is a continuing and critical need to provide training and development courses for FBI personnel assigned to field offices and FBI Headquarters. This training is necessary to maintain and enhance the professional skills of FBI personnel in their present assignments, to equip personnel to handle new investigative and administrative requirements, and to develop the leadership and management skills of potential supervisors, managers, and executives. The large-scale hiring of new agents during the last two years means that 17% of the FBI's agent workforce has less than two years experience. The FBI must be prepared to offer continuous education for these less-experienced agents to enhance their development and improve their ability to solve complex crimes.

The FBI also provides instruction for State and local criminal justice practitioners, both at the FBI Academy and throughout the United States at State, regional, and local training facilities. The FBI is presently the only agency at the Federal level that offers continual assistance to approximately 20,000 police agencies for training. The principal course of study for State and local law enforcement officers is the FBI National Academy Program, an 11-week multi-disciplinary program for officers who are considered to have potential for further advancement in their careers by their nominating agency heads. During 1998, 1,040 State, local and international law enforcement officers are projected to attend the FBI National Academy.

Other training opportunities at the FBI Academy also exist for State and local law enforcement personnel. The National Executive Institute (NEI) and the Major City Chiefs (MCC) Programs provide a forum for the development of the chief executive officers of the 150 largest law enforcement agencies in the United States and selected international law enforcement agencies. The focus of these programs is to provide an opportunity to discuss contemporary law enforcement issues, to exchange ideas, concepts and strategies for successful leadership, and to foster a networking of executives for future consultations. The Law Enforcement Executive Development Seminar (LEEDS) is designed for police chiefs from mid-sized agencies. In addition, the National Law Institute is a one-week specialized training program for State and local police, legal advisors and prosecutors.

The Field Police Training Program (FPTP) serves as the foundation for the FBI's Comprehensive Law Enforcement Training Program. Training sessions cover the full range of law enforcement training topics, such as hostage negotiations, computer-related crimes, death investigations, violent crimes, criminal psychology, and forensic science. During 1998, the FBI anticipates training 125,000 criminal justice personnel at State, regional, and local training facilities.

Stressing a cooperative effort, the FBI must increase law enforcement effectiveness by providing large-scale training and education not only in identifying and combating

traditional criminal activity, but also the most sophisticated activities of criminal enterprises. As computer technology continues to develop and expand at seemingly exponential speed, more and more law enforcement agencies will need to participate in the automated environment if they are to remain current. The FBI should be at the vanguard of making computers, computer training, relevant software and access to the "Information Highway" available to all students.

The FBI conducts its training programs at the FBI Academy in Quantico, Virginia, field offices and off-site locations, at local, State, and regional facilities throughout the Nation and at various international sites. At the FBI Academy, training is provided for FBI new agent training, the FBI National Academy, Drug Enforcement Administration (DEA) basic agent training and as capacity permits, in-services/comprehensive FBI management training, and specialized schools, conferences, and symposia. In addition, the International Law Enforcement Academy in Budapest, Hungary, began operation in April 1995.

The FBI provides and maintains sophisticated audiovisual presentation systems in 25 classrooms and two auditoriums at the Academy as well as designing and producing new training and internal information materials in many media including vugraph and 35mm transparencies, monochrome and color photography, video tape recordings, and computer-based multimedia programs. The FBI's Distance Learning Training Program (DLTP) uses satellite and video teleconferencing technologies to provide training and education to FBI personnel, agent and support and the law enforcement community, domestic and international. Many, if not most, of the training activities conducted at the Academy are dependent upon the equipment, systems, and services.

To enhance our ability to reach our law enforcement partner across the country, the FBI has produced 59 "Viewpoints from the FBI Academy" programs since March 1991. The programs are 30-minute taped programs shown on the Law Enforcement Television Network (L.E.T.N.) which features FBI Academy instructors. L.E.T.N. is a 7-day, 24-hour per day law enforcement training network based in Carrollton, Texas, that supports approximately 5,000 law enforcement subscribers. The FBI Academy anticipates continuing its production of 12 programs per year for L.E.T.N.

Since March 1986, the FBI has also produced 36 live, two-hour, interactive teleconferences for the Law Enforcement Satellite Training Network (L.E.S.T.N.), which is operated at the Academy. In June 1995, the FBI began originating its L.E.S.T.N. teleconferences live from the Academy television studio. The topics for both programs are geared toward the FBI and general law enforcement community. L.E.S.T.N. has approximately 1,500 down sites on the training network. These down sites include Federal, State, and local law enforcement departments and corrections, law enforcement training academies, universities, community colleges, libraries and local school systems. An estimated 15,000 to 30,000 viewers watched L.E.S.T.N. programs live and many more viewers watch the programs on tape at later times. L.E.S.T.N. and L.E.T.N. programs are kept in law enforcement resource libraries for future viewing.

LONG-RANGE GOALS: To provide initial and advanced professional training and investigative support for FBI agent and support personnel, and to provide training and retraining sessions to Federal, State, local and international law enforcement officers through the FBI National Academy and International programs, enabling them to carry out their increasingly complex responsibilities in an efficient, professional, and effective manner.

MAJOR OBJECTIVES:

- To utilize FBI Academy facilities to the maximum and fund other regional training initiatives to support mandated and backlogged in-service training consistent with the Bureau's overall mission.
- To continuously refine and expand the level of training provided to State and local law enforcement agencies, as well as to create and maintain the requisite conditions to facilitate cooperation between FBI and local agencies in areas of mutual concern and interest.
- To insure that all agents and other law enforcement personnel involved in practical applications training are fully capable of conducting successful investigations utilizing sound investigative techniques and utilizing the skills taught and reinforced through practical applications, firearms training, physical training and other academic topics at the FBI Academy.
- To expand investigative training capabilities to state-of-the-art instructional technology and distance learning techniques, and to identify and develop the curriculum which will be delivered via distance learning.
- To execute a five-to-ten year recurring cycle of replacing production and presentation equipment and systems to ensure effective delivery of well-produced professional materials so that the FBI Academy can continue to enjoy the reputation as the premier law enforcement training institution.
- To increase the availability of computer technology for training law enforcement, to increase the complement of skilled computer support personnel, to increase the complement of Computer Instructors and to develop a core staff that would facilitate the development of materials on behalf of the FBI.
- To develop new and innovative training programs and to engage in critical behavioral science-related research focusing on gangs and gang violence; youth violence; killing and felonious assault of law enforcement officers; crime analysis; homicide; community policing; hate crime; and predictability of dangerousness.

PROGRAM INCREASES: No program increases are proposed for 1998.

**Federal Bureau of Investigation
Violent Crime Reduction Program
Justification of Program and Performance**
(Dollars in thousands)

Forensic Services	Perm. Pos.	FTE	Amount
1997 Appropriation Anticipated	\$36,243
1998 Base	34,369
1998 Estimate	34,369
Increase/Decrease

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: The FBI Laboratory provides forensic examinations and related services to Federal, State, and local law enforcement agencies through a total commitment to quality service; prompt, accurate and thorough response to all requests; technical leadership; innovative use of technology to facilitate investigations; sharing information and technology with the Federal and non-Federal criminal justice community; and a work environment which fosters open communication, creativity, individual initiative and personal achievement.

The successful investigation and prosecution of crimes require, in most cases, the collection, examination, and scientific analysis of evidence recovered at the scene of the incident or obtained during the course of the investigation. Oftentimes, the availability and presentation of physical evidence is used in court to demonstrate the guilt, either directly or circumstantially, of the person on trial. The Forensic Services program supports the operations of the FBI Laboratory, one of the largest and most comprehensive crime laboratories in the world and the only full-service Federal forensic laboratory. The FBI Laboratory performs examinations of evidence for all duly constituted law enforcement agencies -- Federal, State, and local -- in the United States.

The FBI Laboratory is recognized as a leader in the scientific analysis and solution of crime in the United States. Since its inception, the FBI Laboratory has consistently strived to enhance its service to the law enforcement and criminal justice communities. Through exhaustive analysis, appropriate methodologies are developed to apply the most recent scientific and technological innovations to the examination of forensic evidence in criminal investigations. The reliability of these techniques is crucial, not only to the law enforcement profession, but also the public it serves.

Through the Violent Crime Reduction Program (VCRP), funding is proposed for several key FBI Laboratory initiatives including: FBI Laboratory Equipment Modernization

(\$6,000,000); the FBI's Combined DNA Index System (CODIS) and State grants (\$15,000,000); DRUGFIRE (\$4,200,000); Evidence Response Teams (\$1,800,000); Renter Safe Team Equipment (\$2,250,000); Mobile Deployment Laboratories (\$240,000); and Contract Linguists (\$2,850,000). These initiatives provide for enhanced forensic capabilities within the FBI laboratory, linguist support for criminal investigations, and the development and sharing of new forensic techniques and capabilities for State and local crime laboratories.

LABORATORY EQUIPMENT MODERNIZATION

The 1998 budget provides \$6,000,000 from the VCRP for the fourth year of multi-year modernization of FBI Laboratory equipment. The majority of equipment funds will be used to support the primary initiatives in the Laboratory: DNA Analysis, Forensic Training, Field Photo Support, Foreign Language Services, and Polygraph. The Laboratory Division (LD) will use the VCRP funding to replace broken and antiquated equipment that has been retained far beyond what would normally be considered its useful life. Specialized equipment is often expensive. For example, one DNA Sequencer can cost over \$100,000 and the replacement cost for a Gas Chromatograph/Mass Spectrometer is in excess of \$450,000. The FBI Laboratory is in the process of buying microscopes, light sources, computerized polygraph units, computers and other equipment necessary to perform routine laboratory procedures and examination of evidence. The five-year modernization effort is estimated at \$30,000,000, of which \$18,000,000 has been appropriated to date.

COMBINED DNA INDEX SYSTEM (CODIS)

The DNA Identification Act, included in the Violent Crime Control and Law Enforcement Act of 1994, authorized the FBI to establish an index containing DNA records from persons convicted of crimes, samples recovered from crime scenes, and samples recovered from unidentified human remains. CODIS allows State and local crime laboratories to store and match DNA records. VCRP base funds for the FBI's CODIS program for 1998 total \$15,000,000, of which \$5,500,000 would be spent on contract ADP services to continue software development and operate CODIS for State and local crime laboratories. The remaining \$9,500,000 will be transferred to the Bureau of Justice Assistance (BJA), Department of Justice, to conduct a grant assistance program for States to establish, develop, and upgrade computerized identification systems compatible with CODIS, the FBI's National Crime Information Center (NCIC), and automated fingerprint systems compatible with the FBI's Integrated Automated Fingerprint System (IAFIS).

The FBI has developed CODIS to function as a national DNA database system containing indices of DNA profiles from convicted offenders and unsolved crime scenes. A missing persons index is under development. CODIS permits State and local law enforcement crime laboratories to exchange and compare DNA profiles electronically, thereby linking serial violent crimes (especially rapes) to each other and identifying suspects by matching DNA from crime scenes to convicted sex offenders. As of January, 1997, there are 57 CODIS sites in 27 States and the District of Columbia. The FBI anticipates that an additional 27 laboratories will install CODIS in 1997, bringing the total CODIS sites to 84. The FBI Laboratory manages the CODIS program. Computer support and maintenance are provided through a service contract with Synetics Corporation. The continued success of CODIS rests on having sufficient contractor personnel to sustain software development and maintenance, conduct installations and user training, and provide technical support to the FBI and State and local crime laboratories.

DNA testing is provided free of charge to any law enforcement agency in the U.S., including travel for FBI examiners to testify in court. From 1991 to 1993, DNA cases submitted to the FBI Laboratory increased by 53 percent. From 1995 to 1997, it is projected that DNA cases submitted will increase by another 92 percent. This increase is due largely to the introduction of new DNA testing techniques that will permit testing on smaller quantities of DNA, as well as new tissues (e.g., bone, teeth, hair, and skin). Due to these new techniques, more cases will be addressed than ever before, and the demand for new testing information will increase significantly. The forensic science and law enforcement communities are already aware of these new DNA technologies being brought on-line and are preparing to utilize this valuable service.

As of December, 1996, 42 States have enacted DNA database laws with the remaining eight States expected to pass similar laws in 1997. Additionally, the Anti-terrorism and Effective Death Penalty Act of 1996 provides that "the Director of the Federal Bureau of Investigation may expand CODIS to include Federal crimes and crimes committed in the District of Columbia." Based on data provided by the U.S. Bureau of Prisons and the Administrative Office of the U.S. Courts, the FBI projects a requirement to collect and type approximately 14,500 DNA samples in 1998. The 14,500 DNA samples include 11,500 samples from the current Federal inmate population, plus an estimated 3,000 samples from defendants convicted in U.S. District Courts during 1998.

DRUGFIRE

DRUGFIRE is a computer database system which allows laboratories within a region or large metropolitan area to exchange and compare images of fired ammunition casings. The microscopic machining marks on cartridge cases or bullets, resulting when a gun is fired, are scanned, and the image is stored in the DRUGFIRE database. After searching the database, these images are then electronically recalled, transmitted, compared, and matched to other evidence, thereby connecting shootings previously thought unrelated or linking crimes to certain weapons. The FBI acquired the services of Mnemonic Systems, Inc. (MSI) to develop the DRUGFIRE system. Color reference libraries of the FBI Laboratory's ammunition and firearms collections (stored on CD-ROM) will be an additional feature of the DRUGFIRE system. Also, networking capabilities will be expanded to allow inter-regional exchange of DRUGFIRE images and data between any two DRUGFIRE sites in the United States. As of December, 1996, there were 73 DRUGFIRE sites within the United States, with another 75 laboratories expected to install DRUGFIRE by the end of calendar year 1997. MSI will develop the networking capability through the existing contract. This development would essentially migrate DRUGFIRE from a regional system to the first fully integrated, national firearm and cartridge case/bullet database system. The FBI is also beginning to examine the possibility of re-engineering the algorithms used to search, select, and rank candidate matches. Preliminary results are very promising that all true matches can be ranked very close to the top of the list of candidate images. Following testing to document sensitivity and accuracy, these advances would be included in future releases of DRUGFIRE software.

Nationwide, over 35,000 criminal investigations represented by over 60,000 images have been entered in DRUGFIRE. Additionally, DRUGFIRE has linked nearly 1,400 cartridge cases, matching one of every eight cartridge cases entered from crime scenes and providing police with investigative leads that would otherwise have gone undetected. In some cases, the match shows that the same gun was used repeatedly in criminal activity. In other cases, a seized gun was test-fired and linked to one or more previous shootings. For example, during "Operation Clean-Up," the FBI used DRUGFIRE to assist the Washington Metropolitan Police Department in working through its backlog of over 2,000 firearms

cases. DRUGFIRE proved to be highly successful, recording 38 hits and linking 57 cartridge cases of the 247 cartridge cases entered, a 23 percent hit rate.

Base funds of \$4,200,000 are proposed to continue the development, installation and operation of the DRUGFIRE system. This funding will be used for: ADP contractor services to continue development of DRUGFIRE system software; continuing and increasing user support; maintaining current DRUGFIRE sites; expanding the number of operational DRUGFIRE sites; continuing development, refinement, and integration of the FBI Laboratory's National Firearms Reference Collection and Standard Ammunition File into the DRUGFIRE database; and equipping State and local crime laboratories with DRUGFIRE equipment and software.

EVIDENCE RESPONSE TEAMS (ERT)

The FBI Laboratory works closely with FBI field offices to develop, train, and equip Evidence Response Teams (ERT). An ERT is a group of very motivated, well-trained and well-equipped personnel who specialize in organizing and conducting major evidence recovery operations. An individual ERT normally consists of a team leader and six to eight members, each having certain designated responsibilities. ERTs are prepared to respond to major case situations in an efficient fashion to ensure critical evidence is identified and gathered for forensic analysis. ERTs are involved in ongoing training to develop and maintain their organizational and forensic skills.

The ERT program was funded at \$2,900,000 in 1995 and 1996, and \$1,000,000 in 1997 after nonrecursals. Base level funding in 1998 is \$1,000,000. To date, funding appropriated has provided critical supplies, equipment, and travel for ERT personnel. However, ERT members are not permanent, due to transfers, retirements, promotions, or attrition for other reasons. New members must be trained and outfitted with new protective gear. For safety precautions, all ERT protective gear is individually fitted; therefore, it cannot be passed on to new team members. Additionally, new protective gear must be replaced as it becomes ineffective or unsafe. Base level funding of \$1,000,000 in 1998 is intended to address the continuing need to equip and maintain ERTs.

In 1997, the FBI received \$2,000,000 to obtain ERT trailers and an additional \$400,000 to cover the cost of in-service and specialized training for ERTs. Funding for training was not provided in amounts appropriated in 1995 or 1996. While ERT base funds for supplies and equipment will provide the ERTs with the tools necessary to function, the ERTs must also receive specialized training to acquire and maintain forensic skills. Therefore, the \$400,000 was required to cover the regular and recurring training needs of the ERT members. Training is required to reinforce the numerous perishable skills held by approximately 800 FBI employees that are currently ERT members. Of the \$2,000,000 appropriated in 1997 for ERT trailers, a total of \$400,000 will recur in 1998 for maintenance and supplies.

In a short period of time, trained ERTs have proven to be a highly productive and effective means of collecting, preserving and packaging crime scene evidence. To date, 55 field ERTs have completed the one-day orientation training, and 51 field ERTs have completed the 80 hour basic training. ERT personnel from all remaining field offices are scheduled to complete this training and once initial training is complete, advanced training will be conducted on a regional basis. Regional training will provide ERTs with a refresher course on original concepts and methodologies, as well as various new forensic techniques. Additionally, all ERT members will require specific training in blood splatter, body recovery

and human remains, emergency medical techniques, and hazardous materials.

ADVANCED RENDER SAFE TEAM EQUIPMENT

The FBI's 1997 Appropriation provided \$3,000,000 to develop and acquire an advanced, improvised explosive device (IED) "render safe" capability for deployment against large, sophisticated, inaccessible or enhanced IEDs. This funding will provide the FBI's Advanced Render Safe Teams (ARST) with advanced capabilities for detecting and remotely disarming or disabling explosive devices. Of the \$3,000,000, base funding in the amount of \$2,250,000 is required in 1998 for the following:

- The continued development and acquisition of electronic countermeasures (ECM) equipment for the disablement of radio-controlled IEDs. Radio signals are used to activate fuzing systems on an IED in order to cause detonation from a remote location on command. The ECM equipment of interest could detect and remotely jam the radio signal, thereby disabling the explosive device until it could be safely disarmed.
- The continued development and acquisition of Remote Electronic Diagnostic Equipment for the detection and neutralization of electronic timing systems. This technology will target the electronic circuitry of sophisticated IEDs and neutralize the timing and triggering system.
- The acquisition of a Robotic Access System, which has been recently developed to detect explosives in a vehicle and then gain entry into that vehicle and further determine the type of device and countermeasures needed to disable or disarm the explosive device.
- The acquisition of containment systems to mitigate the dispersal of chemical or biological agents should an IED explode. These systems consist of tents and aqueous foams which surround the explosive device and encapsulate the hazardous materials limiting dispersal.
- The development of a deployable system to inactivate or neutralize the hazardous biological, and possibly chemical, components that have been incorporated into an IED.
- The acquisition of satellite-mediated communications equipment in order that the ARST can communicate with experts and archives at remote locations during operational deployments and exercises. This will permit real-time access to resources which would greatly increase the probability of success against a threat or device.
- A set of fully equipped vehicles which can be driven or air-transported to a site for use as a technical laboratory and forward base of operations for the ARST.

The FBI envisions ARST as an 8-person team of experts, empowered with an intense array of specialized training and practice, and equipped with a suite of advanced technologies. This capability is unique in the civilian aspect of the Federal Government. The requirement for the creation, development and equipping of the ARST is evidenced by the rash of high visibility and impact bombings over the last several years and the expectation that such activities will continue indefinitely. The law enforcement community believes the bomb has become the weapon of choice of terrorists. IEDs are continually increasing in size, sophistication and resulting damage. The establishment, training, and equipping of ARSTs, as well as the development of new technologies, provides American law enforcement and the public a new and powerful option for preventing or defeating terrorist activities which involve explosive devices.

Further, there is considerable concern throughout government at all levels that America is considerably vulnerable to incidents which involve the dispersal of hazardous CBN materials. Any such occurrence could be potentially disastrous in any number of ways (lives, economics, and infrastructure). Fully equipped ARST complements the recent and parallel creation of the Hazardous Materials Response Program, also based in the FBI Laboratory. The HMRP targets illicit acts (terrorist, criminal, environmental) which involve the use of hazardous CBN materials. The Hazardous Materials Response Unit (HMRU) has already been established with applications for permanent resources in progress. Even though the HMRU is quite new, it has made significant positive impact on the Federal CBN counterterrorism environment. For example, the FBI Laboratory organized the first-ever comprehensive CBN response at the 1996 Olympic Games. This is the model upon which a comprehensive national program will be built. The FBI asserts that a similar result would occur from a fully equipped ARST.

MOBILE DEPLOYMENT LABORATORIES

Over the last several years, the FBI Laboratory has been called to deploy its scientific capabilities to a number of remote locations throughout the U.S. and around the world. The frequency of the need for these deployments is steadily rising, as evidenced by events such as the bombings of Pan Am Flight 103 (Scotland), World Trade Center (New York), U.S. Military Assistance Command facilities (Riyadh and Dhahran, Saudi Arabia), UNABOM (several U.S. locations including the suspect's remote Montana cabin), the Murrah Federal Building (Oklahoma City), TWA Flight 800 (Long Island, New York) and the Olympic Centennial Park (Atlanta).

The 1997 Appropriation provided the FBI with \$1,200,000 in VCRP funding to design, procure and fully equip two mobile, modular laboratories deployable by ground, sea or air to support on-site forensic analyses and examinations in a wide spectrum of environments. This funding provides for the purchase of host vehicles, such as a truck and/or trailer which can be towed by these or other vehicles; chemical, biological and physical analysis instrumentation and mini-laboratories which can be modularly installed or carried in the trucks and trailers; advanced communications and imagery equipment which provides support to crime scene command and control and search personnel; voice and data communications with a field office; the FBI's Strategic Investigative Operations Center (SIOC); and other locations; computer systems for documentation, graphics and evidence control; and logistics to establish and maintain a forward scientific operations center. Of the \$1,200,000 enhancement, the FBI proposes a recurl of \$240,000 in FY 1998 to outfit and maintain the mobile deployment laboratories.

Multiple deployment laboratories are required to ensure the availability of laboratory support to more than a single event or location at any given moment or period of time, as exemplified by the recent simultaneous TWA 800 and Centennial Park bombings. The former necessitated a protracted field deployment of FBI Laboratory experts with

suboptimal support by laboratory instrumentation and ad hoc facilities. The investigation of the bombing in Oklahoma City was also a critical situation that required mobile deployment laboratory capability. The FBI strongly believes that it is essential to provide its examiners and technicians with deployable capabilities to best support major investigations.

CONTRACT LINGUISTS

The FBI Laboratory manages the Field Operations and Translations Program and Foreign Language Education and Measurement Program. To provide requested translation and linguist assistance to field offices, the FBI draws from both internal and external resources including: Translators, Language Specialists (LS), Contract Linguists (CL), Contract Language Monitors (CLM), Translation Agency Contract Linguists (TACL), Special Agent Linguists, and Department of Defense Linguists. For FY 1997, the FBI received a program increase of \$2,850,000 to address the rapidly escalating need for language services in Southwest Border Investigations.

The Southwest Border Project (SWBP) is a joint FBI/DEA initiative targeting the four most significant Mexican Drug Trafficking Organizations (MDTOs) which are: Juan Garcia Abrego Organization (JGAO), Amado Carrillo Fuentes Organization (ACFO), Arellano Felix Organization (AFO), and Caro Quintero Organization (CQO). In addition to targeting the four mentioned core organizations, SWBP also addresses white collar crime, public corruption, violent crime and various other criminal violations arising as a result of the drug trade.

Foreign language translation is extremely critical to SWBP investigations due to the international nexus of all of the targeted organized criminal groups which are the focus of the SWBP. CLs play a key role in the SWBP, as investigations require the use of court-approved wire-taps to develop cases. Consensual recordings and court ordered electronic surveillance pursuant to Title IIIs are the primary weapons used against the various MDTOs to gather evidence of conspiratorial activities and collect time critical intelligence facilitating seizures, arrests, and other enforcement actions which disrupt their operations. Title III implementation requires contemporaneous monitoring to accomplish statutorily required minimization. Operationally, contemporaneous monitoring is essential to effectively exploit time critical information.

CLs can staff monitoring positions utilizing their language proficiency while relieving language capable Agents for utilization in investigative and enforcement operations. Translation and transcription of Title III intercepts and consensually monitored recordings are highly advantageous in the investigative phase and indispensable in the pretrial phase when the government must comply with discovery requirements relating to the production of documentation for the defense which will be relied on at trial. Typically, these recordings are voluminous, and timely, accurate translation is essential to successful prosecution.

Consequently, VCRP base level funding in the amount of \$2,850,000 is required to continue to meet the growing demand for CL support to major investigations. The use of independent contractors and translation services is a highly effective and efficient means of obtaining linguists for languages on short notice. An average CL costs \$18.22 per hour; however, language service providers or agencies will charge as much as \$25-60 per hour.

Program measure indicators relating to the FBI's forensic programs are included under the Forensic Services Salaries and Expenses justification.

LONG-RANGE GOAL: To support the Federal and non-Federal criminal justice system by: developing an automated database of DNA patterns from evidence and/or individuals for examination and comparison; working with other laboratories to exchange information on DNA testing methods, sharing protocol, encouraging consensus on standards, and ensuring use of quality assurance and proficiency testing programs; developing a database and network software to match and exchange images of firearms evidence from violent crimes; providing a highly productive and effective means of preserving crime scenes integrity and collection of evidence; and adequately equipping laboratory technicians and examiners with the most modern technologically advanced forensic equipment.

MAJOR OBJECTIVES:

- To provide FBI Laboratory examiners, technicians, and support employees with the most modern state-of-the-art forensic laboratory facilities, equipment, instrumentation, and techniques.
- To increase the number of State and local laboratories participating in the FBI's Combined Deoxyribonucleic Acid (DNA) Index System (CODIS), DRUGFIRE, and other forensic database programs.
- To provide FBI Evidence Response Teams (ERT) with the appropriate vehicles, protective gear, technical equipment, supplies, and training necessary to conduct crime scene preservation and collection of evidence.
- To continue research, development, and implementation of mitochondrial DNA, Polymerase Chain Reaction (PCR) DNA and chemiluminescence techniques.
- To improve the timeliness of the FBI Laboratory's case turnaround time.
- To establish, manage, and administer a Federal DNA Database program.

PROGRAM INCREASES: No program increases are requested in 1998.

**Federal Bureau of Investigation
Violent Crime Reduction Program
Justification of Program and Performance
(Dollars in thousands)**

Information Management, Automation, and Telecommunications	Perm. Pos.	FTE	Amount
1997 Appropriation Anticipated
1998 Base Anticipated	\$9,059
1998 Estimate	9,059
Increase/Decrease

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: The Information Management, Automation, and Telecommunications (IMAT) decision unit serves the American public through its support to all functional areas of the FBI, investigative, law enforcement support, and management and administration. The IMAT program managers have responsibility for carrying out support functions for all FBI program activities as well as other Federal agencies. IMAT services include: the National Name Check Program (a reimbursable function); automation support for administrative and investigative purposes (CISP, DRUGFIRE, CODIS, and FOIPA Document Processing System); including Legal Attache posts; information hardware and software acquisition; crisis response (Rapid Start deployments) and special case support (OKBOMB, UNABOM, MOZARK, and the Olympics); secure and non-secure telecommunications, mail services, and office equipment and papers. Finally, the IMAT decision unit is the sole administrator for the FBI's information technology budget, acquisition, networking, and implementation.

In recent years, as investigations have become more complex, investigative efforts have increasingly required more sophisticated information processing capabilities. Since these investigations often involve massive volumes of information and multiple jurisdictions, the FBI uses computers to facilitate the collation and analysis of information within the central file system.

In addition, criminal organizations have embraced automation as a means to enhance their operations and have spawned new categories of crimes the FBI is required to investigate. Examples are illegal data manipulation, software piracy, embezzlement by computer and deliberate break-ins to computer networks by hackers. As the world becomes computerized, so must the FBI to keep pace and to maintain preeminence in the field of law enforcement.

The IMAT provides the means for FBI agents and analysts to gather, store, process, and analyze information to successfully investigate, arrest, and prosecute criminals. With the expansion of the FBI's responsibilities into the international arena and the broadening of its role in such significant areas as counterterrorism, drugs, and the threat to the nation's

infrastructure, today's law enforcement activities are becoming increasingly multi-jurisdictional. DRUGX (a common FBI/DEA database), the establishment of a direct link between the FBI and the Treasury Enforcement Communications System (TECS), and the use of the INTELINK system for enhanced information sharing are especially beneficial when compared to duplicative and time-consuming procedures used to accomplish this exchange without information technology. The FBI has acquired a base technical infrastructure of desktop and portable workstations, mainframe computers, and local and wide area networks. In order to continually meet the challenges presented to investigators, the FBI must acquire and implement more sophisticated investigative support tools, have the capability of sharing information electronically with other agencies, and continue to provide security for the information gathered.

An initial capability in information sharing is being achieved with IMAT base funding. The FBI will begin efforts to comply with the Information Technology Management Reform Act of 1996 with available base resources. The IMAT has implemented a Trusted Guard, which permits networks operating at dissimilar classification levels to share information with DEA and to allow the FBI access to TECS. The IMAT is implementing the Novell network operating system in field offices and at FBIHQ to support a client-server architecture. Base level funding has also provided for a prototype of the document information management capabilities at FBIHQ only.

The FBI provides ongoing efforts to include a Litigation Support prototype as a part of the FBI's prototyping within this initiative. The FBI is working on the development of a secure link to the Internet through the FBI network. This connection will provide access to the private and commercial world. The FBI is building the Law Enforcement Online (LEO) system which provides information sharing capabilities to State and local law enforcement groups.

The FBI is also committed to following the technology of voice processing and voice input to digital and communications equipment. The same is true for multimedia technology, which includes a capability to create, transmit, and present electronic documents or files that integrate information in various forms, including text, images, audio, and video. FBI files contain mainly text documents, but are supplemented with non-textual materials such as videotapes, photographs, and audio tapes.

The FBI utilizes a central records system for maintaining its investigative, personnel, applicant, administrative, and general files. This system consists of a numerical sequence of 281 subject matter files, an alphabetical index to the files, providing cross reference, and a supporting abstract system.

The IMAT is responsible for the operation and management of three mainframe computer centers. These centers, which include the FBI Computer Center located at FBIHQ and regional support centers located at Pocatello, Idaho and Clarksburg, West Virginia, support communications and network requirements of the 56 FBI field offices and 400 resident agencies. Each of the regional support centers contains two independent systems. These systems provide internal back-up within each of the centers and allow each center to back up the critical applications of the other. All applications and databases are copied to tape and stored at offsite locations.

Information collected and analyzed by FBI Agents in criminal investigations and used by U.S. Attorneys in the prosecution of cases is a basic commodity of the FBI. Without reliable and timely information, the FBI as an organization cannot be effective. Enhanced technological capability - and the associated productivity increases - will be a primary vehicle for the FBI to maintain its leadership position in the law enforcement community.

vehicle for the FBI to maintain its leadership position in the law enforcement community.

LONG-GOAL: To develop and implement a comprehensive, global information system that supports the FBI's major criminal investigative and counterintelligence initiatives, shared access and shared processing of investigative information among law enforcement and criminal justice agencies and national security information within the intelligence community.

MAJOR OBJECTIVES:

- To modernize and augment computer equipment, software applications, and telecommunications networks within the FBI's current infrastructure to facilitate the necessary transition to a distributed computing environment which will use state-of-the-art tools for information collection, management, analysis, and exploitations.
- To expand and broaden the FBI's current environment for the multi-agency cooperation and collaboration essential for dealing with such initiatives as counterterrorism (including threat, from chemical or biological agents), economic crime, organized crime, drugs, international law enforcement, and the growing threat to the nation's information infrastructure.
- To provide the necessary tools to analyze investigative and intelligence information as thoroughly as possible to ensure that innocent American citizens are protected from acts of terrorism, threats of hostile foreign governments, dangers of illegal drugs, violence in the streets, and criminal attacks on their financial interests.
- To protect the privacy of citizens and secure sensitive and classified data from hostile elements.
- To provide all the information necessary to ensure that the American national infrastructure is properly protected.

PROGRAM INCREASE:

Initiative: Investigative Infrastructure
Item: FOIPA Document Processing System (FDPS) - \$9,059,000

The Information Management, Automation and Telecommunications (IMAT) decision unit is requesting \$9,059,000 for FOIPA Document Processing System (FDPS) development.

The goal of the FDPS is to enhance technology applications to improve the quality and timeliness in processing FOIPA requests. The FDPS will eliminate manual work procedures by electronically networking all FOIPA employees at FBIHQ and 56 field offices as well as approximately 50 employees in the Office of General Counsel for civil

discovery and information privacy litigation purposes. Today, the majority of the FDPS user group rely on manual methods to perform their work. Using FDPS, FOIPA requests can be forwarded to the analyst in electronic case folders for on-screen data review, allowing annotations, redactions, and markings of exemption codes to be performed electronically. Information could then be released to a requester in either hard copy or electronic format.

The FBI is developing the FDPS to fully automate the FBI's FOIPA function. During 1994, the Department of Justice (DOJ) recognized the FBI's FDPS as a National Performance Review (NPR) laboratory. The FBI's FDPS is not specific to the FBI, rather, it incorporates off-the-shelf software packages to achieve full functionality. The DOJ has provided \$3 million through the Working Capital Fund (WCF) to develop a rapid prototype of the desired system and to begin development of the actual FDPS.

During 1996 the Attorney General recognized the FOIPA program, as well as, FDPS development as a major Department of Justice initiative. The Attorney General called for more strict management of the FOIPA program and a significant decrease in the backlog of requests by late fiscal year 1997. As a result, the FBI has performed an internal analysis of its FOIPA operations and determined some procedural changes could be made to make the process more efficient. Consequently, the FBI has begun to streamline the operation. It is expected that this business process re-engineering effort will result in at least a ten percent productivity gain during fiscal year 1997.

The implementation of an automated document processing system will allow the FBI to achieve compliance with the Attorney General's mandate for reducing the backlog of FOIPA requests. The quality and reliability of reviews would be improved, thereby reducing the risk of accidental disclosure of sensitive information. The FDPS will permit the FBI to meet the openness in government objectives and will concurrently protect information related to national security, sensitive case files, investigative techniques, and informants.

FDPS development is being pursued by both FBI and contract personnel. To date, these individuals have: (1) completed the functional requirements analysis, (2) developed and implemented a modified Request Tracking System, and (3) developed a stand-alone redaction system using commercial off-the-shelf products. In addition, the FBI is developing a pilot project to test the viability of the automated redaction process under actual work conditions and to produce records in electronic format. Four FOIPA employees would be employed as the user group for this pilot project. This pilot project would facilitate automating the FBI's reading room as well.

The FBI's focus on FOIPA issues was further emphasized during late 1996 with the passage of the Electronic Freedom of Information Act (EFOIA) of 1996. The EFOIA institutes a number of modifications to the Freedom of Information Act of 1996 (5 U.S.C. Section 522). The EFOIA requires all agencies to provide public information to requesters in electronic format (Compact Disc (CD) or floppy diskette). The EFOIA requires that computer-based information in addition to paper records kept by agencies be subject to review for classification. This includes electronic mail. If an agency cannot currently produce responses in electronic format, a method must be instituted immediately. Each agency is encouraged to begin automating its public reading rooms and FOIA libraries for ease in public access. All "reading room" material created on or after November 1, 1996, must be available in electronic format by November 1, 1997. In addition, the FBI is requesting 239 positions, 120 workyears, and \$11,394,000 for EFOIA in the Salaries and Expenses appropriation account.

The EFOIA would require agencies to indicate the amount of information deleted in response to a FOIA request, unless such an indication would harm an interest protected by an

exemption. The Act imposes a technical feasibility standard for such specifications. Upon completion, the FBI's FDPS would satisfy all technical standards required by EFOIA statutes. The FBI's FDPS is being designed to show the quantity of redacted material, shown as a gray-shaded area, on each page of response presented to a requester.

Most provisions of the EFOIA become effective one year after the date of enactment and others, 180 days after enactment. FDPS development and implementation is imperative for FBI compliance with the EFOIA. Despite the FBI's re-engineering efforts, the EFOIA places additional demands on the FBI's FOIPA operation that can only be remedied by an enhanced level of funding for FDPS development. For these reasons, the FBI requires \$9,059,000 to continue development of the FDPS in order to comply with the EFOIA. The FBI's successful completion and implementation of the FDPS would promote a higher level of operating efficiency and ultimately optimal public confidence and satisfaction.

**Federal Bureau of Investigation
Violent Crime Reduction Program
Justification of Program and Performance**
(Dollars in thousands)

Technical Field Support and Services	Perm.		ETE	Amount
	Pos.			
1997 Appropriation Anticipated	6	5		\$79,468
1998 Base Anticipated	6	6		89,517
1998 Estimate	8	7		95,517
Increase/Decrease	2	1		\$6,000

BASE LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: The Violent Crime Control and Law Enforcement Act of 1994 established and authorized the Violent Crime Reduction Program (VCRP). The anticipated 1997 Appropriation includes a VCRP allocation of \$79,468,000 under the Technical Field Support and Services (TFS&S) Program to finance Advanced Telephony, Tactical Operations, Federal Wireless Communications, and Infrastructure initiatives. For 1998, base level funding of \$89,517,000 will be used to continue the Advanced Telephony (\$34,505,000), Tactical Operations (\$23,074,000), Federal Wireless Communications (\$8,762,000), Antenna Site Lease (\$7,797,000) and Automobile (\$15,379,000) programs. Base funding in 1998 reflects a transfer of \$6,715,000 from Salaries and Expenses automobile funding to the VCRP. Performance indicator data for items are included in the FBI's Salaries and Expenses narrative section.

The Advanced Telephony Program (ATP) focuses on the emergence of digital technology and new telecommunications services that are flooding our society and their impact on law enforcement. In order to maintain court-authorized electronic surveillance capabilities, law enforcement must continue an aggressive development effort to keep pace with the rapidly changing products and services of the telecommunications industry. Until recently, the telecommunications industry had remained virtually unchanged for approximately 50 years. For the most part, the services offered were wireline analog voice; however, the 1980s witnessed the emergence of cordless and cellular telephones, the proliferation of facsimile machines, and the promise of high speed transmission of video, voice, and data. The factors driving these changes are twofold. First, the presence of computers and related digital technology has caused a transition to the information age and a need for timely and voluminous exchanges of information. A second factor in the emergence of new telecommunications services is the increased need for mobility as evidenced by the usage of cordless and cellular phones and paging devices.

In 1998, it is estimated that approximately 65 million cordless phones, 50 million cellular phones, 30 million paging devices, and 8 million personal communications services phones will be in use in the United States. These new services and the need for mobility are the driving forces responsible for the 1990s emergence of advanced telecommunications technologies, such as the ISDN, advanced cellular and personal communications networks, and enhanced services and features as a result of intelligent networks. The impact that this technology is having, and will continue to have, on law enforcement cannot be overstated. This technology is expanding; the industry is fiercely

competitive with new products and services introduced continuously. These products represent fundamental changes in the way people and businesses communicate, and they pose unprecedented challenges to the electronic surveillance capabilities of the FBI and the entire law enforcement community. Because electronic surveillance is utilized by all levels of law enforcement to combat illegal drugs, violent crime, espionage, white-collar crime, and organized crime, the loss of these techniques would have a devastating impact on the fight against crime.

The Network Access Development Unit is charged with ensuring the ability of the FBI to collect evidence and intelligence through the development, deployment, and support of intercept capabilities on communications networks. This includes the development of public and private communications network intercept capabilities which are independent of carriers' access solutions developed under the Communications Assistance for Law Enforcement Act, private communications network capabilities developed through cooperation with Internet access providers and information service providers, and deployment and support of unique, application-specific public and private communications network intercept systems.

Individuals are becoming increasingly sophisticated in the use of state-of-the-art technology to implement and conceal their illegal activities. Not only are high technology systems used for voice communications, but increasingly, more information is recorded, stored, copied and/or transmitted by electronic means. The Sensor Development and Deployment Unit is responsible for providing the technology to support covert audio and plain text machine intelligence collections from all criminal, counterterrorism, and counterintelligence targets. The Collection and Information Management Unit provides the advanced telephony equipment and systems required to insure that the FBI is able to maintain electronic surveillance capabilities.

The Signal Analysis and Processing Unit is responsible for the solution of encryption problems. Commercial cryptography has been introduced which provides protection to conventional and cellular telephone, facsimile, data, and radio communications systems. Today, approximately 500 different encryption schemes are offered on the market to the public, commercial, and government customers. Therefore, in order to maintain court-ordered electronic surveillance capabilities, law enforcement must continue an aggressive development effort to keep pace with rapidly changing products and services of the telecommunications industry. The FBI and law enforcement have seen a marked increase in the demand and use of encryption over the past four years. The advances in, and proliferation of, digital technologies have vastly complicated law enforcement's task of processing lawfully intercepted communications and electronically stored information. Encryption, once solely the purview of military and the government, is now readily available and accessible commercially to the general public. Today the encryption market offers products to protect voice communications, digital data communications, disk files, electronic mail, video, and facsimile. A 1996 survey of law enforcement agencies conducted by the National Institute of Justice revealed that 28.4 percent of the survey's respondents have encountered encryption, voice scrambling, or other surveillance countermeasures during criminal investigations. Criminal elements are employing encryption and other digital technologies, and that usage is likely to increase.

The Tactical Operations Unit conducts research and development and provides access control equipment to all FBI locations. Funding provided is allowing aggressive research and development and will aid in addressing current workloads compounded by rapid changes in lock and alarm technology.

The Public Safety Wireless Advisory Committee (PSWAC) and the Federal Law Enforcement Wireless Users Group (FLEWUG) will define the narrow band digital technology

and the features necessary to ensure interoperability with other Federal, State and local law enforcement agencies. The FLEWUG was formed on April 20, 1994, in response to the National Performance Review's Information Technology Initiative 04, "Establish a National Law Enforcement/Public Safety Network." The FLEWUG is co-chaired by the FBI and the United States Secret Service. This initiative requires a multi-year commitment of funds to plan, test, and prepare for the full-scale implementation of a national law enforcement/public safety wireless communications network. The FLEWUG Program Management Office will conduct projects to develop a nationwide wireless network and support the interoperability, functional, management, technical, and spectral requirements.

The FBI's Encrypted Land Mobile Radio System (ELMRS) supports all FBI investigations and provides for interoperability between Government agencies, task forces and FBI personnel during emergency situations. The ELMRS infrastructure would cease to exist if the antenna sites or the telephone data circuits which remotely control the radio equipment located at the antenna sites were reduced or eliminated. The ELMRS is undergoing continuing modification and enhancement to meet the changing requirements of FBI investigations. Additional coverage to extend communications into rural areas, enhanced coverage in metropolitan areas to provide hand-held communications, additional radios for task forces, and radios for FBI to local police communications are key needs. By 1998, many of the FBI's radio systems will have been operational in excess of 10 years, requiring more frequent and costly maintenance.

In the coming years, the FBI will place a high priority on the maintenance, support and enhancement of these existing systems to carry them into the next century, at which time the next generation radios based on narrowband digital technology will have been identified. Therefore, it will be five to ten years before the FBI will be prepared to install a new generation radio system. Until such time as this next generation system can be analyzed, defined, and engineered, the only option left to the FBI is to maintain the existing system, making selective improvements and technology insertions when there are warranted operational requirements.

Finally, the FBI's vehicle fleet continues to age and complete mileage at an alarming rate. The number of vehicles which exceed the FBI's internal mileage ceiling of 80,000, the maximum mileage for operating safe and reliable vehicles for law enforcement purposes, must be reduced. In 1998, the FBI will have 1,252 vehicles with mileage exceeding 80,000. Increased vehicle downtime forces the FBI to use costly rental vehicles which lack the proper law enforcement equipment, such as DVP radios, for some mission requirements. Base level funding of \$15,379,000 would enable the FBI to purchase 877 replacement vehicles. The total motor vehicle base funding will allow the FBI to reduce the number of vehicles exceeding 80,000 miles from 1,252 to 533. This level of funding greatly enhances the ability of the FBI to replace older high mileage vehicles. Recurring these funds through 1999 would enable the FBI to eliminate all vehicles with mileage of 80,000 or greater. With this level of funding, the FBI's replacement cycle decreases from eight to five years.

LONG-RANGE GOALS: To provide engineering services, technical support, and equipment to FBI field offices and conduct necessary research and development to adapt technology for deployment against criminal and terrorist activities.

To provide safe and reliable vehicles to support FBI investigative requirements.

MAJOR OBJECTIVES:

To establish a national wireless network to support the Federal law enforcement communications requirements.

To provide radio communications and technical equipment in support of field investigations.

To conduct research and development in support of new technologies in an effort to produce state-of-the-art investigative techniques.

To provide safe and reliable automobile transportation with less vehicle downtime and cost for repairs and maintenance costs, thereby increasing investigative ability.

To reduce the number of vehicles with mileage exceeding 80,000 miles.

PROGRAM INCREASES: For 1998, program increases of two positions, one workyear and \$6,000,000 are requested for replacement microwave equipment under the Investigative Infrastructure Initiative.

Initiative: Investigative Infrastructure

Item: Mandated Replacement of Microwave Equipment - 2 Pos., 1 FTE, \$6,000,000

Funding totaling \$6,000,000, consisting of two Electronics Technician (ET) positions and personnel funding of \$225,000 and nonpersonnel funding of \$5,775,000 is requested to purchase equipment and services to begin the mandated replacement of microwave equipment currently operating in the 1710-1755 megahertz band. Title VI of the Communications Licensing and Spectrum Allocation and Improvement of the Omnibus Reconciliation Act of 1993 requires the FBI and other Federal users of a selected portion of the microwave spectrum to vacate this spectrum. The Federal Communications Commission will be reassigning these frequencies to non-Government users; therefore, the FBI must vacate this band by 2004 in U.S. cities and acquire replacement equipment operating on other frequencies or wireline services. The FBI uses the 1710-1755 megahertz band in 24 of its 56 field offices. The total nonpersonnel cost of migrating from the 1710-1755 band width is estimated at \$30,000,000. The FBI proposes a six-year transition plan beginning in 1998. The nonpersonnel enhancement of \$5,775,000 would start this process by purchasing equipment, testing and optimization services for this conversion. The two ETs are requested to support conversions of these 24 microwave systems. There is no base funding for migration from radio spectrum transferred to the private sector. Private vendors are not required to reimburse the FBI for spectrum. Voluntary reimbursement appears unlikely.

Based upon prior experience utilizing contractor support for this type of work, funding is requested beginning in 1998 to insure that the transfer is accomplished within the mandated time period. Difficulties in acquiring service contracts (a competitive procurement of this scale will typically take up to nine months to award), technical issues with replacement equipment, and issues with radio site vendors will predictably extend implementation. Based on recent experiences in the Washington Field Office with the procurement and implementation of wireline services to support radio communications, the time required to replace the microwave in the affected field offices will extend this

project through December 2003. Because of the extensive size of the network, the remoteness of many sites, and the anticipated difficulties in replacing existing microwave links with alternative frequencies, the process of vacating will take from 1998 to 2003 to minimize disruption to the following 24 affected field offices.

1. Boston	4. Pittsburgh	7. Philadelphia	10. Baltimore	13. Detroit	16. Las Vegas	19. Kansas City	22. St. Louis
2. San Francisco	5. Los Angeles	8. Dallas	11. New Orleans	14. Indianapolis	17. Houston	20. New Haven	23. Tampa
3. Cleveland	6. El Paso	9. Miami	12. Atlanta	15. San Juan	18. Jacksonville	21. Newark	24. Oklahoma

The FBI will prioritize replacement of field office systems depending upon the private sector use of transferred spectrum. It is believed that switching to leased services at an estimated cost of \$1,000,000 per year per office may provide the most cost effective method of replacing 18 of the 24 microwave links. Leased services include the cost to lease wireline services, the cost of capital equipment, ordering the wireline service, installation of the new service, removal of old microwave equipment, and the first year of recurring charges for the service.

In six of the 24 field offices (El Paso, Indianapolis, Los Angeles, Philadelphia, Pittsburgh, and San Juan), the FBI does not have the option of switching to leased services and must exchange the affected 2 gigahertz microwave with 7 gigahertz. In some areas, such services are not available. In others, there are extenuating circumstances which require the continued use of the microwave such as microwave sharing agreements and memoranda of understanding with other State and local entities. It is estimated this will require \$1,500,000 per office or a total of \$9,000,000 to cover the cost of replacing the microwave radios and antennas with 7 gigahertz equipment. The \$1.5 million is based upon 15 links per field office at \$100,000 each. The following chart shows the six-year funding requirements by fiscal year (FY). This \$10,000,000 initiative would cost \$5,775,000 in 1998; \$6,225,000 in 1999; \$6,000,000 in 2000; \$4,500,000 in 2001; \$5,500,000 in 2002; and \$2,000,000 in 2003.

Costs to Replace Microwave Equipment in the 1710-1755 Megahertz Band by FY

	FY 1998	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	Total
Wireline Lease Cost/Office	\$1,000,000	\$1,000,000	\$1,000,000	\$1,000,000	\$1,000,000	\$1,000,000	\$1,000,000
Number of Field Offices	3	3	3	3	4	2	18
Total - Wireline Lease	\$3,000,000	\$3,000,000	\$3,000,000	\$3,000,000	\$4,000,000	\$2,000,000	\$18,000,000
Microwave Exchange Cost/Office	\$0	\$1,500,000	\$1,500,000	\$1,500,000	\$1,500,000	\$1,500,000	\$1,500,000
Number of Field Offices	0	2	2	1	1	0	6
Total - Microwave Exchange	\$0	\$3,000,000	\$3,000,000	\$1,500,000	\$1,500,000	\$0	\$9,000,000
Services Contract	\$2,775,000	\$225,000	\$0	\$0	\$0	\$0	\$3,000,000
Grand Total	\$5,775,000	\$6,225,000	\$6,000,000	\$4,500,000	\$5,500,000	\$2,000,000	\$30,000,000

For 1998, a nonpersonnel enhancement of \$5,775,000 is requested to lease wireline services for three field offices at \$1,000,000 each and to fund a services contract of \$2,775,000 to provide the necessary design and installation services required. The services contract is required to provide equipment installation services where microwave is being replaced with wireline services or microwave in an alternate frequency band. The contract will be used to install and optimize new equipment and also to remove the replaced equipment. This would include removal of microwave antennas and feedline presently installed on towers and buildings. The replacement of the microwave with new microwave in another frequency band will require the installation of new microwave antennas and system optimization. Tower and antenna installation are very expensive, usually requiring special contractors authorized to do this work. The cost of the services contract was determined by comparison with costs incurred for similar services in existing services contracts.

Two ETs are requested to design the required system changes and act as project managers coordinating the work of the services contractor. The requested ETs must be on board as early as possible to acquire the required training and experience to properly design and implement the required replacements. If funding is delayed, future budget requests would require staffing above the two in order to meet the mandated deadlines. The following chart shows projected installation timelines based on a realistic and measured installation plan.

MICROWAVE SPECTRUM COMPLIANCE PROGRAM FISCAL YEARS 98 - 03

1998 Estimate
Increase/Decrease

BASE-LEVEL CAPABILITIES/STRATEGIC ASSESSMENT: President William J. Clinton signed the Brady Handgun Violence Prevention Act (hereafter the Brady Act) on November 30, 1993. The Brady Act directs the Attorney General to establish within 60 months after enactment, "a national instant criminal background check system that any Federal Firearms Licensees may contact, by telephone or by other electronic means in addition to the telephone, for information, to be supplied immediately, on whether receipt of a firearm by a prospective transferee would violate Section 922 of Title 18, United States Code or State law."

The interim provisions of this Act became effective on February 28, 1994. The FBI, acting at the behest of the Attorney General, has taken the lead in determining the requirements for a permanent national system. Following planning conferences with State and local officials in January and February 1994, a task group of law enforcement officials was formed. This group met with the FBI in April 1994 to develop a general implementation approach for the provisions of the Act. The proposed approach was presented to the Criminal Justice Information Services (CJIS) Advisory Policy Board (APB) in May 1994, for their review and recommendations. The Attorney General published a notice in June 1994, specifying how the instant check system (hereafter called the National Instant Check System (NICS)) would generally operate by November 1998. Once developed, the NICS will provide a centralized system for accessing information on persons who are prohibited from purchasing firearms, some of which is not currently automated, and provide that information to authorized agencies in a timely, accurate and complete manner.

Specifically the FBI was tasked to: (1) gather information and develop proposals regarding the specific design of the NICS; (2) identify and collect data on persons prohibited from purchasing firearms for the Federal segment of NICS; (3) develop standardized policies and procedures for storing, retrieving and transmitting data contained in the NICS; (4) propose guidelines for protecting the security and integrity of the system; and (5) adopt regulations and guidelines for safeguarding the privacy of individuals contained in NICS.

The FBI received a total of \$16,000,000 through the Office of Justice Programs to provide interim Brady Act support and compliance. In 1994, \$10,000,000 was provided to upgrade existing computer capacity to handle the increased volume of Interstate Identification Index (IJI) inquiries resulting from Brady Act compliance. In 1995, \$6,000,000 was provided to support the development of the NICS functional requirements and to fund the required design specifications and required systems integration and engineering services to support the NICS effort.

Full compliance with the Brady Act's permanent provisions prohibits the transfer of firearms to unauthorized persons and requires the establishment of NICS by November 30, 1998. Disqualifying factors for firearms possession under the Brady Act are not limited to criminal history record information. According to Section 922 (d) of Title 18, it is unlawful to sell a firearm to anyone who is (1) under indictment or has been convicted of a felony within a sentence of at least one year; (2) a fugitive; (3) a user of or addicted to any controlled substances; (4) adjudicated as a mental defective or committed to any mental institution; (5) an alien who is illegally or unlawfully in the U.S.; (6) dishonorably discharged from the Armed Forces; (7) a citizen who has renounced citizenship; and (8) subject to a court order restraining such person from harassing, stalking, or threatening an intimate partner or child of such partner or person. Most existing law enforcement systems are limited to criminal history data (arrests, adjudications, confinements) and information on fugitives from justice. Existing FBI information systems neither contain data nor interface with systems containing data on substance abusers, persons with mental conditions, etc., unless these persons have been arrested and fingerprinted. Consequently, the FBI's interim Brady Act capabilities, which are limited to criminal history, must be expanded to comply with the Act's permanent provision requirements.

The Department of Justice Appropriations Act, 1997, P.L. 104-208, included \$20,240,000 for system development and integration of the NICS into the FBI's existing information and identification systems. These funds were nonrecurred in the 1998 base. The Criminal Justice Information Services (CJIS) Division serves as the program manager responsible for ensuring that the NICS is operational by November 30, 1998. The CJIS Division formulated baseline functional requirements for the NICS, which have been approved and adopted by the CJIS APB. The CJIS Division has contracted with a development vendor, the Science Applications International Corporation (SAIC), to incorporate the approved functional requirements into the NICS.

The Congress also appropriated \$8,250,000 for development of two additional files for the National Crime Information Center (NCIC) 2000 system. The initial appropriation for NCIC 2000 did not include funding for the development of several files that have since been either mandated by Executive Order or recommended by the criminal justice user community. Specifically, funding was appropriated in 1997 for the Protective Order File and the Deported Felon File and this funding was nonrecurred in the 1998 base.

LONG-RANGE GOAL: To prevent the illegal receipt or possession of firearms under Federal or State law by providing the local, State, and Federal criminal justice community the capability to immediately identify persons prohibited from receiving or possessing firearms.

MAJOR OBJECTIVE: To develop and implement an on-line National Instant Check System (NICS) by November 30, 1998, in order to comply with the mandate cited in the Brady Handgun Violence Prevention Act (P.L. 103-159).

PROGRAM INCREASES: There are no program increases included in the Criminal Justice Services decision unit budget for 1998.

PERFORMANCE MEASURES: Performance measurement data is included in the Salaries and Expenses submission for the Criminal Justice Services decision unit.

Transfers to and from other accounts:

1. <u>Transfer from Salaries and Expenses</u>	Perm Pos.	WY	Amount
In 1998, a total of \$6,715,000 from the Technical Field Support and Services program is being transferred from Salaries and Expenses to the Violent Crime Reduction Program.	\$6,715
<u>Total, transfers</u>	\$6,715

Increases:

1. <u>1998 pay increase</u>	\$9
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$9,000 represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$6,013 for pay and \$2,987 for benefits = \$9,000).			
2. <u>Annualization of 1997 pay raise</u>	209
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$209,000, represents the pay amounts for three quarters of the year (\$146,583 for compensation and \$62,417 for benefits).			
3. <u>Annualization of 2 positions approved in 1997</u>	1	48
This provides for the annualization of two additional positions provided in 1997 Congressional Action for Technical Field Support and Services. This request includes non-recurring costs for one-time items associated with the increased positions.

DEPARTMENT OF JUSTICE DRUG ENFORCEMENT ADMINISTRATION (HEADQUARTERS)

Drug Enforcement Administration
Salaries and Expenses
Summary Statement

DEA's FY 1998 Authorization and Budget Request to Congress seeks a total of \$1,145,830,000 in appropriated funding, 7,218 positions including 3,358 Special Agents. The budget requests an increase of 382 positions, 168 Special Agents and \$91,812,000 of which \$67,164,000 is for new initiatives.

Salaries and Expenses	Positions	Workyears	Funds (19000)
Violent Crime Reduction Program	4,494	4,293	\$ 682,025
Drug Diversion Control Fee Account	2,087	2,041	400,037
Construction	636	613	58,268
			5,500
TOTAL	7,218	6,947	\$1,145,830

The budget request sets forth five specific initiatives that provide resources to: address the growing power and influence of international drug mafias; seek a solution to the growing threat of domestic and foreign produced methamphetamine, heroin, and cocaine; provide the necessary investigative tools to enable our agents to do their jobs; and provide safe and efficient laboratories to analyze drugs in support of drug investigations.

DEA's Growing Role in Combatting Drugs and Drug-Related Violence

Drug traffickers in the United States continue to breed crime and burden law enforcement in every state, and in most American communities. The violence which plagues our cities, rural areas and small towns is, in the vast majority of cases, related to drug trafficking or drug abuse. While violence and drug trafficking have manifested themselves as serious local problems addressed by local law enforcement, it is important to note that the drug trade in America is not a home-grown phenomenon. Cocaine, heroin, and now the majority of methamphetamine, is of foreign origin and is trafficked by well-organized and technologically sophisticated international criminal enterprises.

These organizations --- the Cali Mafia, the Mexican Federation and large scale international heroin trafficking groups --- have dominated the global narcotics trade and are responsible for the drugs and attendant violence which have denigrated the quality of life in so many American communities. It is no exaggeration to say that these sophisticated drug syndicates have risen to levels of organization and influence that rival many multinational corporations. Their capabilities and flexibility make them formidable adversaries for American law enforcement at all levels --- local, State and Federal.

Identifying leaders of these organizations, building strong and solid cases against them, and eventually bringing them to justice are the primary tasks of the Drug Enforcement Administration. It is no longer enough to simply seize the drugs and properties of these Mafia leaders, nor is it sufficient to disrupt their organizations. Until the leaders of these organizations receive jail sentences commensurate with the seriousness of their crimes the drug trade will continue to flourish with only temporary disruptions. DEA intends to continue building conspiracy cases against the world's most significant drug traffickers and their organizations, making the best use of the tools and resources provided to us.

Years Of Successful Drug Law Enforcement Have Proven:

- o First, law enforcement works: recent drops in the rates of crime and violence are a testament to continuous and targeted law enforcement pressures against all levels of criminals and criminal activity.
 - o Second, sophisticated targets require sophisticated investigations: long-term, effective, multi-jurisdiction investigations of major trafficking organizations require time and resources. Cases which came to fruition in 1986, such as "Zorro II" and "Global Sea" are resource-intensive and time consuming.
 - o Third, it is critical to identify and act quickly against emerging drug threats: our nation cannot afford to allow current threats such as methamphetamine and heroin to grow unabated and become so entrenched that it will take a decade or more to address their devastating consequences.
 - o Fourth, neglected infrastructure requirements erode effectiveness: DEA's infrastructure --- computers, laboratories, technical equipment and resources to transfer personnel to meet emerging enforcement needs --- are the backbone of the agency. The infrastructure must be maintained to ensure that DEA can match the traffickers' capabilities.
- DEA's 1988 Budget request acknowledges these lessons, and includes programs which target the highest levels of the drug trade operating along our Southern Border. The request also addresses violent crime, marshals resources to attack emerging methamphetamine and heroin drug trafficking organizations, and provides the infrastructure critical to DEA's mission.

Law Enforcement Works: During the late 1980's and early 1990's, when drug-related violence rose to unprecedented levels, Americans demanded that local, State and Federal law enforcement respond quickly and swiftly to eliminate violence and criminals from their communities. During this period, consistent, targeted and energetic law enforcement efforts made a tremendous difference in the crime rate in many major American cities. Recently, crime levels have dropped significantly; in New York City alone, the murder rate has fallen by 60 percent during the past five years, from 1,995 in 1992, to 984 in 1998. In Houston, the murder rate dropped 49 percent, and in Boston, 62 percent. The overall crime rate has dropped for five years in a row, and our nation is now in the longest period of decline in the crime rate since 1969.

These dramatic drops are the result of smart law enforcement programs which target all levels of violators, from petty crime to murder, from panhandling to drug trafficking. Increases in the numbers of police on the beat, more prisons and tougher policies are paying off. Despite these declines, we still face the serious prospect of violent youth crime in the coming years. Some experts predict the coming of a storm of juvenile crime that will be more violent and random than any crime problem we have yet seen. In what is referred to as the "echo of the baby boom," the number of males ages 14-17 will increase by 23 percent by the year 2006. Couple this fact with the recent alarming increases in drug abuse by young people, and we may have -- unless we act quickly -- a prescription for disaster in the years ahead.

The Mobile Enforcement Team (MET) program, which Congress fully funded in DEA's 1997 budget, builds on the philosophy that violent drug crime in communities must be met by aggressive law enforcement techniques. DEA's MET program has made a significant difference in hundreds of communities across the nation, reducing violent crime by investigating and arresting those individuals responsible for the vast majority of drug-related violent acts. This initiative emerged from a belief that street distributors should not be viewed merely as low-level, minor criminals, but as part of a seamless continuum of drug trafficking that is headquartered in Colombia, Mexico and Southeast Asia, and its surrogates operating on the streets of the United States.

Invited into violence-plagued communities by State and local law enforcement officials, DEA's MET teams work with local law enforcement to target gang-related drug activity and violent offenders. DEA provides expertise and support to law enforcement agencies which are often understaffed or under-funded and facing unprecedented threats from violent drug gangs with international sources of supply. Each DEA division has at least one team of approximately twelve Special Agents, dedicated to addressing violent crime in cities and towns within the division. An average deployment lasts 60 days, and teams are able to move from city to city, helping communities address critical problems.

To date, MET teams, working with State and local law enforcement officials in cities such as Spartanburg, South Carolina, the Rampart Section of Los Angeles, Galveston, Texas, and Toledo, Ohio have made 85 deployments, 2,677 arrests, seized over \$3 million in currency and 250 weapons.

Sophisticated Targets Require Sophisticated Investigations: Today's international narcotics traffickers have at their disposal technological advantages and logistical support that enables them to direct the activity of their multi-billion dollar global businesses. Armed with state of the art computers, communications systems, aircraft, boats, and fleets of trucks and automobiles, these drug Mafias are able to maintain control over multiple drug shipments. Additionally, these organizations control proceeds, personnel and operations not only in their headquarters in Colombia and Mexico, but also within the borders of the United States and Puerto Rico. With intense drug trafficking activity now concentrated along the border between Mexico and the southwest United States, DEA is conducting complex investigations which have both international and domestic ramifications. Investigations of organizations operating along the border reach into many American cities and small towns, paralleling the often circuitous routes used by drug traffickers to bring their poison to the far reaches of America.

This was clearly evident in two recent cases conducted by DEA in conjunction with other Federal, State and local law enforcement organizations. Both investigations were complex, multi-jurisdictional cases, requiring a significant investment of resources, months of investigation, wiretaps and the translation of hundreds of conversations.

Zorro II

As part of the Southwest Border Initiative, on May 2, 1996, Federal, State and local agents successfully completed a unique Organized Crime Drug Enforcement Task Force operation code-named "Zorro II". This investigation targeted a Mexican-run cocaine smuggling and distribution network in the United States and the Colombian Mafia for which it worked.

Since the operation began in September 1995, 130 traffickers from cities such as Los Angeles, Chicago, El Paso, Houston and Midland were charged with offenses relating to the importation and distribution of cocaine.

More than 90 court-authorized wiretaps were used in the investigation that seized 5,598 kilograms of cocaine powder, three quarters of a kilogram (730 grams) of crack cocaine, and 1,018 pounds of marijuana.

The Colombian cocaine was shipped from Colombia to Mexico where Mexican transportation groups, which were part of the "Mexican Federation," smuggled the cocaine across the border. Once in the United States, the cocaine was stored in the Los Angeles area for distribution by representatives of the Colombian Mafia and the Mexican Federation to such cities as: Miami, Chicago, Philadelphia, New York, Richmond and Newark. The cash receipts were then shipped to Colombia and Mexico.

Zorro II was significant in that it simultaneously dismantled both the organization that owned the cocaine, as well as a second organization that ran the transportation system. It was the first coordinated multi-district enforcement action taken as part of the Southwest Border Initiative.

The following were key Cali Mafia figures taken into custody: Hernan Aquilera and Pierre Remy were arrested in Miami. Mauricio Gutierrez, Rafael Alapico (the alleged organizer of the Mexican transportation network), Jorge Valazquez (the alleged leader of a Chicago-based distribution network) were arrested in Los Angeles. Others arrested included a New York City police officer and a sergeant in the National Guard. The distribution system ended in places like Richmond, Virginia, where cocaine powder was converted into crack cocaine and sold in public housing projects.

Zorro II was unique in that over 40 state and local police agencies, the DEA, the FBI, U.S. Attorney's Offices, and seven other Federal agencies across the country combined resources and expertise in this cooperative effort.

Effective investigations, such as the Zorro II case, are expensive and labor-intensive. A three-year investigation such as Zorro II, in which wiretaps are central to the investigation's success, cost DEA over \$13 million in wiretap-related expenses. This figure does not capture the costs to State and local law enforcement agencies participating in the case, nor does it reflect the ongoing costs to the fourteen DEA field divisions involved in the Zorro II investigation. In terms of manhours associated with the Zorro II investigation, 103,091 hours were dedicated by DEA Special Agents, and another 10,279 by DEA intelligence analysts.

In another multi-jurisdictional, multi-agency case aimed against Nigerian heroin traffickers, DEA worked with the FBI and U.S. Customs to target a heroin trafficking group located in Chicago, Illinois and headed by a Nigerian national. This organization was responsible for smuggling multi-kilo quantities of Southeast Asian heroin from Thailand through Europe and Mexico to Chicago. Using wiretaps over a forty day period, 23,000 telephone calls were recorded between members of the trafficking organization and sources of supply. Principals and couriers associated with this organization were arrested in Bangkok; Amsterdam; Paris; Cancun; Chicago; New York; Detroit; El Paso and McAllen, Texas. Again, this investigation depended a great deal on wiretaps. The costs associated with this technique, such as lease lines and translators costed about \$2 million.

Identification and Decisive Action Against Emerging Drug Threats is Critical: While cocaine and crack remain the primary drug threats in the United States, methamphetamine and heroin are rapidly becoming major threats across the Nation. Federal, State, and local law enforcement must work in concert to identify those organizations and individuals involved in methamphetamine production and heroin and methamphetamine trafficking within the United States. Having learned the tragic lesson taught by crack, law enforcement is aggressively attacking the burgeoning heroin and methamphetamine problems before they become more deeply rooted in American communities.

Heroin

Heroin has re-emerged in the United States as a major issue for law enforcement and public health officials. Because of its increased purity, lower price and wider availability, heroin has attracted a new group of users who prefer to smoke or snort heroin, rather than inject it. However, once hooked on heroin, many users ultimately turn to intravenous use to obtain the "high" they seek. Another troubling development is the fact that 82 percent of the heroin seized in the United States during 1995 was of South American origin, signaling the potential for Colombian dominance in the heroin trade and eventually leading to greater supply and lower prices.

On the street, heroin purity is directly related to availability. During 1995, the nationwide average purity for retail heroin from all sources was 39.7 percent, much higher than the average of 7 percent a decade ago, and considerably higher than the 28.6 percent recorded in 1991. The rise in average purity corresponded directly to the increase in availability of high-purity South American and Southeast Asian heroin.

The 1995 National Household Survey on Drug Abuse estimated that 1.4 million people have smoked heroin in their lifetime. This estimate was nearly double the 1994 estimate. Although the change was statistically significant only for the 35 and older age group, estimates for other age groups were also higher in 1995 than in 1994, including youths age 12-17.

Methamphetamine

The methamphetamine threat has also become critical in many parts of the United States. Trafficking and abuse of methamphetamine in the United States have been on the rise over the past few years. This has been evidenced by investigative, seizure, price, purity, and abuse data. As a result, "meth" has had a devastating impact in an increasing number of communities across the Nation. Although more common in western areas of the country, its impact was felt in the Midwest and Southeast areas that were not previously exposed to the harmful effects of this powerful stimulant.

Almost all of the methamphetamine trafficked and abused in the United States is produced in clandestine laboratories. Traditionally, the suppliers of methamphetamine in the United States have been outlaw motorcycle gangs and independent traffickers. Although these groups are still involved in the trade, Mexican drug trafficking organizations have begun to dominate the methamphetamine market in the United States. Their ascendancy in the methamphetamine trade is due to their access to wholesale ephedrine (the major precursor for methamphetamine) sources on the international market; their ability to produce large quantities of high-purity methamphetamine on a regular basis; and their well-established cocaine, marijuana and heroin distribution networks in the United States.

According to the *1995 National Household Survey on Drug Abuse*, 4.7 million persons have tried methamphetamine in their lifetime or 2.2 percent of the population in 1995. In 1994, the estimate had been 3.8 million. In the West, the statistics are more alarming. The latest *Drug Abuse Warning Network* figures indicate that methamphetamine related episodes tripled in Phoenix between 1992 and 1994, and the number of deaths related to this drug increased five fold. Los Angeles has had a 71 percent increase in emergency room visits related to methamphetamine abuse, and a 222 percent increase in meth-related deaths.

During 1998, DEA sponsored a national conference on methamphetamine which brought together State, local and Federal law enforcement officers to suggest workable strategies to address the methamphetamine threat. Emerging from this conference was a blueprint for action which was incorporated into the Department of Justice's larger methamphetamine strategy, and which provided suggestions for the national methamphetamine legislation which was passed by Congress and signed by the President in October, 1998.

Infrastructure Needs Must be Met: The new breed of international drug trafficker recognizes the necessity for state-of-the-art technology to ensure that profits, products and communications are secure. Drug Mafias, operating around the world, can track drug shipments on an hourly basis and maintain detailed data bases on personnel, equipment, transportation and logistical support. In order for DEA to undertake the type of investigations necessary to target and arrest major drug traffickers, it is essential that DEA have state-of-the-art laboratory support, technical equipment, aviation resources and the flexibility to move Special Agent personnel, intelligence analysts and support staff to meet emerging enforcement needs on a timely basis.

DEA's Fiscal Year 1998 Budget

DEA's budget request for 1998 focuses on these four areas. Enhancements are sought for methamphetamine control; the Southwest Border Initiative; heroin control; and investigative infrastructure support.

A summary of each of the S & E Initiatives is outlined below.

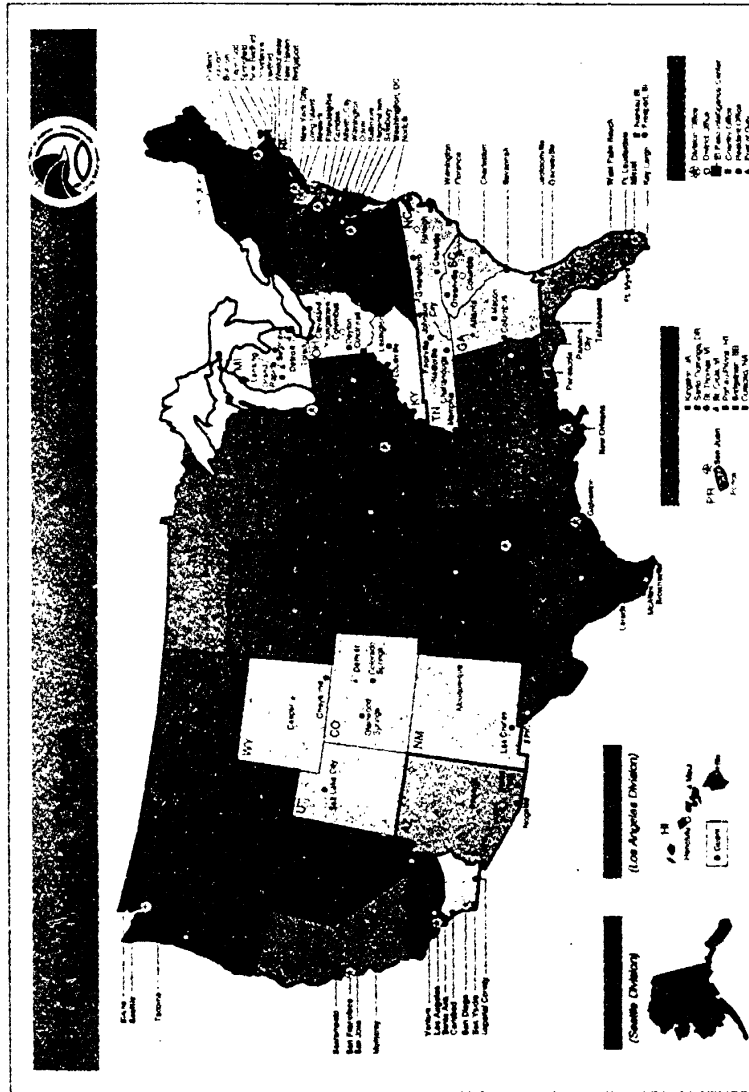

Methamphetamine Initiative: DEA requests a total of 74 positions (80 Special Agents) and \$11.0 million. Of this amount, 14 positions and \$2.27 million are requested through the Violent Crime Reduction Program (VCRP). These resources are requested to implement a multifaceted approach for attacking methamphetamine abuse, a deadly and rapidly growing epidemic that threatens the health and safety of our children, the environment, as well as the welfare of the American family. This initiative seeks to target, investigate and prosecute major methamphetamine traffickers operating within the United States and abroad, and to focus a coordinated Federal and international effort to identify, investigate and dismantle clandestine drug

laboratories operating in the United States. The initiative consists of funding for increased methamphetamine enforcement, heightened contract oversight of hazardous waste removal, enhanced drug analytical support, and an improved health/safety/enforcement training programs for Federal, State, and local law enforcement. Without these resources the methamphetamine epidemic will continue wreaking havoc upon our citizens and our environment.

Southwest Border Initiative: DEA requests 192 positions (96 Special Agents, 50 intelligence analysts, and 46 support) and \$29.7 million to apply investigative personnel and the latest investigative technology in continuance of the Department's comprehensive interagency strategy against drug trafficking on the Southwest Border. Through the use of human and technological-investigative resources, this enhancement will bolster Federal efforts to identify, penetrate, disrupt, and dismantle the major Colombians and Mexican trafficking organizations operating throughout the Southwest Border region. The initiative consists of three major components: Investigative Caseload, Investigative Equipment, and Intelligence. Without the requested resources, much of the unconstrained flow of drugs across the Southwest Border will persist and Colombians and the Mexican Federation will continue to flourish.

Heroin Strategy Initiative: DEA requests 60 positions (12 Special Agents, 20 Intelligence Analysts, and 28 Support) and \$5.0 million to continue efforts to reduce heroin trafficking within the United States. This initiative seeks to intensify DEA's efforts in identifying and prosecuting those responsible for the trafficking of heroin and, ultimately, the escalating number of heroin-related emergency room episodes throughout the country. Without these resources, Federal drug enforcement efforts will continue to lag behind the growth of heroin trafficking in this country, the availability and popularity of heroin in the United States will continue to grow, and heroin-related overdoses and emergency room episodes will further escalate, thereby costing the United States millions of dollars in additional medical expenditures each year.

Investigative Shortfall Initiative: DEA requests 19 positions and \$33.4 million to ensure that adequate resources are available for programs which support DEA enforcement operations. As funding for DEA leveled-off during the mid 1990's, resources for a host of agency operational support programs were depleted in order to cover the cost of emerging enforcement needs. Without additional resources for these critical support programs, DEA enforcement operations cannot continue to function at optimal levels. Enhancements included in this initiative are: \$1.0 million for Aircraft Replacement, \$4.4 million for MERLIN, and \$15.0 million for FIREBIRD which are requested in the VCRP budget. Additionally, a total of \$7.8 million for PCS, \$4.7 million for ADP maintenance and equipment, and 19 positions and \$539,000 to support implementation of the 1996 Electronic Freedom of Information Act (FOIA) amendments are requested in the Salaries and Expenses budget.

DRUG ENFORCEMENT ADMINISTRATION

Salaries and Expenses

Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates includes proposed changes in the appropriation language listed and explained below. New language is underscored.

Salaries and Expenses

For necessary expenses of the Drug Enforcement Administration, including not to exceed \$70,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of, and to be accounted for solely under the certificate of, the Attorney General; expenses for conducting drug education and training programs, including travel and related expenses for participants in such programs and the distribution of items of token value that promote the goals of such programs; purchase of not to exceed \$1,158,000 for passenger motor vehicles, of which \$1,032,000 will be for replacement only, for police-type use without regard to the general purchase price limitation for the current fiscal year, and acquisition, lease, maintenance, and operation of aircraft; \$745,388,000 of which not to exceed \$1,800,000 for research and \$16,000,000 for transfer to the Drug Diversion Control Fee Account for operating expenses shall remain available until expended; of which not to exceed \$4,000,000 for purchase of evidence and payments for information, \$8,000,000 for contracting for automated data processing and telecommunications equipment, and \$2,000,000 for laboratory equipment, \$4,000,000 for technical equipment, and \$2,000,000 for aircraft replacement, retrofit, and parts, shall remain available until September 30, 1998, and of which not to exceed \$50,000 shall be available for official reception and representation expenses; Provided further, That not to exceed 25 permanent positions and 25 full-time equivalent workyears, and \$1,828,000 shall be expended for the Office of Legislative Affairs and Public Affairs; Provided further, That the latter two aforementioned offices shall not be augmented by personnel details, temporary transfers of personnel on either a reimbursable or nonreimbursable basis or any other type of formal or informal transfer or reimbursement of personnel or funds on either a temporary or long term basis. For the additional amount for security measures for domestic and foreign Drug Enforcement Administration offices, \$5,000,000: Provided, That the entire amount is designated by Congress as an emergency requirement pursuant to section 251(b)(2)(D)(i) of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended.]

(Reorganization Plan No. 2 of 1973; Reorganization Plan No. 1 of 1988; 21 U.S.C. 801-986 as amended; 40 U.S.C. 304; Department of Justice Appropriations and Related Agencies Act, 1997; 104-208 (approved September 30, 1996; 110 STAT 3009.)

Explanation of Changes

1. The first change reflects the authorization to purchase 1,802 passenger motor vehicles.
2. The second change reflects the authorization to purchase 1,410 replacement passenger motor vehicles.
3. Note: the President's Budget Appendix reflects \$897,000,000 as the appropriation amount, this is an error. The correct 1998 appropriation amount is reflected above.
4. The third change reflects the increase in two-year authority for the purchase of ADP and telecommunications equipment up to \$10,000,000.
5. The fourth change reflects the deletion of language regarding limitations on the Office of Legislative and Public Affairs and the reference to the funds for security measures in DEA domestic and foreign offices.

**Drug Enforcement Administration
Salaries and Expenses
Program Performance Information
Government Performance and Results Act Requirements**

Mission: The Drug Enforcement Administration serves as our nation's lead Federal agency in combating illicit drugs and related activities.

Organizational Goal:

1. To arrest the most significant drug traffickers in the world and dismantle their organizations.
2. To combat drug-related violent crime in conjunction with State and local law enforcement organizations (this goal is addressed in DEA's Violent Crime Reduction Program Budget).
3. To develop and disseminate intelligence information for use by DEA and other law enforcement agencies in support of high priority investigations.
4. To prevent legitimately produced controlled substances and listed chemicals from being diverted into illicit channels.

ACTIVITY: ENFORCEMENT

	Perm. Pos.	FTE	Amount
Domestic Enforcement			
1997 Appropriation	2,103	2,019	\$282,038
1998 Base	2,103	2,058	292,262
1998 Estimate	2,358	2,188	321,401
Increase/Decrease	255	128	\$ 29,139

LONG RANGE GOAL: To reduce the domestic supply of illicit drugs by building cases against the highest level drug violators operating within the United States.

BASE PROGRAM DESCRIPTION: The Domestic Enforcement Program includes the investigative operations of DEA's 21 field divisions and the operational coordination functions located at DEA Headquarters. The program employs the bulk of DEA's Special Agent work force and uses a variety of sophisticated investigative tools, including electronic surveillance, informants, and undercover operations.

Domestic enforcement investigations are the heart of DEA's mission. They rely on information obtained from informants, internal intelligence sources, as well as the input of other Federal, State, and local law enforcement organizations. The program's financial investigations identify and trace assets subject to seizure and forfeiture which leads to the destruction of the economic bases supporting drug trafficking enterprises.

The Domestic Enforcement Program also includes DEA's Special Enforcement Programs (SEPs), Title III intercept operations, and the Domestic Cannabis Eradication/Suppression Program.

* Foreign Cooperative Investigations Decision Unit resources transferred to the Violent Crime Reduction Program.

LONG RANGE GOAL: To build cases leading to the arrest and prosecution of major drug traffickers by cooperating with and assisting those nations that demonstrate a commitment to fight international narcotics syndicates.

BASE PROGRAM DESCRIPTION: DEA's overseas efforts are directed toward advising, assisting, and encouraging foreign governments in efforts to arrest and prosecute major drug traffickers whose operations impact directly on the United States, and to assist host countries on the implementation of programs that impede the ability of these organizations to produce and transport these products to the United States. In pursuing this goal, DEA coordinates drug intelligence collection and drug investigations (including chemical diversion and drug money laundering activities) with foreign law enforcement agencies, and participates in bilateral and multilateral drug suppression programs.

DEA's Foreign Cooperative Investigations Program (FCIP) now includes resources for foreign Special Enforcement Operations/Programs (SEO/P), including OPBAT and the Northern Border Response Force (NBRF).

Increase/Decrease

* Reflects the annual transfer of \$15 million to Drug Diversion Control Fee Account.

LONG RANGE GOAL: To prevent legitimately produced controlled substances and listed chemicals from being diverted into illicit channels.

BASE PROGRAM DESCRIPTION: The Drug and Chemical Diversion Control program directs DEA's worldwide drug and chemical diversion control activities to include diversion investigations, domestic and international diversion control, registration, voluntary compliance, State assistance, industry liaison and associated support programs.

The Diversion Control Program is principally responsible for: 1) analyzing past data from diversion control activities to help develop work plans and priority objectives for current operations; 2) reviewing the effectiveness of DEA worldwide and individual field office drug and chemical diversion control activities to ensure they are responsive to, and/or consistent with the drug and chemical diversion control mission of DEA; 3) representing, among other Federal agencies, the United States drug enforcement position at national and international forums that address the control of legitimate drugs, and at other diplomatic initiatives designed to ensure appropriate drug and chemical diversion controls; and 4) formulating additional legislation and regulations to curtail the diversion of controlled substances and listed chemicals from legitimate channels.

Of the \$22,956,000 in the 1997 appropriation and \$23,415,000 in the 1988 base, \$15,000,000 is fee related and will be transferred to the Drug Diversion Control Fee Account (DDCFA) in accordance with appropriation language. Subsequent to the annual transfer of the \$15,000,000 from this decision unit to the DDCFA, all funding for the Drug Diversion Control Program will be contained in the DDCFA.

Drug Diversion Investigations:

Criminal Drug Diversion Investigations: It is estimated that 12,000 medical practitioners are involved in the diversion of legal drugs. DEA identifies those medical professionals responsible for the highest level of diversion and investigates their criminal activities.

CSA Mandated Cyclic Investigations: These investigations examine drug diversion at and between the manufacturer, distributor and wholesale levels in the distribution chain. This focus differs from other investigations that examine only one aspect of the diversion process. This focus is needed in situations where diversion is being conducted on a large scale level.

Pre-registrant Investigations: Pre-registrant investigations ensure at only qualified individuals or companies are authorized to acquire or dispense controlled substances.

State and Local Assistance: DEA assesses State programs that aim to suppress the diversion of controlled substances from scientific, medical research and legitimate distribution channels. In addition, the State and Local Assistance Program provides expertise, leadership, and guidance to the States consistent with national objectives.

International Drug Control: United States law and international treaty obligations provide the guidelines for DEA management on all matters pertaining to the formulation, direction, and coordination of worldwide programs associated with the diversion of legally produced controlled substances.

Chemical Diversion Investigations:

Criminal Chemical Diversion Investigations: DEA, under the auspices of the Chemical Diversion and Trafficking Act, conducts criminal investigations of firms suspected to be involved in the diversion of listed chemicals.

Import/Export Investigations: DEA receives and determines the legitimacy of all import/export declarations of listed chemicals. DEA's authority in these matters includes stopping chemical shipments, and rejecting the applications of chemical companies for "regular customer" status.

Pre-registrant Investigations: Pre-registrant investigations ensure that only qualified individuals or companies are authorized to acquire or distribute List I chemicals.

ACTIVITY: INVESTIGATIVE SUPPORT

Intelligence	Perm. Pos.	FTE	Amount
1997 Appropriation	665	675	\$68,865
1998 Base	665	682	70,587
1998 Estimate	708	703	74,588
Increase/Decrease	41	21	\$ 3,995

LONG RANGE GOAL: To identify, develop, and exploit information and intelligence necessary to enhance the effectiveness of drug law enforcement.

BASE PROGRAM DESCRIPTION: DEA's Intelligence Program is comprised of four components: 1) financial; 2) operational; 3) strategic; and 4) the El Paso Intelligence Center (EPIC). The Intelligence Program also provides leadership in the National Drug Intelligence Center (NDIC).

Financial Intelligence: This program focuses on fiscal aspects of the drug trade by identifying the development of financial conspiracy.

Operational Intelligence: This program gathers, organizes, analyzes and disseminates information available to DEA in direct support of active drug investigations.

Strategic Intelligence: This program produces comprehensive assessments and reports of drug trafficking patterns, availability levels, consumption rates and averages. This program also develops long-range supply reduction plans.

El Paso Intelligence Center: EPIC is a multi-agency facility providing the law enforcement community with all-source tactical intelligence pertaining to the interdiction of drugs, weapons, and aliens. EPIC provides support for drug law enforcement and interdiction operations, and is accessible 24-hours-a-day, seven-days-a-week.

National Drug Intelligence Center: NDIC is a multi-agency facility that brings together the collective analytical capabilities of all DOJ agencies to produce comprehensive analyses of drug trafficking and trafficking organizations. DEA serves as the Deputy Director of NDIC and also provides a share of the intelligence analyst support.

- Laboratory Services Decision Unit resources transferred to the Violent Crime Reduction Program.

LONG RANGE GOAL: To provide the required laboratory support necessary to maximize enforcement, intelligence, and diversion control activities.

BASE PROGRAM DESCRIPTION: This program provides laboratory support services for the enforcement, intelligence, and diversion control activities of DEA. Enforcement activities are supported through the timely analysis of drug evidence and the presentation of forensic expert testimony in court; by providing field assistance to Special Agents on clandestine laboratory investigations; by conducting crime scene searches for trace drug evidence; and by performing toolmark and signature analyses on evidence linked to suspected conspiracy cases.

Intelligence activities are supported through laboratory analysis that shows the origin of controlled substances and highlights foreign drug distribution patterns. Intelligence investigations are also aided through the signature analyses of the Domestic Monitor Program, which help monitor domestic drug distribution patterns and price/purity data at the retail level.

Diversion control activities are supported through the examination of tablets, capsules, and papers, which provide information on illegal drug distribution.

This program also provides forensic drug laboratory support to the Interagency Crime and Drug Enforcement Program and to the Federal Bureau of Investigation, which has concurrent jurisdiction for the enforcement of Federal drug laws. The program also provides support to other Federal, State and local law enforcement agencies that do not have their own forensic drug examination capability, or require the special expertise of DEA forensic scientists.

Training		Perm. Pos.	FTE	Amount

LONG RANGE GOAL: To establish, maintain, and enhance the mission-related skills of DEA personnel so they may carry out their work responsibilities.

BASE PROGRAM DESCRIPTION: The Training Program provides DEA personnel with the skills and knowledge necessary to support DEA's goals of dismantling drug operations and developing and disseminating drug intelligence. DEA's specialized training courses include: entry-level training; advanced and in-service specialty training; management and supervisory training; State and local training; international training; and foreign language training.

Research, Engineering, and Technical Operations		Perm. Pos.	FTE	Amount

Increase/Decrease		10	5	\$ 9,501

LONG RANGE GOAL: To support DEA enforcement and intelligence programs through research and development, procurement, maintenance, and management of technical investigative equipment and aircraft, and provide assistance to ensure maximum achievement of the agency's mission.

BASE PROGRAM DESCRIPTION: The Research, Engineering and Technical Operations Program is responsible for the following: 1) providing new technology and scientific support to the operational elements of DEA; 2) enhancing technical equipment, aircraft, and personnel resources in a manner that allows DEA investigative personnel to maximize their efforts, enhance their personal safety, and accomplish the agency's goals of disrupting drug trafficking organizations and reducing the availability of illicit drugs; and 3) ensuring the effectiveness of DEA's enforcement effort by offering or enhancing the speed, mobility, vantage, and maneuverability qualities unique to aircraft operations. These enhanced attributes are necessary to successfully conduct drug investigations not possible with surface vehicles.

* Base Resources Associated with Firebird and Merlin have been transferred to the Violent Crime Reduction Program.

LONG RANGE GOAL: To provide high quality and timely information technology resources and telecommunications support that maximizes the ability of the agency to meet its mission.

BASE PROGRAM DESCRIPTION: The ADP program provides all information technology services to DEA worldwide. This responsibility includes the installation and maintenance of DEA's office automation system (FIREBIRD) and management of a modern Data Base Management System (DBMS).

In addition to DBMS, the information technology program is responsible for continually improving and developing systems applications that best manage information vital to supporting DEA's extensive intelligence information. DEA maintains a number of such systems, including the following: Narcotics and Dangerous Drugs Information System (NADDIS); Controlled Substances Act System (CSA); System to Retrieve Information from Drug Evidence (STRIDE); Automation of Reports and Consolidated Orders Systems (ARCOS I & II); and DEA Accounting System (DEAAS).

Additionally, DEA develops microcomputer applications for specific enforcement operations. DEA must sometimes conduct this type of high-level development in order to track the highest-level criminals. The nature of this information requires the support of a Secure Communication System (Mercury Project), which includes, for both domestic and foreign offices, secure voice, facsimile, and teletypewriter communications.

ACTIVITY: PROGRAM DIRECTION

Management and Administration	Perm.		Amount
	Pos.	FTE	
1987 Appropriation	703	693	\$69,852
1988 Base	703	698	71,240
1988 Estimate	722	708	78,580
Increase/Decrease	19	10	\$ 8,340

LONG RANGE GOAL: To develop, maintain, and provide effective and efficient management, executive direction and control, and administrative support functions to ensure maximum achievement of DEA's mission.

BASE PROGRAM DESCRIPTION: This program formulates agency-wide policy and oversees all field management functions, monitors internal controls, and ensures that resources are used efficiently and effectively.

Staff Operations: Responds to Congressional, media, and public inquiries; provides DEA officials with reports on Congressional activities; issues press releases; prepares text of speeches, talking points, and Congressional demand reduction testimony. The Staff Operations program also prepares legal briefs, opinions, and presentations; provides technical legal training in regulatory and criminal matters, civil litigation, seizures, forfeiture of assets, personnel, equal employment opportunity, procurement, and international matters; and advises management on matters pertaining to planning, policy analysis, and statistical systems.

Financial Management: Operating under the direction of the Chief Financial Officer (CFO), prepares DEA's budget; develops and maintains resource allocation plans; and operates DEA's accounting system.

Inspections: Advises management on all matters pertaining to integrity/misconduct matters.

Security Programs: Oversees all personnel, document, and physical security at all DEA offices worldwide.

Personnel Operations: Oversees classification, pay, and position management; employee relations, assistance, and benefits; recruitment and placement; health and safety; personnel systems automation development; and validation and analysis of personnel procedures. Personnel Operations also advises and assists managers and employees on employee-specific matters, develops human resource policy, and provides guidance for the effective management of the work force.

Equal Employment Opportunity: Ensures that DEA focuses on legal and moral responsibilities in selecting and managing its work force. This prevents discrimination and morale problems and assures the equitable treatment of all DEA employees.

General Services: Provides DEA's administrative support including: the acquisition and utilization of space; operation, maintenance, and repair of office and special facilities; permanent change of station orders; relocation benefits; office supplies; formal procurement contracts and requisitions; office furniture and equipment; and DEA's motor vehicle fleet.

Methamphetamine Initiative*
Domestic Enforcement Decision Unit
Training Decision Unit

- * An additional \$2.270 million for this is requested through the Violent Crime Reduction Program

Proposed Actions

This initiative seeks to address the following objectives:

1. To target, investigate and prosecute major methamphetamine traffickers operating within the United States and abroad.
2. To focus a coordinated Federal, and international effort to identify, investigate and dismantle methamphetamine organizations operating clandestine production facilities in the United States and abroad.

Methamphetamine Initiative

DEA requests a total of \$11.048 million and 74 positions (including 60 Special Agents) to fund a multifaceted approach for attacking methamphetamine production, trafficking, and abuse. Methamphetamine is a deadly and rapidly growing epidemic that threatens the health and safety of our children, the environment and affects many communities around the nation. The Methamphetamine Initiative consists of three component requests: Increased Enforcement to target major methamphetamine trafficking organizations (\$7,898 million and 54 Special Agents); Resources for Hazardous Waste Removal and Laboratory Services to address critical health, safety and hazardous materials removal issues relating to methamphetamine (\$2.27 million and 14 positions--requested through the Violent Crime Reduction Program); and, Clandestine Laboratory Training to DEA personnel and State, local and foreign law enforcement organizations (\$878 million and 6 Special Agent positions).

Methamphetamine - More Abundant and Deadlier Than Ever

Methamphetamine is quickly becoming the growth drug of the 1990's. Although methamphetamine has been illegally used for decades, the control and distribution of this illicit product has moved away from the outlaw biker gangs, historically dominant in the methamphetamine trade, and into the hands of ruthless Mexican polydrug traffickers. These Mexican groups, have quickly transformed methamphetamine from a regional threat into one of national significance.

Methamphetamine, known on the street through names like "crank," "ice" and "speed", is a dangerous stimulant that results in the same addiction cycle and physiological trauma associated with crack cocaine. Both drugs, after prolonged use, lead to "binging"-- consuming the drug continuously for days without sleep. The user is then driven into a severe depression, followed by worsening paranoia, belligerence, and aggression; a period known as "tweaking". Finally, the user collapses from exhaustion, only to awaken days later to begin the cycle again. Unfortunately, as traffickers offer methamphetamine at increasingly higher purity levels, the effects of the drug are becoming much more pronounced.

According to Dr. S. Alex Stalcup, Addiction Specialist Advisor to the California Department of Justice:

"... today's more pure, more potent methamphetamine produces a reaction far more severe than even crack cocaine; causing sleepless binges that last up to 15 days and end with intolerable crashes. [One of Stalcup's patients] A 15 year old girl who shoots one-eighth of an ounce of methamphetamine daily, confided that she continues binging not for the euphoria, but for fear of the crash."

Methamphetamine may be injected, smoked, snorted, or taken orally; making it increasingly attractive to casual users and young people. The chemical effects of methamphetamine produce euphoria and an increased sense of energy and alertness; however methamphetamine may also produce heightened irritability, aggressive behavior, anxiety, excitement, auditory hallucinations and paranoia (delusions and psychosis). As a result, an individual under the influence of methamphetamine is much more prone to violent, sometimes murderous behavior. For example, in 1995, a father in New Mexico, under the influence of methamphetamine, decapitated his 14 year old son, thinking he was a "demon"; a sad testimony to the horrific impact methamphetamine can have on the American family.

Traditionally, methamphetamine use has been most pronounced among males between the ages of 19 and 40. However, reporting from epidemiologists and treatment professionals reveals increasing use among Hispanics (possibly due to increased involvement by Mexican poly-drug organizations), college students and young professionals. Furthermore, methamphetamine is less expensive than cocaine and produces a much longer "high". For example, the euphoric effects of cocaine typically last 1 - 2 hours; the "high" produced by methamphetamine lasts roughly 8 hours. This is just one reason why methamphetamine is becoming increasingly attractive to a growing number of users.

At the Methamphetamine Conference conducted in February 1998, DEA gathered over 240 Federal, State and local law enforcement organizations from across the country to assess the impact that increased methamphetamine trafficking has had on their States, counties and communities. The results of this conference, supported by statistical data from DAWN, indicate that the production, trafficking and use of methamphetamine is expanding at a rate similar to the rise of crack cocaine. For example, in America's heartland, to include such cities as Omaha, Nebraska, Des Moines, Iowa and Sioux Falls, South Dakota, methamphetamine has supplanted crack cocaine as the drug of choice. According to the latest information available from the Drug Abuse Warning Network (DAWN), the estimated number of nationwide emergency room drug abuse episodes involving methamphetamine has increased steadily since 1992. In fact, the number of methamphetamine related episodes almost doubled from 1989 to 1994. DAWN statistics indicate that the areas hardest hit by methamphetamine abuse include San Diego, Phoenix, San Francisco, Los Angeles, Dallas, Denver and Seattle. Methamphetamine related emergency room episodes in the Los Angeles area rose from 827 in 1992 to 1,418 in 1994--a 71 percent increase in 2 years. This surge in emergency room episodes was paralleled by increases in methamphetamine-related deaths. For example, in 1992, 68 deaths in Los Angeles were attributable to methamphetamine and in 1994 this figure more than tripled to 219 deaths. Clearly, there is a direct relationship between the availability of methamphetamine and its traumatic impact on American lives.

Methamphetamine Laboratories - An Environmental Nightmare

The illicit manufacture of methamphetamine can occur anywhere, in hotel rooms or apartment complexes, industrial areas, farms, a neighbor's house or any place an operator can set up laboratory equipment to synthesize their product. If an operator is manufacturing only limited amounts of methamphetamine, he/she would only need about 2 hours from set up to clean up, complicating enforcement efforts to locate and dismantle many clandestine laboratory operations.

Methamphetamine laboratory operators are often well-armed, and their laboratories occasionally are booby-trapped and equipped with scanning devices employed as security precautions. Laboratory operators, or "cooks," frequently display little regard for public safety and much less for the environment. The caustic, flammable and explosive chemicals required by "cooks" to produce methamphetamine in their "kitchens of death" are unsafely stored and disposed of, leading to the endangerment of the public and the pollution of the environment.

As sad evidence of these hazards, America lost three children in December 1995. These three toddlers, ages 1, 2, and 3 were burned beyond recognition in an explosion and fire inside a mobile home in California that allegedly contained an illegal methamphetamine laboratory. The following page depicts, as only photography can, the level of devastation caused by this tragic fire.

The actual manufacture of methamphetamine is accomplished, most commonly, by the ephedrine reduction method, which was used in 90 percent of all methamphetamine laboratories seized by DEA in 1995. Essentially, ephedrine is chemically combined with other chemicals like iodine and red phosphorus to produce methamphetamine. This is the method most favored by major traffickers, because it is a simpler route to synthesis and yields a much higher purity/potency level of methamphetamine than other methods, such as the phenyl-2-propanone method (commonly called P2P). Pictured below is an actual seized methamphetamine synthesis apparatus found in a clandestine laboratory.

DEA estimates that in an 18-month period ending in February 1995, Mexican drug organizations diverted some 170 tons of ephedrine from international sources, enough to produce 130 tons of methamphetamine. This would be more than enough to saturate the American market, lowering the price and making methamphetamine more accessible to potential users.

The Mexican Federation Now Dominates Methamphetamine Trafficking

The emergence of the Mexican Federation and its extensive involvement in methamphetamine production and distribution has redefined the methamphetamine problem in the United States. Unlike the cocaine business where Mexican traffickers must rely on Colombian suppliers, the Mexican Federation relies on no outside source for methamphetamine. They control all production, all transportation and distribution, *and all profits*.

The level of dominance that Mexican organized crime has been able to achieve over the methamphetamine market is attributable to a number of factors: 1) the Mexican Federation has established access to wholesale supplying sources of supply on the international market; 2) it is producing triple-identical quantities of high-purity methamphetamine in "garret labs" in Mexico; and 3) Mexican organized crime already controls well-established cocaine, heroin, and marijuana distribution networks throughout the United States. In 1995, DEA seized 315 kilograms of methamphetamine, of 1 as Ciudad New Mexico that was tied to the Arnaldo Carrillo Fuentes organization, one of the four most powerful drug organizations in Mexico. Parts of this shipment were destined for the states of Washington, Oklahoma, Illinois and Georgia. The methamphetamine was analyzed at a purity level of 98 percent and had an estimated street value of over \$50 million.

With its established smuggling and domestic production networks, the Mexican Federation is delivering and marketing its products to an ever increasing number of U.S. cities. For example, from 1993 to 1994, methamphetamine seizures rose 4,000 percent in the city of Des Moines, Iowa. As a sad result of this increased use, Iowa has cited methamphetamine as a contributing factor in 80 percent of the state's domestic violence cases and a major reason behind violent crime. In Atlanta, Georgia, methamphetamine has been transformed from "poor man's cocaine" to the drug of choice at upscale nightclubs; it is now more profitable for sellers than cocaine.

Furthermore, methamphetamine traffickers' disputes, acts of retribution and attempts to eliminate competition have led to a level of murder and mayhem that echo the gruesomeness of the "Cocaine Cowboys" of the early 80's. In 1993, Victor Marron was found dead in Chula Vista, California, shot execution style. The intended victim in this attack was not Victor, but his brother Nico -- a major methamphetamine producer and distributor in the San Diego area. Nico responded to his brother's killing by launching a bloody drug war that resulted in 26 murders in San Diego and Mexico. In June 1994, DEA Special Agent Richard Fass, a father of four, was ambushed, shot and killed by four methamphetamine traffickers, sad testimony to the fact that violence and methamphetamine go hand in hand.

Methamphetamine's increasing popularity, not only in California and along the Southwest Border, but also in states like Iowa, Missouri, Georgia and Arkansas, is pulling more and more communities into a vicious, downward spiral of increased addiction and violent crime. Surging demand in emerging domestic markets outside the traditional confines of the Southeast border states is driving drug trafficking profit margins higher and higher; this in turn, spurs increased production and takes more and

more traffickers and users into the methamphetamine trade. It is a case of simple economics, especially when considering that a pound of methamphetamine that sells for \$5,000 in California can sell for \$18,000 in Des Moines, Iowa or Tampa, Florida.

The profits and overall demand for methamphetamine are also leading many traffickers to establish an increasing number of clandestine laboratories, including industrial sized laboratories capable of producing five times the amount of methamphetamine than that of conventional laboratories. In California, the Bureau of Narcotics Enforcement's (BNE) seizures of methamphetamine and clandestine laboratories have increased dramatically. Methamphetamine seizures surged from 1,400 pounds in 1991 to over 18,000 pounds in 1996. Also in 1996, BNE's lab seizures reached 486; one every 18 hours.

The proliferation of clandestine laboratories is not limited to California alone. States like Missouri, Kansas, Oklahoma and Utah are also seeing significant increases in clandestine laboratory activity. Unfortunately, many emerging market/producer States' law enforcement agencies lack the experience in investigating and dismantling clandestine laboratories. In fact, a survey conducted at the Methamphetamine Conference in February 1998 indicated that two-thirds (64 percent) of State and local law enforcement are having difficulties conducting methamphetamine investigations. Although roughly half attributed their problems to scarce personnel resources, others cited financial constraints, poor intelligence, and an overall lack of knowledge of the hazards associated with clandestine laboratories.

Declative Federal Action is Critical

DEA has already taken important steps to address the growing menace of methamphetamine. In FY 1996, DEA devoted almost 10 percent more work hours to methamphetamine investigations than in 1994, resulting in more than 2,800 arrests, an increase of 20 percent over 1994. In FY 1996, DEA organized the first annual Methamphetamine Conference to raise national awareness of this growing problem and reallocated investigative resources to develop intelligence on clandestine methamphetamine production sites and to target laboratory operators. The results of this effort have been extraordinary. In the first eleven months of 1998, DEA seized 800 clandestine laboratories -- one every ten hours, amounting to a 220 percent increase over 1996. The alarming growth in methamphetamine laboratory seizures clearly indicates that methamphetamine use is exploding into a threat of national significance. The chart on the following page depicts DEA clandestine laboratory seizures since 1993. Clearly since 1993, clandestine laboratory activity has been growing at an alarming rate.

In 1997, DEA will expand overall interdiction and chemical control efforts along the Southwest Border. This should have a significant impact on the amounts of Mexican-produced methamphetamine reaching markets in the United States. Unfortunately, however, the existing resources that DEA can redirect to fight methamphetamine only come at the expense of other priority missions. Given the alarming increases in methamphetamine trafficking, production and abuse, DEA's existing resources are simply inadequate to meet the rising challenge ahead. Therefore, DEA requires sufficient investigative resources to attack methamphetamine at the national level.

Building on the Southwest Border Initiative and the National Methamphetamine Strategy, DEA is requesting resources to implement a multifaceted approach for controlling and reversing the surging menace of methamphetamine. This approach will attack the problem through increased domestic enforcement, heightened drug analytical support, and the implementation of an enhanced training program to both improve the investigative capabilities of law enforcement and comply with Federal safety laws.

Increased Enforcement

DEA requests \$7.898 million and 54 Special Agent positions to target major methamphetamine trafficking organizations operating in the United States and abroad. Clearly, in order to address the enormous threat posed by methamphetamine, DEA must have additional Special Agents. These investigative resources will be used to attack methamphetamine trafficking and production from both sides -- in States where trafficking is already an overwhelming problem like California and Arizona, and in emerging market and/or producer States like Utah, Missouri, Georgia, and Oklahoma. Once in place, these investigative resources will be used to develop intelligence on clandestine laboratories, focus special emphasis on high level and/or violent methamphetamine traffickers and integrate methamphetamine enforcement with international, Organized Crime Drug Enforcement Task Force (OCDETF) and Southwest Border investigations.

Hazardous Waste Removal and Laboratory Services. (This portion of the initiative is requested through the Violent Crime Reduction Program). DEA requests \$2.27 million and 14 positions (2 Diversified Investigators and 12 Chemists positions) to address critical health, safety and hazardous materials removal issues relating to methamphetamine.

Training

DEA requests \$0.878 million and 6 Special Agent positions to provide clandestine laboratory training to DEA personnel and State, local and foreign law enforcement organizations.

Investigating, seizing and dismantling clandestine drug laboratories poses significant challenges for law enforcement, particularly in safeguarding the health and safety of enforcement personnel and innocents. The following picture provides just a hint of the additional precautions, both in equipment and training, that DEA must take to ensure the safety of its personnel.

In fact, of the 32 chemicals mentioned in recipes for methamphetamine, roughly a third have been rated extremely hazardous - fainting, nausea, eye irritations, sore throats and respiratory ailments are the least of the side effects. For example, hydriodic acid can cause instant third-degree burns and destroy lung tissue if inhaled. If overheated, red phosphorus, another ingredient, burns furiously or turns into phosphine gas -- a World War I nerve agent capable of causing comas and death. These hazards are very real and very lethal. In California, a 2 month old baby was killed in 1994 by the fumes produced by a methamphetamine laboratory operating in the family home -- a tragic example of the dangers inherent to clandestine laboratories. Pictured below is the result of a clandestine laboratory that exploded, causing a damaging fire and potentially endangerment to investigative personnel and innocent bystanders.

In addition to these health and potentially life threatening chemical hazards, law enforcement must also deal with the threats posed by the laboratory operators themselves. Many of these individuals are well-armed and occasionally boot-trap their laboratories with explosives to kill or incapacitate interlopers and/or destroy the clandestine laboratory and any incriminating evidence. Given these potential dangers to property, to the environment and to the very lives of law enforcement personnel, adequate training must be provided to ensure that clandestine laboratories are seized and dismantled in a safe, effective manner.

According to the Code of Federal Regulations (CFR) (29 CFR Ch. XVII), the Occupational Safety and Health Administration (OSHA) requires employers to develop and implement a written safety and health program for their employees involved in hazardous waste operations. Individuals engaged in hazardous substance removal or other activities which expose or potentially expose individuals to hazardous substances and health hazards on a limited basis must receive a minimum of 24 hours of instruction off-site and a minimum of one day actual field experience under the direct supervision of a trained, experienced supervisor.

OSHA requires all law enforcement personnel to undergo this training before they are allowed to enter a clandestine laboratory. As a result, there is a direct relationship between the amount of training that can be provided and the number of enforcement personnel that are OSHA-certified to participate in the growing number of clandestine laboratory investigations. Therefore, as the Federal government and its State and local counterparts are required to dedicate additional law enforcement personnel to target methamphetamine, training efforts must be expanded accordingly.

Currently, DEA is the only Federal law enforcement agency that provides a consistent and proven training program for investigating, seizing and dismantling clandestine laboratories that meets OSHA requirements. Unfortunately, however, DEA's current training resources are simply inadequate to address the explosive growth in clandestine drug laboratories. For example, in FYs 1996/1997, DEA received funding from the Bureau of Justice Assistance (BJA) for five Clandestine Laboratory Certification classes, which is sufficient to train roughly 200 State and local law enforcement officers. This amounts to only four officers for each state in the Union. Over recent years, funds allocated to DEA for this program have decreased, significantly affecting DEA's ability to provide training to State and local law enforcement. Therefore, in order to assure program continuity and to keep pace with the national need for clandestine laboratory training, DEA is requesting the resources necessary to establish two regional training teams--a West Team and an East Team.

These teams would provide DEA Special Agents and State and local law enforcement with instruction on the use of special equipment and clothing, clandestine laboratory raid planning, investigative techniques, evidence collection, and hazardous chemical disposal. Additionally, DEA Special Agents and program funded task force officers receive necessary raid and safety

equipment to participate in clandestine laboratory seizure operations, since many of these items must be personally tailored to the wearer, (e.g. like boots, gloves, etc.) for safety reasons. Upon completion of these training programs, students would receive OSHA certification to permit their full participation in clandestine laboratory raids and dismantling operations.

Providing training under this geographic approach will allow DEA training personnel to become regional experts on clandestine laboratory activity and enhance DEA's ability to build productive relationships with its State and local customers. Each team, consisting of three Special Agents, would teach as many as 19 classes per year at roughly 40 students per class. Given the importance of this training, which is designed to save lives, DEA requires three core positions per team to ensure a reasonable teacher to student ratio of roughly 1:13. The Special Agent positions would be used to provide relevant investigative training and expertise on chemical identification, the manufacturing process of methamphetamine and other illegal drugs, chemical safety, and OSHA requirements. The training team would also teach students about the latest formulas and equipment utilized to manufacture methamphetamine and other illegal drugs in various parts of the U.S.

The need for additional clandestine training is evident and supported by the National Methamphetamine Strategy. Given DEA's position as lead drug enforcement agency and its extensive experience with methamphetamine, DEA should be provided the resources to take a lead role in this vital effort. At the 1996 Methamphetamine Conference, over 80 percent of the attendees stated that an intensified training program was needed and over 60 percent complained about difficulties in securing OSHA-mandated safety training for their enforcement personnel. Also, 71 percent stated that law enforcement personnel in their area had suffered health problems related to chemical exposure during clandestine laboratory investigations. Given these circumstances, clandestine laboratory training must be integral to any Federal, State or local enforcement effort on controlling the menace of methamphetamine.

INITIATIVE 2

Southwest Border Project	Pos.	EJE	Amount (\$000)
Domestic Enforcement Decision Unit	141	71	\$16,241
Intelligence Decision Unit	41	21	3,999
Research, Engineering, and Technical Operations Decision Unit	10	6	9,501
Total	192	97	\$29,741

Proposed Actions

This initiative seeks to address the following objectives:

- 1) To identify, arrest, and prosecute the leaders of the organized criminal groups from Mexico and Colombia that are responsible for transporting vast quantities of illicit drugs into the United States through the Southwest Border.
- 2) Through the use of human and technological investigative resources, to enhance the coordinated Federal effort to identify, penetrate, disrupt, and dismantle the major Mexican and Colombian trafficking organizations operating along the Southwest Border and throughout United States.

Southwest Border Project

DEA requests \$29,741 million and 192 positions (96 Special Agents, 50 Intelligence Analysts, and 46 Support) to apply investigative personnel and the latest investigative technology in continuance of the Department's comprehensive interagency strategy against drug trafficking on the Southwest Border. Of this amount, \$10,317,000 is for non-personnel/special costs. The Southwest Border initiative consists of three components: 1) Investigative Caseload, 2) Investigative Equipment, and 3) Intelligence Efforts.

Without the requested resources, much of the unconstrained flow of drugs across the Southwest Border will continue and the drug smuggling and trafficking of the Colombian Mafias and the Mexican Federation will flourish.

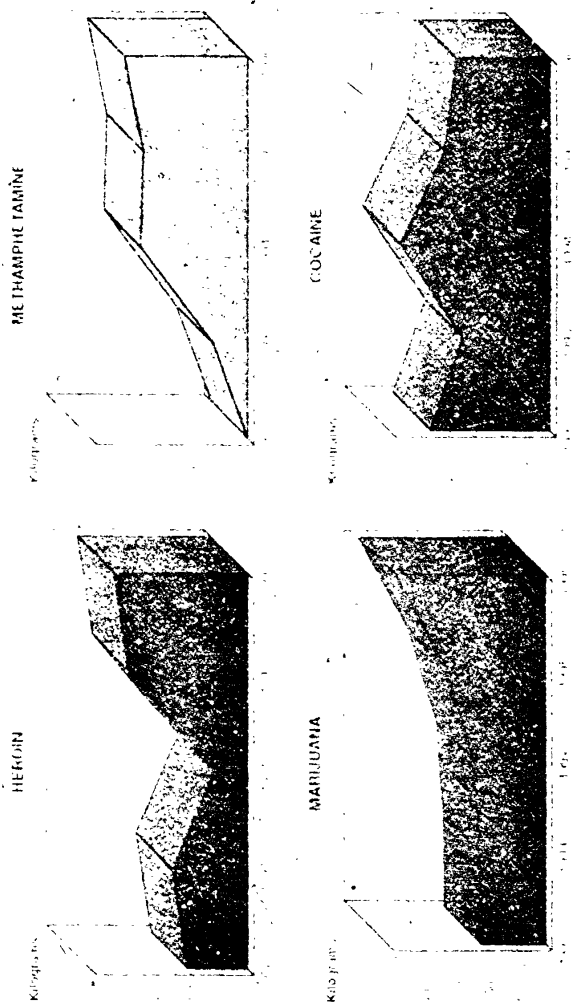

The Vast Majority of All Drugs Entering the U.S. Transit The Southwest Border.

Illegal drugs are transiting the 2,000 mile Southwest Border in record levels. Mexico and its border with the United States has become a gateway for all four of the major illicit drugs (cocaine, heroin, methamphetamine, and marijuana) entering the United States.

Mexico is a key transit country for South American cocaine destined for the United States. Current estimates indicate that the majority of all the cocaine that reaches American cities, suburbs, and rural towns is coming through the Southwest Border. Mexico also remains a major source country for heroin and marijuana, and Mexican traffickers have now become the primary producers and suppliers of methamphetamine. Recent intelligence indicates that major trafficking organizations are looking increasingly for alternative routes; as the Federal presence at the border escalates. Further, these traffickers appear willing to ship large bulk quantities of drugs by sea to avoid border interdiction.

The chart on the following page reflects Southwest Border seizures by DEA, U.S. Border Patrol, and U.S. Customs Service which demonstrate the dramatic increase in drug smuggling activity along the Southwest Border.

FEDERAL DRUG SEIZURES ON THE SOUTHWEST BORDER 1992 to 1996

DATA SOURCE: U.S. CUSTOMS AND BORDER PROTECTION

The major Mexican drug traffickers are made up of a loose "federation" of highly organized criminal syndicates who exploit their wide-range of abilities and geographic strongholds to transport multi-thousand kilogram quantities of cocaine as well as heroin, marijuana, and methamphetamine through the Southwest Border. This Mexican Federation consists of four major cartels: the Tijuana Cartel, led by the Arellano-Felix organization; the Sonora Cartel, led by the Caro-Quintero organization and the Juarez Cartel, led by the Carrillo-Fuentes organization. The gulf Cartel once led by Juan Garcia-Abrego has been substantially dismantled since Garcia-Abrego's arrest and conviction with the remnants having aligned themselves with the Carrillo-Fuentes organization.

Traffickers Are Now Cooperating With Each Other

For the first time in decades, the Mexican Federation is so well organized that the Colombian Mafia entrusts them with their cocaine shipments to the United States. Perhaps of more concern is the fact that the various cartels of the Mexican Federation are, in some cases, cooperating and not competing with each other in regard to transshipment areas. The result is a well organized, increasingly sophisticated crime syndicate whose drug operations are flourishing through the ports of entry into the United States. The map on the following page illustrates how the Mexican Federation channels South American cocaine through major ports of entry along the border and then transships the drugs to Los Angeles and Houston where Colombian and Mexican cells reduce the cocaine and distribute it throughout the United States.

To counter this insurgence and force traffickers to employ riskier strategies, Federal law enforcement must continue to aggressively pursue organized drug trafficking currently funding the Southwest Border. The Office of National Drug Control Policy has recognized this most serious problem and made the Southwest Border one of the highest priorities in its 1995 and 1996 *National Drug Control Strategies*. The President has also called for renewed efforts on the part of Federal law enforcement to aggressively attack cross-border trafficking. In the 1997 appropriation, Congress took the first crucial step in combating border trafficking by providing DEA with 121 positions (64 additional Special Agents) and \$14.7 million, including \$9 million in contract linguist funding to be concentrated on the Southwest Border.

To coordinate the Federal law enforcement resources along the Southwest Border, DEA, in cooperation with the Federal Bureau of Investigation, the U.S. Attorney's Office, and the Criminal Division has developed an operational plan that provides an integrated and coordinated strategy for law enforcement counter drug activities along the Southwest Border. The goal of this plan is to attack the major Colombian and Mexican drug trafficking organizations simultaneously on both sides of the border by creating and sustaining a greatly enhanced operational effort that expands intelligence, enforcement operations and cooperative efforts with the Government of Mexico. Full and successful execution of this plan would significantly reduce the production, smuggling, distribution, and money laundering activities of the Mexican Federations, thereby reducing the amount of cocaine, heroin, marijuana, and methamphetamine reaching American communities.

SOUTHWEST BORDER TRANSHIPMENT ROUTES
FOR COCAINE DESTINED TO THE UNITED STATES

This Initiative addresses the plan's call for investigative resources to handle caseload along the Southwest Border, the investigative equipment to collect information and organize information on the Colombian and Mexican organizations, and the intelligence equipment and personnel to develop and apply the information that is collected.

Investigative Caseload

DEA requests \$16.241 million and 141 positions (86 Special Agents, 9 Intelligence Analysts, and 36 Support) for Investigative and support personnel throughout the Southwest Border to address the substantial caseload resulting from the Department's Southwest Border Project. This request builds upon the 1997 Southwest Border Initiative as requested in the 1997 President's budget and approved by the Congress.

In order for law enforcement to effectively neutralize drug trafficking on the Southwest Border, criminal cases must be initiated and fully developed against the command and control infrastructure of these drug syndicates. A tremendous shortfall of investigative personnel in DEA offices along the Southwest Border severely constrains the number, quality, and the cooperative effort of multi-jurisdictional investigations.

With the Federal government gearing up its drug control and immigration efforts on the Southwest Border, caseload for DEA offices in that region is burgeoning. On the California-Mexico border, for example, the U.S. Border Patrol has added 200 Special Agents. As a result, the 1995 caseload in DEA's Imperial County and San Ysidro Resident Offices has jumped by 78 and 63 percent respectively because of increases in Border Patrol referrals.

Furthermore, the Southwest Border operational plan calls for the intensive use of Title III wire intercepts against the Colombian and Mexican smuggling and distribution cells. This investigative technique has been proven to be extraordinarily effective. The Mexican Federation can also be attacked in a similar manner. DEA and FBI are currently implementing the extensive use of Title III intercepts throughout Southwest Border and other parts of the United States. These intercepts are beginning to produce substantial investigative leads that cannot be developed without additional investigative personnel.

Federal prosecutors also realize the need for additional investigative personnel. In a December 15, 1995 memorandum to the Executive Office for United States Attorneys, the U.S. Attorney for the Western District of Texas stated:

"DEA is, by any measure, seriously understaffed, and given the manpower intensive nature of wiretap investigations; the size of their geographical responsibilities; and the gravity of smuggling activity, a major increase in staffing is necessary."

The operational plan calls for 191 additional Special Agents to augment DEA offices on both the domestic and foreign side of the border by 1998. With the 96 Special Agents requested in this initiative and the 50 Special Agents that DEA received for 1997, DEA is closer to realizing the plan's full complement of 191 Special Agents.

Investigative Equipment

DEA requests \$9.501 million and 10 Investigative Assistants (equipment technicians) to apply and maintain the latest technology in Title III wire intercept equipment in support of investigations into the Mexican Federation and their drug trafficking operations along the Southwest Border. Of this amount, \$9,100,000 are special costs to purchase, install, and maintain digital intercept equipment.

As proven in recent efforts against the Cali Mafia, the coordinated use of extensive Title III wire intercepts is the most effective investigative strategy available to drug law enforcement personnel. Investigators must continue to apply this strategy against the Colombian Mafia and the Mexican Federation and their drug trafficking organizations in order to obtain the information needed to make the cases that can impact the flow of drugs across the Southwest Border and incarcerate those responsible for transshipment and sale of illicit drugs in American cities.

The backbone of the Southwest Border Project is the application of numerous intercepts within DEA offices throughout the Southwest Border. Substantial resources are necessary to orchestrate the collection and processing of such massive amounts of information. However, the Translation and Transcription Support System (T2S2), which is the latest technology that provides for the effective integration of communications interception, translation, and transcription of multiple wire intercepts, can greatly reduce the workload and administrative costs associated with the current use of dialed number recorders.

T2S2: the Latest Technology for Wire Intercepts

The T2S2 collects analog telephone voice, fax, and data and places this information into digital files which are immediately available for replay and detailed analysis. These files can be stored on a disc that can contain a month's worth of intercepts. Under the current system of Dialed Number Recorders, the intercepts are recorded on a cassette tape, of which, a month's worth would fill a large closet.

The T2S2 system can also immediately transfer intercepts to a central translation and transcription facility. In its Draper, Utah facility, the Department of Defense (DoD) transcribes numerous DEA intercepts. T2S2 was developed in cooperation with DoD so that digitized intercepts can be immediately sent to the Draper facility or to any other DEA T2S2 system.

The T2S2 allows DEA to effectively conduct as many as 24 intercepts at one time; save ever-shrinking evidence storage space; immediately transfer intercepts to transcription centers and DEA offices and prosecutors, rather than shipping large amounts of bulk tapes. Most importantly, it saves valuable Special Agent and analyst investigative time.

DEA's original plan called for the eventual installation of the system into all 20 division offices. However, the urgency of intercept efforts along the Southwest Border has prompted DEA to select the following eight border offices as the next priority for the system: San Diego, Dallas, Houston (expansion), Los Angeles (expansion), Phoenix, San Antonio, El Paso, and Albuquerque.

The first phase of T2S2 has been installed in DEA's New York, Miami, Houston, and Los Angeles division offices. Cost of this installation was \$5 million and was paid through Department of Defense funding. However, this one-time funding has been completely exhausted with no expectation of renewal. Consequently, DEA must secure funding for any additional installations. This request will allow DEA to install or expand T2S2 in the eight Southwest Border offices identified above.

DEA's increased activity in wire intercepts has resulted in an overwhelming demand for technical expertise. DEA technicians are responsible for all of DEA's technical investigative equipment (cameras, recorders, microphones, surveillance vans, etc.), which require full-time responsibility. DEA's technician staffing, however, has remained at a level established well before the implementation of DEA's intensive wire intercept program.

The continuing advancement in wire intercepts technology, coupled with the volume of intercepts conducted necessitates full-time technicians just for wire intercept operations in the DEA offices with the most intercept activity. Because the T2S2 system greatly expands DEA's capability to conduct multiple simultaneous intercepts, DEA is requesting one additional technician for each intercept room in the eight offices mentioned above, as well as, New York and Miami.

Intelligence

DEA requests \$3.899 million and 41 Intelligence Analysts for Intelligence efforts in support of the Southwest Border Initiative, including \$1,217,000 in special costs for equipment and software. The Intelligence request consists of two items:

- 1) Transaction Processing and Analysis System and 2) Intelligence Analysts.

Transaction Processing

A primary tool for DEA's investigative analysis is the Transaction Processing and Analysis System (TPA). The TPA workbench is a powerful, yet easy to use automated system for examining and analyzing transaction records for patterns, relationships,

and activities. The exploitation of investigative data for intelligence value is both an art and a developing science; TPA facilitates the analyst's exercise of the art while providing metrology and rigor in the science. Both novice and experienced analysts find it indispensable in their work. Expanded deployment to DEA field users will assure more timely support to current criminal investigations. *(A classified briefing on this program can be arranged for appropriately cleared individuals).*

Currently, TPA is located in DEA Headquarters and DEA offices in Newington; Virginia; New York; Miami; Houston; San Diego; Los Angeles; Tampa; and Bogota. Because of the significant data gathering effort along the Southwest Border, DEA requests \$1,217,000 million for the installation of TPA in other Southwest Border offices.

Intelligence Analysts Are Critical to the Investigative Effort on the Southwest Border

The volumes of intelligence that will be generated through data gathering and other investigative techniques applied as part of the Southwest Border Project cannot be addressed solely by Special Agents. DEA requires, at least, sixty Intelligence Analysts in Southwest Border offices by 1998.

DEA will require \$2,782,289 for an additional 41 Intelligence Analysts above the module to reach the 60 analyst requirement for 1998. These Intelligence Analysts would be assigned to DEA offices along the Southwest Border and would provide support to major ongoing cases through the identification of resources for asset forfeiture/seizure, Title III wire intercepts, pen registers, telephone toll analysis, and the preparation of operational and strategic assessments.

INITIATIVE 3

	Pos.	FTE	Amount (\$000)
Domestic Heroin Enforcement	60	30	\$5,000
Domestic Enforcement			

Proposed Actions

This initiative seeks to address the following objectives:

- 1) To intensify efforts in identifying, targeting, and arresting the leadership of major heroin trafficking organizations, thereby reducing the availability and purity of heroin within the United States.
- 2) To intensify enforcement efforts against major heroin traffickers operating within the United States.

Domestic Heroin Enforcement

DEA requests \$5,000 million and 80 positions (12 Special Agents, 20 Intelligence Analysts, and 28 Support Positions) to continue DEA's increased efforts to reduce the resurgent supply of heroin within the United States.

Without these resources, Federal drug enforcement efforts will not be able to help curtail the increasing availability and popularity of heroin, particularly South American heroin, and the resulting escalation of heroin-related overdoses and emergency room episodes, which cost the country billions in medical costs each year.

Heroin Use Is Growing Dramatically As New and Long-Time Users Discover New Ways to Abuse the Drug

No longer just a dirty injectable narcotic abused in back rooms and street alleys, heroin can now be administered through several different methods; and it has now become a fashionable drug, much like cocaine was in the 1980's and early 1990's. With increasing availability and purity levels, heroin abuse threatens to wreak havoc upon our nation's health care system. The Office of National Drug Control Policy recently reported in its publication, *Pulse Check*, that due to the new methods of administering heroin combined with increased availability from a variety of different sources, the heroin market is the fastest growing domestic drug market. Current estimates place the number of heroin addicts in the United States at approximately 700,000 -- up 200,000 from the 1995 estimate, and the number of heroin users at 2,000,000. As the popularity of heroin continues to grow, so does the toll it takes on the health of the country.

According to the latest published Drug Abuse Warning Network (DAWN) report, there were 76,023 heroin-related emergency room episodes reported across the country in 1995, up 115 percent from 1990.

The primary reason for the dramatic increase in heroin-related emergency room episodes is the skyrocketing purity levels of retail heroin in the United States. The following chart compares emergency room episodes with retail purity levels from 1977 to 1996.

Reducing The Supply of Heroin Reduces Purity and Health Consequences

Price and purity are the most reliable indicators of heroin availability in the United States. As the previous chart shows, the average purity level of heroin increased eight-fold since the 1970's, and has more than doubled in the last five years. With this abundance of wholesale heroin entering the country, traffickers do not have to "cut" the drug nearly as much to make a profit. This means that a far purer and more dangerous product makes it to the retail market. As shown below, there is a direct correlation between the higher purity of domestic heroin and the number of emergency room episodes relating to drug overdoses and other drug-related medical conditions.

South American Heroin Traffickers Have Flooded The Market

A significant factor leading to the increased availability and purity of heroin is the entrance of South American heroin into the market. As the chart on the following page shows, South American heroin now accounts for 62 percent of the market, making it the most prevalent heroin available in the United States. To gain control of the American market, traffickers of South American heroin have "dumped" a high-purity heroin into the U.S. market at cut-rate prices or even as free samples.

Traffickers of South American heroin employ many of the proven smuggling methods such as smuggling through airports by means of internal body concealment. Most smuggling operations appear to be independent from the Colombian drug Mafias. Heroin traffickers from South America employ a large number of couriers to smuggle heroin mostly through internal and external body carries.

DEA Domestic Heroin Strategy

In 1994, DEA recognized the re-emergence of heroin abuse and trafficking that accompanied the introduction of South American heroin into the U.S. market. In response, DEA dedicated entire enforcement groups in the field solely to heroin investigations. DEA currently has 15 enforcement groups and five HIDTA enforcement groups that are solely dedicated to heroin investigations. Three of these groups were made possible through a 1998 enhancement of 30 Special Agents. Two groups existed before DEA started this aggressive initiative in 1994. The remaining 10 enforcement groups, or approximately 100 Special Agents, were established by reassigning existing resources from other investigations, such as cocaine and chemical drug investigations to heroin investigations.

With cocaine trafficking still the primary investigative target and methamphetamine emerging as a major concern, DEA can no longer afford to reassign existing enforcement groups to heroin investigations. There are DEA offices that are desperate to step-up their heroin investigations, but cannot sacrifice other critical investigations. With 12 additional Special Agents, DEA will be able to provide one additional enforcement group to one of these divisions.

Because heroin investigations are extremely complex, the collection and analysis of intelligence is vital and extremely time consuming. As DEA has focused more enforcement groups and Special Agents on heroin investigations, the demand for intelligence analysis is overwhelming. In 1998, DEA received 30 Special Agent positions for heroin enforcement, however, no intelligence or support positions were approved. The 20 intelligence analysts and 28 support positions requested will provide these dedicated enforcement groups with the analytical capabilities that are required for heroin investigations.

As heroin-related emergency room episodes and heroin purity increase, Federal law enforcement cannot stand idle in addressing this challenge. DEA is committed to applying investigative resources directly against heroin traffickers and reducing the availability of heroin within the United States.

An aggressive anti-heroin strategy will reduce available supplies and force dealers to either "cut" [dilute] the available supply or allow the price to rise. Experience has been that dealers will likely cut their product and lower purity, before raising price. An effective enforcement effort would reduce supply sufficiently to affect price and purity.

As DEA and other drug law enforcement seek to successfully constrict the availability of heroin, purity levels would drop, which in turn, would reduce the number of heroin-related emergency room episodes. Not only will this provide a tangible benefit by reducing health care costs, but it will also reduce the ready supply of cheap very pure heroin that would potentially "hook" a whole new generation of addicts.

INITIATIVE 4

	Pos.	EIE	Amount (\$000)
Investigative Shortfalls*			
Automated Data Processing	19	10	\$ 4,670
Management and Administration	19	10	\$ 8,340
Total	19	10	\$13,010

- * Additional resources for this Initiative of \$20,426 million are requested through the Violent Crime Reduction Program.

Proposed Actions

This Initiative seeks to address the following objectives:

1. To restore the base program funding to a minimum acceptable level to ensure adequate funding is available to programs which support DEA enforcement operations.
2. Continue with the upgrade of DEA's automated data processing systems to permit communication with other agencies and keep pace with increasing workload.
3. Complete the task to give DEA the ability to take current business processes and, through automation, reengineer these processes to allow the user to work more efficiently.
4. Complete the development and implementation of infrastructure that will provide DEA with a system that will permit the accessing, processing, and storage of both DEA Sensitive and Classified data.

Permanent Change of Station (PCS) Base Restoration

DEA requests \$7,801,000 to establish an adequate level of base program funding for the agency's Permanent Change of Station (PCS) program. This funding is critical to ensure Special Agent safety and integrity, as well as promote the agency's necessary career development goals.

DEA personnel must be moved for a variety of reasons, including changing enforcement priorities, career development, integrity assurance, and Agent safety.

International drug trafficking patterns are in a constant state of flux. Organized criminal groups adapt their modus operandi in response to the changing focus of law enforcement. For example, along the southern border of the U.S., the Colombian drug Mafias have begun shifting a portion of their smuggling operations from the Southwest border of the country, to the Caribbean corridor, in response to recent law enforcement resource and force distribution patterns. With drug trafficking patterns changing so rapidly, DEA needs to have an extremely mobile Special Agent workforce in order to successfully respond to the changes that occur.

Over the course of a career, a DEA Special Agent will typically be required to change duty stations three to four times for career development purposes. The goal of DEA's career development plan is to enhance Special Agent competence, while developing a highly capable managerial corps. This goal is best achieved through varied assignments.

Another factor influencing DEA's PCS policy is the need to move personnel in order to safeguard the overall integrity of the agency's Special Agent work force. Numerous studies, including the 1994 Mollen Commission Report on police corruption, cite the necessity of routinely moving law enforcement personnel to ensure work force integrity.

The extremely volatile nature of DEA investigations poses unique concerns in the area of Special Agent safety. Agents who are stationed at the same location for too long a period risk not only their own health and welfare, but also the welfare of other case Agents. Special Agent mobility also supports the assurance of integrity for ongoing cases, which can be compromised if Special Agents are not routinely reassigned to other posts of duty.

Over the past seven years (1990 - 1996), roughly 76 percent of DEA's PCS moves have been related to the transfer of Special Agents. This figure would actually be closer to 80 percent, if not for the high number of non-Agent personnel transferred in 1991, which worked to bring down the overall percentage of Special Agent PCS transfers.

During this time frame (1990 - 1996), DEA has moved an average of 594 employees (455 Special Agents) per year, costing an average of \$21.6 million annually. Due to funding limitations, PCS resources have varied considerably from one year to the

next. Prior to FY 1996, a significant amount of money was reprogrammed out of the agency's PCS funding base in order to meet other critical agency requirements. This resulted in an artificially low PCS operating base (e.g., \$12. million in 1995), far below what is required to maintain the agency's established PCS standards.

Due to these funding shortfalls, DEA was largely restricted to undertaking only mission critical transfers. Many of these moves involved senior level employees, which increased the cost of individual PCS moves. It also resulted in a significant PCS backlog which the agency only began to address in 1995 and 1996 with a series of one time reprogrammings. Despite the significant inroads made into this backlog over the past two years, DEA needs to permanently increase its overall PCS funding base in order to fully meet the agency's safety, career development, and integrity assurance guidelines.

In 1997, DEA's PCS funding base is \$23.2 million. In 1998, DEA requests an additional \$7.8 million in order to establish a permanent PCS operating base of roughly \$31.0 million. Without this additional funding for PCS, DEA will be forced to lengthen the tours of its Special Agent work force or divert operational funds to protect its workforce. Over the long term, required extended tours would adversely affect the quality and competency of DEA Special Agents, as well as pose additional concerns for the agency in the area of safety and integrity assurance.

A lack of Special Agent mobility could also lead to long term agency morale problems. DEA Special Agents sign mobility agreements upon entry into the organization, with the anticipation of being able to laterally transfer between positions. The lack of PCS funding in recent years has worked to limit the overall number of agency transfers, thus hindering Special Agent mobility and detrimentally affecting organizational morale. Without the establishment of an adequate PCS base, this problem will worsen over time.

Aircraft Replacement Base (*This portion of the initiative is requested through the Violent Crime Reduction Program*). DEA requests \$1.0 million to increase its base for replacing aging aircraft.

ADP Equipment Maintenance and Replacement

DEA requests \$4,670,000 to establish an equipment replacement base (\$2,670,000) and to restore an equipment maintenance base (\$2,100,000). These funds are essential if DEA is to properly manage and maintain critical ADP applications for investigations and support activities.

Equipment Replacement

For the last several years, DEA's ADP equipment base has been reduced to less than \$50,000. As a result, DEA has been unable to replace equipment as it reaches the end of its life cycle. Although DEA is in the process of a major office

automation procurement, FIREBIRD, this project does not provide funding for all of DEA's ADP equipment needs. There is much more to DEA's ADP program.

DEA requests \$2,570,000 for an equipment replacement base. Four examples of DEA's ADP equipment needs beyond the FIREBIRD project in 1998 are \$650,000 to purchase laptops for Special Agents, Inspectors, and Intelligence Analysts to complete assignments in the field; \$550,000 to replace high speed printers; \$900,000 to purchase equipment in support of the Network Control Center; and, \$470,000 to install the Non-Drug Evidence Data Base System in DEA's resident offices. This request would rebuild DEA's ADP equipment base to purchase mission-critical equipment when the need arises and replace equipment when it is no longer usable.

Laptops: The Office of Information Systems receives countless requests for laptops from the field during the year. As technology changes and improves, the capabilities of these computers grow. DEA must invest in technology that makes its personnel more productive, especially during times when agencies are trying to do more with less. Special Agents and Intelligence Analysts have requested laptop computers for use while traveling or on surveillances. Office of Professional Responsibility (OPR) personnel and inspectors need laptop computers for taking notes and writing reports while on travel. This request for \$650,000 will provide DEA with a base of laptops to replace laptops that are no longer in working condition. Because laptops are used primarily while employees travel, the wear and tear on them is significant.

Printers: In 1990, DEA purchased 37 high speed laser printers for DEA's field divisions, the forensic laboratories, and selected offices within DEA Headquarters. By 1998, these printers will be eight years old, obsolete and wearing out. Current printer technology is cheaper and, as time goes on, parts for the older printers will be harder to find. These printers are no longer being manufactured by Xerox and they are not on GSA's schedule for maintenance. Incidences of failures will increase; therefore, the printers will be idle longer for repairs. It is more cost effective to replace these printers. If these printers are not replaced, DEA's ability to provide timely support to major field investigations, operations, and programs would be affected.

Network Control Center Equipment: DEA's request for \$900,000 is the first of three annual increments to obtain Network Control Center (NCC) backup equipment. If this equipment is not purchased, DEA will not be in compliance with DOJ and OMB mandates to prepare contingency plans for mission critical installations. The nature of the NCC requires that backup operations be implemented within an extremely short time frame, substantiating the need for a standby, alternate site. Should the NCC equipment fail to operate, DEA data information operations would largely come to a complete halt, since the NCC serves as the communications focal point and switch for all incoming and outgoing data transfer operations. DEA must procure backup equipment to maintain vital communications functions in the event of an emergency.

Non-Drug Evidence Data Base System Equipment: The Non-Drug Evidence Data Base System (NEDS) has been evaluated as being essential for tracking evidence information and in conducting inventories. Based on this evaluation, NEDS needs to be

installed in all district and resident offices. With NEDS offices would no longer have to manually track evidence in custody. With the automation of the evidence vaults, information pertaining to evidence can be acquired almost instantaneously. This leaves technicians and investigators with more time to devote to other more important aspects of an investigation. Because of the number of offices involved, DEA plans to install NEDS in 120 offices over a three-year period; the deployment will cost approximately \$470,000 per year.

Equipment Maintenance

In order to keep pace with the challenges of drug law enforcement, DEA must spend significant resources each year on the acquisition of essential ADP equipment. This equipment provides DEA with access to time-critical information, facilitates inter-agency communication and information sharing, and greatly increases the productivity of DEA Special Agents. Unfortunately, as DEA's ADP equipment needs and inventories have expanded to keep pace with its operational requirements, adequate funding for critical equipment's system maintenance contracts has not been provided. Failure to provide this funding places this capital investment and DEA operations at increased risk - virtually all DEA programs, investigations and administrative functions rely heavily on this equipment. As an example, in a resident office with one office automation/FIREBIRD server, if the server shuts down, Special Agents would not be able to access NADDIS or other investigative systems.

The request for \$2,100,000 in maintenance funding will support general ADP equipment (see above) as well as the FIREBIRD and MERLIN projects. Although DEA has received additional funding to maintain FIREBIRD/MERLIN related telecommunications equipment, additional resources are vital to maintaining FIREBIRD and MERLIN workstations - the actual terminals needed by DEA employees to perform their duties. DEA is already in the process of installing Phase I of FIREBIRD (which includes DEA Headquarters and 19 domestic division offices) - at a cost of over \$50 million; once FIREBIRD is completely installed in all DEA offices, the financial requirement for the maintenance of these projects must be covered.

Put simply, investing in equipment maintenance makes sense. Maintenance funding is cost effective, since DEA simply can not afford to replace each piece of equipment when it breaks, and it greatly minimizes the possibility that operations will be unnecessarily affected when mission critical equipment is idled by equipment failure. DEA's requirements are based on the inventory listed in its property management system (estimated at over 36,000 pieces of ADP equipment) and DEA's estimated 1998 equipment maintenance costs. DEA's current equipment maintenance base is roughly \$5,300,000. This request will increase the base to approximately \$7,400,000.

FIREBIRD and MERLIN (Those portions of the Initiative is requested through the Violent Crime Reduction Program). DEA requests \$19,425 million to upgrade the quality of the agency's office automation/data processing systems.

Freedom of Information Act Program Support

DEA requests a total of 19 positions and \$539,000 (including \$123,000 in special program funding) to support implementation of the 1996 Electronic Freedom of Information Act (FOIA) Amendments.

On October 2, 1998 President Clinton signed into law the Electronic Freedom of Information Act Amendments of 1998. The amendments made to the Act by this new law address, for the first time, agency processing of electronic FOIA records, as well as time limits and agency backlogs surrounding FOIA requests. Many of the new amendments will take effect after a 180-day period, but the time limit and backlog-related provisions of the law will take effect after one year. Among the major changes affecting Federal agencies include provisions surrounding the development of electronic reading rooms and transmission of electronic FOIA records, as well as the aforementioned time limitations and backlog guidelines for responding to FOIA requests.

Regarding electronic reading rooms and electronic records, under the new FOIA provisions, when records are disclosed in response to a FOIA request, agencies will be required to determine if they have already become the subject of subsequent FOIA requests or, based upon the nature of the records and types of requests regularly received, are likely to be the subject of multiple requests of the same nature in the future. If either is the case, agencies will be required to make these records "reading room" records to be made automatically available to potential FOIA requesters. Further, the amendments will require agencies to use electronic information technology (preferably in the form of on-line Internet access) to enhance the availability of their reading room records.

The amendments will also require agencies to honor a requester's specified choice among existing forms of a requested record (including electronic requests), if the record is deemed to be readily reproducible in the requested format. Thus, agencies must now make reasonable efforts to search for records in electronic form or format, except when such efforts would significantly interfere with the operation of an agency's automated information systems.

Of primary concern to DEA are the several different provisions pertaining to the timing of agency responses to FOIA requests. First, the amendments increase the Act's basic time limit for agency responses to FOIA requests from 10 to 20 working days. A second provision provides a basis for agencies and FOIA requesters to reach agreement on the timing of agency responses in cases in which the circumstances of the particular request, rather than a more general "agency backlog," cause difficulty in meeting the Act's time limits. Third, and most significant to DEA, the amendments address the subject of general agency backlogs by limiting the conditions under which the Act's "exceptional circumstances" provision may apply. Such circumstances cannot include "a delay that results from a predictable agency workload of FOIA requests, unless the agency demonstrates reasonable progress in reducing its backlog of pending requests."

Finally, under the new amendments, a FOIA requester may now ask for expedited processing of a request if they are certified to have a "compelling need." The amendments also require an agency to make a reasonable effort to estimate the volume of FOIA documentation withheld from requesters, as well as respond to numerous newly implemented congressional FOIA reporting guidelines.

As previously noted, the new amendments addressing FOIA backlog and document turnaround time are of the utmost importance to DEA. By expanding document turnaround time from 10 to 20 days, the implication of the new law is that agencies will have more time to reduce existing FOIA backlogs. Although increasing the time frame for document turnaround, the new legislation includes a provision which allows the requester to file a civil action in Federal court if the request is not processed within the 20 day time frame. At the same time, the law does not provide for the currently existing administrative appeal process for agencies unable to meet this deadline, thus leaving little recourse for backlogged agencies.

For the past three years, DEA's FOIA backlog has varied between 400 and 700 requests annually. Despite a two year effort that improved DEA's FOIA response productivity by 30 percent, increases in the overall number of requests have kept the agency's FOIA backlog artificially high. To reduce this backlog and maintain the potential development of future backlog, DEA requires an additional 10 FOIA specialists.

The new 20-day turnaround requirement also places a major burden on DEA non-FOIA components, as well as FOIA staff personnel. The non-FOIA components of DEA cannot be unduly burdened with FOIA related file searches. Therefore, DEA's FOIA program requires an additional four pre-processing positions to aid non-FOIA components in necessary file searches. The technical requirements of electronic media will also initially require a coordinator who has the expertise to work in both the Electronic Data Processing (EDP) area and the FOIA field. One position is thus required to initiate DEA's program for electronic records response. An additional two clerical positions will be required to meet the expanded workload generated by the new specialists and pre processors.

The elimination of the "exceptional circumstances" delay in responding to FOIA requests and the concomitant right of requesters to sue in Federal court after expiration of the 20 day turnaround time will inevitably result in an increase in litigation against DEA. In addition, prisoners, who now submit the majority of FOIA requests, will have a new incentive to litigate. DEA will therefore require one additional attorney and one paralegal to handle the projected increase in civil actions.

In sum, DEA requests an additional 19 positions to fully implement the new FOIA provisions, permanently eliminate its current backlog of requests, and work to meet the 20 day turnaround time of the amended law. Included in the request is \$123,000 for special program funding to meet additional anticipated training and equipment requirements for new and existing FOIA personnel.

Investigative Shortfall	19	—
Total	345	168
<p>The 1998 estimates are based on the number of additional Special Agents lapsed at 50 percent. Therefore, 168 Special Agents were calculated in the 1998 investigative workhours estimate.</p>		

DOMESTIC ENFORCEMENT ACTIVITIES NARRATIVE OUTCOME

DEA's domestic enforcement activities have had a tremendous impact against drug trafficking and violence in communities throughout the United States. Below are recent examples of domestic law enforcement.

Zorro II Investigation

In early May, 1996, DEA, while working with dozens of Federal, State, and local law enforcement agencies, culminated an 18-month investigation that resulted in the shutdown of a cocaine trafficking partnership between the Cali mafia and a major Mexican mafia trafficking organization. This partnership was responsible for bringing multi-ton kilogram quantities of cocaine into the United States through the Southwest Border and eventually to small U.S. towns such as Rocky Mount, North Carolina. This investigation, which involved 13 DEA divisions, documented the Cali and Mexican Mafias' cooperative efforts to transport cocaine from Colombia to Mexico, where the Mexican mafia transported it across the border into El Paso and eventually to Los Angeles. Once in Los Angeles, the cocaine was turned back to the Cali mafia who then shipped it across country to New York where it was distributed throughout the East Coast. One path took a significant load of the cocaine from New York to Richmond, Virginia and ultimately to Rocky Mount, North Carolina.

The culmination of this investigation resulted in the arrest of 156 suspects, including key Cali and Mexican mafia figures; the seizure of over 5,500 kilograms of cocaine and 1,000 pounds of marijuana; and the seizure of several million dollars of drug proceeds. Most importantly, this investigation resulted in the dismantling of a major conduit for cocaine entering the United States destined for American communities.

MET deployment in Rampart Division of Los Angeles

In January 1996, Los Angeles Chief of Police Willie Williams requested the support of DEA's Los Angeles Mobile Enforcement Team (MET) to help combat escalating gang and drug violence in the Rampart Division of Southeast Los Angeles. The Rampart area is considered to be one of the most dangerous, averaging 14 homicides per month, half of which are drug related and involving more than 13 gangs.

The deployment began on April 23 and concluded on July 12, 1996. In addition to the arrests made by other agencies, the MET arrested 141 defendants on drug charges, of which 45 are considered violent gang members. According to reports from the area, overall violent crime in the target area dropped 25 percent since the deployment. Residents of the Rampart community were so appreciative of the law enforcement effort that they collected funds and purchased a billboard expressing gratitude to DEA and ATF for the effort (see the Violent Crime Initiative of the Fiscal Year 1997 budget request).

MET Deployment to Lynn, Massachusetts

In April 1995, DEA's Boston Field Division Office dispatched its Mobile Enforcement Team (MET) to Lynn, Massachusetts, located 25 miles outside of Boston. According to the acting police chief, Lynn has been overrun by drugs and drug violence, much of which is generated by members and associates of the Salem, Massachusetts chapter of the Hell's Angels motorcycle gang. The Salem chapter is one of the organization's most influential and most violent. On September 5, 1996, after a 16-month investigation, federal, state, and local officials executed warrants at ten locations in Lynn and arrested 15 defendants. One of them was the chairman of East Coast membership for the Hell's Angels.

The statistics reported in the 1998 Congressional Budget submission may not match with those statistics reported above. This is due to differences in statistical definitions and reporting times.									
¹ Represents total PE/PI dollars expended by foreign offices. FY 1996, 1997, and 1998 PE/PI are estimates based on the 1998 Spring Call. FY 1994 PE/PI was not identified by decision unit at this time. FY 1996 PE/PI is an estimate based on FY 1995 actual usage per object class breakdown study. ² Reduction in FY 1996 of 30 FTE as a result of conference mark. ³ Includes the establishment of new offices in Moscow, Pretoria, South Africa, & Managua, Nicaragua in FY 1997.									

FOREIGN COOPERATIVE OPERATIONS NARRATIVE OUTCOME

DEA's foreign cooperative operations have had a tremendous impact against drug trafficking in foreign countries throughout the world. Below are recent examples of foreign cooperative operations.

Foreign Cooperative Investigations

Bogota: Operation Selva Verde is a cooperative, bilateral operation between DEA's Bogota Country Office and the Colombian National Police (CNP) Anti-Narcotics Unit. The primary purpose of this operation is to locate and destroy clandestine laboratories, airstrips and storage sites. A secondary purpose is to form a strong narcotics intelligence and operational alliance between DEA and the Government of Colombia. This operation has been extremely successful. The Bogota Country Office assists the CNP in developing and managing sources of information, as well as debriefing and making payments to these individuals. In addition, DEA provides aircraft and the Air Intelligence Group as aerial intelligence platforms to support this program.

During 1996, four major cocaine hydrochloride (HCL) laboratory sites were identified and destroyed--three of the sites were destroyed by the CNP in cooperation with the Bogota Country Office in Operation Selva Verde. The fourth site consisted of an HCL laboratory and a separate stand alone large chemical synthesis complex. This fourth laboratory site was identified and destroyed by the Colombian Army after a site visit by DEA.

Costa Rica: In October, 1996, information was developed by DEA and the Organization of Judicial Investigation on a group of Costa Rican and Colombian traffickers smuggling cocaine from Barranquilla to Costa Rica. An intercept determined that approximately 300 kilograms of cocaine had already arrived in Costa Rica by vessel. After arresting the main suspect and searching his residence, a warehouse was located revealing 389 kilograms of cocaine as well as a semi tractor trailer truck and a tanker with Guatemalan tags. The tanker had a concealed compartment which could only be accessed when the tanker was empty. The tanker had brought a load of soap from Panama and unloaded it at the warehouse. Once the compartment was loaded with cocaine, the soap would surround the compartment to conceal the cocaine.

ORGANIZATIONAL GOAL 3: Reduce the availability of illicit drugs in the United States and disrupt and dismantle Drug Trafficking Organizations through DEA's Intelligence Operations

<p>A. Definition of Terms or Explanation for Indicators:</p> <p>The statistics reported in the 1998 Congressional Budget submission may not match with those statistics reported above. This is due to differences in statistical definitions and reporting times.</p> <ol style="list-style-type: none"> 1. FY 1998 Actual amount decreases due to decreased FTE allocations 2. Criminal and Pre-registrant investigations increases are based on an anticipated 20 % increase in the Diversion workforce and the establishment of Diversion Program Manager positions 3. Trends: Export permits and declarations are expected to continue increasing fairly steadily, but are not expected to increase significantly unless a new drug is added to CSA Schedule II. 4. The drop in the number of estimated registrations processed in FY 1998 is due to the cyclical nature of the program 5. Until the establishment of a budget for Drug Diversion, it was not necessary to keep separate statistics on Drug and Chemical Diversion work. Consequently, the Input Indicators, Criminal Investigations, Arrests, Seizures, Criminal and Civil fines include both Drug and Chemical Statistics. The remaining performance indicators reflect Drug Diversion Control only.

ORGANIZATIONAL GOAL 6: Reduce the availability of illicit drugs in the United States and disrupt and dismantle Drug Trafficking Organizations through DEA's drug related investigations conducted in conjunction with its State and Local Task Force program ¹

A. Definition of Terms or Explanation for Indicators									
The statistics reported in the 1998 Congressional Budget submission may not match with those statistics reported above. This is due to differences in statistical definitions and reporting times.									
¹ Statistics for SL Cooperative and Mobile Enforcement Teams are under Goal #1 ² SL Task Force data are for all official task forces, both program funded and provisional ³ FY 1995 FTE reflects two reprogrammings and a conference mark increase of 178 FTE positions. In FY 1997 all FTEs transferred to the Violent Crime Reduction Program ⁴ Represents total PEPI dollars expended by SL Task Force offices. FY 1994 PEPI not available. FY 1996, 1997, and 1998 PEPI are estimates based on the FY 1998 Spring Call ⁵ FY 1994 and FY 1995 totals are estimates, since no reliable records exist for these years ⁶ No authoritative data for the SL Task Force Program is shown in FY 1992 or FY 1993									

STATE AND LOCAL TASK FORCE PROGRAM NARRATIVE OUTCOME

Expansion of Jurisdiction: Since State and local agents participating in DEA task forces are deputized to perform the same functions as DEA agents, their jurisdictional boundaries are expanded. Without this deputization, state and local law enforcement officers find that their jurisdiction to investigate drug cases stops abruptly at their state, county, or city borders. This expanded jurisdiction is imperative in investigating narcotics cases because drug dealers know no boundaries.

Shared Intelligence: The information shared by the federal, state, and local investigators is crucial to a successful drug investigation. Local drug agents know their communities--the dealers, their methods, their hangouts. Combining this local knowledge with DEA's broader expertise in drug investigations produces positive results: often an area's drug agents--federal, state, and local--each hold a piece of the intelligence puzzle, and sharing these puzzle pieces can more quickly produce a complete picture.

In one example of cooperative law enforcement, from 1991 to 1992, DEA worked with the Savannah, Georgia, Police Department; Chatham County Metro Drug Squad; the Bureau of Alcohol, Tobacco, and Firearms (ATF); the Internal Revenue Service (IRS); and the U.S. Marshals Service to arrest members of the Ricky Jivens organization, a violent drug trafficking gang. The investigation revealed that high-level members of the organization were required to commit murder as an initiation rite to secure their positions in the gang. Video surveillance recorded Jivens telling an informant to murder "any" person, regardless of their connection to the gang. The task force collected evidence to aid in prosecuting at least seven homicides, as well as thwarting widespread drug-related violence by causing the indictment of eighteen gang members. Several gang members were indicted and the organization leader, Jivens, was sentenced to life imprisonment and a \$1 million fine.

Experience Gained/Training: Bringing together all levels of law enforcement enhances training and provides invaluable experience to law enforcement. Most law enforcement agencies have few dollars to spend on training, and therefore most training is received on the job. Researching a criminal history, tracking down leads, analyzing pen registers, preparing a case with an Assistant United States Attorney, identifying drugs, prices and trends--these are all skills learned more quickly when an experienced officer works closely with a new officer. Task forces bring together groups of officers with a variety of expertise, such as knowledge of Organized Crime or established Confidential Informants, making cost-effective use of their knowledge.

Coordination: Relationships formed by DEA State and Local Task Forces facilitate coordination. During an undercover drug buy, it is not unusual for a local Task Force Officer to communicate with a marked police car, telling the car to leave the area. Surveillance assistance is another benefit of a close association of federal, state, and local officers. Many times a subject of surveillance is observed with an unidentified person. Rather than reveal the surveillance, a local Task Force Officer can quickly call in a traffic officer, who then makes a routine stop of a vehicle and subtly identifies the person.

Coordination also prevents duplication of effort, thus saving countless dollars. When drug agents get together to coordinate activities, they frequently find that several different agencies have been investigating the same dealers and can then make more efficient use of their time and resources.

Asset Forfeiture: Participating in joint operations allows State and local law enforcement to share equitably in assets seized from drug dealers. During FY 1992, State and local law enforcement received approximately \$230 million in forfeited cash and \$12.5 million in tangible property from Federal forfeitures. With law enforcement resources scarce, these equitably shared funds go far in fighting crime at all levels.

Sometimes a seizure benefits the entire community. Atlanta's State and Local Task Force seized 35 acres of property in the heart of the city, appraised for \$538,500, and seized an additional \$73,579 in cash. The United States Attorney and DEA's Special Agent-in-Charge agreed that because of the property's beauty and rarity, they should find an alternative to selling it. Although the task force agreement provided that the proceeds from seizures would be shared equally among the twelve state and local agency task force participants, all twelve agencies waived their rights to the property. After several months of planning and negotiation, title to the property was transferred to the Georgia Sheriff's Youth Homes, a non-profit organization sponsored by the Georgia Sheriff's Association. The Youth Homes will provide drug education to children, sponsored by each of the 12 Task Force agencies through a summer camp program. Nature trails and a nature science center will also provide education to children from schools within the 12 jurisdictions.

**Drug Enforcement Administration
Salaries and Expenses
Status of Congressionally Requested
Studies, Reports, and Evaluations**

House Report 104-676 relating to the Drug Enforcement Administration Appropriations Act, 1997, requires that DEA submit a quarterly report, beginning with the first quarter of F Y 1997, that provides investigative work hours and funding, by type, within major drug source and transit countries, delineated by country and function.

The Committee requested that the first report be submitted by January 15, 1997. DEA has requested clarification of the reporting requirements and is currently waiting for further guidance.

DRUG ENFORCEMENT ADMINISTRATION
Salaries and Expenses
Justification of Adjustment to Base (continued)
(Dollars in thousands)

	Perm Pos	FTE	Amount
3 Annualization of 1997 Pay Raise This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locally pay adjustments as well as the general pay raise. The amount requested \$2,737,000 represents the pay amounts for one quarter of the year (\$2,217,000 for pay and \$520,000 for benefits)	-	-	\$ 2,737
4 Foreign Allowance Allowances for Government employees in foreign areas are determined by the Department of State (DOS). The requested increase of \$140,000 provides a 1.7 percent increase over the obligations of \$7,782,000 which are projected for 1997	-	-	140
5 Mileage Allowance rate increase The mileage allowance rate has increased from 30 to 31 cents per mile. An increase of \$134,000 is requested in 1998 to cover this rate adjustment	-	-	134
6 Correspondence Management System An increase of \$16,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. The new system provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability	-	-	16
7 ICASS increase for staffing ICASS an annual charge will be made by the DOS for administrative support based on the number of overseas staff for each Federal agency. Because the law enforcement operations of the Department of Justice has increasing international demands, additional overseas staffing since 1995 will result in increased ICASS costs in 1998. Based on the additional staffing, DOS has requested an increase of \$502,000 for DEA in 1998	-	-	502
8 Spectrum Frequency Management Public Law 104-134 authorizes the Secretary of Commerce to charge Federal agencies for spectrum management services. The National Telecommunications and Information Administration estimates that the Department of Justice costs for 1998 will be \$723,000 based on an annual number of frequency assignments. Given the dependence of the Department's law enforcement operations on efficient and dependable frequency management, this funding is necessary to continued operations. Funding of \$95,000 is requested for the Drug Enforcement Administration.	-	-	95

DRUG ENFORCEMENT ADMINISTRATION
Salaries and Expenses
Justification of Adjustment to Base (continued)
(Dollars in thousands)

	Parm Pos	FTE	Amount
9 General Pricing Level Adjustments			\$ 3,609
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those sub-object classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, and transportation costs, and utilities.			
10 Northern Mariana Islands			190
Prior to 1998, the Department of Interior reimbursed the Department of Justice for the cost of addressing law enforcement problems in the Commonwealth of the Northern Mariana Islands (CNMI). However, beginning in 1998, reimbursement of these costs will not be available. Funding of \$180,000 is requested for Drug Enforcement Administration.			
11 Technical Workyear Adjustment		5	
An increase of 7 reimbursable workyears to be funded by the Working Capital Fund retained earnings is requested to cover the necessary expenses for the preparation of the Department-wide audited financial statement required by the Government Management Reform Act of 1994, and a decrease of 2 reimbursable workyears related to FMS and INL (Russia).

**Drug Enforcement Administration
Violent Crime Reduction Program**

Summary Statement

DEA is requesting 2,087 positions, 2,041 FTE and \$400,037 million from the Violent Crime Reduction Trust Fund. This represents an increase of 14 positions, 7 FTE and \$22,695 million over an adjusted FY 1998 base. This increase will provide funds to implement DEA's Methamphetamine Strategy, field DEA's new FIREBIRD and MERLIN systems, and enhance a much needed aircraft replacement base. In addition to the State and Local Task Forces and the Mobile Enforcement Team (MET) Program, in FY 1998 DEA will fund the Foreign Cooperative Investigations and Laboratory Services programs through the Violent Crime Reduction Program in FY 1998.

Methamphetamine Initiative

This request consists of 12 Chemist and 2 Diversion Investigator positions to support hazardous waste removal and laboratory support services. Cleaning up a seized clandestine drug laboratory site is a complex, dangerous, expensive and time-consuming undertaking. The amount of waste material and chemicals taken from a clandestine laboratory may vary from a few pounds to several tons, depending on the size of the laboratory and its manufacturing capabilities.

Due to the increase in the amount of hazardous waste DEA has encountered and with the expectation that this situation will only escalate, the funding needed to remove this waste will more than triple (a 350 percent increase). However, although Assets Forfeiture Fund (AFF) funding can be used to cover DEA's surging hazardous waste removal costs in terms of dollars, it cannot provide the positions that DEA needs to effectively manage/monitor the program at these greatly expanded levels. Therefore, DEA is requesting \$195,000 and 2 Diversion Investigator positions to ensure effective program and contract management.

Given the unique challenges associated with supporting methamphetamine investigations, DEA is also requesting \$2,075 million and 12 additional chemist positions. These positions will be used to accommodate heightened laboratory workload requirements and ensure greater chemist availability for on-site dismantling and processing of seized clandestine laboratories. These positions will support DEA clandestine laboratory investigations in California, along the Southwest Border, and the Midwest, where the illegal production of methamphetamine is most prevalent.

Investigative Shortfalls Initiative

DEA is requesting \$20.425 million to implement the FIREBIRD and MERLIN systems and enhance its aircraft replacement base.

FIREBIRD - Volumes of enforcement and intelligence information are contained in DEA's investigative reports and other documents that cannot be effectively accessed or processed manually. DEA's FIREBIRD system will bring together information from a variety of sources and give Special Agents and Intelligence Analysts the ability to quickly access and analyze this information, saving thousands of research hours which can be directed to further research, and produce products that will enhance the management decision process.

DEA requests \$15,000,000 to implement Phase II of FIREBIRD. With this funding, DEA will outfit the newly-established Caribbean Division and then complete each field division down to the post of duty level. As each division is completed, the laboratories located within the geographical area of a division will be included in this installation process. In subsequent years, DEA will equip the El Paso Intelligence Center (EPIC), the Airwing, the Office of Training, and finally, DEA's overseas offices.

MERLIN - The MERLIN system, operating at the SECRET HIGH security level, provides tools which reduce the time it takes to locate and analyze information, access and analyze collections of information to reveal patterns and trends, improve analysis of information to enable decision making analysis not possible by manual or basic computer means, and, enhance the methods of producing and distributing reports.

DEA is requesting \$4,425,000 to continue development and deployment of MERLIN to other DEA offices. Of this request, \$1.6 million is needed for operating and engineering support. The remaining \$2,825 million is necessary to begin installation of MERLIN in the remaining 16 domestic offices and those district offices where FIREBIRD is installed. These funds will be used to procure hardware, software, and installation services for the new sites and make necessary physical alterations to satisfy MERLIN's security requirements. Additional workstations will be purchased (as funding permits) to provide the remaining Intelligence Analysts at the initial sites with MERLIN workstations.

Aircraft Replacement Base - It is critical that DEA replace aging aircraft in order to ensure a safe and efficient fleet capable of meeting changing mission demands. In 1997, Congress approved a \$1 million replacement base for aircraft. This request seeks to bring the replacement base to a total of \$2 million. A total of \$2 million would allow DEA to replace one single-engine helicopter or eight single-engine fixed wing aircraft. Aircraft play a vital role in DEA's investigation efforts along the Southwest Border and in Marijuana Eradication.

DRUG ENFORCEMENT ADMINISTRATION
Violent Crime Reduction Program
Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates includes proposed changes in the appropriation language listed and explained below. New language is underscored.

Violent Crime Reduction Program

For activities authorized by section 180104 of the Violent Crime Control and Law Enforcement Act of 1994 (Pub. L. 103-322), as amended, and section 814 of the Antiterrorism and Effective Death Penalty Act of 1996 (Public Law 104-132), and for the purchase of passenger motor vehicles for police-type use, as otherwise authorized in this title, \$220,000,000, to remain available until expended, which shall be derived from the Violent Crime Reduction Trust Fund.

not to exceed 1,802 passenger motor vehicles, of which 1,410 will be for replacement only, for police-type use without regard to the general purchase price limitation for the current fiscal year, \$400,037,000,

Department of Justice Appropriations and Related Agencies Act, 1997; 104-208 (approved September 30, 1986; 110 STAT 3008.)

Explanation of Changes

1. The first change reflects a further definition of the authorization to purchase motor vehicles.

**Drug Enforcement Administration
Violent Crime Reduction Program
Program Performance Information
Government Performance and Results Act Requirements**

Mission: The Drug Enforcement Administration serves as our nation's lead agency in combating illicit drugs and related activities.

Organizational Goal:

1. Combat drug-related violent crime in cooperative investigations with state and local authorities and task forces.

Major Objectives:

1. Support State and Local law enforcement agencies in Federal drug law enforcement efforts.
2. Reduce the level of organized drug-related gang violence.
3. Achieve enhanced cooperative working relationship with State and local law enforcement.
4. Apply Federal law enforcement expertise and enforcement power to reduce violent drug related crime in specific areas at the invitation of State and local authorities.

To meet funding constraints \$156 million in programs were transferred from Salaries and Expenses Appropriation to the VCRP.

LONG RANGE GOAL: Ensure a maximum contribution to State and local law enforcement and foster intergovernmental improved cooperation to reduce drug availability and immobilize major drug trafficking organizations at all levels.

BASE PROGRAM DESCRIPTION:

State and Local Task Forces

The State and Local Task Forces Program effectively enlists the resources and support of State and local law enforcement agencies in Federal drug enforcement efforts. The task force program assists in fulfilling DEA's responsibility to provide a diverse, creative, and all-encompassing Federal response to the multi-faceted and complex drug problem. Through their coordination, DEA Special Agents and State and local law enforcement personnel enhance the quality of drug investigations and prosecutions. The program expands the work force under DEA's supervision; provides State and local officers with special equipment and conveyances when needed for DEA undercover operations; contributes substantial intelligence to DEA's data bases; and achieves enhanced cooperation with local banks, thus improving DEA's ability to obtain emergency flash rolls and temporary storage of funds.

Mobile Enforcement Teams (MET)

The MET program was established on the premise that DEA is a resource that can assist local law enforcement with additional personnel and resources to penetrate and dismantle violent gangs and local trafficking organizations. The program was developed through discussions with law enforcement executives and organizations representing chiefs of police and sheriffs across the country.

The program places DEA in a supportive role in investigations that are targeted by State and local agencies based on their own local priorities. The mission of the METs is to dismantle drug organizations by securing the conviction and incarceration of those individuals dealing drugs and causing violence in these communities.

DEA's Mobile Enforcement Teams are specifically designed to deal with the most violent and dangerous elements of drug trafficking--organized violent drug trafficking organizations. Recently, three cities can attest to the effectiveness of these teams.

- o The Houston MET pursued investigations of gang-related violence, including 26 juvenile murders in Galveston, Texas. The deployment resulted in the arrest of 104 defendants, 37 for violent offenses. Local law enforcement executives characterized the MET deployment as the most significant factor in reducing violence in Galveston County.
- o The Atlanta MET was requested to combat escalating gang violence in the Bowdoin, Georgia public housing projects. The deployment resulted in the arrest of 61 defendants, including a police officer who had been protecting the drug trafficking organization in that area.
- o The Chief of Police of Salina, Alabama requested a deployment from the New Orleans MET to deal with a significant increase in crack trafficking and drug-related homicides, coupled with a 44 percent increase in drug-related robberies. The deployment resulted in 17 arrests and what city officials characterized as the return of normalcy to Selma.

Laboratory Services

This program provides laboratory support services for the Enforcement, Intelligence, and Diversion Control activities of DEA. Enforcement activities are supported through the timely analysis of drug evidence and the presentation of forensic expert testimony in court; by providing field assistance to Special Agents on clandestine laboratory investigations; by conducting crime scene searches for trace drug evidence; and by performing toolmark and signature analyses on evidence linked to suspected conspiracy cases.

Intelligence activities are supported through laboratory analysis that shows the origin of controlled substances and highlights foreign drug distribution patterns. Intelligence investigations are also aided through the signature analyses of the Domestic Monitor Program, which help monitor domestic drug distribution patterns and price/purity data at the retail level.

Diversions control activities are supported through the examination of tablets, capsules, and papers, which provide information on illegal drug distribution.

This program also provides forensic drug laboratory support to the Interagency Crime and Drug Enforcement Program and to the Federal Bureau of Investigation, which has concurrent jurisdiction for the enforcement of Federal drug laws. The program also provides support to other Federal, State and local law enforcement agencies that do not have their own forensic drug examination capability, or require the special expertise of DEA forensic scientists.

Foreign Cooperative Investigations

DEA's overseas efforts are directed toward advising, assisting, and encouraging foreign governments in the development of strategies to reduce the trade and supply of illicit drugs within their countries. DEA also works with foreign governments on the investigation of high-level international trafficking organizations which have a direct impact on the United States crime problem. In pursuing these aims, DEA coordinates drug intelligence collection and drug investigations (including chemical diversion and drug money laundering activities) with foreign law enforcement agencies, and participates in bilateral and multilateral drug suppression programs.

DEA's Foreign Cooperative Investigations Program (FCIP) now includes resources for foreign Special Enforcement Operations/Programs (SEOP), including OPBAT and the Northern Border Response Force (NBRF).

INITIATIVE 1

	Pos.	FTE	Amount (\$000)
14	7	0	2,270

**Methamphetamine Initiative
Hazardous Waste Removal and Laboratory Services**

- An additional \$8.776 million and 80 Positions are requested for this Initiative in the Salaries and Expenses Budget.

Proposed Actions

This Initiative seeks to address the following objectives:

1. To focus a coordinated Federal, and international effort to identify, investigate and dismantle clandestine drug laboratories operating in the United States and abroad.

Hazardous Waste Removal and Laboratory Services

Methamphetamine Laboratories - An Environmental Nightmare

The illicit manufacture of methamphetamine can occur anywhere; in hotel rooms or apartment complexes, industrial areas or farms, a neighbor's house - any place an operator can set up laboratory equipment to synthesize their product. If an operator is manufacturing only limited amounts of methamphetamine, he/she would only need about 2 hours from set up to clean up; complicating enforcement efforts to locate and dismantle many clandestine laboratory operations.

Methamphetamine laboratory operators are often well-armed, and their laboratories occasionally are booby-trapped and equipped with scanning devices employed as security precautions. Weaponry, ranging from single firearms to arsenals of high-powered weapons and explosives, are commonly found at laboratory sites. Laboratory operators, or "cooks," frequently display little regard for public safety or the environment. The caustic, flammable and explosive chemicals required by "cooks" to produce methamphetamine in their "kitchens of death" are unsafely stored and disposed of, leading to the endangerment of innocents.

DEA requests \$2.27 million and 14 positions (2 Diversion Investigators and 12 Chemists positions) to address critical health, safety and hazardous materials removal issues relating to methamphetamine.

Included in this request is \$0.195 million for 2 Diversion Investigator positions for hazardous waste removal.

As discussed above, clandestine laboratories are dangerous areas. Flammable, caustic, and potentially explosive chemicals such as benzene, ethanol, hydrochloric acid and red phosphorous are typically stored in these "facilities" to serve as synthesizing agents for methamphetamine production. Once consumed by the synthesis process, the hazardous chemical by-products are disposed of by unsafe and illegal methods, causing potential harm to the environment and endangering the lives of innocents. Uncaring operators may dump their chemical "sludge" on the ground or in nearby streams and lakes; they may pour them into local sewage systems or septic tanks. On the other hand, some may simply bury them, allowing the hazardous, and in some cases carcinogenic waste to be absorbed by the soil or into natural water systems.

Cleaning up a seized clandestine drug laboratory site is a complex, dangerous, expensive and time-consuming undertaking. The amount of waste material and chemicals taken from a clandestine laboratory may vary from a few pounds to several tons, depending on the size of the laboratory and its manufacturing capabilities.

Whenever DEA or its State and local partners seize a clandestine laboratory, Environmental Protection Agency (EPA) regulations require law enforcement to perform the duties of a "generator" of hazardous waste and thus bear responsibility for removal of that waste. After DEA or its State and local partners are through processing a clandestine laboratory for criminal prosecution, DEA fulfills its obligations as "generator" by paying a certified contractor to remove all hazardous waste and tainted materials from the site. These materials are safely transported from a clandestine laboratory site to a permitted hazardous waste facility and either stored or destroyed. DEA's responsibility for the cleanup of the site typically ends with the removal of gross contamination (containers, and contaminated equipment), the posting of the site as a potentially contaminated area, and notification of the property owner, appropriate environmental agency and health department.

Currently, DEA is the sole Federal law enforcement agency funding clandestine laboratory cleanup projects. Under the existing contracting arrangement, DEA uses eight contractors operating in 27 regions to perform this essential function - the current contract arrangement involves roughly 100 certified hazardous waste storage facilities. In FY 1988, DEA will move to a contract expected to consist of 35 contract areas and 12 to 15 contractors and as many as 150 certified facilities; as a necessary step to improve response time and lower cleanup costs.

There is a direct relationship between the level of clandestine laboratory activity (which is heading steadily upward) and the number of cleanups that DEA must perform. For example, at the beginning of FY 1988, DEA was provided \$2 million by the Assets Forfeiture Fund (AFF) to pay for clandestine laboratory cleanups *(over the past three years, DEA costs had hovered around \$2 million annually)*. However, given the significant increases in clandestine laboratory seizures, DEA spent over \$4 million in FY 1988 - a 100 percent increase over previous years. Given the trend towards an ever increasing number of clandestine laboratory seizures and cleanups, DEA will require even more funding in future fiscal years.

To account for this increased activity, DEA is planning to request at least \$7 million for hazardous waste removal in its FY 1988 AFF budget submission - this will more than triple the amount of dollars that DEA received for this program at the on-set of FY 1980 *(a 350 percent increase)*. However, although AFF funds can be used to cover DEA's surging hazardous waste removal costs in terms of dollars, it cannot provide the positions that DEA needs to effectively manage/ monitor the program at these greatly expanded levels. Therefore, DEA is requesting 2 Diversion Investigator positions to ensure effective program and contract management.

DEA requires these positions to conduct cyclic contractor compliance investigations of the DEA contracted hazardous waste facilities to ensure that diversion of chemical waste does not occur, and to confirm the safe storage, processing and disposal of DEA related waste from clandestine laboratories - *performance of these investigations reduces DEA's potential liability and is a contractual requirement*. Since the 1988 contract will involve a 350 percent increase in program funding and a 50 percent increase in the number of certified hazardous waste storage facilities (requiring even more cyclic investigations), it is essential that DEA receive these positions.

Included in this request is \$2.075 million and 12 Chemist positions to support increased clandestine laboratory seizures.

Whenever DEA seizes a clandestine laboratory, its Special Agents and Task Force Officers are confronted with a host of operational decisions and potentially life-threatening dangers. Typically, unmarked, potentially flammable, explosive and health, and/or life threatening substances must be identified and decisions made on what chemical or drug substances should be seized to support criminal prosecution. Although proper safety training of enforcement personnel is essential, DEA still requires experienced on-site chemists to oversee the safe dismantling of clandestine laboratories and ensure compliance with OSHA and EPA regulations to reduce risk to life, property, and the environment.

A chemist is an integral participant in the assessment and processing stages of clandestine laboratory seizure operations. He/she serves as the technical advisor on laboratory dismantling, ensuring that essential/precursor chemicals are seized as evidence, and that all enforcement personnel are aware of potential health and safety hazards. As a result, having a chemist on-site not only reduces safety risks, but ensures that only necessary chemicals and drug substances are seized as evidence (thereby conserving DEA's laboratory resources). Unfortunately, given the already significant growth in DEA clandestine

laboratory seizures, the laboratory system has been able to respond to an average of only 55 percent of clandestine laboratory raid requests. Unless additional resources are provided, this response rate will decline as DEA seizes more laboratories, placing the lives of law enforcement personnel and innocents at a higher level of risk.

Increased clandestine laboratory seizures will also have a greater than normal impact on DEA's forensic drug analysis operations. To illustrate, consider that a typical drug seizure or purchase case, cocaine for example, will generate roughly 2 exhibits. A clandestine laboratory case, however, generates an average of 16 exhibits. This additional workload is unique to clandestine laboratory cases because, in order to properly support prosecution efforts, DEA must analyze not only the finished product (methamphetamine), but also the seized laboratory equipment and/or precursor/essential chemicals. This analysis is vital to proving in court that the laboratory operator manufactured or attempted to manufacture an illegal substance (methamphetamine).

Given the unique challenges associated with supporting methamphetamine investigations, DEA is requesting 12 additional chemist positions. These positions will be used to accommodate heightened laboratory workload requirements and ensure greater chemist availability for on-site dismantling and processing of seized clandestine laboratories. These positions will support DEA clandestine laboratory investigations in California, along the Southwest Border, and the Midwest, where the illegal production of methamphetamine is most prevalent. For example, in the first 11 months of 1986 the St. Louis Division seized 242 clandestine laboratories; one every 33 hours. The three divisions in California seized a total of 142 laboratories during the same period; 1 every 2.3 days.

These 12 chemist positions would be stationed at the nearest DEA laboratory(s) serving the affected areas and be dedicated solely to supporting DEA's clandestine laboratory seizure operations. During periods of increased clandestine laboratory activity these chemists would be placed in a TDY status to ensure more rapid response times. Additionally, these chemist positions would be transferred/shifted between DEA laboratories when geographic areas of increased clandestine laboratory activity change.

If this initiative is not funded, DEA laboratory productivity will be adversely affected. For example, the North Central Laboratory's backlog has already increased significantly, from 390 exhibits in September 1985 to 874 in April of 1986. This increase is primarily due to the explosive growth in methamphetamine clandestine laboratory activity in the Mid-West. Furthermore, without experienced chemists on-site to provide essential technical and safety advice, DEA faces an increased risk to its Special Agents and Task Force personnel and potentially to innocent bystanders.

Investigative Shortfalls:

- An additional \$13.01 million and 19 positions was requested for this initiative in the Salaries and Expenses budget.

This initiative seeks to address the following objectives:

1. To restore the base program funding to a minimum acceptable level to ensure adequate funding is available to programs which support DEA enforcement operations.

2. Continue with the upgrade of DEA's automated data processing systems to permit communication with other agencies and keep pace with increasing workload.
3. Complete the task to give DEA the ability to take current business processes and, through automation, reengineer these processes to allow the user to work more efficiently.
4. Complete the development and implementation of infrastructure that will provide DEA with a system that will permit that accessing, processing, and storage of both DEA Sensitive and Classified data.

FIREBIRD

DEA requests \$15.0 million for Phase II of the FIREBIRD project which will provide DEA Special Agents with the automated tools needed to effectively communicate with other law enforcement agencies, streamline burdensome report writing, and provide access to multi-agency law enforcement data bases. FIREBIRD's case management system significantly improves the efficiency of Special Agent investigations and will allow for the replacement of archaic manual reporting systems. FIREBIRD will save thousands of hours of data search time, costly mailing of case information, and eliminate duplicate written files.

This funding, in tandem with DEA's base FIREBIRD equipment resources, will purchase additional hardware and software, communications lines, and training, installation, maintenance, and other contract services.

DEA's mission is dependent on gathering and manipulating information critical to the pursuit of drug investigations. The requirement to analyze and share this information throughout DEA and with other law enforcement agencies has created a critical need for enhanced information systems. However, DEA's current outdated system does not provide the communications and processing capabilities needed to keep pace with the agency's increasing workload.

Volumes of enforcement and intelligence information are contained in DEA's investigative reports and other documents that cannot be effectively accessed or processed manually. FIREBIRD will bring together information from a variety of sources and give Special Agents and Intelligence Analysts the ability to quickly access and analyze this information, saving thousands of research hours which can be directed to further research, and produce products that will enhance the management decision process.

The estimated total cost of the FIREBIRD project is \$121 million. To date, the project has been funded primarily through DOJ's Working Capital Fund (WCF). DEA received \$27.4 million from the WCF in 1994 and \$12 million in 1995 for Phase I of the implementation. In addition, in 1996, DEA internally reallocated \$5,400,000 from its base to begin Phase II of FIREBIRD implementation.

When completed, Phase I of FIREBIRD will accomplish: 1) upgrade of the communications to the DEA Division offices; 2) automation of the DEA-6 and other investigative forms; 3) nationwide accessing of information in DEA's file room; (4) E-Mail between Headquarters and Division offices, (5) implementation of FIREBIRD in Headquarters and 19 division offices.

Phase II will bring FIREBIRD to the district and resident office level, posts of duty, overseas offices, El Paso Intelligence Center (EPIC), the Airwing, and the Office of Training. The requested amount of \$15.0 million plus the reallocated \$5.4million will provide DEA with \$20.4million towards implementing Phase II of FIREBIRD. With this funding, DEA will outfit the newly-established Caribbean Division and then complete each field division down to the post of duty level. As each division is

completed, the laboratories located within the geographical area of a division will be included in this installation process. In subsequent years, DEA will equip EPIC, the Airwing, the Office of Training, and finally, DEA's overseas offices. In addition, Phase II would provide additional funding for training, tailored to DEA's operations as well as enable DEA to develop applications specifically designed for the agency.

FIREBIRD will provide new services to DEA users through an agency-wide infrastructure; specifically, Special Agents will create, review, release, and update an electronic DEA-6. Special Agents and Intelligence Analysts across the country, and eventually around the world, will have the ability to search for and retrieve case information (including reports, photographs, and related materials) from the new electronic file room where DEA-6s and other investigative reports will be stored. With FIREBIRD, DEA personnel will be more productive, have better investigative information, and will be able to spend more time in the field.

FIREBIRD also gives DEA the ability to take current business processes and, through automation, reengineer these processes to allow the user to work more efficiently. The system provides the infrastructure for the development of customized data bases to eliminate isolated and redundant pools of information--created by individuals who have instituted their own data bases using a variety of software packages. These customized data bases would enable DEA users to query several information sources at once. This would save valuable time in responding to time-sensitive requests. Currently, this function does not exist in a standardized configuration throughout DEA.

Project MERLIN

DEA requests \$4.425 million for Project MERLIN which will provide critical intelligence information in support of investigations in a manner that is faster, more current, and more complete than is currently possible. MERLIN directly supports Intelligence Analysts in developing intelligence products--these products in turn enhance the analysts' ability to provide vital information to enforcement operations. The Intelligence Analysts will be able to devote more time to analytical tasks while the software applications perform the routine tasks of data retrieval, cataloging, and initial processing.

MERLIN, operating at the SECRET HIGH security level, provides tools which: reduce the time it takes to locate and analyze information; access and analyze collections of information to reveal patterns and trends; improve analysis of information to enable decision making; enable analysis not possible by manual or basic computer means; and, enhance the methods of producing and distributing reports.

The estimated total cost of Project MERLIN is \$28.5 million and DEA will use this system to support both domestic and foreign intelligence efforts. Currently, MERLIN provides DEA Headquarters and a few DEA field offices (Miami, Houston, and Los

Angeles) with advanced Intelligence Analyst workstations; these workstations provide the capability to transmit and share classified data over DEA's existing telecommunication network.

DEA is requesting \$4.425 million to continue development and deployment of MERLIN to other DEA offices. Of this request, \$1.6 million is needed for operating and engineering support. This support includes system administration, network administration, configuration management services, a DEA help desk, technical support of base line software configuration, hardware and software replenishment, and support to certification and accreditation activities. This is a recurring expense and should become part of the DEA budget base.

The remaining \$2.825 million is necessary to begin installation of MERLIN in the remaining 16 domestic offices and those district offices where FIREBIRD is installed. These funds will be used to procure hardware, software, and installation services for the new sites and make necessary physical alterations to satisfy MERLIN's security requirements. Additional workstations will be purchased (as funding permits) to provide the remaining Intelligence Analysts at the initial sites with MERLIN workstations.

If these requirements are not funded, FIREBIRD and MERLIN installation will slow to a crawl. Given the primary mission of these projects (i.e., to serve as a platform for future cooperative law enforcement), DEA's ability to readily share information and function interactively with the law enforcement community could be seriously affected. Furthermore, DEA will be forced to maintain costly duplicative computer systems and technical support contracts, costing millions of dollars unnecessarily.

Aircraft Replacement Base. DEA requests \$1.0 million to increase DEA's aircraft base for replacing aging aircraft.

By 1998, the average age of single-engine aircraft in DEA's fleet will be over 19 years old. The older the aircraft is, the more costly it is to operate and the less dependable and productive the aircraft will be. In 1997, Congress approved a \$1 million replacement base for aircraft. This request seeks to bring the replacement base to a total of \$2 million. It is critical that DEA replace aging aircraft in order to ensure a safe and efficient fleet capable of meeting changing mission demands.

DEA currently has 35 single-engine fixed wing aircraft in its fleet. All of these aircraft are over 10 years old and a total of 12 of them are over 20 years old. Historically, single-engine fixed wing aircraft over 10 years old cost DEA more and fly less

than the same type aircraft that are less than 10 years old. For example, in 1995, single-engine fixed wing aircraft greater than 10 years old cost DEA an average of \$248 more per hour to operate and flew 138 less hours than aircraft less than 10 years old.

DEA also has a total of 24 single-engine helicopters in the fleet. A total of 21 are over 10 years old and 15 are over 20 years old. Single-engine helicopters over 10 years old cost DEA an average of \$366 more per hour to operate and fly an average of 90 hours less per year.

Another factor that cannot be overlooked in the fact that one-third of DEA's aircraft are seized from drug traffickers. When DEA seizes an aircraft, maintenance records are only available 50 percent of the time. Even when records are available they are not always reliable. Due to the nature of their business, drug traffickers are often willing to take chances with their aircraft that DEA would not take. This can cause the aircraft to be subjected to conditions and stresses that could further limit the life of the aircraft.

A total of \$2 million would allow DEA to replace one single-engine helicopter or eight single-engine fixed wing aircraft. With the \$1 million DEA received in 1997, DEA needs an additional \$1 million to establish an adequate replacement base. By 1998, the average age of single-engine aircraft in DEA's fleet will be over 19 years old. The older the aircraft is, the more costly it is to operate and the less dependable and productive the aircraft will be. In 1997, Congress approved a \$1 million replacement base for aircraft. This request seeks to bring the replacement base to a total of \$2 million. It is critical that DEA replace aging aircraft in order to ensure a safe and efficient fleet capable of meeting changing mission demands.

(Also see narrative outcome)							
A. Definition of Terms or Explanation for Indicators							
The statistics reported in the 1998 Congressional Budget submission may not match with those statistics reported above. This is due to differences in statistical definitions and reporting times.							
¹ Represents total PEPI dollars expended by foreign offices. FY 1996, 1997, and 1998 PEPI are estimates based on the 1998 Spring Call. FY 1994 PEPI was not identified by decision unit at this time. FY 1996 PEPI is an estimate based on FY 1995 actual usage per object class breakout study.							
² Reduction in FY 1996 of 30 FTE as a result of conference mark.							
³ Includes the establishment of new offices in Moscow, Pretoria, South Africa, & Managua, Nicaragua in FY 1997.							

FOREIGN COOPERATIVE OPERATIONS NARRATIVE OUTCOME

DEA's foreign cooperative operations have had a tremendous impact against drug trafficking in foreign countries throughout the world. Below are recent examples of foreign cooperative operations.

Foreign Cooperative Investigations

Bogota: Operation Selva Verde is a cooperative, bilateral operation between DEA's Bogota Country Office and the Colombian National Police (CNP) Anti-Narcotics Unit. The primary purpose of this operation is to locate and destroy clandestine laboratories, airstrips and storage sites. A secondary purpose is to form a strong narcotics intelligence and operational alliance between DEA and the Government of Colombia. This operation has been extremely successful. The Bogota Country Office assists the CNP in developing and managing sources of information, as well as debriefing and making payments to these individuals. In addition, DEA provides aircraft and the Air Intelligence Group as aerial intelligence platforms to support this program.

During 1996, four major cocaine hydrochloride (HCL) laboratory sites were identified and destroyed--three of the sites were destroyed by the CNP in cooperation with the Bogota Country Office in Operation Selva Verde. The fourth site consisted of an HCL laboratory and a separate stand alone large chemical synthesis complex. This fourth laboratory site was identified and destroyed by the Colombian Army after a site visit by DEA.

Costa Rica: In October, 1996, information was developed by DEA and the Organization of Judicial Investigation on a group of Costa Rican and Colombian traffickers smuggling cocaine from Barranquilla to Costa Rica. An intercept determined that approximately 300 kilograms of cocaine had already arrived in Costa Rica by vessel. After arresting the main suspect and searching his residence, a warehouse was located revealing 389 kilograms of cocaine as well as a semi tractor trailer truck and a tanker with Guatemalan tags. The tanker had a concealed compartment which could only be accessed when the tanker was empty. The tanker had brought a load of soap from Panama and unloaded it at the warehouse. Once the compartment was loaded with cocaine, the soap would surround the compartment to conceal the cocaine.

**FOREIGN COOPERATIVE OPERATIONS
NARRATIVE OUTCOME**

DEA's true measure of the effectiveness of its overseas mission can be demonstrated in the way it conducts the following operations:

- Conducts bilateral investigations;
- Coordinates intelligence gathering overseas;
- Engages in foreign liaison;
- Coordinates training programs for host country police agencies;
- Assists in development of host country drug law enforcement institutions.

ORGANIZATIONAL GOAL 2: Reduce the availability of illicit drugs in the United States and disrupt and dismantle drug trafficking organizations through DEA's drug related investigations conducted in conjunction with its State and Local Task Force program ¹

End Outcome (Also see Narrative Outcome)							
A. Definition of Terms or Explanation for Indicators							
The statistics reported in the 1998 Congressional Budget submission may not match with those statistics reported above. This is due to differences in statistical definitions and reporting times.							
¹ Statistics for SL Cooperative and Mobile Enforcement Teams are under Goal #1 ² SL Task Force data are for all official task force, both program funded and provisional ³ FY 1995 FTE reflects two reprogrammings and a conference mark increase of 178 FTE positions. In FY 1997 all FTEs transferred to the Violent Crime Reduction Program ⁴ Represents total PEPI dollars expended by SL Task Force offices. FY 1994 PEPI not available. FY 1996, 1997, and 1998 PEPI are estimates based on the FY 1998 Spring Cell ⁵ FY 1994 and FY 1995 totals are estimates, since no reliable records exist for these years [*] No enhancements for the SL Task Force Program in either FY 1997 or FY 1998							

**STATE AND LOCAL TASK FORCE PROGRAM
NARRATIVE OUTCOME**

Expansion of Jurisdiction: Since State and local agents participating in DEA task forces are deputized to perform the same functions as DEA agents, their jurisdictional boundaries are expanded. Without this deputization, state and local law enforcement officers find that their jurisdiction to investigate drug cases stops abruptly at their state, county, or city borders. This expanded jurisdiction is imperative in investigating narcotics cases because drug dealers know no boundaries.

Shared Intelligence: The information shared by the federal, state, and local investigators is crucial to a successful drug investigation. Local drug agents know their communities--the dealers, their methods, their hangouts. Combining this local knowledge with DEA's broader expertise in drug investigations produces positive results: often an area's drug agents--federal, state, and local--each hold a piece of the intelligence puzzle, and sharing these puzzle pieces can more quickly produce a complete picture.

- In one example of cooperative law enforcement, from 1991 to 1992, DEA worked with the Savannah, Georgia, Police Department; Chatham County Metro Drug Squad; the Bureau of Alcohol, Tobacco, and Firearms (ATF); the Internal Revenue Service (IRS); and the U.S. Marshals Service to arrest members of the Ricky Jivens organization, a violent drug trafficking gang. The investigation revealed that high-level members of the organization were required to commit murder as an initiation rite to secure their positions in the gang. Video surveillance recorded Jivens telling an informant to murder "any" person, regardless of their connection to the gang. The task force collected evidence to aid in prosecuting at least seven homicides, as well as thwarting widespread drug-related violence by causing the indictment of eighteen gang members. Several gang members were indicted and the organization leader, Jivens, was sentenced to life imprisonment and a \$1 million fine.

Experience Gained/Training: Bringing together all levels of law enforcement enhances training and provides invaluable experience to law enforcement. Most law enforcement agencies have few dollars to spend on training, and therefore most training is received on the job. Researching a criminal history, tracking down leads, analyzing pen registers, preparing a case with an Assistant United States Attorney, identifying drugs, prices and trends--these are all skills learned more quickly when an experienced officer works closely with a new officer. Task forces bring together groups of officers with a variety of expertise, such as knowledge of Organized Crime or established Confidential Informants, making cost-effective use of their knowledge.

Coordination: Relationships formed by DEA State and Local Task Forces facilitate coordination. During an undercover drug buy, it is not unusual for a local Task Force Officer to communicate with a marked police car, telling the car to leave the area. Surveillance assistance is another benefit of a close association of federal, state, and local officers. Many times a subject of surveillance is observed with an unidentified person. Rather than reveal the surveillance, a local Task Force Officer can quickly call in a traffic officer, who then makes a routine stop of a vehicle and subtly identifies the person.

Coordination also prevents duplication of effort, thus saving countless dollars. When drug agents get together to coordinate activities, they frequently find that several different agencies have been investigating the same dealers and can then make more efficient use of their time and resources.

Asset Forfeiture: Participating in joint operations allows State and local law enforcement to share equitably in assets seized from drug dealers. During FY 1992, State and local law enforcement received approximately \$230 million in forfeited cash and \$12.5 million in tangible property from Federal forfeitures. With law enforcement resources scarce, these equitably shared funds go far in fighting crime at all levels.

Sometimes a seizure benefits the entire community. Atlanta's State and Local Task Force seized 35 acres of property in the heart of the city, appraised for \$538,500, and seized an additional \$73,579 in cash. The United States Attorney and DEA's Special Agent-in-Charge agreed that because of the property's beauty and rarity, they should find an alternative to selling it. Although the task force agreement provided that the proceeds from seizures would be shared equally among the twelve state and local agency task force participants, all twelve agencies waived their rights to the property. After several months of planning and negotiation, title to the property was transferred to the Georgia Sheriff's Youth Homes, a non-profit organization sponsored by the Georgia Sheriff's Association. The Youth Homes will provide drug education to children, sponsored by each of the 12 Task Force agencies through a summer camp program. Nature trails and a nature science center will also provide education to children from schools within the 12 jurisdictions.

Increases (Automatic, non-policy)

1998 Pay Rate	-	-	1,899
---------------	---	---	-------

This request provides for the proposed 2.8 percent pay raise to be effective in January of 1999 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$1,899,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$1,447,000 and \$452,000 for benefits = \$1,899,000).

Annualization of 1997 pay raise

	-	-	131
--	---	---	-----

This pay annualization represents first quarter amounts (October through December) of the 1997 pay raise increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$131,000, represents the pay amounts for the first quarter of the year (\$100,000 for pay and \$31,000 for benefits).

**Drug Enforcement Administration
Construction Program**

Summary Statement

DEA is requesting \$5.5 million to fund the replacement of five of its eight regional laboratory facilities.

DEA's forensic laboratories provide critical operational and analytical support to drug law enforcement at the State, local, Federal and international level. These existing facilities no longer meet DEA's operational requirements and are severely overcrowded. Furthermore, because these laboratories do not meet Occupational Health and Safety Administration (OSHA), Environmental Protection Agency (EPA), and other Federal, State and local health and safety requirements, DEA is being forced to operate at an unacceptably high level of liability risk. This non-compliance with the law could make DEA subject to potentially expensive civil suits from laboratory employees who develop health problems that can be attributed to an unhealthy working environment.

DEA can not afford to enter into leases in substandard facilities that do not meet standard laboratory design criteria and the agency's requirements for the health and safety of its employees. This crisis will only continue to accelerate with the passage of time. Failure to improve the laboratory facilities could ultimately affect the ability of the laboratories to provide high quality, timely, and effective support to enforcement operations and the long lead time required to relocate facilities mandates that urgent attention be given to this problem now. These laboratory facilities to be replaced include the following: the Southwest Laboratory (San Diego); the Mid-Atlantic laboratory (Washington, D.C.); the Southeast Laboratory (Miami); the Special Testing and Research Laboratory (McLean, VA); and the Western Laboratory (San Francisco).

DRUG ENFORCEMENT ADMINISTRATION

DEA Construction
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates includes proposed changes in the appropriation language listed and explained below. New language is underscored.

DEA Construction

For necessary expenses to construct or acquire buildings and sites by purchase, or as otherwise authorized by law (including equipment for such buildings); conversion and extension of federally-owned buildings; ad preliminary planning and design of projects; \$30,806,000 to remain available until expended. \$5,500,000

Department of Justice Appropriations and Related Agencies Act, 1997: 104-208 (approved September 30, 1996; 110 STAT 3009.)

Explanation of Changes

- 1. The first change reflects a decrease in authority for the DEA Training Center.
- 2. The second change reflects an increase in authority for the restoration and upgrade of DEA's laboratory facilities.

**Crosswalk of 1997 Changes

Mission: To improve the efficiency and productivity of DEA drug investigations by providing for the reconstruction of existing DEA laboratory facilities.

Organizational Goal:

1. To enhance the quality of laboratory operational support provided to DEA and other Federal, State and local law enforcement agencies.
2. To improve the working conditions of DEA laboratory personnel by providing for environmentally safe and structurally sound laboratory facilities.

**Drug Enforcement Administration
Construction
Justification of Program and Performance

ACTIVITY: CONSTRUCTION

Laboratory Reconstruction	Perm. Pos.	FIE	Amount
1997 Appropriation	\$30,806
1998 Base	\$ 1,500
1998 Estimate	\$ 5,500
Increase/Decrease	\$ 4,000

LONG RANGE GOAL: To ensure that DEA's forensic drug laboratories meet all operational requirements and provide its employees with a safe and healthy work environment.

BASE PROGRAM DESCRIPTION: The DEA Construction appropriation provides resources for a multi-year project to reconstruct at least five of the agency's deteriorating laboratory facilities. DEA has eight forensic drug laboratories with unique requirements in terms of physical design and layout for conducting analysis of drug evidence. The labs provide a key service of timely analysis of drug evidence produced by field agents of the DEA, Federal Bureau of Investigation and other Federal law enforcement agencies. However, at least five of the eight laboratories are facing severe space shortages, lease expirations and environmental conditions that pose health risks. Failure to improve these facilities could adversely affect the ability of the laboratories to provide quality, timely and effective support to enforcement operations and subsequent prosecution efforts.

DEA and the Army Corps of Engineers awarded a contract with an Architectural/Engineering (A&E) firm during September 1995 (at a total cost of \$5.5 million), for each of the five identified laboratories to provide laboratory design and construction documents. The construction documents will be completed by mid 1997.

DEA is currently working on an agreement with GSA and the Army Corps of Engineers which, after completion of the required A&E designs, provide DEA with state-of-the-art laboratory facilities and a 20-year lease. The actual construction costs of the facilities would then be paid to GSA through rent. This plan would allow DEA to avoid having to submit a one-time laboratory construction request to the Department of Justice for each of the five laboratories, which could cost as much as \$65.0

million. In addition, the GSA leasing arrangements would allow DEA to purchase any of the five facilities over the course of the individual 20-year leases.

The facilities would be designed to house chemical laboratories meeting OSHA and EPA requirements, construction code, and adopted consensus standards for laboratory ventilation to ensure the health and safety of DEA laboratory employees. Following the GSA rental plan, DEA would be responsible for any above standard construction associated with the building of the facilities, construction supervision costs for the Corps of Engineers, furniture and furnishings for the facilities, security, telephones, and any additional rent costs associated with operation of the laboratories. This project cannot be delayed without significant risk affecting the health and safety of DEA laboratory staffs.

INITIATIVE 1

Laboratory Construction Initiative
Laboratory Services

Pos.	EIE	Amount (\$000)
0	0	\$4,000

Proposed Actions

This initiative seeks to address the following objective:

1. To ensure that DEA's forensic drug laboratories meet all operational requirements and provide its employees with a safe and healthy work environment.

DEA requests \$4,000,000 to begin priority replacement of its aging, obsolete forensic laboratory facilities.

DEA's forensic laboratories provide critical operational and analytical support to drug law enforcement at the State, local, Federal and international level. Stationed throughout the United States, DEA's forensic chemists and fingerprint specialists are responsible for a wide variety of highly specialized and unique missions that include: analysis of drug evidence; forensic expert testimony in court; on-site field assistance for clandestine laboratory operations; and drug signature analyses. DEA must perform these mission-critical functions in order to effectively support prosecution efforts and to safeguard the health and safety of potentially at-risk law enforcement personnel.

Management of the forensic laboratory program requires the continual, annual purchase of millions of dollars worth of technical and scientific equipment and, of course, the maintenance of eight highly specialized forensic laboratory facilities located throughout the United States. These laboratories provide drug analytical support on a geographic, regional basis and are essential to DEA operations.

Unfortunately, however, factors such as lease expirations, severe space shortages, and poor environmental conditions require the replacement and relocation of at least five of DEA's eight forensic laboratories by 2001. These laboratory facilities include the following: the Southwest Laboratory (San Diego); the Mid-Atlantic Laboratory (Washington, D.C.); the Southeast Laboratory (Miami); the Special Testing and Research Laboratory (McLean, VA); and the Western Laboratory (San Francisco).

DEA's Laboratory Facilities No Longer Meet Operational Requirements

Most of DEA's eight forensic laboratories were designed in the late 1960's or early 1970's and thus no longer meet DEA's ever increasing operational requirements. Twenty years worth of growth in chemist staffing, the expansion and evolution of program responsibilities, and increasing amounts of essential laboratory equipment have generated space requirements that DEA's current facilities simply can not meet. Unfortunately, the results of this overcrowding have had a debilitating effect on DEA's laboratory program.

DEA forensic chemists, many of them acknowledged leaders in their particular fields of expertise, are working in cramped, confining areas crammed with analytical equipment, glassware, chemicals, solvents and drug evidence. Hallways in these facilities have become more like obstacle courses filled with equipment, old furniture and/or supplies, hindering movement and significantly affecting employee morale. Conference rooms have been eliminated and offices have even been created in stairwells as more and more chemist work space has been sacrificed to make room for additional staffing, vital laboratory instrumentation and drug/evidence storage. The current overcrowding situation experienced in these facilities increases the chance of unnecessary accidents and makes it more difficult to safeguard the integrity of evidence. **Pictured below are examples of the current environment for employees working in these obsolete facilities.**

In fact, the space conditions of these laboratories have now reached the crisis level and DEA may soon no longer be able to accommodate the much-needed chemist staffing increases, drug/evidence storage or new equipment required to keep up with the increasing demands of drug law enforcement. The following is a short synopsis of specific deficiencies and needs of each of these facilities.

Southwest Laboratory: Located in San Diego, California, this laboratory space has been occupied since June 1976 and there is currently insufficient space to properly accommodate the laboratory's chemist, and support staff. The current lease expired on this facility on October 31, 1996 and the General Services Administration is currently negotiating an extension of the lease. Overcrowding, outmoded ventilation, deteriorating facility infrastructure, poor facility design and Federal property management regulations render relocation of this facility as the most feasible alternative.

Mid-Atlantic Laboratory: Located in Washington, D.C., this laboratory space has been occupied by DEA since October 1971. The facility was originally configured to accommodate the needs of 25 chemists and is presently staffed beyond capacity. A prospectus development study of facility space requirements was performed by GSA in 1991 and indicated the need to expand the laboratory to approximately 40,000 square feet of space. The current lease on this facility expired in October 1994 and the extension on the property granted by GSA expires on March 31, 1997. Overcrowding, outmoded ventilation, deteriorating facility infrastructure, poor facility design and Federal property management regulations render relocation of this facility as the most feasible alternative.

Southeast Laboratory: Located in Miami, Florida, this laboratory space has been occupied since June 1977. The laboratory is located within the same office complex as DEA's Miami Field Division, occupying the entire second floor (17,000 square feet) of a two story building. The building also houses components of the Bureau of Alcohol, Tobacco and Firearms, as well as an armed forces recruiting office. Expansion space is only available through the displacement of non-DEA entities. The lease on the property expires May 31, 1997. Overcrowding, outmoded ventilation, deteriorating facility infrastructure, poor facility design and Federal property management regulations render relocation of this facility as the most feasible alternative.

Special Testing and Research Laboratory: Located in McLean, Virginia, this facility has been occupied since October 1972. The current lease on the facility expires October 31, 1997. Increased program demands, special operations and mandated initiatives have severely impacted the available space and existing facility infrastructure. Overcrowding, outmoded ventilation, deteriorating facility infrastructure, poor facility design and Federal property management regulations render relocation of this facility the most feasible alternative.

Western Laboratory: Located in San Francisco, California, this laboratory has been occupied by DEA since February 1989. Space is currently leased under a memorandum of agreement in a U.S. Post Office building. The facility encompasses approximately 15,000 square feet of space, and although comparatively new, it has already exceeded its staffing capacity with no additional space for chemists. A heightened awareness of safety and health issues and overcrowding require a review of the existing space to determine whether on-site expansion is feasible or relocation is necessary.

The Current State of DEA's Forensic Laboratories Raises Significant Health, Safety, and Liability Issues

DEA can not afford to enter into leases in substandard facilities that do not meet standard laboratory design criteria and the agency's requirements for the health and safety of its employees.

As an alarming example of the poor conditions of these facilities, DEA chemists in a majority of the eight laboratories are now exempt from the mandatory agency-wide drug testing program because of poor work station design and inadequate air handling/ventilation systems. DEA chemists are, on a daily basis, breathing air containing improper amounts of potentially hazardous substances ranging from illegal drugs to chemical solvents. Ideally, chemical laboratories should have 10 to 15 air changes per hour and provide for the use of fume hoods when working with potentially toxic substances. Unfortunately, in DEA's current facilities, the limited space between the ceiling and floor (or roof) above constrains the ability to install and service heating, ventilation and air conditioning (HVAC) equipment and duct work, electrical power lines, and other utilities. In other words, refurbishment of the existing laboratories to bring DEA in full compliance with current health and safety regulations is impossible in the existing facilities.

Various studies on laboratory design including, *Guidelines for Laboratory Design Health and Safety Considerations* (1987); *Safe Laboratories: Principles and Practices for Design and Remodeling* (1991); *OSHA Laboratory Standard 29 CFR Part 1910*; and, the *ASHRAE Standard for Acceptable Indoor Air Quality*, clearly reflect the necessity for lower chemical exposure limits and proper confinement of hazardous materials in forensic laboratories. DEA has, in recent years, attempted to confront current health and safety related concerns within the existing laboratory system through a variety of avenues, including the modification of current HVAC systems. Such efforts have proven to be piecemeal attempts to address a crisis that can only rightly be corrected through expensive, long-term facility reconfiguration, or in most cases, new laboratory construction.

The current laboratory crisis faced by DEA will only continue to accelerate with the passage of time. Failure to improve the laboratory facilities could ultimately affect the ability of the laboratories to provide high quality, timely, and effective support to enforcement operations and the long lead time required to relocate facilities mandates that urgent attention be given to this problem now.

New Laboratory Facilities Are The Key

Modern, state-of-the-art facilities will provide DEA's highly skilled and specialized chemists with a healthy, safer work environment and promote more efficient use of DEA's analytical resources. The new laboratory facilities will be designed to provide the following benefits: 1) accommodate workstations that allow chemists and fingerprint specialists to do their desk work outside of the chemical environment; 2) prevent contamination of reports and records; 3) avert passive inhalation; 4) provide the necessary number of fume hoods in which to do chemical analysis safely; and 5) come equipped with modern HVAC systems that supply fresh filtered air at standard laboratory ventilation rates. Pictured below is an example of what a state of the art facility that meets all operational requirements in terms of space, health, safety and environmental conditions.

Work On These New Laboratories Has Already Begun

DEA and the Army Corps of Engineers awarded a contract with an Architectural/Engineering (A&E) firm during September 1995 (at a total cost of \$6.5 million), for each of the five identified laboratories to provide laboratory design and construction documents. The construction documents will be completed by mid 1997.

DEA is currently working on an agreement with GSA and the Army Corps of Engineers which, after completion of the required A&E designs, provide DEA with state-of-the-art laboratory facilities and a 20-year lease. The actual construction costs of the facilities would then be paid to GSA through rent. This plan would allow DEA to avoid having to submit a one-time laboratory construction request to the Department of Justice for each of the five laboratories, which could cost as much as \$65.0 million. In addition, the GSA leasing arrangements would allow DEA to purchase any of the five facilities over the course of the individual 20-year leases.

The facilities would be designed to house chemical laboratories meeting OSHA and EPA requirements, construction code, and adopted consensus standards for laboratory ventilation to ensure the health and safety of DEA laboratory employees. Following the GSA rental plan, DEA would be responsible for any above standard construction associated with the building of the facilities, construction supervision costs for the Corps of Engineers, furniture and furnishings for the facilities, security, telephones, and any additional rent costs associated with operation of the laboratories.

The chart below depicts DEA's estimates for the cost of these facilities.

Laboratory Replacement - 3 Year Cycle Cost Estimates	
Above Standard Construction (Ⓔ \$1.95 million per facility)	\$9,750,000
Construction Management Costs (Ⓔ \$520,000 per facility)	\$2,600,000
Furniture, Furnishings, Telephones & Security (Ⓔ \$1,800,000 per facility)	\$9,000,000
Total Cost	\$21,350,000*
*This figure may be ultimately increased to a total cost of \$25,620,000 when DEA replaces the South Central laboratory facility in Dallas, Texas.	

DEA's forensic laboratory program is a vital link in the chain of successful, effective drug law enforcement. This funding is necessary to provide its highly trained and specialized chemist workforce with a safer, more efficient place to work.

DRUG ENFORCEMENT ADMINISTRATION
Drug Diversion Control Fee Account

Summary Statement

DEA's Drug Diversion Control Program is responsible for control of diversion, distribution, manufacture, and abuse of legitimate pharmaceuticals, and serves as a resource base for states and other agencies on drug distribution and abuse patterns. The Comprehensive Drug Abuse and Prevention and Control Act of 1970 (Public Law 91-5132) (CSA) authorizes DEA to enforce the law as it applies to the registration of handlers of controlled substances. The program also serves as a resource center for the international monitoring and control of legitimate pharmaceuticals.

The purpose of the Drug Diversion Control Program is to prevent, detect, and investigate the diversion of controlled substances from legitimate channels, while ensuring that there is an adequate and uninterrupted supply of controlled substances required to meet legitimate needs. This is accomplished through periodic, pre-registrant and criminal investigations, registrations, drug scheduling, establishing manufacturing quotas, voluntary compliance, state assistance, industry liaison and associated support programs. Additionally, DEA has responsibility for adhering to the United States international treaty obligations through activities with the United Nations, the Customs Cooperation Council, Interpol, and other international drug control organizations, as well as for government officials involved in drug control.

DEA annually registers in excess of 880,000 drug handlers, of which 1,670 are manufacturers, distributors, importers, exporters, and others handling large volumes of controlled substances. The Drug Diversion Control Program will focus on improving customer service by providing a 1-800 telephone service this year.

Preventing the diversion of controlled substances from legitimate channels of drug distribution is a cooperative effort between Federal and state governments. DEA has primary responsibility for enforcing the provisions of the CSA as it relates to all non practitioner registrants. DEA also targets any registrant violator who meets established criteria. DEA will reinstate the Drug Diversion Investigative Units (DIUs) this fiscal year as a means to focus diversion control efforts at the State and local level. In the past, this has served to increase arrests, while decreasing the cost per arrest.

Intergovernmental liaison for planning and coordination is necessary for criminal prosecutions and civil actions, for reciprocal development and exchange of leads with the Food and Drug Administration, the National Institute on Drug Abuse, the Federal Bureau of Investigation, the Department of State, the Internal Revenue Services, the U.S.

Customs Service, the Department of Defense, the Department of Veterans Affairs, and respective state and local law enforcement and regulatory agencies.

The Drug Diversion Control Program will also establish a National Forensics Laboratory Information System (NFLIS). This will be the first national data base focused on collecting information from drug evidence analysis associated with criminal activity. The collection of accurate and scientifically validated data concerning abuse of controlled substances and scientific review of actual or potential drugs of abuse is a necessary function for scheduling controlled substances, setting quotas for manufacturing levels, and providing leadership in establishing drug policy under the CSA.

Pursuant to the Appropriations Act of 1993, CSA registration fees were increased in 1993 by a factor of 3.5 to recover the entire cost of the program beginning in 1994. DEA will not raise the fees in 1997.

Mission:

DEA has been delegated responsibility for control of diversion, distribution, manufacture, and abuse of legitimate pharmaceuticals, and serves as a resource base for states and other agencies on drug distribution and abuse patterns. The Comprehensive Drug Abuse and Prevention and Control Act of 1970 (Public Law 91-6132) (CSA) authorizes DEA to enforce the law as it applies to the registration of handlers of controlled substances. The program also serves as a resource center for the international monitoring and control of legitimate pharmaceuticals.

The purpose of the Drug Diversion Control Program is to prevent, detect, and investigate the diversion of controlled substances from legitimate channels, while ensuring that there is an adequate and uninterrupted supply of controlled substances required to meet legitimate needs.

Organizational Goal: Prevent legitimately produced controlled substances from being diverted into illicit channels.

Major Objectives:

1. Conduct investigations of suspect practitioners and evaluations of registrant qualifications.
2. Enforce all provisions of the CSA and the Anabolic Steroid Control Act (ASCA) through criminal and regulatory investigations as well as civil actions.
3. Assess the ability of the states to control diversion and assist them in their drug diversion control efforts.
4. Identify all new substances which are being abused or have abuse potential, determine their placement in the appropriate CSA schedule and establish manufacturing quotas.
5. Respond in a timely fashion to all requests concerning drug control issues and import/export data.
6. Register all legal handlers of controlled substances.
7. Continually monitor the closed system of distribution of licitly manufactured controlled substances.

There are approximately 911,000 handlers of controlled substances. DEA considers each registrant as a potential source of diversion; however, most diversion activities entail audits at the practitioner and retail pharmacy level.

Drug Diversion Control			
1997 Availability ¹	598	594	\$87,824
1998 Base	598	594	54,447
1998 Estimate	635	613	58,268
Increase/Decrease	37	19	3,821

BASE PROGRAM DESCRIPTION: In compliance with United States law and international treaty obligations, the Office of Diversion Control advises DEA management on all matters pertaining to the formulation, direction, and coordination of worldwide programs associated with the diversion of legally produced controlled substances. To include the following:

Criminal Diversion Investigations: DEA identifies the highest level violators responsible for large scale diversion and conducts high quality, timely criminal investigations of their diversion activities.

Public Interest Revocation Investigations: DEA may deny an application for registration, revoke or suspend registration if it is determined that it would be inconsistent with the public interest.

CSA Mandated Cycle Investigations: DEA conducts investigations that ensure diversion does not occur at the manufacturer, distributor, or wholesale level.

¹Due to limitations within the Budget Enforcement Act of 1990, DEA's Drug and Chemical Diversion Control Decision Unit in the Salaries and Expenses budget includes \$15,000,000 (registration fee related) for costs associated with drug diversion control. As these funds are annually transferred to the Drug Diversion Control Fee Account, the amount is included in the 1997 Availability but not the 1998 Base reflected above.

Pre-registrant Investigations: DEA ensures that only qualified individuals or companies are authorized to acquire or dispense controlled substances.

State and Local Assistance: DEA assesses state programs aimed at suppressing the diversion of controlled substances from scientific, medical research, and legitimate distribution channels. In addition, the State Assistance Program provides expertise, leadership, and guidance to the states consistent with national objectives.

Significant Investigations

Illicit Distribution by Physician in Western Pennsylvania: The physician who had been the subject of a four-year investigation by the Cambria County District Attorney's office, the Pennsylvania Attorney General's Office of Medicaid Fraud, and DEA's Pittsburgh Diversion Group entered a plea of guilty to four counts of illicit distribution of controlled substances and one count mail fraud. The doctor admitted devising a scheme to defraud the state by seeing Medicaid patients, failing to provide any medically necessary service, and then billing the Department of Public Welfare for the visits. In addition, the doctor was providing local exotic dancers with Adipex and Vicodin without a legitimate medical purpose and engaged in "sex for drugs" exchanges with at least two female patients. The doctor paid \$13,600 in fines and is facing potentially 21 years in jail.

Georgia Physician Fined \$1 Million: A prominent physician in Adel, Georgia, was sentenced in Federal Court to five years of imprisonment to be followed by three years of supervised probation. He was further ordered to pay the court an immediate \$1 million criminal fine and surrender both his DEA certificate of registration and his medical license. The pharmacist who had collaborated with him, and had stolen drugs to support her habit was fired from her job and lost her license pending rehabilitation. The physician had violated the drug laws in a series of sexual escapades involving a handful of women, some of whom were minors, in exchange for drugs. Before he plead guilty, the government identified 84 incidents in which the physician had falsified drug records over a period of two years. His conviction resulted from a joint investigation conducted by DEA's Atlanta Division and the Georgia Drug and Narcotics Agency.

Registration Population

At present, DEA's registrant population totals 911,446: 393 manufacturers, 977 distributors, 173 exporters, 85 importers, and 985 narcotics treatment programs were designated as "Type B" registrants. The remainders are "Type A" registrants, which includes physicians, veterinarians, pharmacists, and other practitioners. The following table reflects some statistics of the Regulatory Support program:

REGULATORY SUPPORT PROGRAM	1994 Actual	1995 Actual	1996 Est.	1997 Est.	1998 Est.

DOI - 544 (all other drugs)	1	\$5,040	\$180,000		\$22,640

Description of the Drug Oriented Investigations

The following information is provided about the DOIs that are reflected in the chart on the previous page:

DOI-511: DOI-511 was established to coordinate intelligence and enforcement efforts against retail diversion of Dilaudid nationwide. Dilaudid, a synthetic, morphine-like substance, is considered the most powerful prescription pain killer sold today. There exists a drug culture that is strictly composed of Dilaudid addicts. Due to the demand for the short-acting but potent narcotic, current street prices have been and continue to be as high as \$70 per four milligram tablet. The diversion of this highly addictive drug occurs primarily at the retail level through over-prescribing by unscrupulous physicians and dispensing pharmacists with similar unprofessional motives. Doctor shopping, thefts, and forged prescriptions passed by sophisticated rings account for a large portion of the diversion.

DOI-538: Over the past few years, since DEA's enforcement and regulatory efforts of the Anabolic Steroid Control Act have become well known, a new trend has gradually emerged. Today almost all of the diverted steroids encountered in the illicit market originated from a foreign source, primarily Europe and Mexico. Further, it is now common to find cocaine and marijuana dealers selling steroids as well. DOI-538 continues to be productive and to date has resulted in 174 arrests and the seizure of cash and real property valued in excess of \$922,000.

DOI-544: DOI-544 was established to encompass all prescription drugs other than Dilaudid, Steroids, or Methadone. - There exists a certain population within the drug abusing communities that prefer and traffic in prescription drugs. Methods of diversion include excessive prescribing or dispensing of these drugs by doctors or pharmacists, forged prescriptions, doctor shopping, and theft. More recently, trafficking of Rohypnol (Flunitrazepam) has become a significant problem through smuggling and declaring the drug for personal use. As a result of DOI-544, cash, real property, and other items valued in excess of \$200,000 and 5,800 dosage units have been seized.

DOI-567: DOI-567 was established in Fiscal Year 1996 to provide funding for large-scale investigations of methadone diversions. While the primary intent is to investigate narcotic treatment programs committing diversion or fraud, a secondary objective is to evaluate factors which contribute to diversions from narcotic treatment programs. Diversions occur primarily from take-home doses of clients enrolled in narcotic treatment programs. The average price is \$1 per milligram, but street prices as low as sixty cents per milligram have been seen in large cities where there is greater availability. There are currently four investigations underway.

INITIATIVE 1

Perm. Pos.	FTE	Amount
4	2	\$1,210

Industry Support Improvement Program

Proposed Actions

This Initiative seeks to address the following objectives:

1. Provide improved customer service to the industry by upgrading the Automation of Reports and Consolidated Orders System (ARCOS).
2. Engineer current business processes using state-of-the-art technology to improve the collection of data and transfer of information.
3. Ensure that DEA's Drug Diversion oversight role remains responsive and effective.

DEA requests \$1.2 million and 4 positions (2 Program Analysts, 1 Information Resource Specialist, and 1 Computer Specialist) in order to upgrade the technology of the ARCOS/CSA registration systems and other databases/systems used by the Drug Diversion Control Program. The funding provides \$246,960 for personnel costs, and \$963,000 for contractor support, hardware, software, and equipment costs to upgrade DEA technology to keep pace with the technology used by the regulated industry.

Current Data Collection Methods are Obsolete

The Office of Diversion Control interacts with the health care industry in controlling, managing and monitoring the distribution of legal drugs throughout the United States. This involves transaction reporting related to drug distribution, movement, and use requiring continuous interaction with industry. This interaction has been performed using methods, processes, and technology which are rapidly becoming obsolete and inefficient. DEA's outdated methods of data collection place a huge burden on the industry and the registrants by hampering their ability to comply with current reporting requirements. Consistent with the National Performance Review, DEA's Drug Diversion Control Program has undertaken a business process re-engineering of the Controlled Substances Act System operation and other processes within the Program.

This initiative will allow for an evolutionary change in the Drug Diversion Control Program technology base, as well as implement needed process improvements both within the organization and its relationship to industry. The evolutionary process will contain five major elements: 1) upgrade the current mainframe-based ARCOS system to a database operation, 2) implement data/information structures which move the organization's files closer to effective electronic information distribution and control, 3) establish work flow processes which realign past methods into more effective future processes, 4) integrate functions across the organization, and 5) establish an electronic interchange with registrations for fee submission, registration processes, and transaction reporting in the movement of legal drugs throughout the United States.

The process of maintaining and upgrading the ARCOS/CSA and registration systems has been ongoing for a number of years. The program funds (\$963,000), requested in FY 1998 will upgrade the ARCOS system to a database operation, and provide technical support, hardware, and software to initiate the metamorphosis to allow for electronic data interchange.

The Information Resource Specialist and Computer Specialist requested will provide support to the Drug Diversion Control Program in maintaining the ARCOS/CSA and Registration systems, troubleshooting the operating system and telecommunication problems, training DEA personnel as necessary on computer operations, defining current and future automation requirements, providing feedback to the users and providing liaison with the vendors. These positions will be in addition to the seven people who already provide support to ARCOS and CSA. Two of those seven are computer programmers who are providing programming support for ARCOS and CSA. The remaining five are computer operators and computer assistants who are responsible for computer support such as scheduling, computer operations, and contract monitoring.

The two Program Analysts requested will provide support to the Drug Operations and Drug Evaluation staffs responsible for collecting and inputting vast amounts of information into several different DEA databases. Not only will these Program Analysts maintain the Orders to Show Cause and Significant Activities databases, but they will also conduct other intensive analytical projects, such as the Narcotic Treatment Program Study. The Narcotic Treatment Program Study involves the collection, analysis and data input from more than 900 multiple page questionnaires.

INITIATIVE 2

Operational Improvement Program			
Proposed Actions			
	Perm. Pos.	FTE	Amount
	4	2	\$ 283

This Initiative seeks to address the following objectives:

1. Provide expert staff for economic analysis, cost-benefit analysis, and assessing the impact on small business of regulations necessary to implement new legislation and keep up with industry practices.
2. Improve processing time for Orders to Show Cause.

DEA requests \$283,000 and 4 positions (including 1 Diversion Investigator and 3 Program Analysts) in order to provide operational support for the Drug Diversion Control Program. This increased staff support two areas of the Drug Diversion Control Program: (1) issuing regulations to implement legislation; and (2) processing Orders to Show Cause.

Regulations

A critical function of the Drug Diversion Control Program is to conduct required impact analysis and to develop regulations as the result of new laws and developing drug control and industry practices. This workload has increased substantially as the result of new legislation, Executive Orders, and National Performance Review mandates. Each analysis is now subject to judicial review. In accordance with the Regulatory Flexibility Act, the Agency is required to list all alternatives considered--including doing nothing--and provide a cost benefit analysis for each alternative, for each new regulatory modification of any existing regulation. In addition, the President signed into law the Small Business Regulatory Enforcement Fairness Act of 1996 in March. Provisions of this Act apply to all final rules. This Act mandates Congressional oversight of each Final Rule. It states that any final rule published on or after March 29 cannot take effect until the agency provides a report to each House of Congress and to the GAO containing a copy of the rule, a concise statement regarding the rule, and the proposed effective date. When the agency submits this report, it must also provide the cost-benefit analysis, regulatory flexibility, or unfunded mandates analysis prepared for the purposes of the rule. In addition, this Act provides for agencies to prepare compliance guides for certain rules and to provide informal guidance to small entities regarding their regulation. These new laws in conjunction with other new legislation and Executive Orders, have substantially increased the workload of the Diversion Control staff. Therefore, DEA is requesting two analysts, and one Diversion Investigator Staff Coordinator who will conduct the necessary economic and cost-benefit analysis, assess impact on small businesses, and perform other analysis necessary to develop effective regulations.

Orders to Show Cause Processing

An Order to Show Cause is a lengthy administrative process by which an applicant or a registrant, who has been denied registration, is given the opportunity to bring evidence forward supporting their right to be registered. Prior to a Show Cause hearing, each Order to Show Cause must be reviewed by the Domestic Drug Unit and then presented to DEA's Office of Chief Counsel. Currently, Staff Coordinators spend months collecting all relevant data from the Diversion Investigators and completing the entire investigation package. In order to prepare, process, and review the Orders to Show Cause packages, DEA organizes task forces comprising four to six Diversion Investigator Group Supervisors. This task force is temporarily assigned to DEA Headquarters to work on clearing the backlog. The Office of Diversion Control processes approximately 133 Show Cause Orders each year. This request will provide a full-time professional to continuously prepare these packages for review by Senior Diversion Investigators. This will also provide DEA's Office of Chief Counsel with the Orders to Show Cause on a steady basis, instead of 35-40 at a time after a Show Cause Task Force has processed them. This would result in speedier resolution of the registrant's appeal.

INITIATIVE 3

Community Assistance Program

Proposed Actions

This initiative seeks to address the following objectives:

1. Provide DEA staffing for the three provisional Diversion Investigative Units established in FY 1997, and continue this momentum by adding three additional units. These units (which will now be called Tactical Diversion Squads) will provide better coordination and information exchange between Federal, state, and local law enforcement authorities.
2. Assist state personnel develop expertise in diversion investigations.
3. Eliminate jurisdictional overlaps and submit stronger and more effective cases for prosecution.
4. Provide information, analysis, literature, guidance, and evaluation for community-based pharmaceutical diversion prevention awareness programs.

Through this request, DEA seeks \$2.0 million and 21 positions (including 13 Diversion Investigators, 8 clerical and 2 Program Analysts). Funding consists of \$1,632,048 for personnel costs and \$375,000 to fund the Community Education Program.

Tactical Diversion Squads

In the FY 1997 President's Budget request, DEA established a funding base for three Diversion Investigative Units (DIU). No additional personnel were requested to staff these units. This initiative will provide two permanent Diversion Investigators and one clerical position for each of the three DIUs. As the need for these units has grown over last year, DEA seeks to form three additional units. DEA would also like to change the name of these units from Diversion Investigative Units to Tactical Diversion Squads (TDS) to avoid confusion--as the DIU terminology is currently used by state and local police forces, this will distinguish the Federal squads.

Each of the Tactical Diversion Squads will consist of two Diversion Investigators, one clerical, and eight Federally deputized state and local officers. Officials from state and local governments, such as Bureau of Narcotics, State Pharmacy Boards, and State Medical Boards, will also participate in the TDS.

The need still exists to focus diversion control efforts at the state and local level and provide a medium through which DEA can influence national diversion control efforts and assist states to develop criminal enforcement strategies.

DEA's Investigative Resources Fall Short of What is Needed

Adequate DEA resources are not available to identify, investigate, and eradicate the diversion of controlled substances at the state and local level. An advantage in establishing a TDS is combining the state and local officer's knowledge of the geographical area of investigation and the DEA Diversion Investigator's knowledge of diversion control strategies to increase the volume of successfully prosecuted cases at the Federal, state, and local level. This also provides an option of three levels of prosecution, which should also increase the volume of successfully prosecuted cases.

Not only does this initiative focus on the criminal investigative function of diversion control, but it also provides a comprehensive prevention and public awareness program. While this will augment DEA's current Demand Reduction Program, the personnel requested will provide services that the Demand Reduction Program does not have the manpower or funding to provide. The two Program Analysts and one Diversion Investigator will also strive to build coalitions that bring cooperation, communication, and coordination to bear on the diversion of legitimate drugs at the community, professional, and regulatory levels. It is DEA's aim to build coalitions with key components of the community, such as schools, businesses, and neighborhoods as well as law enforcement and government personnel. The program funding will allow for dissemination of information regarding current trends in abuse of legitimate drugs such as hydrocodone, Dilaudid, Ritalin, Percodan, Rohypnol, and anabolic steroids. It will also sponsor conferences to bring community organizations, state and local law enforcement officials and industry representatives together to address these problems.

This initiative will also address the diversion of legitimate drugs from international sources that affect the United States by providing translated policy initiatives and informational documents for distribution to foreign governments, drug enforcement officials, and producers of controlled substances.

INITIATIVE 4

Perm.	FTE	Amount

Improved Customer Service Support

Proposed Actions

This initiative seeks to address the following objectives:

1. Provide increased Registration Support staff to selected field divisions.

The Comprehensive Drug Abuse Prevention and Control Act of 1970 (CSA) authorizes DEA to enforce provisions of this Act as they apply to registered handlers of controlled substances. DEA registers in excess of 911,000 drug handlers annually, of which more than 10,380 are manufacturers, distributors, importers and exporters, researchers, and others handling large volumes of controlled substances. The remaining 900,000 registrants are "practitioners," including doctors, retail pharmacies, and hospitals.

Over the last six years, the registration population has grown an average of 21,000 registrants per year. This is the result of subtracting retired registrants, and adding nearly 48,000 new registrants to the master file each year. Based upon this average it is anticipated that the base will grow from 911,486 in FY 1996 to 974,486 by the end of FY 1998. This growth trend is expected to continue. The volume of the work processed by each registration technician has increased significantly in many areas of operations. For example, in FY 1989, 17,702 registrants retired compared to 34,461 in FY 1995. The number of delinquent notices has increased from 12,701 in FY 1989 to 31,632 in FY 1995. The number of congressional inquiries rose from an average of 69 per year over the five year period FY 1989 through FY 1993 to a peak of 552 in FY 1994 alone, and 140 in FY 1995. All of these activities involve numerous transactions for a registration technician. DEA currently has 30 Registration Assistants working within the 20 field divisions.

In addition to processing new applications, Registration Assistants answer all written and telephonic inquiries by applicants and registrants, make file maintenance changes including address, drug schedule and name changes, process requests for Order Forms, and verify a registrant's status with the appropriate state licensing agencies. They are also responsible for reviewing and entering data into the CSA system for all new and renewal applications for registration, preparing and typing letters to return applications, and depositing fees to the U.S. Treasury.

In order to keep up with the ever increasing registration population, DEA is requesting eight additional Registration positions for allocation to domestic field offices. Seven of these positions will be allocated to offices in the country with a high number of registrants and thinly spread technicians--such as Indianapolis, Indiana; Columbus, Ohio; Columbia, South Carolina; Buffalo, New York; Hartford, Connecticut; Kansas City, Missouri; and Newark New Jersey. Due to the problems of time zone changes, service to Guam, the distance between the Los Angeles Division office and the District Office located in Honolulu, Hawaii, the eighth position will be allocated to the Honolulu Office.

ORGANIZATIONAL GOAL 1: Prevent legitimately produced controlled substances from being diverted into illicit channels.

Drug Enforcement Administration
Revenues of the Drug Diversion Control Fee Account

REGISTRATION FEES

DEA and its predecessor have collected fees pursuant to 21 U.S.C. Section 821 since 1971, which allows the Attorney General to collect fees relating to the registration and control of the manufacture, distribution and dispensing of controlled substances. In accordance with the Appropriations Act of 1993, these fees were increased by a factor of 3.5 to recover the entire cost of the program beginning in 1994.

DEA has established a fee cycle of three years to allow for an equitable distribution of fees across the entire registrant population (over 900,000), accommodate such factors as inflation, an uneven number of applicants in each of the individual years, and minimize the administrative burden associated with establishing a fee schedule. The three-year cycle impacts most of the registrant population. Inherent in the system is the need to establish reserves early in the cycle as a hedge against inflationary pressures and inconsistent annual fee income. Therefore, the fees collected in any given year may deviate measurably from the budget needs of the program for that year. (See Chart "Revenue Against Planned Obligations")

To collect the required \$57.1 million in FY 1994 the final fee structure was revised to 3.5 times the existing fee as follows:

(a) manufacturers.....	\$ 875 per annum
(b) distributors, importers, exporters....	\$ 438 per annum
(c) dispensers/practitioners.....	\$ 70 per annum *
(d) researcher.....	\$ 70 per annum
(e) chemical analysis.....	\$ 70 per annum
(f) narcotic treatment.....	\$ 70 per annum

* Also payable every three years as \$210

Most of the DEA registrants are practitioners and hospital/clinics. The annual impact of the fee increase on these activities is \$50.00 per registration year. The cost ratio that exists between the various types of registrations has remained the same since 1971. The Federal Register proposing the new fee structure to carry out the Justice and Related Agencies Appropriation Act, 1993, specifically noted that DEA would not alter this fee ratio since the administrative structure to collect it was well established and operating efficiently.

ACCOUNT BALANCE

For a variety of reasons there has been a growing balance of funds carried forward since FY 1993. First, actual collections exceeded original estimates. Contributing factors include: additional mid-level practitioner registrations; the fact that certain exemptions were lifted in 1994; and other population variables for which the program had no history. The collection projection on the chart "Revenue Against Planned Obligations" accounts for these changes.

Second, the program has had a considerable number of vacancies, the majority of which were intended to be filled by the end of FY 1996, however, this did not come to fruition. The funding for these positions carries forward until the positions are filled.

Finally, DEA and the Department of Justice were reluctant to alter, in any way, the basis on which the program costs were determined and fees established while the new fee structure was in its infancy. Funds were not reprogrammed to offset the unused payroll funds which would have decreased this account balance. This was due to the initial uncertainty of the program costs and annual receipts in this three-year collection cycle.

IMMIGRATION AND NATURALIZATION SERVICE

Approved: *Janet Reno* Date: *January 4, 1994*
 JANET RENO
 Attorney General

Immigration and Naturalization Service

Salaries and Expenses
Summary Statement
Fiscal Year 1998

The Immigration and Naturalization Service (INS) is requesting a total of 16,470 permanent positions, 16,247 workyears, and \$1,651,463,000 in its Salaries and Expenses Appropriation. This request represents an increase of 25 positions, 1,076 workyears, and \$46,304,000 over the FY 97 appropriation of \$1,605,159,000.

The total program increases for FY 1998 are 37 permanent positions, 18 workyears, and \$3,086,000. The requested resources will be used to improve administrative infrastructure, which will enable INS' Information and Records Program to be compliant with the Electronic Freedom of Information Act Amendment of 1996 (EFOIA). This Act has several provisions which impact greatly on the operations of the FOIA/PA program at INS. The requested resources will allow INS to meet the mandates placed on them by the EFOIA, as well as continue with their current operational responsibilities.

The requested increases in the Salaries and Expenses Appropriation, combined with resources provided in the Violent Crime Reduction Programs and INS' Fee accounts, will enable INS to manage the nation's immigration system more effectively and implement its major initiatives. Within the Salaries and Expenses appropriation, only the Improving Professionalism initiative is requesting an enhancement. The requested increase in the Professionalism initiative follows.

Increasing Professionalism

The FY 1998 request includes 37 positions, 18 workyears, and \$3,086,000 to help INS meet the mandate set forth in the Electronic Freedom of Information Act Amendment of 1996. Sections 4, 7, and 8 will have the greatest impact on the FOIA/PA program at INS, and will require the additional resources requested.

INS is requesting 5 positions, 2 workyears, and \$274,000 to comply with Section 4 of EFOIA, which is the Electronic Reading Room. This section requires that INS create a computer based, as well as a records based, environment for public access. The requested

resources will ensure that INS is able to comply with this section of the EFOIA by either placing workstations in each district office allowing public access, or, with the Department of Justice's approval, make records available on the Internet.

INS is also requesting 32 positions, 16 workyears, and \$2,812,000 in order to comply with Section 7 of the EFOIA, which requires timely responses to requests for information. The FOIA/PA staff currently consists of 135 employees. They are processing 90,000 incoming requests for information each year, which is expected to increase by 10-15% annually, and dealing with a backlog of 15,000 cases. The requested resources will allow INS to comply with this section of the EFOIA, which mandates that responses are answered within 20 days and that the backlogs are eliminated.

Immigration and Naturalization Service
Salaries and expenses
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For expenses, not otherwise provided for, necessary for the administration and enforcement of the laws relating to immigration, naturalization, and alien registration, including not to exceed \$50,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of, and to be accounted for solely under the certificate of the Attorney General; purchase for police type use (not to exceed \$2,691) of which 2,574 1,711 are for replacement only), without regard to the general purchase price limitation for the current fiscal year, and hire of passenger motor vehicles; acquisition, lease, maintenance and operation of aircraft; [and] research related to immigration enforcement. A

and for the care and housing of Federal detainees held in the joint INS and United States Marshall Service's Buffalo Detention Facility:

\$1,651,463,000

shall remain available until expended; and of which not to exceed \$1,590,159,000) A, of which not to exceed \$400,000 for research and of which not to exceed \$5,000,000 is to fund or reimburse other Federal agencies for the training program for basic officer training, and] \$5,000,000 is for costs associated with the care, maintenance, and repatriation of smuggled illegal aliens. Provided, That the Attorney General may reallocate to the INS training program from other payments or advances arising out of contractual or reimbursable agreements with State and local law enforcement agencies while engaged in cooperative activities related to immigration; A officer basic training.

Provided further, That none of the funds available to the [Immigration and Naturalization Service] A, shall be available to pay any employee overtime pay in an amount in excess of \$10,000 during the calendar year beginning January 1, [1997] A. Provided further, That uniforms may be purchased without regard to the general purchase price limitation for the current fiscal year. Provided further, That not to exceed \$51,000) A, shall be available for official reception and representation expenses [; Provided further, That none of the funds provided in this or any other Act shall be used for the continued operation of the San Clemente and

Temecula checkpoints unless the checkpoints are open and traffic

is being checked on a continuous 24-hour basis. Provided further, That the Land Border Free Pilot Project scheduled to end September 30, 1996, is extended to September 30, 1999, for projects on both the northern and southern borders of the United States, except that no pilot program may implement a universal land border crossing toll. Provided further, That obligated and unobligated balances available to "Salaries and Expenses, Community Relations Service" under section 501(c) of the Refugee Education Assistance Act of 1980 are transferred to this account and shall remain available until expended. Provided further, That not to exceed 48 permanent positions and 48 full-time equivalent workyears and \$4,628,000 shall be expended for the Office of Legislative Affairs and Public Affairs. Provided further, That the latter two aforementioned offices shall not be augmented by personnel details, temporary transfers of personnel on either a reimbursable or nonreimbursable basis or any other type of formal or informal transfer or reimbursement of personnel or funds on either a temporary or long-term basis.

[For an additional amount to support the detention and removal of aliens with ties to terrorist organizations and expand the detention and removal of illegal aliens and enhance the intelligence of the Immigration and Naturalization Service, \$15,000,000 of which \$10,000,000 shall be for detention and removal of aliens. Provided, That the entire amount is designated by Congress as an emergency requirement pursuant to section 251(b)(2)(D)(i) of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended.]

(Department of Justice Appropriations Act, 1997.)

Explanation of Changes:

1. This change authorizes the Immigration and Naturalization Service (INS) to support the detention of aliens at the joint INS and United States Marshals Service facility near Buffalo, New York, which otherwise would not be authorized due to current statutory provisions regarding the use of INS resources for detention of aliens.
2. This change will provide INS with the necessary authority, operational flexibility and sufficient level of funding to address its responsibilities, in coordination with other Federal agencies, for the care, maintenance and repatriation of smuggled illegal aliens.
3. This change will allow the INS Training program to incur direct costs associated with the training of officers from other INS programs, eliminating the need for routine one-year reprogrammings for the basic training of new officer corps personnel.
4. This change will allow the Commissioner to waive the \$30,000 per calendar year overtime pay cap during extraordinary circumstances, thereby enabling assignment of all needed officer corps personnel to any arising emergency. In the event of an emergency, such as a sudden mass immigration, the overtime cap could be a critical barrier to scheduling the needed officer corps personnel to handle the situation.
5. This change will increase the amount of funding available to be used by INS for official reception and representation expenses to \$20,000. This increase is comparable to amounts available to other Federal law enforcement agencies and is necessary in view of the growth INS has experienced and its interactions with other agencies and foreign governments.

Congressional Appropriation Action on the FY 1997 Budget The Congress approved an increase of 1,456 positions, 613 workyears, and \$176,363,000 for the S&E account. This was 122 positions, 84 workyears, and \$34,780,000 below the request level.

Base Reduction Congressional Action included base reductions totaling \$43,975,000 to offset the carryover authority allowed from FY 1996.

Transfers from the S&E account The Congress approved a base transfer of \$48,011,000 in funding for the Detention and Deportation program from the S&E appropriation to the Violent Crime Reduction Programs appropriation.

Reprogramming The reprogramming of resources reflect the permanent effects of the May 23, 1996, August 8, 1996, and the December 23, 1996 reprogramming notifications. In the narratives accompanying the notifications, it was stated that portions of the reprogrammings were of a permanent nature and would carry into 1997.

**Immigration and Naturalization Service
Salaries and Expenses
Program Performance Information**

Mission: The Immigration and Naturalization Service (INS):

- 1) facilitates entry of those legally admissible as visitors or immigrants and grants them benefits to which they are entitled;
- 2) prevents improper entry and the granting of benefits to those not legally entitled to them;
- 3) apprehends and removes those aliens who enter illegally and/or whose stay is not in the public interest; and
- 4) enforces sanctions against those who act or conspire to subvert the requirements for selective and controlled entry, including sanctions against employers who knowingly hire aliens not authorized to work in the United States.

General Goals:

- 1) **Border Control and Facilitation**
The INS will regulate entry to the United States in a manner that facilitates lawful travel and commerce while ensuring border integrity.
- 2) **Integrated Enforcement**
The INS will have a balanced, integrated enforcement approach to expedite identification, apprehension, and removal of illegal aliens.
- 3) **Disincentives for Unlawful Migration**
The INS will maximize deterrents to unlawful migration by reducing the incentives of unauthorized employment and entitlements and use of fraudulent documentation.

- 4) **INS Benefits and Service**
The INS will deliver services in a manner which shows that it highly values the public. Services will be timely, consistent, fair, and of high quality.
- 5) **Effective Workforce**
The INS will develop a motivated, well-trained, and diverse workforce.
- 6) **Resource Management**
The INS will manage resources to accomplish its mission effectively, using results-oriented workload and productivity measures.
- 7) **Policy Leadership**
The INS will develop and maintain a leadership role with respect to policy decisions on migration issues.
- 8) **Application of Technology**
The INS will use ADP and other emerging technologies to support an efficient, effective, and integrated operational environment.

BASE PROGRAM DESCRIPTION:

- The Inspections program includes the resources necessary to ensure that the entry of applicants for admission into the U.S. is controlled in a manner that is consistent with the national interest, facilitates the entry of qualified applicants and identifies and denies admission to those not qualified.

- This program enforces and administers the immigration and nationality laws with respect to the inspection of all persons seeking admission into the U.S. The process is coordinated with the Department of State, the U.S. Customs Service, the Department of Agriculture, and local port authorities. Determination of inadmissibility is based on examination of the applicant, related documents, and/or prior information. National and local lookout systems containing information relating to excludable aliens are available for use at each port-of-entry. Inadmissible aliens are denied entry into the U.S. Any criminal activity discovered in the inspection process is referred to the appropriate law enforcement authority for investigation.
- The program also is responsible for inspecting (in cooperation with other Federal agencies) all applicants for admission into the U.S. at land border ports-of-entry, preventing the entry of inadmissible applicants, and for detecting fraudulent documents, including those representing false claims to U.S. citizenship or permanent residence status, and seize conveyances used for illegal entry. (Funding for inspections at air and sea ports-of-entry is provided in the Immigration User Fee account)

1998 Estimate	7,383	7,112	670,427
Increase/Decrease

BASE PROGRAM DESCRIPTION

- The Border Patrol is responsible for ensuring that the entry of persons into the U.S. between ports-of-entry is controlled in a manner that is consistent with the national interest as established and provided by Congress, by preventing entry of persons who have not been inspected, and by detecting and apprehending illegal aliens within the U.S.
- Border Patrol agents deter uncontrolled entry into the interior of the U.S. by: the rapid detection, interception, and apprehension of illegal entrants at or near the border; interdicting or deterring illegal aliens, drug smugglers, potential terrorists and criminals from attempting illegal entry between ports-of-entry; and causing persons seeking admission into the United States to present themselves at designated ports for inspection.

- Border Patrol officers engaged in surveillance activities to prevent entry or apprehend those who have illegally crossed the borders are supported by computer-monitored electronic ground sensors which alert them to illegal entries. Additional support is provided by observation aircraft, low light level television systems and infrared viewing devices. Border Patrol officers use a wide assortment of vehicles adapted to local terrain and operational requirements, including motorcycles, all-terrain vehicles, boats, and horses. Line-watch traffic check operations are conducted along major routes of travel to restrict access to the interior by illegal aliens. Transportation centers are placed under surveillance for the same reason.
- The Border Patrol has primary responsibility for drug interdiction between the land ports-of-entry. The Border Patrol participates in numerous interagency drug task force operations with other Federal, State and local law enforcement agencies through its participation in Operation Alliance along the Southern Border. To further assist the Border Patrol in this endeavor, all Border Patrol agents receive Drug Enforcement Administration Title 21 cross-designated authority in their basic training in Glynnco, Georgia.

1998 Estimate	2,652	2,484	244,306
Increase/Decrease

BASE PROGRAM DESCRIPTION:

- Generally, the functions of the Investigations program include the detection of criminal law violations and the identification of violators, through undercover operations and traditional investigative procedures, and to initiate criminal prosecution and/or administrative action. Many cases investigated involve violators associated with large-scale, organized criminal conspiracies. Quite often, these criminal alien organizations are simultaneously engaged in other illegal activities such as racketeering, alien smuggling, immigration benefit fraud, counterfeiting, prostitution, official corruption, extortion, narcotics and weapons

- trafficking on a national or international scale. Special Agents identify these organizations through interviews, informant surveillance, and through undercover and task force operations. Investigative task force operations include a combination of resources from several offices and agencies.
- More specifically, this program is responsible for: investigating and apprehending aliens who commit major criminal offenses, with emphasis on international criminal organizations involved in narcotics trafficking, subversion, terrorism, alien smuggling, and other serious or violent criminal activities; prosecuting aliens who illegally apply for and collect benefits from government entitlement programs; preventing the filing of fraudulent claims and supporting civil proceedings to recover benefits illegally obtained; providing investigative support to other INS branches by locating aliens who have absconded from deportation or exclusion proceedings; developing grounds for denial of petitions and applications, and obtaining government evidence for administrative proceedings.
- Violent Gang and Drug-Related Activity:** The INS is focusing its efforts on violent criminal alien gangs in designated cities where INS Special Agents, in coordination with other law enforcement officials, seek to identify, apprehend, convict, and remove from the country alien members of these criminal groups and ultimately dismantle their organizations. The Investigations program will continue its commitments to the Interagency Crime and Drug Enforcement appropriation, (previously known as the Organized Crime Drug Enforcement appropriation) and Violent Gang Task Force (VGTFF) efforts and work in coordination with other Federal, State and local law enforcement agencies.
- Criminal Aliens:** The Immigration Reform and Control Act of 1986 and other statutes mandate expeditious identification and processing of aliens convicted of deportable offenses. To accomplish this, the Service has established the Institutional Hearing Program (IHP). The IHP, a cooperative effort of the INS, Executive Office for Immigration Review (EOIR) and correctional agencies, enables the INS and EOIR to identify criminal aliens within State, local and Federal correctional facilities who are eligible for deportation once they have served their sentences, and institute deportation proceedings while they are still serving their sentences. By virtue of the fact that the process makes possible the immediate deportation of aliens upon completion of their prison sentences, significant cost avoidance is achieved, as compared to previous methods, which required the Service to detain those aliens who had been released from prison while in deportation hearings, at considerable government expense.
- Fraud and Smuggling:** These resources are focused on one of the basic enforcement priorities of the INS: detection and deterrence of fraud and smuggling. The principal goal is to discourage illegal immigration through fraud. In an effort to accomplish this goal, the INS is aggressively targeting complex criminal organizations involved in immigration benefit fraud. This includes the actions of aliens who participate in immigration benefit fraud and/or the actions of organized "preparers or

facilitators" who submit thousands of fraudulent applications on behalf of aliens who are ineligible for such status. Smuggling cases typically involve the investigation of major international alien smuggling and criminal organizations. Many smuggling cases have shown extensive networks used to move aliens via the use of fraudulent documents and circuitous routes to reach this country.

- **Employer Sanctions:** The Employer Sanctions program enforces the Employer Sanctions provisions of IRCA, which require employers to hire only U.S. citizens or authorized aliens and verify employment eligibility. The program enforces civil and criminal penalties against employers who violate these provisions. INS officers investigate employers, inspect eligibility verification, determine nature and degree of compliance and remove unauthorized aliens from the worksite. The resources for Employer Sanctions are primarily directed to lead-driven investigations and deterring employment of unauthorized aliens by targeting employers involved in illegal employment practices

BASE PROGRAM DESCRIPTION:

- The Detention and Deportation (D&D) program is a critical element in the structure of the INS. Its functions are to detain, exclude, remove, parole and deport aliens. INS utilizes Service Processing Centers (SPCs), contract facilities, Joint INS/BOP Federal Facilities, and State/local facilities to detain those aliens subject to deportation or exclusion proceedings who are likely to abscond, or whose freedom at-large would clearly represent a danger to public safety and security until they are ready for removal. To perform the deportation function, the INS maintains a system of controls that ensure that a case involving a deportable alien is efficiently and correctly processed and, if necessary, the alien's removal from the country is effected promptly.

1998 Estimate	2,274	2,179	\$50,910
Increase/Decrease

BASE PROGRAM DESCRIPTION:

- The Detention and Deportation (D&D) program is a critical element in the structure of the INS. Its functions are to detain, exclude, remove, parole and deport aliens. INS utilizes Service Processing Centers (SPCs), contract facilities, Joint INS/DOJ Federal Facilities, and State/local facilities to detain those aliens subject to deportation or exclusion proceedings who are likely to abscond, or whose freedom at-large would clearly represent a danger to public safety and security until they are ready for removal. To perform the deportation function, the INS maintains a system of controls that ensure that a case involving a deportable alien is efficiently and correctly processed and, if necessary, the alien's removal from the country is effected promptly.

- The D&D program removes deportable and excludable aliens and avoids detention to the greatest extent possible. The D&D program: (1) tracks the cases through the IIRP; (2) updates the necessary data bases; (3) provides case status updates to inmates and their attorneys; (4) obtains required travel documents; (5) makes the necessary travel arrangements, including notification to foreign governments; (6) executes the warrants of deportation; and (7) physically removes criminal aliens from the country (including providing overseas escorts, when necessary, to protect the traveling public or to ensure the criminal's arrival at the intended destination).
- The D&D program ensures that adequate alien detention capability is available by staffing and maintaining nine Service Processing Centers (SPCs), and detaining aliens, in six INS contract facilities, two joint INS/BOP Federal facilities, and State/local facilities, which meet INS standards.
- The D&D program allows other enforcement programs to operate effectively by detaining and removing aliens. Abscondee Removal Teams further support efforts to remove aliens with final orders of deportation and to locate and remove absconders.
- The Administration's policy is to interdict smuggled illegal aliens at sea prior to entry into our Nation's territorial waters. Over the past few years, INS working with the Departments of Defense and State and the U.S. Coast Guard have cooperated on numerous operations that have resulted in the swift interdiction and repatriation of hundreds of aliens attempting to be smuggled into this country illegally. In 1995, the President allocated \$6 million from the Immigration Emergency Fund (IIEF) to support this effort. Most of these funds have been obligated to support these earlier operations. The budget proposes to authorize the use of appropriated funds, up to a proscribed limit, to fund INS' responsibilities for the care, maintenance and repatriation of smuggled aliens. The budget provides \$5 million to fund independently or through reimbursements to other Federal agencies INS' costs associated with the return of smuggled aliens to their home country.

BASE PROGRAM DESCRIPTION:

- The Intelligence program provides strategic and tactical intelligence support to INS offices enforcing the provisions of the Immigration and Nationality Act (INA), and assists other Federal agencies in addressing national security issues. Intelligence program activities contribute support to: prevent the entry of illegal aliens, terrorists and narcotics traffickers; detect fraudulent documents, alien smuggling, false claims to citizenship; and to detect other fraudulent activity.
- The Intelligence program provides strategic intelligence assessments to INS management that have long-term importance/relevance to the mission of the agency in terms of operations, planning and policy.
- The Intelligence program maintains liaison with appropriate U.S. and foreign government agencies on immigration and national security matters, including the movement of known or suspected international terrorists.
- The Intelligence program provides assistance to international law enforcement agencies and international air carriers to detect fraudulent identity documents.
- The Intelligence program provides technical support and assistance to prosecute major document counterfeiters, alien smugglers and other violators of the INA.
- Forensic Document Laboratory: The Forensic Document Laboratory (FDL) is used to identify fraudulent documents and to assist in identifying and removing illegal aliens from the country. This support also includes training State and local law enforcement officers, department of motor vehicles and other State and local authorities in the identification of fraudulent documents.

BASE PROGRAM DESCRIPTION:

- The Adjudications and Naturalization program examines aliens to determine their qualifications for naturalization, issues citizenship documents, provides for the appearances of INS officials before naturalization courts, and conducts administrative naturalization ceremonies. The majority of this program's resources are funded in the Examinations Fee Account.
- A naturalization pilot project was developed in urban and rural areas of Southern California, and is funded in this appropriation, allowing the INS to encourage and promote naturalization through public education programs, with community-based organizations, ethnic group networks, and educational institutions assisting qualified persons in preparation of applications and in studying for civics and language tests. The INS will also use information gained in these efforts to streamline the naturalization process.

BASE PROGRAM DESCRIPTION:

- Enforcement Activities: In coordination with the Department of State, the U.S. Coast Guard, and components of the Department of Justice, the Office of International Affairs actively participates in working with foreign governments to monitor the movement of groups being smuggled into the U.S.

- The placement of INS staff overseas allows the INS to establish and maintain an effective long-term working relationship with host country migration authorities, consular officers, and enforcement organizations. This relationship, coupled with a working knowledge of cultural, social and economic conditions in the area, enables officers to gather intelligence information and coordinate enforcement operations, which have a significant positive impact on INS domestic operations.
- INS Overseas personnel, through coordination with domestic INS offices, Border Patrol Sectors, other U.S. Government agencies, host country governments, airline officials, and other non-government entities, will pursue a proactive international enforcement strategy to identify, investigate, deter, disrupt and reduce illegal activities at their source, and at key overseas transit locations used by smugglers and mala fide aliens bound for the U.S.
- The Refugee Act of 1980 created a statutory basis for asylum in the United States and made withholding of deportation of those who qualify for mandatory rather than discretionary asylum. While Congress, in passing the Act, established a statutory definition of "refugee", it did not legislate a specific method by which claims for asylum or withholding of deportation were to be adjudicated. Instead, the Congress directed that the Attorney General establish the necessary procedures for such adjudication. Interim regulations published in June 1980 remained in effect until superseded by new asylum regulations published as a final rule, which became effective October 1, 1990.
- In 1993, the Department of Justice (DOJ) completed a study of the asylum system and convened a working group comprised of staff from several INS and DOJ divisions, EOIR, and members of non-governmental organizations to discuss reform of the asylum processing system. Streamlining procedures to increase productivity and eliminate frivolous or abusive claims were two primary goals of the reform process. The working group identified several major changes, which were then implemented by making procedural, policy, and regulatory revisions. A final rule which contains all of the asylum reform changes was published in December 1994 and became effective in January 1995. The revised procedures streamline the process so that asylum applicants who are interviewed receive final decisions on their claims within 180 days of the filing of their applications (including asylum processing by INS and EOIR Immigration Judges). Due to requirements in the Illegal Immigration Reform and Immigrant Responsibility Act of 1996, the Asylum Corps will be required to perform a new expedited exclusion procedure beginning on April 1, 1997. The Asylum Corps will perform pre-screening of certain asylum seekers at ports of entry as required under this new law. Those asylum seekers who meet the credible fear threshold will be able to pursue their claims with an Immigration Judge while those who do not meet credible fear will be ordered excluded.
- The Resource Information Center (RIC) is a major component of the Asylum Program. Its mission is to provide asylum officers and refugee adjudicators with credible perspectives on human rights conditions in refugee-producing countries.

Several information products (both electronic and printed) are developed each year. Research covers the top twenty refugee-producing countries of interest to the United States. A joint effort involving the RIC, the Canadian Government Documentation Center (DIRB), and the United Nations High Commissioner for Refugees (UNHCR), has resulted in a CD-ROM product covering country-of-origin and legal data bases, and is now in use at all Asylum Offices. In FY 1997, a secure pilot Internet Web Site is being developed to promote exchange of asylum-related information between participating governments.

1998 Estimate	78	77	15,107
Increase/Decrease

BASE PROGRAM DESCRIPTION:

- The Training program provides the staff and the resources necessary to maintain an employee development program that meets the diverse training needs of the INS workforce. Training requirements are identified annually and are revised, as needed, due to new regulations, legislation, or organizational needs. The program operates in a variety of ways: through residential training at the Federal Law Enforcement Training Center (FLETC) at Glynco, Georgia (basic officer training) and at Artesia, New Mexico (Journeyman officer training); through programs conducted by other Federal agencies; by private contractors; or in combined presentations using INS and non-INS resources.
- INS activated a satellite training facility at Charleston Naval Base, South Carolina in April 1996. Beginning in August 1996, the Charleston facility has been used exclusively for Border Patrol training. Four Border Patrol classes are to be conducted at the Federal Law Enforcement Training Center (FLETC) at Glynco, Georgia in FY 1997. All other INS officer training, both basic and journeyman, will be conducted at one of the FLETC facilities at Glynco, Georgia, or Artesia, New Mexico, or will be provided via exportable modules at students' duty stations.

- The Training program ensures basic training for all new officers and advanced and technical training for journeyman officers, and periodically updates curricula for the basic and advanced training programs
- The Training program provides mandatory training for INS supervisors, managers, management officials and executives, and provides progressive technical and specialized training for professional, technical, and clerical personnel who support agency operations.
- New training technology will afford the INS an opportunity to provide continuous training for all INS employees at or near their duty station, reducing travel costs, and internal and external costs that come with having to train off-site. While certain requirements such as basic training, firearms and driver training, and other courses involving group interaction and practical exercises, may justify a group/residential learning environment, many learning objectives can be addressed by distributed learning packages utilizing video cassettes, workbooks, training pamphlets, and computer-based instruction and, in certain instances, video conferencing. This training can be learner-based, self-paced, ongoing, and reusable. Distributed learning technology allows for disseminating information, increasing certain skills, increasing abilities to get the job done, and change attitudes.

BASE PROGRAM DESCRIPTION:

- The Data and Communications program provides direct support for operational programs as well as administrative support functions of the Service. There are seven major technology programs included under the Data and Communications Program plus the functions collectively known as Information Resources Management (IRM) Operations. The seven program areas, each of which consist of one or more projects in addition to the normal operations and maintenance required for existing

systems and technologies, are: 1) Infrastructure 2) Examination Systems, 3) Inspection Systems, 4) Biometric Identification Systems, 5) Corporate Information Systems, 6) Management Systems (financial and administrative), and 7) Enforcement Systems. IRM Operations includes the functions necessary to support the activities of the Data and Communications Program. Through development and implementation of these initiatives, the Service will improve the effectiveness and efficiency of Service functions through use of automation, provide for the operation of data and communications networks, and provide radio communications, telephone call handling, intrusion detection sensors, and electronic security equipment and systems. INS automation efforts are designed to directly support efforts to control the borders of the United States, reduce incentives for unauthorized employment and benefits, and remove criminal and non-criminal aliens. In FY 1998, INS will complete the development and deployment activities initiated in FY 1995 through FY 1997 and provide the necessary operations and maintenance services to ensure the effective and efficient operation of the installed base of technology systems. The INS will continue to place an emphasis and priority on its role as a repository of the Nation's records on immigrants, visitors, and illegal entrants, as well as on meeting the customer needs for enhanced technology services and information. A brief description of each of the six major automation programs follows.

- Infrastructure** - The IRM Infrastructure Program provides standard office automation hardware and software to support improved communications and interoperability between INS sites. Through the use of these products, the INS workforce will effectively and efficiently communicate, share data, and provide professional products and services that support customer requirements. The Infrastructure Program encompasses three significant IRM activities. The first and most significant of these activities is Infrastructure Deployment in which the primary goal is to equip each INS office with standard integrated sets of office automation hardware, software, and LAN configurations, along with the WAN and telecommunications backbone through which remote and centralized systems and the corporate database are accessed. The second activity, Infrastructure Support, encompasses the full range of ongoing services to support the technology and systems architecture. Included are hardware maintenance, Facilities Operations Support (FOS), help desk operations, training, and data communications. Hardware maintenance provides the necessary services to ensure ADP equipment is maintained in operating order consistent with manufacturer specifications. The FOS contract provides on-site user support to INS facilities throughout the United States. FOS also provides INS help desk operational support and computer operations and production control services for Headquarters. Training includes training in the use of the office automation hardware and software, and computer network training to the field to support the modernized computers systems that have been and continue to be installed at the INS field offices. Data Communications provides data communication circuits that allow operational users to access INS centralized ADP systems from offices world wide. The third activity is the Video Teleconferencing (VTC) initiative in support of the Service's Institutional Hearing Program (IHP). The VTC provides for audio and video connectivity between distant INS locations to support INS hearings and legal proceedings.

- By the end of FY 1996, standard office automation hardware and software from the Infrastructure Deployment Project was installed at 238 sites (37 percent of the original 641 planned sites). In FY 1997, INS expects to install the standard infrastructure at an additional 213 sites (approximately 33 percent of the 641 planned sites). In FY 1998, INS expects to install the standard infrastructure at the remaining 190 planned sites (approximately 30 percent of the original 641 planned sites) plus an additional 109 facilities that have been established to accommodate INS workforce growth since the inception of the Infrastructure Deployment Project. In FY 1998, IRM will also provide continued hardware and software maintenance, upgrade software licenses and system components as required, and provide on-site user support to address site specific needs for operations and maintenance services.
- **Examination Systems** - The Examination Systems Program provides for an integrated set of functions that incorporate all individual casework-oriented subsystems used to support the processing of applications and petitions for immigration benefits and associated processes such as the production of immigration documents. These functions and processes include employment authorization, asylum, resident alien processing, and citizenship application and processing for naturalization. In FY 1998, INS will provide services to operate and maintain the Examinations information technology systems developed and deployed in FYs 1995 through 1997. Such services include: making corrections to existing software to eliminate functional errors, failures, and deficiencies which could affect operational performance; modifications in response to legislative and/or policy changes; the costs for maintaining and upgrading licenses to existing application-specific software; and the costs for maintaining validation and verification capabilities that can be used to test application systems before they are deployed and placed into operation.
- **Inspection Systems** - The Inspections System Program supports efforts to control admissions at ports-of-entry and enhance the INS inspection function. Three major automation efforts included under this program are the Interagency Border Inspection System (IBIS), the INS Passenger Accelerated Services System (INSPASS), and the Dedicated Commuter Lane (DCL). IBIS, a system operated jointly with the U.S. Customs Service and Departments of State and Agriculture, is used at ports-of-entry to facilitate inspection and to identify criminals. IBIS is currently installed at major air and land border ports-of-entry. INSPASS is an automated inspection system for low-risk, frequent travelers using automated inspection kiosks. This system is currently installed at several of the Nation's major international airports. DCL allows border crossers, already inspected by INS, to use automated verification instead of manual inspection. This program will develop and deploy machine readable travel documents, which will allow for positive identification of air travelers destined for the United States.

A combination of technology and advanced production techniques will produce entry documents that are fraud resistant and easy to use. Profile scanning and a sophisticated worldwide law enforcement network will quickly and accurately identify persons of interest. Smart card technology with positive identification features will facilitate the quick and accurate inspection of low-risk, frequent land travelers. Technology will allow for improved service to the public while increasing the number of inspection hours devoted to high-risk activities.

In FY 1998, INS will provide services to operate and maintain the Inspections information technology systems developed and deployed in Fiscal Year 1995 through 1997.

- **Biometric Identification Systems** - The INS is developing a single fingerprint-based identification system that will enable the Service to rapidly and accurately identify persons of interest. IDENT is the current INS fingerprint-based identification subsystem that is and will be used by Service law enforcement and benefit systems to assist in the positive identification of persons who are arrested, as well as those who apply for benefits, including the identification of travelers referred to secondary inspection processing and for automated inspection.

During FY 1996, the INS began deployment of IDENT across the Southwest border. In FY 1997, INS expects to pursue implementation of this technology to expand the IDENT records storage, fingerprint matching capacity, and trends analysis for the existing installed sites along the Southwest border, as well as additional interior enforcement sites. Implementation of benefit and asylum identification will be underway. In FY 1998, INS will continue to deploy the IDENT system to INS sites and provide the necessary services to support and maintain the capabilities of the system.

- **Corporate Information Systems** - This program seeks to integrate and consolidate, where appropriate, INS information and enhance records management capabilities while supporting a secure, open system environment. In FY 1997, the INS will continue efforts to re-engineer INS data repository systems to streamline access to alien information. This program will ensure that the data collected is correct, and that it will follow the same naming and attribute standards across all agency systems requiring use of the data. In FY 1997, the INS will also develop and deploy a Common User Interface that provides a front-end to existing INS systems as a means to ensure data collection integrity and to streamline access to alien information. The INS will also build imaging capabilities to provide electronic access to INS paper file information and provide for use in specific programs such as FOIA/PA. New and enhanced statistical capabilities and name search methodology will improve our corporate decision functionality.

Also under this program, the Verification Information System (VIS) will support the confirmation of an alien's immigration status, eligibility for certain entitlement benefits, and authorization to work. The INS recently expanded employer participation in the pilot verification program for employment eligibility to over 1,000 employers. In FY 1997, the Service anticipates continued implementation of systems which strengthen Service efforts in the area of worksite enforcement.

In FY 1998, INS will continue with its efforts to develop and deploy an imaging capability that will allow for electronic access to INS paper file information. The INS will also continue to re-engineer its data repository systems to streamline and improve its corporate information systems and the data contained in those systems.

- **Management Systems** - The Management Systems Program includes the development, implementation, and maintenance of financial and administrative applications providing decision support information on INS workload, personnel, and financial resources. During FY 1996, INS continued development of plans to implement a cross-servicing agreement for a new financial management system. During FY 1997, the Service will finalize plans to implement the core financial and administrative system by October 1, 1997.

- **Enforcement Systems** - In FY 1998, INS will continue with the deployment of ENFORCE Phase II at designated INS sites and the continued implementation of the EVRP. The INS will also continue providing services to support and maintain the applications systems that support the Enforcement Systems Program (i.e., ENFORCE and ICAD), and the radios, scopes, sensors, and night vision equipment deployed.

- **Information Resource Management (IRM) Operations** - IRM Operations consists of the planning, policy development, acquisition management, computer security, field and program support, and management activities required to support the technology requirements of the Service. IRM Operations provide the strategic direction and tactical implementation strategies for the effective and efficient development, deployment, and maintenance of automated information resources.

1998 Estimate	652	635	\$60,042
Increase/Decrease	37	18	3,086

BASE PROGRAM DESCRIPTION:

- The Information and Records Management Program maintains and manages alien records and files, provides information from those files to fulfill requests, controls and monitors the release of information through the Verification (SAVE) program and the Freedom of Information/Privacy Acts program, oversees the Service mail management program, and delivers forms and applications to internal and external customers.
- The program develops, implements, and monitors policy and procedures, promulgates regulations, develops planning and budgets, and carries out operational support functions to support the responsibilities described above.
- Every operation entity in INS relies on accurate, timely and complete data and records as well as the day to day records support operations that make it possible to conduct law enforcement activities, adjudicate benefits, facilitate foreign travel, and support administrative functions. It is the responsibility of the Information and Records Management Program to ensure the high level of support demanded by our internal customers. In addition, the program represents the public's interest as the custodian of records and information. The safeguarding of immigration related information, and the appropriate dissemination of that information provision to the public and other governmental entities, is a primary objective of this program.

BASE PROGRAM DESCRIPTION:

- INS attorneys represent INS before Immigration Judges, the Board of Immigration Appeals, the Merit Systems Protection Board, the Equal Employment Opportunity Commission, and boards of contract appeals. The attorneys review charging documents for legal sufficiency, prepare for hearings, represent INS in court, prepare appellate briefs and provide legal advice. The Legal Proceedings program provides litigation support in agency litigation conducted in U.S. District Courts, U.S. Courts of Appeals, and the U.S. Supreme Court. Attorneys provide advice to the Commissioner, Regional Directors, District Directors, Border Patrol Sector Chiefs, and to their staffs, on legal matters arising at all levels of agency operations. The attorneys also assist interagency task forces in developing cases and removal strategies for criminal aliens.

The Legal Proceedings program at Headquarters provides the following legal support:

- Employer Sanctions Program:** This program is responsible for the maintenance of the Index of Case Decisions on Employer Sanctions and the Digest of Case Decisions on Employer Sanctions. It compiles and distributes employer sanctions regulations as a part of the Employer Sanctions Legal Reference Series. The Employer Sanctions Legal Advisory Committee assists in resolving complex legal issues and provides field offices with input on major employer sanctions legal matters. Experienced sanctions attorneys conduct training in employer sanctions for Special Agents, Inspectors, and Border Patrol agents.
- Examinations Program:** This program issues formal legal opinions and provides legal assistance to all INS attorneys and program managers on an array of immigration issues. The program also reviews legislative proposals, drafts bill reports, and drafts and revises regulations.

- **Refugee and Asylum Law Program:** This program provides the direction and supervision for the Asylum Pre-Screening program; provides formal legal opinions and other legal advice to INS components on issues arising in connection with the Service's asylum and refugee programs; drafts and reviews regulations, legislative proposals, and management initiatives concerning asylum and refugee processing; and participates in the training of Asylum Officers and Refugee Officers.
- **Enforcement Program:** This program emphasizes litigation strategies and removal of criminal aliens, particularly those convicted of aggravated felonies and aliens involved in terrorist activities. Expedited exclusion and deportation of these aliens requires more intensive legal review because of the complexity of potential exclusion and deportation charges. INS attorneys are stationed in all district offices to coordinate and help assure the effectiveness of the criminal alien program, including the IIRP. This program also supports litigation in Federal courts relating to criminal aliens.

BASE PROGRAM DESCRIPTION:

- The Management and Administration program provides management direction and support for the implementation and operation of regional and field activities and functions to those managers and supervisors who are responsible for and exercise authority over multiple programs;
- Executes the provisions of the INA and related policies through the development and implementation of immigration programs and the management of resources;
- Provides for the development, implementation, direction, operation and evaluation of administrative support systems and services that meet internal operational and managerial needs, as well as externally mandated requirements;

- Provides executive direction and control of INS;
- Furnishes accurate and prompt responses to Congressional and public inquiries; performs audits, conducts internal investigations, provides informational responses to inquiries from GAO, OIG, OMB and Departmental offices, develops and evaluates policies and systems to improve the effectiveness of the INS' programs.
- The major administrative functions within the program include: personnel; budget; accounting; internal controls; equal employment opportunity; procurement; property management; fleet management; security; safety and health; and other miscellaneous general services that support all programs.

Professionalism Initiative
Salaries and Expenses
(Dollars in Thousands)

Proposed Actions

In recent years, INS has expanded and intensified program activities in the areas of enforcement, deterrence, and benefits. This expansion has facilitated the entry of legally admissible individuals to the United States, prevented illegal entry and improper granting of benefits, increased apprehensions and removals of illegal aliens, and the enforcement of Immigration laws at the worksite. However, program expansion has placed a strain on the basic infrastructure of INS and its ability to assimilate thousands of new employees into the organization. Infrastructure and assimilation issues are highlighted by the inability of INS to provide necessary training, vehicles, equipment, facilities, and administrative, legal, and information management support required by the workforce. These basic infrastructure and assimilation resources are critical to enable the INS workforce to effectively manage program requirements and to promote professionalism and success in the priorities of INS.

INS must build and maintain its infrastructure base and provide sufficient mission support to maximize the efficiency and effectiveness of the workforce. In FY 1997, INS received resources to begin addressing the deficiencies in the infrastructure base and mission support. In FY 1998, basic operational support requirements must be addressed further for INS to fully achieve its goals. Additionally, initiatives developed and implemented with resources from the Violent Crime Reduction Trust Fund between FY 1995 and FY 1997 must now also be maintained. It is imperative that INS focus its efforts and resources on promoting professionalism through the continued restoration and maintenance of the infrastructure base and mission support as we move into FY 1998.

The INS Professionalism initiative will focus its efforts and resources on the delivery of mission-critical support to INS components to maximize the effectiveness and efficiency of the INS workforce. INS will focus on assimilating the thousands of new employees into the organization.

In fiscal year 1998, INS is requesting \$3,086,000 in funding from the Salaries and Expenses Account. These resources will be used to help the INS comply with the Electronic Freedom of Information Act Amendment of 1996 (EFOIA). Resources will be used as follows:

	Positions	Workyears	Amount
Information and Records	37	18	\$3,086

EFOIA has several provisions which have an impact on the FOIA/PA program at the Immigration and Naturalization Service. The mandates in sections 4, 7, and 8 will have the greatest impact on the INS and require additional resources to be compliant.

5 positions, 2 workyears, and \$274,000 are requested to comply with Section 4 of EFOIA, Electronic Reading Room. This section mandates that the INS create a computer based, as well as a records based, environment for public access, at the very least at INS headquarters. This environment may be in the form of computer diskette, CD-ROM, or may be placed on the Internet. In addition to having the information available, INS must comply with the public's demand for copies in the format of their choice. Since it was established, by regulation, that reading room material would be available at each district office, workstations would be needed at every location to allow for public access. The resources noted above would allow the INS to be in compliance with this section of the EFOIA and, with the Department of Justice's approval, allow INS to make these records available on the Internet, eliminating the need for reading room materials at each district.

A total of 32 positions, 16 workyears, and \$2,812,000 are requested to comply with Section 7 of EFOIA, Timely Response to Requests for Information, which requires a response within 20 days. Currently, the FOIA/PA staff of 135 employees is processing some 90,000 incoming requests for information. With requests increasing yearly at a rate of 10-15%, the INS FOIA/PA would be unable to carry out the mandate. In order to meet the mandate of Section 7 of the EFOIA, staff must be increased by 32 positions. Currently, the number of pending requests stands at 15,000 plus cases. Once eliminated, the incoming requests caseload could be managed if conditions remained constant. However, from past experience, INS predicts a 10-15% increase in receipts each year. Under the new standard, a predictable backlog does not qualify for exceptional circumstances in justifying a delay in responding to requests within statutory time limits. To bring the program into compliance, eliminating the backlog and meeting the 20 day response time, the requested positions are essential.

GENERAL GOAL # 1: Border Control and Facilitation - Regulate entry to the United States in a manner that facilitates lawful travel and commerce while ensuring border integrity.									
ELEMENT # 1: INSPECTIONS

A. Definitions of Terms or Explanations of Indicators:	
INSPECTIONS:	
N/A = "Data not (currently) available"	
FTEs are used rather than the number of assigned individuals in order to distinguish between hours specifically related to inspections activities, as opposed to time spent on leave or holidays.	
<p>1. These figures include the total number of inspectors by FTE, but does not include support FTE. In addition, the actual totals listed reflect FTE used per year. In FY 1998, FTE totals reflect 50% FTE lapse of the new positions requested with the remaining 50% to be annualized into the FY 1999 total.</p> <p>2. Total inspections hours includes all hours worked relating to inspections activities, including primary, secondary, supervisory, clerical, leave, training, details, waiting time, travel hours, collateral duty hours, carrier liaison activities, adjudication time, fines, and departure control hours (PAS lines 122-134, 141-147, 168, and 172-173).</p> <p>3. Inspection hours for air, sea, and land include only those regular and overtime hours spent in primary, secondary, and on supervisory time (PAS lines 122-133).</p> <p>4. Enforcement referrals include only the processing of applicants deemed to be inadmissible, and service referrals include only the activities related to those individuals who require further processing for special or additional permissions. As new inspectors are added to primary and for pre-primary roving, enforcement-related referrals should increase. Inspectors will be able to facilitate legal traffic more quickly and identify more inadmissible aliens.</p> <p>5. Note that the total number of inspections per inspector are measured in thousands of inspections. Thus, the total number of actual inspections performed in 1994, were 147,000 inspections per inspector FTE. This equates to more than one inspection every minute (1.17 inspections per minute or 70 inspections per hour). The plan, as acknowledged and recommended by GAO, is to reduce this workload to a more reasonable and tolerable level. The 1997 target of 115,000 inspections per inspector FTE is still high, slightly less than one inspection per minute (91 inspections per minute or 55 inspections per hour), but still represents a significant improvement. At the same time, as the total number of inspectors increase, and as they gain skill and experience, the total number and quality of inspections can be expected to increase and the average individual waiting time improve (refer to note on "cycle time" below).</p> <p>6. Positive identification technology has not yet been adequately deployed to consistently and confidently identify repeat illegal border crossers. However, with FY 1996 and 1997 resources INS plans to expand installation of technology specifically designed and intended to perform such identification with high speed and reliability. IDENT, in particular, is scheduled for full deployment along the Southwest border, including all POEs, in FY97 and 98.</p> <p>7. The "Number of Total Estimated Violators" will be calculated based on a "Compliance Survey."</p> <p>8. "Cycle Time" is a data factor that is being planned. "Cycle Time" is defined as the time an individual spends from arrival at the inspection area until completion of primary inspection. Actual procedures for capturing this data are under development, an implementation date has not yet been determined.</p>	

B. Factors Affecting FY 1995 Program Performance	
C. Factors Affecting Selection of FY 1997 and 1998 Targets.	
<p>As noted above, outcome goals are greatly dependent upon INS' ability to successfully obtain and deploy technology which will allow the identification of repeat illegal border crossers and illegal entries. This, in turn, will make possible far more accurate estimates of the total numbers and movement of illegals.</p> <p>Another important factor affecting future goals will be the ability of INS to attract, train and retain quality personnel as inspectors, agents and officers. Notwithstanding the vital and effective assistance of technology, border control remains an essentially labor-intensive activity. It is also an area where experience is critical to the overall efficiency and effectiveness of operations. Experience is a function of time, so it is extremely important to maintain an optimum mix of seasoned along with new personnel ... so also is the awareness that productivity is not necessarily directly proportional to the number of people on board.</p>	

GENERAL GOAL # 1: Border Control and Facilitation - Regulate entry to the United States in a manner that facilitates lawful travel and commerce while ensuring border integrity.									
ELEMENT # 2: BORDER PATROL									
PERFORMANCE INDICATORS INFORMATION			PERFORMANCE TARGETS & ACTUAL RESULTS

Productivity/ Efficiency	a. Percent of total hours spent on "Border Control" ¹⁶		56%	51%	53%	55%	+1.0%	56%	

<p>A. Definitions of Terms or Explanations for Indicators:</p>	<p>BORDER PATROL:</p> <p>N/A = "Data not (currently) available"</p> <p>V.1 FTEs (Full Time Equivalents) are used rather than the number of assigned individuals. FTE is a better indicator of the effective strength of an activity, in that it compensates for positions that have only been occupied for a portion of the tracking period, and also reflects the impact, if any, of large amounts of overtime. One FTE equals the number of regular official duty hours in the fiscal year, usually 2080 hours. The FTEs for an organization are computed by dividing the total hours worked by the FTE factor.</p> <p>V.2 "Border Control" hours are defined as those work hours spent on activities directly related to Border Enforcement (i.e., patrol, traffic checks, transportation checks, boat and air patrol, crewman and stowaway checks, etc.), as opposed to time spent on administration, training, or other functions.</p> <p>V.3 ENFORCE (Enforcement Case Tracking System) and IDENT (Automated Fingerprint Identification System) are part of the positive identification, apprehension and deportation automation technology being deployed to improve the efficiency and effectiveness of INS law enforcement. Eventually, IDENT and ENFORCE, which are currently operating as separate systems, will be merged into a single integrated system. Two subordinate systems of IDENT are the LOOKOUT database, which lists criminal aliens and prosecutable prior deportees, and the Recordvist database, which records individuals apprehended for Entry Without Inspection (EWI) -- a non-felony -- or otherwise denied entry to the United States at the border or a Port of Entry.</p>
<p>B. Factors Affecting FY 1995 and FY 1996 Program Performance</p>	<p>V.4 Apprehensions will continue to be variable depending on worldwide social and economic trends. FY 1995 provided a classic example with the devaluation of the peso and the resulting shock to the Mexican economy and its workers -- many of whom, as a result, sought relief in the United States. It is very likely that new economic problems in Mexico will continue to provide impetus to illegal northward migration, and subsequent apprehensions.</p> <p>In FY 1996, INS has continued to strengthen border enforcement efforts in the areas along the Southwest border that have historically experienced high levels of illegal alien traffic. These efforts have resulted in noticeable reductions in the number of attempted illegal entries at the targeted entry points, with resulting decreases in overall apprehensions (i.e., demonstrating the deterrent effect of INS endeavors). However, the apprehension decreases in the more popular, high traffic areas have been somewhat offset by significant increases in apprehensions in border areas which have previously experienced far lower levels of illegal entry attempts. This trend in shifting illegal entry patterns and increases in apprehensions in areas with lower numbers of illegal entries in the past are expected to continue in FY 1997 and 1998.</p> <p>V.5 Positive identification technology designed to consistently and reliably perform high speed identification of repeat illegal border crossers -- for example, the IDENT system -- was initially deployed by INS in FY 1995. With additional FY 1996 resources INS plans to expand installation of this technology. In particular, this will help to resolve the problem of repeat offenders simply circumlocating areas where systems such as IDENT are known to be deployed. This expanded deployment will continue in FY 1997 and FY 1998. Please refer to the "Technology Input" section of this General Goal for further discussion about the performance targets for the IDENT system.</p>

<p>C. Factors Affecting Selection of FY 1997 and 1998 Targets.</p>	<p>BORDER PATROL:</p> <p>\5. The percentage of Border Control hours are impacted by the influx of new agents that will require a greater number of hours of training. At the same time, more resources are now being applied to the development of new supervisory and management training for experienced agents, which -- when implemented -- will also affect the total hours that can be devoted to Border Control. However, the trade off in increased quality of Border Patrol supervision and management, as well as increased retention of experienced agents, will certainly compensate. Other factors that will influence total Border Control hours will be the advent of new technology that improves the efficiency of individual agents, the increase in support staff that will relieve the administrative burden on agents and supervisory agents, and changes -- both anticipated and unexpected -- in enforcement policies, tactics and strategies.</p> <p>\7. INS is currently projecting a decrease in total apprehensions by FY 1997. This is based on the assumption that, first, the range of Border Control efforts and initiatives that are in process or being planned will continue to have a <u>deterrence</u> effect in FY 1997. As the risk of apprehension increases and the costs of trying to cross the border illegally become greater (physically, monetarily and judicially), the number of potential first-timers who become discouraged and turn back (or never start) should increase. Similarly, the number of recidivists may increase as the risk of apprehension increases until they are also deterred from entry.</p> <p>In FY 1998, INS is projecting that apprehensions will begin to increase as illegal alien traffic flow shifts to new areas that are not as familiar to entrants and smugglers. Many of these areas are more desolate than the former entry corridors and farther from urban areas and transportation routes. All of these factors make detection and apprehension easier. Another factor contributing to the rise in apprehensions is that by FY 1998, it can be expected that the large numbers of Border Patrol agents who came on board in earlier years will have become increasingly experienced and effective. The deterrence effect that was seen in other border areas will take time to establish in the new locations. Until such time as it is shown -- and word spreads -- that the new areas are also controlled, there will be <u>increased apprehensions</u>.</p>

Productivity/ Efficiency									

<p>A. Definitions of Terms or Explanations for Indicators:</p>	<p>TECHNOLOGY INPUT:</p> <p>N/A = "Data not (currently) available"</p> <p>Currently, the Information Resource Management (IRM) project plan calls for an total of 767 IDENT locations when the system is completely deployed, and they are currently ahead of their original deployment schedule. Actual data input into the IDENT system began on October 1, 1994. The system was brought online in San Diego Sector on March 16, 1995, and since that time there have been nearly 220,000 "positive IDs." In IRM terms, a "positive ID" is one in which the system has made an identification that has resulted in either formal deportation proceedings or prosecution being initiated. There are other, lesser, degrees of identification, but the utility of that data is still being evaluated.</p> <p>For Border Control purposes the IDENT system is soon to be the integrated IDENT/INFORCE system. has been selected as the one most representative of the impact that technology has had on operations. However, there are other systems and initiatives that are in various stages of planning, development and/or deployment. The INFORCE system is an example of a system that will directly aid the regulation of border crossing by identifying and tracking illegal and inadmissible aliens, and indirectly aid facilitation by ultimately aiding in the reduction of the number of illegals. The Automatic Processing Points (APPs) and the Interagency Border Inspection System (IBIS), and the INS Passenger Accelerated Service System (INSPASS) are examples of technology that will directly aid the facilitation of lawful travel and commerce, but are not yet at a stage where their significance as providers of performance data can be determined.</p> <p>U.I. A distinction is made between "MAJOR" locations (475) and "TOTAL INS" locations (767). "Major" locations refer to those locations with "high encounter volume", i.e. large numbers of illegal aliens apprehended. "Total INS" locations refers to the ultimate goal of placing IDENT/INFORCE at every Border Patrol station or checkpoint, every Port of Entry, every District and Sector headquarters. In short, at every place where INS personnel have a need to access the system for either entry or retrieval of data. In addition, "Southwest" locations (191) have been added both as a separate category, and as a subset of "MAJOR" locations. Beginning in mid-FY 1996, the IDENT project team was directed to reprimarize its schedule and focus exclusively on bringing IDENT to every fixed site along the Southwest border. For the sake of consistency in reporting, lower-volume locations along the Southwest border have been rolled into the reporting for "major" or high-volume locations.</p>
<p>B. Factors Affecting FY 1995 and FY 1996 Program Performance</p>	<p>The IDENT system remained ahead of schedule for procurement and deployment of stations through the end of FY 1996, and is right on target for FY 1997.</p>

<p>C. Factors Affecting Selection of FY 1997 and 1998 Targets</p>	<p>In July 1996, the IBM Steering Committee directed that absolute priority would be given to the deployment of IDENT along the Southwest border. The deployment plan that was approved at that time calls for almost total coverage of the border -- all fixed sites will be included, and as many mobile locations as funding will allow. However, as with any new technology, performance projections are subject to technical problems, as well as any of numerous variables in the planning, procurement and deployment process.</p> <p>The planned integration of IDENT with the ENFORCE system began field-testing in El Paso Sector in late FY 1996. If the tests are successful, this integration will provide improved data gathering and analysis capability, as part of a greatly enhanced overall system potential. INS also envisions that the expanded system will allow us to apply statistical measurements to the flow of illegal border crossers and the effectiveness of border control resource utilization, improving the strategic deployment of assets.</p> <p>Initial work is currently under way to develop a computer staffing model that will utilize Artificial Intelligence programming to assess a large number of numeric, geographic, economic and political factors to provide the cost assessment and suggest resource deployment by sector and station. The initial pilot -- scheduled to begin in early 1997 -- will target El Paso Sector and when sufficiently refined -- possibly in late 1998 -- it will be exported to the rest of the Southwest border sectors.</p>

	Advanced Supervision	6,453	6,887	6,627	70	6,200	75	6,275	75	6,275	75	6,275
	Management Training	6,453	6,887	6,627	70	6,200	75	6,275	75	6,275	75	6,275
	Reserve Training	6,453	6,887	6,627	70	6,200	75	6,275	75	6,275	75	6,275

General Goal: INS will develop a motivated, well-trained, and diverse workforce.	
Element #1: The INS Workforce (Growth, Diversity, Training) -- Continued	
A. Definitions of Terms or Explanations for Indicators:	
New Employees - Represents all authorized and funded positions less those employees on board. The number of authorized and funded positions reflects the DNS Table of Organization.	
Diversity is defined where the DNS workforce matches the Civilian Labor Force. Another way of describing diversity is where full representation of minority groups is achieved corresponding to the Civilian Labor Force (CLF) data. The CLF is based on the 1990 Census.	
Advanced training includes Journeyman training and specialized training (e.g., for certifications, firearms training, etc.). Journeymen are eligible for training after three years in the officer corps.	
Training Costs per Employee Trained - The amount included are direct training costs, DNS modular cost for new positions include all training costs.	
B. Factors Affecting FY 1998 Program Performance	
Resources were not available for advanced training. In FY 96, a major emphasis was placed on getting all new officer corps personnel trained in basic training. This requirement took the bulk of the resources allocated to training and limited the Agency's capacity to deliver training to Journeymen.	
INS diversity figures for FY 96 - FY 98 will be shown as actuals when the figures are known.	
C. Factors Affecting Selection of FY 1997 and 1998 Targets	
The FY 98 performance targets reflect growth management assumptions and projected training to be delivered. The FY 98 targets assume that enhancement resources for training are provided.	

Professionalism Initiative GPRA Chart

General Goal: INS will use ADP and other emerging technologies to support an efficient, effective, and integrated operational environment.

Element #2: Application of Information Technology

Type of Indicator	Performance Indicators Information		Performance Targets and Actual Results					
	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Target	1997 Target Decrease	1998 Target	1998 Target Decrease
Input	# Employees Requiring a Computer Workstation	18,000	19,300	22,011	25,011	3,000	989	26,000
	# Computer Workstations Deployed (Beginning of Yr) (Cumulative - New and Upgraded)	-	-	2,859	6,710	6,710	7,551	17,100
Activity	# Computer Workstations Deployed (Annual)	-	2,611	5,272	228	5,500	(2,100)	3,400
	# Computer Workstations Upgraded (Annual)	-	248	1,438	(438)	1,000	(200)	800
Immediate Outcome	# Employees Served by a Computer Workstation	-	5,814	13,162	7,000	20,162	5,838	26,000
	# General Employee Workstations (Annual)	-	2,859	6,710	(210)	6,500	(2,300)	4,200

General Goal: INS will use ADP and other emerging technologies to support an efficient, effective, and integrated operational environment.									
Element #2: Application of Information Technology -- Continued									
Type of Indicator	Performance Indicators Information			Performance Targets and Actual Results					
	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Target	1997 Performance	1998 Target	1998 Performance	1998 Target
End Outcome	Employees Served by a Computer Workstation as % of Employees Requiring Servicing		30.1%	39.8%	20.8%	80.6%	19.4%		100.0%
Productivity/Efficiency	N/A								
A. Definitions of Terms or Explanations for Indicators									
Investments in the DDM Infrastructure Deployment program exclude annual, recurring operations and maintenance costs									
Employees "served by" a computer workstation reflects the number of employees who benefit from a deployed workstation									
B. Factors Affecting FY 1996 Program Performance									
Although the FY 1996 deployment served over 500 employees more than the target number, the nature of the work force included numerous stop sites, therefore the quantity of computers required to service these employees was less than the original target									
C. Factors Affecting Selection of FY 1997 and 1998 Targets									
Performance targets for FY 97 and FY 98 reflect the President's budget and the Department Request

General Goal: Professionalism Initiative - INS will manage resources to accomplish our mission effectively, using results-oriented workload and productivity measures.	
Element #3: Resource Management -- Continued	
A. Definitions of Terms or Explanations for Indicators	
The average cost per vehicle includes costs for retrofit equipment	
During FY 96, Field Operations is providing 3 staff years on a temporary basis. During FY 97, Field Ops will provide 6 staff years on a temporary basis	
1) The increase in cases results from the increase in criminal alien cases litigated (compared to non-criminal cases) and the impact of new immigration legislation	
B. Factors Affecting FY 1996 Program Performance	
Investigative staff of 6 reviews all allegations. During FY 94 - FY 96, this same staff also conducted investigations. Additionally, in FY 96, Internal Review limited review scope so analysts would be responsible for review from beginning to end	
C. Factors Affecting Selection of FY 1997 and 1998 Targets	

1605

Efficiency/ Productivity	% of Aliens with enforceable final orders removed 12	N/A	N/A	N/A	N/A	N/A	N/A	N/A
	% of deportable aliens granted voluntary departure who fail to depart 13/	N/A	N/A	N/A	N/A	N/A	N/A	N/A
A. Definitions of Terms or Explanations for Indicators:								
Inputs:								
<p>1 Personnel Inputs reflect FTE usage related to the removal of deportable aliens. Because base FTE expenditures were not tracked exclusively for removal priority, INS program managers provided estimates based on productive hours expended for certain functions related to the removal priority. Note that for FY 1996, the G-23 Report was used to update the workyears for Detention Enforcement Officers and Deportation Officers. D&D support workyears was pulled from the G-23 report for all non-officer hours and converted into workyears. Inspector workload listed in FY 1994 and FY 1995 was incorrectly included. Estimates for inspector time related to expedited exclusion pursuant to the 1996 Act will be developed, but are not available at this time.</p> <p>2 Detention days and bedspace include funding from the S&E account and the User fee. The User fee funded the following number of detention days in FY 1994-336,657, FY 1995-354,068, FY 1996-312,861, FY 1997-310,000, and in FY 1998-310,000. In addition, in FY 1998, the Immigration Detention account will fund 1,136 beds or 414,640 detention days (combined with 310,000 User fee days and 4,804,975 S&E days for a total of 5,529,615 detention days).</p>								
Outputs/Activities:								
<p>3 Number of Aliens Detained includes all aliens detained by INS, regardless of their length of stay. Of the number of aliens detained, the following numbers were detained using User fee funds in FY 1994-7,228, in FY 1995-6,613, in FY 1996-5,028, in FY 1997-16,145, and in FY 1998-16,847.</p> <p>4 Includes OSCs issued by the Border Patrol, Asylum, Inspections, Investigations, and Examinations.</p> <p>5 Includes I-122s issued by Asylum and Inspections.</p> <p>6 IHP interviews are difficult to project for FY 1997 and FY 1998 due to uncertainties associated with the implementation of the 1996 Act.</p> <p>7 Several variables impeded the development of projections of data entry of NCIC records including DFF cases. Those include the decentralization of the DFF entry, which, when fully implemented, will increase the number of cases entered. In addition, the effects of fully implementing the 1996 Act are not entirely certain and would have an impact on the designation of criminal aliens and thus the entry of NCIC records. Finally, the increase in the number of immigration judges will result in an increase in the number of criminal alien cases that would be eligible for DFF entry.</p>								

End Outcome	
8.	Although some categories are subsets of others, all are presented as separate subsets of the total removal number. This is not an all-inclusive list. The INS will not set a FY 1998 removal target until later in FY 97 to better account for the changes to the removal process brought by the 1996 Act
9	Interior Voluntary Returns Under Safeguard - Aliens apprehended anywhere in the interior of the country who admit their illegal status and agree to be returned immediately in lieu of being issued an OSC
10	Required Departures under EOIR Docket Control - Aliens who have been issued an OSC but who are permitted by immigration judges to leave the country voluntarily in lieu of deportation
11.	Withdrawals - Aliens who withdraw their application for admission after having been referred to an immigration judge for an exclusion hearing
12	Aliens with enforceable final orders who are removed within 6 months of the date that the order became enforceable.
13.	Deportable aliens granted voluntary departure by an immigration judge who fail to depart within the time granted, and thereby become deportable
B. Factors Affecting FY 1997 Program Performance	
1.	Major factors affecting FY 1997 program performance and targets are the delayed hiring and deployment of additional personnel, specifically investigators, detention enforcement, and deportation officers, and immigration agents. This includes unproductive time due to training requirements as well
2.	Availability and allocation of resources (Detention and Deportation, Investigations, Legal, Alien Travel, Detention and Welfare (ATD&W) including availability of bedspace, etc.) involved in the removal of criminal and deportable aliens
3.	Difficulty obtaining travel documents and the cooperation of the aliens' host countries in effecting removals
4.	Availability of EOIR resources, particularly immigration judges, to expedite the removal process Variables such as length of sentence, availability of immigration judges, and the time required to complete hearings directly affect the number of releases with and without final orders and the number of HRP removals
C. Factors Affecting FY 1997 and 1998 Targets	
1.	The most important factors affecting FY 1997, 1998, and beyond are the passage of the 1996 Act and Welfare Reform legislation.
2.	Availability of EOIR resources, particularly immigration judges, to expedite the removal process Variables such as length of sentence, availability of immigration judges, and the time required to complete hearings directly affect the number of releases with and without final orders and the number of HRP removals.
3.	Cooperation of the aliens' host countries in effecting removals

4. Cooperation of State governments in instituting the IHP to expedite removals
5. Delays in appropriations action, hiring, training, and/or deployment of new personnel will impact on INS' ability to achieve its target performance levels
6. Establishment of new codes to track different kinds of removals in the INS database and effectiveness of the linkage between EOIR & INS databases.

General Goal #3: Disincentives for Unlawful Migration *							
Element: Interior Enforcement			03:02 PM				
Performance Indicators Information			Performance Targets & Actual Results

* In FY 1996 and FY 1997, anti-smuggling activities were contained under the General Goal of Border Control and Facilitation. In FY 1998, INS proposes to include domestic anti-smuggling activities under the General Goal #3, Disincentives for Unlawful Migration and the corresponding priority Interior Deterrence.							

* In FY 1996 and FY 1997, anti-smuggling activities were contained under the General Goal of Border Control and Facilitation. In FY 1998, INS proposes to include domestic anti-smuggling activities under the General Goal #3, Disincentives for Unlawful Migration and the corresponding priority Interior Deterrence.

<p>A. Definition of Terms or Explanations for Indicators:</p>	<p>NA = Not available</p> <p>1) The decrease in Special Agent FTEs from FY 1994 to FY 1995 resulted from the absorption of unfunded portion of the locality pay increase.</p> <p>2) Note that, effective October 1, 1995, "Smuggling Cases Completed" will track only major cases, i.e., those which relate to organizations which have the capability of moving large numbers of aliens into the interior of the United States; generating over \$25,000 per month, or are labor contractors. Category III (Impact Level II) cases which can include single, unrelated instances of smuggling ("freelance" smuggling) will not be included in this figure.</p> <p>B. Factors Affecting FY 1996 Program Performance:</p> <p>3) "Number of On-Going Investigations" is not accurately captured by the current case tracking system. When the ENFORCE case identification and tracking system is brought on-line, the data will be available.</p>
<p>C. Factors Affecting Selection of FY 1997 and 1998 Targets:</p>	<p>There are no changes in the antismuggling targets for FY 97 and FY 98 since no additional resources are requested and there are no plans to shift the present mix of investigative activity.</p>

General Goal #3: Disincentives for Unlawful Migration									
Element: Interior Enforcement

Removals from U.S.	NA	NA	NA	1,680	1,680				
End Outcome Productivity Efficiency									
Ratio of worksite visits to Agent FTE	27	25	24	23	27				

A. Definition of Terms or Explanations for Indicators:

NA = Not available

Currently, INS tracks and reports financial resources by decision units as identified in budget documents. The above input indicators are sub-components of INS decision units and are not currently tracked in the financial reporting system. However, to provide some basis of relationship between inputs and outputs/outcomes INS has estimated FTEs for Special Agents, Detention and Deportation Officers, General Counsel, and Border Patrol Agents using workload data that is reported by activity. It should be noted that base FTEs are not estimated for Detention and Deportation (D&D) Officers, since D&D worksite enforcement workload data are not available. D&D FTEs for FYs 96, 97, and 98 only include FTEs associated with D&D worksite initiatives.

- 1) The number of Counsel FTE had been erroneously reported from 1993 to 1997. The revised numbers reflect actual workhours for Trial Attorneys working employer sanctions cases and civil document fraud cases as reported on the G-23 report. In addition, Attorney overtime, Headquarters staff Attorney time, and legal support time has been estimated and factored into the target FTE.
- 2) Currently, the INS does not track or report voluntary departures, voluntary removals, orders to show cause, final orders of deportation and removals associated with worksite enforcement. INS is presently modifying existing systems to begin tracking worksite removals. Removal targets reflect enhancements only that were requested.
- 3) Worksite visits are the number of lead driven cases, GAP, National Targeting Plan, and follow-up inspections.
- 4) The reduction in 274 C cases from 1994 to 1995 is a result of on-going litigation that is affecting INS' 274C processing. Given the effects of the ongoing litigation, investigations has not provided estimates for 1996 to 1998 for 274 C cases.
- 5) Employer assistance is the number of employers educated and the number of outreach activities performed.
- 6) Unauthorized workers identified is the number of aliens identified, by the VIS, as not being eligible for employment.

B. Factors Affecting FY 1996 Program Performance:

The furloughs in FY 1996 reduced some types of employer sanctions cases that could be performed. In addition, the furlough did not allow INS to hire and train a large portion of the enhancement of Special Agents and Immigration Agents received in FY 1996.

C. Factors Affecting Selection of FY 1997 and 1998 Targets:

The following factors will affect the targets identified above: other investigative priorities, staffing reductions/turnover, case complexity, availability of evidence, availability of funding, AUSA/INS attorney acceptance of case, AUSA presentation to Grand Jury, INS attorney presentation to DOJCAHO, AUSA/INS attorney prosecution settlement, and cooperation from alien's country of nationality or last residence. Also, GPRA reporting requirements capability may be affected due to unanticipated delay of various management information reporting systems.

Status of Congressionally Requested
Studies, Reports, and Evaluations

1. Public Law 102-395, Section 112 (5), requires a report on the financial condition of the Breached Bond/Detention Account. The requested information is included in the 1998 President's budget request for the Breached Bond/Detention Account.
2. Public Law 101-515, Section 210 (d) (3), requires a report on the financial condition of the Land Border Inspection Fee Account. The requested information is included in the 1998 President's budget request for the Land Border Inspection Fee Account.
3. Public Law 101-515, Section 210 (a), requires a report on the financial condition of the Immigration Examinations Fee Account. The requested information is included in the 1998 President's budget request for the Immigration Examinations Fee Account.
4. Public Law 101-515, Section 210 (a) (5), requires a report on the financial condition of the User Fee Account and progress in meeting the 45 minute standard. The financial condition information is included in the 1998 President's budget request for the Immigration User Fee Account.
5. Public Law 101-515, Section 210 (d) (3), requires quarterly reports on the status of the Land Border Inspection Project.
6. Chairman Roger's 6/7/95 letter requests the submission of a monthly report addressing INS' status in processing applications for naturalization adjustment of status, and employment authorization documents. The August 1996 report has been sent to the Department.
7. Public Law 104-208 requires the INS to develop a 5-year Border Patrol deployment plan by State, which emphasizes staffing levels at the Southwest border to support the greatest areas of illegal traffic. The 5-year plan is to contain staffing targets for each State for each year beginning in fiscal year 1996. The plan was transmitted to the Department on 1/27/97.

8. Public Law 104-208 requires the INS to report to the Appropriations Committees on a quarterly basis, the progress and plans in meeting hiring goals for new Border Patrol agents. Both the third and fourth quarter reports have been transmitted to the Office of Management and Budget.
9. Public Law 104-208 requires the INS to consult Appropriations Committees before a final allocation of all new positions is determined. The Committees expect the new Border Patrol agents and Inspectors to be deployed to the "front-lines" of the border and that INS should review the requirements of States and localities in the central and western regions of the country in its allocation of new personnel. The Hill was briefed on the Deployment Plan on 11/14/96.
10. Public Law 104-208 requires the INS to continue consultation with Appropriations Committees on redeployment of interior Border Patrol agents. An update was provided on 11/14/96.
11. Public Law 104-208 requires the INS in collaboration with the Department of State, submit a plan and timeline that outline a pilot project that includes the automated issuance of visas through electronic data sharing and the automated collection of arrival and departure information. The report is being prepared in INS in conjunction with the Department of State.
12. Public Law 104-208 requires the INS to submit a quarterly report on removals that outlines the number of removals in the following categories: criminal aliens removed, non-criminal aliens removed, Port Court removals, and the number of outstanding orders of deportation or exclusion. The first report was sent to the Department on 1/21/97.
13. Public Law 104-208 requires the INS to aid the Customs Service in developing a report on a plan to develop a pilot dedicated commuter lane (DCL) at the El Paso border. Inspections has been collaborating with the United States Customs Service (USCS) on the report for El Paso DCL. The SENTRI team has had input from all the agencies concerned.
14. A January 25, 1996 letter from the House Committee on Appropriations directs the Department to submit a final plan for the phase down of the Charleston training facility prior to March 1, 1997. A report is being prepared for transmittal to the Department.

Justification of Adjustments to Base
(Dollars in thousands)**

	Pos.	Work- years	Amount
Transfers to and from other accounts.			
Transfer to Violent Crime Reduction Programs appropriation			
A total of \$40,138,000 is to be transferred in 1998 to the Detention and Deportation program of the Violent Crime Reduction Programs appropriation for alien travel, detention and welfare costs associated with increased activities related to the Detention and Deportation program	..		-\$40,138
Transfer to Construction appropriation	-13	-16	-15,623
This transfer to the Construction appropriation combines construction and repair and alteration resources into one account			
Total transfers	-13	-16	-\$55,761
Increases:			
1998 pay raise	19,784
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$19,784,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$14,654,000 for pay and \$6,239,000 for benefits = \$19,784,000).			
Annualization of 1997 pay raise	6,224
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent, plus appropriate personnel benefits (\$4,609,000 for compensation and \$1,615,000 for benefits).			

1621

843 19,588

Annualization of 1,456 additional positions approved in 1997
 This provides for the annualization of 1,456 additional positions in 1997 Congressional Action for (the
 Inspections, Border Patrol, Investigations, Detention and Deportation, Intelligence, International Affairs,
 Training, Data and Communications, Legal Proceedings, and Management and Administration programs).
 This request includes nonrecurring costs for one-time items associated with the increased positions.

	Approved 1997 Increases	Annualization Required
Annual salary rate of 1,456 approved positions	60,119	34,311
Other personnel compensation	7,290	10,389
Less lapse (56%)	-26,055	37,633
Net Compensation	33,098	47,446
Associated employee benefits	17,052	11,736
Other (non-personnel)
Travel	6,241	2,440
Transportation of Things	3,190	125
GSA Rent	6,048	-852

Printing/Reproduction
Other Services	61,371	-14,409
Supplies/Materials	6,181	6,140
Equipment	42,441	-31,039
Total costs subject to annualization	176,363	19,588

Annualization of additional positions approved in 1996
 This provides for the annualization of additional positions approved in 1996. The full amount of
 annualization was not needed in 1997 because the new positions were not on board. However, all the
 positions will be on board in 1998 and cannot be properly staffed without full funding.

42,975

Foreign allowances	1
Allowances for Government employees in foreign areas are determined by the Department of State (DOS). The requested increase of \$1,000 provides a 1.7 percent increase over the obligations of \$58,824, which are committed for 1996.	
Accident compensation	403
This increase reflects the billing provided by the Department of Labor for the actual costs in 1996 of employees' accident compensation, which will be billed in 1998. The 1998 increased cost will be \$403,000.	
Medical/Hospital Service costs	143
The Department of Health and Human Services is projecting an increase in health care costs. The Department is applying a factor of 5.3 percent against medical services. An increase of \$13,000 will be required for 1998.	
Mileage allowance rate increase	52
The mileage allowance rate has increased from 30 to 31 cents per mile. An increase of \$52,000 is requested in 1998 to cover this rate adjustment.	
Correspondence Management System	25
An increase of \$25,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved record keeping, and improved reporting capability.	
Investigation/Reinvestigation	71
Executive Order 10450 "Security Requirements for Government Employees" requires that appointments of each civilian officer or employee in any department or agency of the Government shall be made subject to investigation. Additional funding is required to cover the costs of additional contractor support needed to ensure timely compliance with this Executive Order. It is critical to accommodate the Department's security requirements by ensuring investigations and reinvestigations are timely initiated on newly appointed civilian officers and employees.	

ICASS Increase for Staffing Under the ICASS an annual charge will be made by the IXOS for administrative support based on the number of overseas staff for each Federal agency. Because the law enforcement operations of the Department of Justice have increasing international demands, additional overseas staffing since 1995 will result in increased ICASS costs in 1998. Based on the additional overseas staffing, IXOS has provided an increased cost estimate of \$220,000 for this organization in 1998.	220	
Spectrum Frequency Management Public Law 104-134 authorizes the Secretary of Commerce to charge Federal agencies for spectrum management services. The National Telecommunications and Information Administration estimates that the Department of Justice costs for 1998 will be \$723,000 based on the annual number of frequency assignments. Given the dependence of the Department's law enforcement operations on efficient and dependable frequency management, this funding is necessary to continued operations. Funding of \$132,000 is requested for INS.	132	
Northern Mariana Islands Prior to 1998, the Department of Interior reimbursed the Department of Justice for the costs of addressing serious crime problems in the Commonwealth of the Northern Mariana Islands (CNMI). However, beginning in 1998, reimbursement of these costs will not be available. Funding of \$185,000 is requested to maintain current efforts in CNMI.	1	1 385
General pricing level adjustments This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.	8,976	
Department-wide Audited Financial Statement An increase of 3 reimbursable FTE to be funded by the Working Capital Fund retained earnings is requested to cover the necessary expenses for the preparation of the Department-wide audited financial statement required by the Government Management Reform Act of 1994.	3	

1624

Restoration of FY 1996 FTE Reduction			
In FY 1996, this account absorbed a reduction of 623 FTE over the FY 1996-1997 time frame. An analysis of the workyears required by this account indicates a total of 227 FTE are required to be restored in FY 1998.	227

Immigration and Naturalization Service

Violent Crime Reduction Program
Summary Statement
Fiscal Year 1998

The Immigration and Naturalization Service (INS) requests 2,804 permanent positions, 2,141 workyears, and \$732,251,000 in the Violent Crime Reduction Program (VCRP). This request represents a total increase of 1,163 positions, 794 workyears, and \$232,251,000 above the Appropriation enacted for FY 1997 (1,641 positions, 1,347 workyears, and \$500,000,000). This includes transfers, adjustments and restorations to the base, totaling 183 workyears and \$10,606,000.

Total program increases for FY 1998 include 1,163 positions, 611 workyears, and \$221,645,000. This request will enhance INS' ability to further implement its strategy to control the border, reduce crime and urban pressure resulting from illegal immigration, deter unlawful employment of illegal aliens, come to the aid of State and local governments by identifying and removing criminal aliens, and to support records clean-up and centralization efforts. The increases associated with each of these initiatives follow.

Professionalism

The FY 1997 request includes a total of 30 positions, 16 workyears, and \$7,645,000 for assimilating and automating the workforce under the Professionalism initiative. Of this amount, 9 positions, 5 workyears, and \$6,145,000 will enable INS to develop and maintain a professional workforce through the delivery of quality basic, specialized, managerial and employee development training. These resources will help reduce current backlogs in supervisory and advanced training, as well as provide the necessary training for professional development and advanced training of the officer corps and non-officer personnel.

In addition, 21 positions, 11 workyears, and \$1,500,000 will enable INS to dedicate more computer support personnel to the various information technology and mission-critical programs. As new systems and computer infrastructure are deployed nationwide, computer specialist positions are required to effectively manage and provide technical support to the end-users.

Border Control and Facilitation

Under this initiative, INS requests \$51 positions, 221 workyears, and \$89,700,000 to support the Border Patrol's Strategic Border Control Plan, as well as to provide facilitation and control at land ports-of-entry. Of this total, \$50 positions, 220 workyears, and \$62,000,000 will allow INS to build on the successes of continuing campaigns against illegal border activities, such as Operations Gatekeeper and Hold-The-Line. This request will provide 500 new Border Patrol agents and 50 support personnel needed to continue and maintain the accomplishments of the earlier phases of the Strategic Plan in Arizona, Texas, New Mexico, and the eastern portion of the California-Mexico border, and will initiate Phase IV, which includes the Northern and maritime border stations.

In addition, several automation projects are included under the Border Control and Facilitation initiative. For the Inspections program, a total of \$11,500,000 is requested for increased coordination with the U.S. Customs Service on issues affecting land border inspections. The two agencies have developed a joint agreement to fund the installation of license plate readers, the replacement of the Treasury Enforcement Communications System (TECS) terminals, and other port technology. A total of 1 position, 1 workyear, and \$14,000,000 will also support deployment of the IDENT and ENFORCE systems to additional Border Patrol sites, primarily along the Southwest border.

Removal of Criminal and Non-Criminal Aliens

INS requests a total of 422 positions, 293 workyears, and \$95,500,000 to continue its efforts in criminal and non-criminal alien removals. The FY 1998 request will enable INS to enhance its ability to identify, locate, and remove deportable aliens. Of the total, an increase of 223 positions, 186 workyears, and \$60,400,000 is being requested to respond to the new requirements of the Antiterrorism and Effective Death Penalty Act (AEDPA) and sustain current efforts toward removing criminal aliens. These resources will provide 1,339 additional detention bed spaces, including the activation of 300 bed spaces in the Buffalo Service Processing Center, 300 bed spaces in the Krome Lockdown Facility, and 400 bed spaces in the San Diego area. In addition, a total of 199 positions, 107 workyears, and \$35,100,000 is being requested to pursue specific projects that enhance the identification of criminal aliens. Funding requested will expand the County Jail project to additional INS districts, enhance the Law Enforcement Support Center, and expand the criminal record holdings in the National Crime Information Center. These resources will fund an additional 525 State and local bed spaces.

Interior Deterrence

In order to adequately respond to the presence and consequences of illegal migration in the interior United States, especially in the deterrence of unlawful employment and displacement in the workforce, as well as assisting employers to abide by the law, INS is requesting a total of 156 positions, 79 workyears, and \$21,000,000 under the Interior Deterrence initiative. Specifically, in order to deter unlawful employment, this request includes 87 positions, 44 workyears and \$9,200,000 to enhance worksite enforcement in states with high immigrant populations. These resources will also be used to provide employer education through centrally-controlled automated information systems. In addition, to assist employers through further development and expansion of Verification Information Systems (VIS), 69 positions, 35 workyears, and \$11,800,000 are needed to clean-up INS data and records, as well as to improve and expand verification efforts.

Improving Services and Benefits

INS requests a total of 4 positions, 2 workyears, and \$7,800,000 to continue expansion of the corporate database concept and to support the records clean-up and centralization efforts.

The 1998 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

For activities authorized by sections 130002, 130005, 130006, 1310007, and 190001(b) of the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322), as amended, and section 813 of the Antiterrorism and Effective Death Penalty Act of 1996 (Public Law 104-132), \$550,000,000/1. Amount available until expended, which will be derived from the Violent Crime Reduction Trust Fund, of which \$66,217,000 shall be for expeditious deportation of denied asylum applicants \$317,236,000 shall be for improving border controls, and \$116,527,000 shall be for detention and deportation proceedings. Provided, That amounts not required for asylum processing provided under the expeditious deportation of denied asylum applicants shall also be available for other deportation program activities.	\$373,251,000	(Department of Justice)

Congressional Appropriation Action on the 1997 Request. The Congress approved 1,641 positions, 1,347 workyears, and \$500,000,000 for this account. This was 268 positions and 202 workyears below, and \$42,158,000 above the revised request level. The Congress approved the requested base transfer of \$48,011,000 in funding for the Detention and Deportation program from the Salaries and Expenses account to the VCRP and directed the transfer of 388 positions, 261 workyears, and \$29,567,000 in resources associated with the Asylum program and \$28,922,000 for automation and infrastructure requirements from the VCRP to the Examinations Fee account.

**Immigration and Naturalization Service
Violent Crime Reduction Programs
Program Performance Information**
(Dollars in Thousands)

The Violent Crime Reductions Program account was established in the Violent Crime Control and Law Enforcement Act of 1994 (P.L. 103-322), as amended. Appropriations are derived from the Violent Crime Reduction Trust Fund and remain available until expended. Resources from the fund are to augment immigration law enforcement activities authorized by sections 130002, 130005, 130006, 130007, and 190001(b) of the Act.

BASE PROGRAM DESCRIPTION:

- The function of this program is to deter or prevent illegal entry or locate and apprehend aliens and other illegal entrants at or near the border. In addition, the Border Patrol has primary responsibility for drug interdiction between ports-of-entry. Border Patrol officers engaged in surveillance activities to prevent entry or apprehend those who have illegally crossed the borders are supported by computer-monitored electronic ground sensors that alert them to illegal entries. Additional support is provided by observation aircraft, low light level television systems, and infrared viewing devices. Patrol officers use a wide assortment of vehicles adapted to local terrain and operational requirements, including motorcycles, all-terrain vehicles, boats and horses. In addition, line watch traffic check operations are conducted along major routes of travel to restrict access to the interior by illegal aliens. Transportation centers are placed under surveillance for the same reason. The Patrol conducts numerous interagency drug task force operations with other Federal, State and local law enforcement agencies through its participation in

Operation Alliance along the southern border. To further assist the Border Patrol in this endeavor, all Border Patrol agents receive Drug Enforcement Administration Title 21 cross-designated authority in their basic training at Glynco, Georgia.

1998 Estimate	217	196	21,809
Increase/Decrease	121	78	13,546

BASIC PROGRAM DESCRIPTION:

- The functions of this program include the detection of criminal law violations and the identification of violators through covert operations and other investigative procedures, and initiate criminal prosecution or administrative action. Many of the cases investigated involve violators associated with large-scale, highly organized criminal conspiracies. Quite often, these criminal alien organizations are simultaneously engaged in other illegal activities such as racketeering, alien smuggling, counterfeiting, prostitution, official corruption, narcotics, weapons trafficking and extortion on an international scale. Special Agents identify these organizations through interviews, the use of informants, surreptitious surveillance, as well as undercover and task force operations. Investigative task force operations concentrate the resources of a local office, or combine the resources of several offices, to identify the members and activities of a criminal organization.
- IRCA and other statutes mandate expeditious identification and processing of aliens convicted of deportable offenses. During FY 1992, the Department of Justice (DOJ) conducted a survey of Federal and State correctional systems and submitted a report of its findings to the Senate and House Judiciary Committees. The survey reflected that over 57,000 foreign-born nationals (FBN) were currently incarcerated (based on felony convictions) in the nation's Federal and State penitentiary systems. Currently, INS is unable to accurately determine the total number of prison inmates in the United States who are "criminal aliens" as required by §510 of the Immigration and Nationality Act of 1990 (IMN/AC '90). However, the INS continues to determine the number of

FBNs as §507¹ of IMMACT '90 is further implemented. It is anticipated that as these and other laws are more fully implemented and the Institutional Hearing Program (IHP) in Federal, State and local prisons is fully operational, the INS will be better able to accurately determine the number of deportable aliens in the prison systems of this country, process them for deportation proceedings and, upon receipt of a final order of deportation and completion of their sentences, remove them from this country.

- The Investigations program is working in close coordination with the Executive Office of Immigration Review (EOIR) to improve and expand (where necessary) the IHP, so that incarcerated alien felons can be identified and processed for deportation proceedings and complete the entire deportation hearing process during the period of their incarceration. Upon the completion of the inmate's sentence, the alien can then be immediately removed from the United States without coming into INS custody, without the attendant delay for continued administrative (deportation) hearings and, most importantly, without being detained at further government expense.
- In 1992, the Service began targeting violent criminal alien gangs in 36 U.S. cities. This effort focuses on violent criminal alien gangs in designated cities where INS special agents, frequently in coordination with other law enforcement officials, seek to identify, apprehend, convict and remove from the United States alien members of these criminal groups and ultimately dismantle their organizations. The Investigations program will continue its commitment to the Organized Crime Drug Enforcement Task Force (OCDETF) and the Violent Gang Task Force (VGTF) and work in coordination with other Federal, State, and local law enforcement agencies to place serious criminal offenders who are aliens into deportation proceedings, and, where applicable, remove them from the United States. In addition, this program is responsible for the management of the Service's assets forfeiture activities.
- The principal goal of the Fraud program is to discourage illegal immigration through fraud and to protect the integrity of benefits and documents legitimately provided to authorized aliens by INS. In an effort to accomplish this goal, INS is aggressively targeting complex criminal organizations involved in immigration fraud for criminal prosecution. One investigation recently completed by INS resulted in the dismantling of one of the largest counterfeit document manufacturing and distribution organizations in INS history. As a result of this investigation, the INS seized 250,000 fraudulent documents valued at over

¹ Section 507 of the Immigration Act of 1990 requires the fifty states (and Guam, the U.S. Virgin Islands, Puerto Rico and the District of Columbia) to submit plans for certified records of conviction for those FBI's that INS has identified as deportable criminal aliens. The states have responded positively to this requirement of law. As the law is being implemented, investigations staff are able to obtain, more expeditiously and systematically, information required under the law. Therefore, the incarcerated criminal aliens will be able to begin the IHP more efficiently. The availability of records of conviction expedites processing of aliens for deportation, and greatly facilitates the administrative hearing process.

\$7 million, two printing presses, counterfeit currency, and handguns. With regard to alien smuggling, the growing problem of Chinese alien smuggling by sea is of particular concern. In FY 1993, six boats were seized in United States territorial waters with Chinese nationals seeking asylum. The boat smuggling investigations are complex, expensive, and international in scope. One recent smuggling vessel carried more than 500 illegal aliens. Boat smuggling investigations involve interpreter costs, domestic and international travel, specialized equipment needs, large numbers of smuggling suspects, and high witness and prosecution costs. There were also ten boats intercepted before reaching U.S. waters. This has changed the dynamics of Chinese smuggling operations. The smuggling continues but the interception is occurring primarily outside the U.S. Instead of boats with large numbers of people, the matriculation appears to be in smaller numbers and under a variety of illegal entry methods. This is expected to increase the number of smuggling attempts and, therefore, smuggling investigations in the near future.

1998 Estimate	827	688	329,627
Increase/Decrease	303	217	83,724

BASE PROGRAM DESCRIPTION:

- The Detention and Deportation program is a critical element in the structure of the Service. Its functions are the detention, exclusion, expulsion, removal, parole and deportation of aliens. Service and non-Service (contract) facilities are used to detain, until ready for removal, those aliens subject to deportation or exclusion proceedings who are likely to abscond or whose freedom at-large would clearly represent a danger to public safety and security. In the performance of the deportation function, the Service maintains a system of controls that ensures that every case involving a deportable alien is efficiently and correctly processed and, if necessary, the alien's removal from the country is effected promptly. In Fiscal Year 1997, a total of \$48,611,000 has been transferred from the Detention and Deportation program of the Salaries and Expenses appropriation to the Detention and Deportation program of the VCRP for alien travel, detention, and welfare costs associated with increased activities related to the Institutional Hearing Program (IHP). For FY 1998, an additional \$40,138,000 is proposed for transfer to the VCRP.

- The D&D program promptly removes deportable and excludable aliens and avoids detention to the greatest extent possible. The D&D program: tracks the cases through the Institutional Hearing Program (IHP); updates the necessary data bases; provides case status updates to inmates and their attorneys; obtains required travel documents; makes the necessary travel arrangements, including notification to foreign governments; executes the warrants of deportation; and physically removes criminal aliens from the country (including providing overseas escorts when necessary to protect the traveling public or to ensure the criminal's arrival at the intended destination).

Training			
1997 Availability	37	31	\$ 2,197
1998 Base	37	35	2,248
1998 Estimate	46	40	8,293
Increase/Decrease	9	5	6,145

BASE PROGRAM DESCRIPTION:

- The Training program provides the staff and the resources necessary to maintain an employee development program that meets the diverse training needs of the INS workforce. Training requirements are identified annually and are revised, as needed, due to new regulations, legislation, or organizational needs. The program is accomplished in a variety of ways: through residential training at the Federal Law Enforcement Training Center (FLETC) at Glynco, Georgia (basic officer training) and at Artesia, New Mexico (journeyman-level officer training); through programs conducted by other Federal agencies; by private contractors; or in combined presentations using INS and non-INS resources.
- INS activated a satellite training facility at Charleston Naval Base, South Carolina in April 1996. As of August 1996, the Charleston facility will be used exclusively for Border Patrol training. Five Border Patrol classes are to be conducted at the Federal Law Enforcement Training Center (FLETC) at Glynco, Georgia in FY 1997. All other INS officer training, both basic and journeyman-level, will be conducted at one of the FLETC facilities at Glynco, Georgia, or Artesia, New Mexico, or will be provided via exportable modules at employees' duty stations.

- The Training program ensures basic training for all new officers and advanced and technical training for journeyman officers, and periodically updates curricula for the basic and advanced training programs
- The Training program provides mandatory training for INS supervisors, managers, management officials and executives, and provides progressive technical and specialized training for professional, technical, and clerical personnel who support agency operations.
- New training technology will afford the INS an opportunity to provide continuous training for all INS employees at or near their duty station, reducing travel costs, and internal and external costs that come with having to train off-site. While certain requirements such as basic training, firearms and driver training, and other courses involving group interaction and practical exercises, may justify a group/residential learning environment, many learning objectives can be addressed by distributed learning packages utilizing video cassettes, workbooks, training pamphlets, and computer-based instruction and, in certain instances, video conferences. This training can be learner-based, self-paced, ongoing, and reusable. Distributed learning technology allows for disseminating information, increasing certain skills, increasing abilities to get the job done, and change attitudes.

1998 Estimate	32	21	173,017
Increase/Decrease	26	14	25,860

BASE PROGRAM DESCRIPTION:

- The Data and Communications Program provides direct support for operational programs as well as administrative support functions of the Service. Congressional action on the FY 1997 budget request provided for the transfer of \$26,922,000 in funding for the Data and Communications Program from the Violent Crime Reduction Programs appropriation to the Immigration Examinations Fee account. There are seven major technology programs (initiatives) included under the Data and

Communications program funded by this appropriation, plus the functions collectively known as Information Resources Management (IRM) Operations. The seven program areas, each of which consist of one or more projects in addition to the normal operations and maintenance required for existing systems and technologies, are: 1) Infrastructure 2) Examination Systems, 3) Inspection Systems, 4) Enforcement Systems, 5) Biometric Identification Systems, 6) Corporate Information Systems, and 7) Management Systems (financial and administrative). IRM Operations includes the functions necessary to support the activities of the Data and Communications Program. Through development and implementation of these initiatives, the Service will improve the effectiveness and efficiency of Service functions through the use of automation, provide for the operation of data and communications networks, and provide radio communications, telephone call handling, intrusion detection sensors, and electronic security equipment and systems. INS automation efforts are designed to directly support efforts to control the borders of the United States, reduce incentives for unauthorized employment and benefits, and remove criminal and non-criminal aliens. In FY 1998, INS will complete the development and deployment activities initiated in FY 1995 through FY 1997, and provide the necessary operations and maintenance services to ensure the effective and efficient operation of the installed base of technology systems. The INS will continue to place an emphasis and priority on its role as a repository of the Nation's records on immigrants, visitors, and illegal entrants, as well as on meeting the customer needs for enhanced technology services and information. A brief description of each of the six major automation programs follows:

- **Infrastructure** - The IRM Infrastructure Program provides standard office automation hardware and software to support improved communications and interoperability between INS sites. Through the use of these products, the INS workforce will effectively and efficiently communicate, share data, and provide professional products and services that support customer requirements. The Infrastructure Program encompasses three significant IRM activities. The first and most significant of these activities is Infrastructure Deployment where the primary goal is to equip each INS office with standard integrated sets of office automation hardware, software, and LAN configurations, along with the WAN and telecommunications backbone through which remote and centralized systems and the corporate database are accessed. The second activity, Infrastructure Support, encompasses the full range of ongoing services to support the technology and systems architecture. Included are hardware maintenance, Facilities Operations Support (FOS), help desk operations, training, and data communications. Hardware maintenance provides the necessary services to ensure ADP equipment is maintained in operating order consistent with manufacturer specifications. The FOS contract provides on-site user support to INS facilities throughout the United States. FOS also provides INS help desk operational support and computer operations and production control services for Headquarters. Training includes training in the use of the office automation hardware and software, and computer network training to the field to support the modernized computer systems that have been and continue to be installed in INS field offices. Data Communications provides data communication circuits that allow operational users to access INS centralized

ADP systems from offices world-wide. The third activity is the Video Teleconferencing (VTC) initiative in support of the Service's Institutional Hearing Program (IIP). The VTC provides for audio and video connectivity between distant INS locations to support INS hearings and legal proceedings.

- By the end of FY 1996, standard office automation hardware and software from the Infrastructure Deployment Project was installed at 238 sites (37 percent of the original 641 planned sites). In FY 1997, INS expects to install the standard infrastructure at an additional 213 sites (approximately 33 percent of the 641 planned sites). In FY 1998, INS expects to install the standard infrastructure at the remaining 190 planned sites (approximately 30 percent of the original 641 planned sites) plus an additional 109 facilities that have been established to accommodate INS workforce growth since the inception of the Infrastructure Deployment Project. In FY 1998, IRM will also provide continued hardware and software maintenance, upgrade software licenses and system components as required, and provide on-site user support to address site-specific needs for operations and maintenance services.

- Examination Systems** - The Examination Systems Program provides for an integrated set of functions that incorporate all individual case-work-oriented subsystems used to support the processing of applications and petitions for immigration benefits and associated processes such as the production of immigration documents. These functions and processes include employment authorization, asylum, resident alien processing, and citizenship application and processing for naturalization.

In FY 1998, INS will provide services to operate and maintain the Examinations information technology systems developed and deployed in FYs 1995 through 1997. Such services include: making corrections to existing software to eliminate functional errors, failures, and deficiencies that could affect operational performance; modifications in response to legislative and/or policy changes; the costs for maintaining and upgrading licenses to existing application-specific software; and the costs for maintaining validation and verification capabilities that can be used to test application systems before they are deployed and placed into operation.

- Inspection Systems** - The Inspections System Program supports efforts to control admissions at ports-of-entry and enhance the INS inspection function. Three major automation efforts included under this program are the Interagency Border Inspection System (IBIS), the INS Passenger Accelerated Services System (INSPASS), and the Dedicated Commuter Lane (DCL).

IBIS, a system operated jointly with the U.S. Customs Service and Departments of State and Agriculture is used at ports-of-entry to facilitate inspection and to identify criminals. IBIS is currently installed at major air and land border ports-of-entry. INSPASS is an automated inspection system for low-risk, frequent travelers using automated inspection kiosks. This system is

currently installed at several of the Nation's major international airports. DC1 allows border crossers already inspected by INS to use automated verification instead of manual inspection. This program will develop and deploy machine readable travel documents, that will allow for positive identification of air travelers destined for the United States.

A combination of technology and advanced production techniques will produce entry documents that are fraud resistant and easy to use. Profile scanning and a sophisticated worldwide law enforcement network will quickly and accurately identify persons of interest. Smart card technology with positive identification features will facilitate the quick and accurate inspection of low-risk, frequent land travelers. Technology will allow for improved service to the public while increasing the number of inspection hours devoted to high-risk activities.

In FY 1998, INS will provide services to operate and maintain the Inspections information technology systems developed and deployed in Fiscal Years 1995 through 1997.

- **Biometric Identification Systems** - The INS is developing a single fingerprint-based identification system that will enable the Service to rapidly and accurately identify persons of interest. IDENT is the current INS fingerprint-based identification subsystem that is and will be used by Service law enforcement and benefit systems to assist in the positive identification of persons who are arrested, as well as those who apply for benefits, including the identification of travelers referred to secondary inspection processing and for automated inspection.

During FY 1996, the INS began deployment of IDENT across the Southwest border. In FY 1997, INS expects to pursue implementation of this technology to expand the IDENT records storage, fingerprint matching capacity, and trends analysis for the existing installed sites along the Southwest border, as well as additional interior enforcement sites. In FY 1998, INS will continue to deploy the IDENT system to INS sites and provide the necessary services to support and maintain the capabilities of the system.

- **Corporate Information Systems** - This program seeks to integrate and consolidate, where appropriate, INS information and enhance records management capabilities while supporting a secure, open system environment. In FY 1997, the INS will continue efforts to re-engineer INS data repository systems to streamline access to alien information. This program will ensure that data collected is correct and will follow the same naming and attribute standards across all agency systems requiring use of the data. In FY 1997, the INS will also develop and deploy a Common User Interface that provides a front-end to existing INS systems as a means to ensure data collection integrity and to streamline access to alien information. The INS will also build imaging capabilities to provide electronic access to INS paper file information and provide for use in specific programs such as

FOIA/PA. New and enhanced statistical capabilities and name search methodology will improve our corporate decision functionality.

Also under this program, the Verification Information System (VIS) will support the confirmation of an alien's immigration status, eligibility for certain entitlement benefits, and authorization to work. INS recently expanded employer participation in the pilot verification program for employment eligibility to over 1,000 employers. In FY 1997, the Service anticipates continued implementation of systems that strengthen Service efforts in the area of worksite enforcement.

In FY 1998, INS will continue with its efforts to develop and deploy an imaging capability that will allow for electronic access to INS paper file information. The INS will also continue to re-engineer its data repository systems to streamline and improve its corporate information systems and the data contained in those systems.

- **Management Systems** - The Management Systems Program includes the development, implementation, and maintenance of financial and administrative applications providing decision-support information on INS workload, personnel, and financial resources. During FY 1996, INS continued development of plans to implement a cross-servicing agreement for a new financial management system. During FY 1997, the Service will finalize plans to implement the core financial and administrative systems by October 1, 1997.
- **Enforcement Systems** - In FY 1998, INS will continue with the deployment of ENFORCE Phase II at designated INS sites and the continued implementation of the EVRP. The INS will also continue providing services to support and maintain the applications systems that support the Enforcement Systems Program (i.e., ENFORCE and ICAD), and the radios, scopes, sensors, and night vision equipment deployed.
- **Information Resource Management (IRM) Operations** - IRM Operations consists of the planning, policy development, acquisition management, computer security, field and program support, and management activities required to support the technology requirements of the Service. IRM Operations provide the strategic direction and tactical implementation strategies for the effective and efficient development, deployment, and maintenance of automated information resources.

BASE PROGRAM DESCRIPTION:

- The Management and Administration program provides management direction and support for the implementation and operation of regional and field activities and functions to those managers and supervisors who are responsible for and exercise authority over multiple programs;
- Executes the provisions of the INA and related policies through the development and implementation of immigration programs and the management of resources;
- Provides for the development, implementation, direction, operation and evaluation of administrative support systems and services that meet internal operational and managerial needs and externally mandated requirements;
- Provides executive direction and control of INS; and
- Furnishes accurate and prompt responses to Congressional and public inquiries, administers and maintains effective budgeting and financial management systems, performs audits, conducts internal investigations, provides informational responses to inquiries from GAO, OIG, OMB and Departmental offices, develops and evaluates policies and systems to improve the effectiveness of the INS' programs.

Total	30	16	\$7,645

Proposed Actions

In recent years, INS has expanded and intensified program activities in the areas of enforcement, deterrence, and benefits. This expansion has facilitated the entry of legally admissible individuals to the United States, prevented illegal entry and improper granting of benefits, has resulted in increased apprehensions and removals of illegal aliens, and the enforcement of immigration laws at the worksite. Program expansion, though, has placed a strain on the basic infrastructure of INS and the ability of INS to assimilate thousands of new employees into the organization. Infrastructure and assimilation issues are highlighted through the inability of INS to provide necessary training, vehicles, equipment, facilities, and administrative, legal, and information management support required by the workforce. These basic infrastructure and assimilation resources are critical to enable the INS workforce to effectively manage program requirements and to promote professionalism and success in the priorities of INS.

INS must build and maintain its infrastructure base and provide sufficient mission support to maximize the efficiency and effectiveness of the workforce. In FY 1997, INS received resources to begin addressing the deficiencies in the infrastructure base and mission support. In FY 1998, basic operational support requirements must be addressed further for INS to fully achieve its goals. Additionally, initiatives developed and implemented with resources from the Violent Crime Reduction Trust Fund between FY 1995 and FY 1997 must now also be maintained. It is imperative that INS focus its efforts and resources on promoting professionalism through the continued restoration and maintenance of the infrastructure base and mission support as we move into FY 1998.

The INS Professionalism initiative will focus its efforts and resources on the delivery of mission-critical support to INS components to maximize the effectiveness and efficiency of the INS workforce. INS will focus on assimilation of the thousands of new employees into the organization.

INS will insist upon the recruitment and clearance of a highly qualified, diverse workforce that is equipped to manage the rigorous demands of each job to promote success in the workforce. With increased capacity and innovative training methods, INS will expand its ability to provide officer and non-officer corps training to its workforce. INS will also complete full deployment of the technology infrastructure to all INS offices and fully support operations and maintenance requirements of the deployed hardware and software systems.

INS intends to accomplish the above goals through the implementation of the following objectives

Professionalizing and Assimilating the Workforce

	Positions	Workyears	Amount
Training	9	5	\$6.145

This initiative includes 9 positions, 5 workyears and \$6.145,000 for the Training program. These resources will allow the INS to develop and maintain a professional workforce, a workforce which has grown by 38% since January 1994, through the delivery of quality specialized, managerial and employee development training. The level of requested resources is based on the existing training backlog information determined through training needs analyses, field surveys and historical data. The Training program will have to locate outside facilities or alternative methods in order to provide advanced training for additional employees. If sufficient resources are not committed to provide training on a recurring basis to all INS employees, INS can not ensure that its workforce is being utilized to its full potential. In addition, an under-trained workforce will increase INS' liability exposure and criticism from Congress and the public. Timely training will ensure that the INS Officer Corps are kept current with policies and procedures, thus reducing potential liability costs. This is particularly true now with the recent and substantial legislative changes affecting INS operations (Anti-terrorism, Welfare Reform and Immigration Bills). As a result of these changes, the entire workforce requires retraining.

The resources requested for the Training Program will provide the following

Supervisory and Managerial Training (\$1,963,000)--

Basic Supervision (\$393,000)-- With the increased levels of hiring new recruits, experienced employees will need to be promoted into the supervisory ranks at a commensurate rate. These resources will provide 10 classes for new supervisors. Each class will have 24 students and requires \$26,400 for travel, as well as \$12,000 for materials, supplies and instructors. Without additional resources to fund these classes, this would leave INS vulnerable to unacceptable risks in potentially life threatening situations.

Advanced Supervision (\$234,000)-- For many years, due to the excessive demands for basic training, INS provided no training to its supervisors beyond basic supervisor training. This request will allow the Training program to conduct 6 advanced supervision classes of 24 students each. Each class requires \$38,400 for travel and tuition.

Management Training (\$308,000)-- This request will provide resources for 8 classes of management training for second and third level managers. Each class will have 24 students. It is important that these managers be trained in the managerial competencies in order to be successful in leadership, decision making, and problem solving rolls. Each class costs \$1,600 per manager for travel and tuition.

Executive Training (\$128,000)-- INS has provided only sporadic training to its top level managers (SES and GS-15 employees). This training will enable top level managers to cope with the organizational and cultural changes that are occurring in INS through its hiring effort. This course will cost \$58,500 each for 2 classes and includes costs for travel and tuition.

Distributed Learning (9 Positions, 5 Workyears and \$1,987,000)--

Historically, INS has had to focus most of its training resources on basic training, resulting in a continuous accumulated need for training the rest of the workforce. The need and demand for training INS' widely-disbursed workforce has increased. The resources requested will allow the Training program to continue implementing distributed learning modules to provide training at or near the employee's duty station to reduce travel costs. The cost of conducting a residential training program can be reduced by 50 percent utilizing distributed learning methodology.

Advanced Training (\$2,260,000)--

This request will provide the resources required to allow for the long range career development of journeyman-level employees. The backlog in advanced training has increased dramatically with the increase in the size of the INS workforce and the limited amount of journeyman-level training that has been conducted. The average officer corps employee is only receiving advanced training after nine years

of service. The standards call for journeyman-level employees to receive formal training every three years. The inability to provide timely training is unacceptable considering that these officers exercise general arrest authority and are authorized to use deadly force. This request will allow INS to begin to address existing backlogs and become current in providing journeyman and advanced officer training. To avoid adverse publicity and costly litigation because of errors made by INS employees, this request for advanced training is crucial and a key element in INS' goal to improve professionalism in its workforce.

	1996		1997		1998	
	# to be Trained	End-of-Year Backlog	# to be Trained	End-of-Year Backlog	# to be Trained	End-of-Year Backlog
Advanced Training	5,266	5,016	7,209	5,889	9,823	6,487

Individual Career/Professional Development and Procurement Training (\$469,000)--

The resources requested include \$409,000 to provide career and employee development training administered at the local level. Individual career development training has been inadequately funded. Field managers have been required to use operational funding to support this critically needed training. The following types of career and employee development training will be funded with these resources: EEO; correspondence study courses; tuition assistance; officer survival training; Special Emphasis Program Management (SEPM) training; retirement training; and other program specific courses.

Also included in this request is \$60,000 for professional development. This initiative includes resources to be used to ensure compliance with the Government Performance and Results Act and the National Performance Review initiatives regarding decentralizing and reinventing Human Resources Management programs. The regulations and the processes involved in how we do business are evolving dramatically. Current business practices require evaluation and redesign to include retraining of employees to manage work effectively. The Office of Personnel Management has eliminated the Federal Personnel Manual and is commercializing the recruitment and examining process. Without adequate funding for this initiative, INS will experience increased costs for services and reduced productivity, which will ultimately result in a significant decline in customer satisfaction. The ability of INS to meet its hiring mandates will be jeopardized. Also included in this request is funding for basic procurement training. Each fiscal year, the base training budget does not provide

procurement regulation training. These resources will allow the procurement division to keep current with the complex changes in procurement regulations.

Automating the Workforce

	<u>Positions</u>	<u>Workyears</u>	<u>Amount</u>
Data and Communications	21	11	\$1,500,000

21 positions, 11 workyears, and \$1,500,000 are requested to support the nationwide automation programs of INS by augmenting the depth of support devoted to the various information technology and mission-critical programs of INS. With these enhancements, INS will maintain and support the information technology base that has been built over the past three years with funds from the Violent Crime Reduction Trust Fund. INS must now ensure that it can properly support the systems placed in the field with commensurate increases in personnel support. These enhancements will enable INS to capitalize on emerging technology, provide innovative solutions to achieve efficiencies in the workforce, and continue productivity gains of the individual worker.

12 positions, 6 workyears, and \$847,000 is requested to enhance the IRM Infrastructure program. This request includes 10 positions, 5 workyears, and \$691,000 to provide support for the nationwide automation program. These positions will be based in the field but will report to Headquarters IRM in order to provide assistance, facilitate coordination, and improve communication with the field on national ADP issues such as: data communications services and standards, network management, training coordination including training on national systems, on-site Facilities Operations Support (FOS) contractor management, and other end-user computing issues such as hardware maintenance, software licensing, inventory management, and Help Desk support. The remaining two positions, one workyear, and \$156,000 are required to augment Headquarters capacity to provide data communications/network management support and Unix systems programming support to the Agency.

1 position, 1 workyear, and \$71,000 will support the Examination Systems program. This position will be headquarters-based and will support CLAIMS re-engineering, FBI fingerprint process matching, and quality assurance/customer support.

- 1 position, 1 workyear, and \$79,000 will augment the Inspections Systems program with this position assigned to support departure control and automated permit port/border crossing initiatives.
- 1 position and \$71,000 will support the Enforcement Systems program for electronics maintenance and support.
- 1 position and \$71,000 is required to support the Biometrics Systems program. This position will be assigned to external law enforcement coordination and mobile support.
- 2 positions, 1 workyear, and \$150,000 will enable needed focus to be placed on the Corporate Information Systems program. Several initiatives under the Corporate Information Systems program require additional support including Oracle database applications support, Year 2000 changes, and automation support for records initiatives including record centralization/consolidation and automation of A-files.
- 2 positions, 1 workyear, and \$150,000 will augment support to the Management Systems program of INS including support for Internet Web site support, Intranet, electronic information sharing, automation of manual processes, and integration of administrative systems.
- 1 position, 1 workyear, and \$79,000 will provide IRM operations support in the Field and Program Management unit. This position will enhance regional and field coordination and administration/audit operations of IRM. This position is crucial to enable IRM to coordinate field IRM activity, to manage and execute IRM outreach, communications, and assessment programs, and to be responsive to increasing external oversight requirements placed on IRM relating to the Agency's information technology program.

Border Control & Facilitation Initiative
Violent Crime Reduction Program
(Dollars in thousands)

	Positions	Workyears	Amount
Inspections	\$11,500
Border Patrol	550	220	62,000
Data & Communications	1	1	16,200
Total:	551	221	\$89,700

* This request includes funding for the following enforcement personnel: 500 new Border Patrol Agents.

Proposed Actions

One of INS' highest priorities is to regulate entry to the United States (U.S.) in a manner that facilitates lawful travel and commerce while ensuring border integrity. In the past several years, INS has achieved considerable success with its border strategies -- INS components have identified and removed more than two million unlawful immigrants per year. Nonetheless, large numbers of illegal aliens continue to enter the U.S., utilizing both traditional means and innovative new avenues. In order to maintain and advance recent gains in the Southwest, INS must further enhance those border control and technical capabilities designed to deter or apprehend illegal entrants along both of the land borders, as well as air and sea locations. At the same time, INS must continue to ensure sufficient legal support, increase efforts to improve customer service, and facilitate the flow of legitimate travel.

The basic strategy of this proposal seeks to build upon INS' recent border control successes at and between the land Ports-of-Entry (POEs), as well as future planned activities, and by implementing expansion strategies into the Northern and maritime border areas. This strategy represents a further maturing of INS' overall strategy of "prevention through deterrence" and supports the logical progression of effort beyond the Southwest border. Specifically, the requested resources will enable INS to move from Phase III and begin Phase IV of the Border Patrol Strategic Plan, originally announced in 1994. It will bring the Border Patrol strength to over 7,000 agents and it will enable the Patrol to improve control of the entire length of the Southwest border: from Imperial Beach, California on the Pacific Coast, to the McAllen Sector on the Gulf of Mexico. At the land border POEs, initiatives to facilitate the entry of low-risk, frequent border crossers, while targeting alien smugglers and port-runners, will continue to be pursued at Northern and Southern ports. INS intends to accomplish the goals of this initiative through the implementation of the two objectives detailed below -- *Control and Facilitation at the Ports of Entry*; and *Control and Facilitation Between the Ports of Entry*.

Control and Facilitation at the Ports-of-Entry
(Dollars in thousands)

Inspections - Data & Communications	Positions	Workyears	Amount
	---	---	\$11,500

Support Joint INS-U.S. Customs Service (USCS) initiatives at land border POEs (\$11,500,000) ---

A total of \$11,500,000 is requested for this objective, which will allow INS to increase control and facilitation of traffic at the land border POEs. INS is dedicated to enforcement of the immigration laws at the POEs while facilitating the flow of traffic for low-risk, frequent border crossers. The INS is also committed to increased coordination with the USCS concerning land border inspections. For FY 1998, INS and USCS have a joint agreement to fund the installation of license plate readers (\$9,500,000); the replacement of the Treasury Enforcement Communications System (TECS) primary terminals (\$1,500,000) and other accompanying permit port technology (\$500,000) at land border POEs. The license plate readers will enhance current operations by eliminating manual keying of license plate numbers by inspectors. This will result in more time for Inspectors to utilize their observational skills to identify high-risk transactions, spot potential alien smugglers, and better anticipate hazardous situations. The replacement of TECS equipment in primary lanes will also improve the inspections process by providing INS and USCS inspectors with up-to-date computer technology and appropriate access to the enforcement databases in IBIS. In addition, INS and USCS will jointly pursue more automated processing technology at small, remote POEs to improve service to the public. These technological improvements will build on the staffing increases received during the past two years and ensure increasing effectiveness in control and facilitation at the land border POEs.

Control and Facilitation Between the Ports-of-Entry
(Dollars in thousands)

	Positions	Workyears	Amount
Border Patrol	550	220	\$ 62,000
Data and Communications	—1	—1	—16,200
Total	551	221	\$78,200

A total of 551 positions (500 Border Patrol agents), 221 workyears, and \$78,200,000 is requested for this objective to allow INS to expand its "prevention through deterrence" efforts into the mature phases of its Border Control Strategic Plan. Further, it will provide the capability for INS to progress beyond the scope of the Southwest border and begin to extend its very successful techniques of focused control to the nation's Northern and maritime borders.

	Positions	Workyears	Amount
Border Patrol	550	220	\$ 62,000
Border Patrol and support positions (550 positions, 220 workyears, \$62,000,000) ...			

A total of 550 positions, 220 workyears, and \$62,000,000 will provide appropriate agent strength and support personnel to deploy necessary resources to meet both tactical and strategic border control requirements. This enhancement includes 500 additional Border Patrol agents and 50 support positions. The requested agent enhancement will exceed the goal set in the Attorney General's March 23, 1995, letter to Congress: will meet the Administration's commitment to have a Border Patrol force in excess of 7,000 agents by the end of FY 1998; and will provide the resources needed to expand the border control efforts which began in Phases I and II of the Border Patrol's National Border Control Strategy. This initiative will allow the Patrol to continue to concentrate on the border areas experiencing high levels of illegal entry attempts as well as to begin to bolster enforcement in areas that are being affected as a result of the resources added in Phases I and II. The Border Control Strategy targets resources in the locations where the illegal alien traffic is expected to shift in order to seek less exposure to detection and apprehension. The border areas of expected increased activity in 1998 will be the South Texas, New Mexico, Eastern California, and the Western Arizona areas of the Southern land border. In addition to those Phase III areas, a major shift is anticipated to begin by 1998 from the traditional Southern land border entry routes to routes on the Northern border and along coastal areas of the Gulf, Pacific Northwest, Great Lakes regions and through Puerto Rico. These Phase IV areas will be targeted for additional resources, as they become available, to counter the anticipated higher levels of illegal entries.

including smuggling operations expected through these areas.

	Positions	Workyears	Amount
Data and Communications	1	1	\$16,200

A total of 1 position, 1 workyear and \$16,200,000 is requested to extend INS' commitment to service-wide deployment and support of the Biometric Identification System (IDENT) and the Enforcement Case Tracking system (ENFORCE), as well as technological support for field operations. This enhancement will provide funding for the completion of systems deployment along the Southwest border and provide for the initial systems deployment to the Northern and maritime borders.

Biometric Identification Systems (1 position, 1 workyear, and \$14,000,000) --

The following biometric system enhancements are requested for FY 1998:

Continued Development and Deployment of IDENT systems (\$4,937,000): This request will provide resources needed to continue the deployment of IDENT (Biometric Identification System) stations to a minimum of 5 INS District Offices and 17 Ports of Entry, progressing into Phase III of the IDENT Deployment Plan. In addition, a portion of the requested funding will be dedicated to further development and improvement of the quality of ID-Print Card submissions, security and interface capabilities (NOTE: An additional \$1,500,000 will be funded by the Immigration User Fee Account and \$1,000,000 will be funded by the Immigration Examinations Account. The total enhancement requested from all accounts for the continuation of the IDENT system is \$7,437,000.)

Mobile IDENT System (\$500,000): These resources will provide a prototype mobile IDENT program for the Border Patrol -- up to a total of 20 units of varying configuration. Mobile IDENT is a much-needed system that will be housed in a rugged, portable workstation and will utilize a variety of communications capabilities, including satellite communications.

Increase Recidivism Database Capability (\$4,500,000): The current recidivist database that tracks and identifies repeat illegal border crossers and criminal aliens for the IDENT system has a maximum capacity of 1,500,000 records. This limit is expected to be reached very soon so expansion of the systems capability is absolutely essential. A total of \$4,500,000 is required to procure the hardware and support material to increase the systems capacity by an additional 500,000 records.

"24x7" Catastrophic Backup Capability (\$2,500,000): There is currently no catastrophic backup capability for the IDENT system. A total of \$5,000,000 is required to establish a "shadow" system at the Justice Data Center in Dallas, Texas, which will continuously and automatically copy and backup the primary IDENT control system and database. This will ensure that, in the event of natural disaster or other calamity, the system will continue to operate 24 hours per day, seven days a week ("24x7") without interruption. **(NOTE: An additional \$2,500,000 will be funded by the Immigration Examinations Account. The total enhancement requested from all accounts for catastrophic backup is \$5,000,000.)**

Operational Access to Law Enforcement Databases (LED) (\$500,000): The resources are requested to begin incremental expansion of IDENT's current capability to identify a subject and determine whether there are indications of a criminal history and/or outstanding warrants from other agencies. Specific systems to which INS is seeking to connect include the FBI's IAFIS and NCIC-2000 systems, the Western Identification Network (WIN), and other systems in California, Texas, New York, Chicago and Miami. Requested resources would cover the cost of specialized terminals, as well as the development of interface software.

On-Site Contractor O&M Support and Oversight (1 position, 1 workyear, \$1,063,000): The critical nature of the IDENT mission throughout the Sectors and Districts requires that its availability be maintained at the highest level possible. This is best achieved by having small teams of IDENT System expert contractors on-site to diagnose and correct problems immediately. Field tests have determined that this is the most cost-effective method. The amount requested will begin moving this concept from its pilot phase to full project implementation. In order to support the various IDENT-related projects, an additional 1 position is requested for INS' Biometric Identification Systems Section. This position will provide both technical support and will oversee contractor operations.

Enforcement Case Tracking and Management System (ENFORCE) (\$2,200,000) --

ENFORCE is the INS' case and report tracking system. Among other things, it automates report writing so that, to a greater extent than ever before, officer and agent manpower are freed to devote their efforts to operational rather than administrative requirements. This request, coupled with additional funding from the fee accounts, will provide resources to expand the ENFORCE system to 25 new sites with the installation of over 900 workstations. **(NOTE: An additional \$1,100,000 will be funded from the Immigration User Fee Account, and \$1,700,000 from the Immigration Examinations Fee Account. The total enhancement requested from all accounts for ENFORCE is \$5,000,000.)**

FY 98 Border Patrol Information Technology Enhancements

- 4/ An additional \$1,100,000 will be funded from the Immigration User Fee Account and \$1,700,000 will be funded from the Immigration Examinations Account. Total for "ENFORCE" from all accounts is \$5,000,000.

Remove Criminal and Non-Criminal Deportable Aliens
Violent Crime Reduction Program
(Dollars in Thousands)

	Positions	Workyears	Amount
Investigations	77	56	8,686
Detention and Deportation	290	210	82,129
Legal Proceedings	38	19	3,290
Data and Communications			360
Management and Administration	17	8	1,035
Total	422	293	\$95,500

**This request includes funding for the following enforcement personnel: 14 Special Agents, 26 Immigration Agents, 144 Detention Enforcement Officers, and 78 Deportation Officers.*

Proposed Actions

One of the INS' core responsibilities is to apprehend and remove aliens who are unlawfully within the United States. INS' detention and removal resources, however, have consistently been overwhelmed by the number of aliens unlawfully in the country and the prohibitive cost to remove them. Beginning in FY 1995, Congress began to address this imbalance with increased appropriations, but limited detention and removal resources remain a major problem. The number of illegal aliens removed has increased significantly in FY 1995 and FY 1996, but thousands of illegal aliens still avoid apprehension or abscond after being ordered deported.

A further strain on INS detention and removal resources resulted with the passage of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (1996 Act). The 1996 Act dramatically changes some of the provisions of the Immigration and Nationality Act (INA), and results in significant resource and program implications for the INS. In particular, the 1996 Act requires the Attorney General to detain, without possibility of release, a far greater number of aliens than under previous law, including terrorists, many criminal aliens, aliens in expedited removal, and all aliens issued a final order of removal. Once fully implemented, this expanded mandatory detention requirement will consume most of the INS' existing detention space, leaving little room for the detention of other removable aliens.

The FY 1998 request for the removal of criminal and non-criminal deportable aliens has two objectives: 1) to respond to the new requirements as a result of the 1996 Act and, 2) to sustain INS' current efforts toward removing non-criminal deportable aliens. In order to achieve those objectives, INS will restore credibility to the detention process by both increasing significantly the amount of detention space and removal resources, and using those resources at critical points in the detention and deportation process, and by enhancing its efforts to identify aliens for removal through specific targeted projects.

Increased Enforcement Through the Strategic Use of Detention

	Positions	Workyears	Amount
Detention and Deportation	185	167	57,355
Legal Proceedings	28	14	2,469
Management and Administration	10	5	570
Total:	223	186	\$60,394

Implementation of the following initiatives requires an increase of 223 positions, 186 workyears, and \$60,394,000. These resources will enable the immediate removal of deportable aliens as soon as their order of deportation has become final.

Additional Detention Capacity

	Positions	Workyears	Amount
Detention and Deportation	149	149	45,727
Legal Proceedings	24	12	2,132
Management and Administration	8	4	462
Total:	181	165	\$48,321

As mentioned in the Office of the Inspector General's report titled "INS' Deportation of Aliens After Final Orders have been Issued," INS' ability to remove deportable aliens is severely hampered by the lack of detention space. Adequate detention space is the key to the success of the removal priority. Without this fundamental resource, INS must rely on aliens to voluntarily present themselves for immigration hearings and deportation. Once faced with a final order of deportation, most non-detained aliens abscond

With increased funding, INS will be able to apply increased detention resources at two critical points in the deportation process to ensure increased removals of deportable aliens: 1) at the time an alien first becomes deportable--that is, upon the issuance of the initial order of deportation; and 2) at the time an order of deportation becomes final--that is, at the time the alien either waives appeal or exhausts his or her appellate review.

The detention of deportable aliens at the time the initial order of deportation is issued greatly increases the likelihood of removal. Traditionally, aliens on release during their immigration proceedings are not detained when issued an initial order of deportation by an immigration judge because INS lacks the detention space to detain them. Instead, the aliens are permitted to leave immigration court and are requested to surrender at a later date. As previously stated, most of these aliens then abscond and fail to surrender when requested. INS is left having to relocate and arrest the alien--a difficult, labor-intensive process.

To better address this problem, INS proposes to increase detention capacity and place much greater emphasis on detaining aliens immediately following the issuance of an initial order of deportation by an immigration judge. In particular, INS will identify those aliens most likely to abscond and detain as many as local detention resources allow. INS will also seek to impose substantial bonds on those not detained in order to better ensure their eventual surrender for deportation, as well.

To support this strategy, INS proposes to increase both Service and non-Service detention capacity by 1,864 beds using VCRP resources, including 14 beds in juvenile shelters. INS' detention request will fund an additional 1,000 beds at the Buffalo SPC (300 beds), the Krome Lockdown Facility (300 beds), and in the San Diego area (400 beds)--all of which will significantly facilitate removal efforts. The non-Service detention request will fund an additional 864 detention beds in State or local facilities for INS, including 14 additional juvenile detention bedspaces. Receipts from the Immigration Detention account are expected to fund an additional 1,136 State and local beds.

	Positions	Workyears	Amount
Detention and Deportation	149	149	\$45,727

INS Bedspace Capacity:-- (149 positions, 149 workyears, \$38,752,000):=

Activate the Buffalo Service Processing Center (119 positions, 119 workyears, \$19,833,000). INS is requesting staffing and detention needs for the Buffalo Service Processing Center. The request includes funding for 60 contract staff consisting of guards, food service and maintenance personnel. The facility is a joint INS/USMS facility, which, when complete, will provide an additional 450 beds (300 for INS, 150 for USMS). In accordance with the agreement between the two agencies, INS will be responsible for funding all 450 beds in the facility. USMS will be responsible for the costs of all off-site medical care and transportation needs related

to their detainees.

Site selection and the Environmental Impact Statement are complete and the design/build contract was awarded in July 1996. The facility is scheduled for completion in January 1998. Staffing and detention resources requested here will support the facility's operational requirements from January through September 1998. Because this is a maximum/medium detention facility, a minimum of 50 percent of the total staff must be INS personnel to ensure a secure environment. To allow sufficient time for training of the new staff, full-year funding for INS staff is requested. The total estimated requirement also includes \$1,150,000 for start-up costs for the facility, including security and facilities systems, furniture, cabling, etc.

Activate Krome Lockdown Facility (\$2,825,000). INS is requesting funding for the operation of the Krome Lockdown facility, which is scheduled to be completed in March 1998. This is a 300-bed medium/maximum security facility constructed to house criminal aliens. In FY 1997, staffing and detention funds were requested to operate a separate project at Krome to replace a facility that had been destroyed by fire. Funding requested in 1998 will support operational requirements and start up costs of the lockdown facility.

Costs to support an additional 36 contract guards are included in the 1998 request as well. Current INS staff and those requested in FY 1997 for the replacement dormitory will provide a sufficient number of INS staff for the Krome SPC. This request will allow for the redirection of some of the existing INS staff to the lockdown facility by providing the contract guard services needed to backfill those positions.

San Diego Contract Detention Facility (30 positions, 30 workyears, \$16,094,000). INS is requesting detention funding and staffing for operation of the San Diego Contract Detention Facility. San Diego County is moving forward with plans to have a private contractor build and operate a 1,000 bed facility at Otay Mesa, directly east of San Diego. This facility will respond to critical detention needs identified by the U.S. Attorney, U.S. Marshals Service, and INS.

INS proposes to contract a total of 400 of the beds once the facility becomes operational in 1998. The facility will provide detention space for criminal and non-criminal aliens, both male and female. It will enable INS to provide much needed detention space for the Border Patrol, Investigations and Inspections operations in this and surrounding areas, and could also serve as a transportation hub for deportations to Mexico. Again to allow sufficient time for training of the new staff, full-year funding for INS staff is requested.

Additional Non-INS State and Local Bedspace Capacity (\$6,975,000):--

State and Local Contract Bedspace (\$6,219,000). In addition to detention space and personnel resources requested for the aforementioned INS and contract facilities, resources are being requested to support the detention, staffing, transportation and removal requirements of INS' overall strategy to increase significantly the removal of criminal and non-criminal deportable aliens. Implementation of the 1996 Act will require a substantial amount of INS resources. This request will begin to address some of the

resource requirements by providing additional INS staff to determine alienage and deportability, detain, and ultimately remove criminal and deportable aliens. These resources will support 95 State and local detention beds and alien removal costs. (Note that there are a total of 864 detention beds in State or local facilities in this request. In addition, the resources available in the Immigration Detention account is expected to provide 1,136 beds.)

Increase Juvenile Detention Bedspace (\$756,000). The need for juvenile shelters has increased substantially over the past few years, and the growing problem of juvenile bedspace has become a critical issue within INS. Currently, INS contracts with six juvenile facilities which, in total, provided 164 beds in FY 1996. The costs for shelter care for juveniles on the average is about three times that of an adult due to special requirements such as teachers, counselors, etc. This request will increase INS' juvenile shelter care facilities by an additional 14 beds.

Juveniles are more difficult to remove due to procedural safeguards that tend to extend their length of time in shelter care. Requirements under 8 C.F.R. to pursue family reunification and difficulty in locating sponsors to care for the juveniles in lieu of being housed in shelters add to the length of stay. It should be noted that while desperately needed, funding for this initiative will not significantly increase the number of removals.

	Positions	Workyears	Amount
Legal Proceedings	24	12	\$2,132

INS is requesting 17 attorneys, 7 legal technicians and \$2,132,000 to support the increased workload that will be generated by the additional capacity to detain aliens as well as the increase in immigration judges. An appropriate level of attorney support also must be available to review cases, provide legal advice, and ensure that all legal requirements are met throughout deportation, exclusion and other proceedings, particularly in view of the new requirements under the 1996 Act. Of the total number of positions, 6 positions are associated with the workload generated by the Buffalo facility and 18 positions with the workload generated by the addition of local beds.

	Positions	Workyears	Amount
Management and Administration	8	4	\$462

INS is requesting resources to provide the appropriate management and administrative support functions related to the hiring, training, procurement, payroll, etc., of the additional staff. Of the total number of positions, 5 are associated with the workload generated by the Buffalo facility and 3 positions are associated with the workload associated by the San Diego facility.

Location and Removal of Deportable Aliens Who Have Completed the Appeals Process

	Positions	Workyears	Amount
Detention and Deportation	36	18	\$11,628
Legal Proceedings	4	2	337
Management and Administration	2	1	108
Total	42	21	\$12,073

In addition to detaining a greater number of aliens immediately upon issuance of the order of deportation, INS must also locate and remove non-detained aliens who abscond. The resources needed to detain every alien upon issuance of the initial order of deportation are so great that INS will continue to allow some aliens to remain on release pending a final determination of deportation, either on bond or on their own recognizance. As noted above, many of these aliens abscond when requested to surrender.

To better ensure that non-detained aliens are apprehended and removed immediately after their deportation order is final, INS will work with the Executive Office of Immigration Review and other Department of Justice components to promptly notify INS field offices when a non-detained alien's order of deportation is final and enforceable. The field offices will then locate and detain the alien for prompt removal.

This request includes 42 positions, 21 workyears and \$12,073,000 to locate and remove deportable aliens who have completed the appeals process and who have been issued final orders of deportation. The following resources allow for their immediate location, apprehension and subsequent removal.

	Positions	Workyears	Amount
Detention and Deportation	36	18	\$11,628

The resources requested (15 detention enforcement officers, 12 deportation officers, and 9 docket clerks) will provide the necessary detention and deportation resources to enforce final orders of deportation. This includes the immediate location and apprehension of the alien, detention, and his or her subsequent removal. These resources will fund an additional 230 beds. (Note that there are a total of 864 detention beds in State or local facilities in this request. In addition, the resources available in the Immigration Detention account is expected to provide 1,136 beds).

	Positions	Workyears	Amount
Legal Proceedings	4	2	\$337

The resources requested here (3 attorneys and 1 legal assistant), when combined with legal resources requested in all other priorities and initiatives, would provide the necessary attorney and legal support to prepare and try cases, prepare briefs, and ensure all legal requirements are met throughout the process

	Positions	Workyears	Amount
Management and Administration	2	1	\$108

INS is requesting resources to provide the appropriate management and administrative support functions related to the hiring, training, procurement, payroll, etc., of the additional staff

Enhance the Identification and Removal of Criminal Aliens

	Positions	Workyears	Amount
Investigations	77	56	\$8,686
Detention and Deportation	105	43	24,774
Legal Proceedings	10	5	821
Data and Communications	0	0	360
Management and Administration	7	3	463
Total:	199	107	\$35,106

INS is requesting a total of 199 positions, 107 workyears, and \$35,106,000 to enhance the identification and removal of criminal aliens. This initiative combines the expansion of the local jail initiative, the Law Enforcement Support Center (LESC), and expanding the criminal alien record holdings in the National Crime Information Center (NCIC). It is a comprehensive effort to identify deportable aliens who are incarcerated in local jails or who are encountered by local law enforcement officers.

County Jail Program Expansion

	Positions	Workyears	Amount
Investigations	34	16	\$3,686
Detention and Deportation	46	22	16,209
Legal Proceedings	6	3	484
Management and Administration	4	2	215
Total	90	43	\$20,594

A total of 90 positions, 43 workyears, and \$20,594,000 is requested to support further expansion of the local jail program. The program, which began in FY 1995 with the Los Angeles County Jail, would expand to city and county jails in additional INS Districts where there currently is no local jail initiative. INS is proposing to expand the program to additional county jails nationwide.

Continuation and expansion of the initiative are vital to INS' overall removals program. Expansion of the initiative alleviates some of the burden placed on local and county jail systems and it allows INS to apprehend and remove criminal aliens not reached by the State and Federal Institutional Hearing Program (IHP). INS must be responsive to the increasing number of State and local law enforcement calls regarding deportable aliens. It is imperative that additional resources be made available to respond to these calls. Expansion of the program provides an increased INS enforcement presence in select areas. In addition, it promotes positive cooperative efforts by both INS and local jurisdictions as they jointly combat the growing problem of incarcerated illegal aliens.

	Positions	Workyears	Amount
Investigations	34	16	\$3,686

The requested increase will provide the investigative resources needed to interview and identify deportable aliens that are incarcerated in local and county jails. They also allow INS to have an enforcement presence in select county and city jails that contain deportable criminal aliens.

	Positions	Workyears	Amount
Detention and Deportation	46	22	\$16,209

This request will provide the detention and deportation resources needed to support the expansion of the county jail initiative. The additional staff: (15 detention enforcement officers, 21 deportation officers and 10 docket clerks) reflects the specific needs as indicated by Detention & Deportation field personnel. These resources will fund an additional 375 beds. (Note that there are a total of 864

detention beds in State or local facilities in this request. In addition, the resources available in the Immigration Detention account is expected to provide 1,136 beds).

	Positions	Workyears	Amount
Legal Proceedings	6	3	\$484

The resources requested here (4 attorneys and 2 legal assistants) would provide the necessary legal support to determine deportability, review orders to show cause, prepare and try cases before Immigration Judges, and other functions related to the full scope of an immigration hearing.

	Positions	Workyears	Amount
Management and Administration	4	2	\$215

INS is requesting resources to provide the appropriate management and administrative support functions related to the hiring, training, procurement, payroll, etc., of the additional staff.

Low Enforcement Support Center (LESC)

	Positions	Workyears	Amount
Investigations	43	40	\$5,000
Total:	43	40	5,000

To handle the increased number of queries at the LESL, which is located in Burlington, Vermont, an additional 8 Special Agent positions, 28 status verifiers, and 7 support personnel are requested. INS also requests an additional 36 temporary positions. INS anticipates that once the accuracy of its automated records is confirmed, the need for a large number of status verifiers would no longer exist.

Expand the Criminal Alien Record Holdings in NCIC

	Positions	Workyears	Amount
Detention and Deportation	59	21	\$8,565
Legal Proceedings	4	2	337
Data and Communications			360
Management and Administration	3	1	250
Total	66	24	\$9,512

INS is proposing to expand its use of the National Crime Information Center (NCIC), install NCIC terminals in 45 additional locations, and increase the number of records being entered. The expanded--and ultimately decentralized--use of this resource will enable INS to locate and remove significant numbers of aliens with final deportation orders.

The Deported Felon File (DFF) will be part of this initiative. The DFF cases will be entered after certain aliens have been deported and will result in prosecutions for reentry after deportation. The result will be a deterrent to aliens who would reenter the United States and resume their criminal activity. In addition to NCIC terminals at these locations, INS must have the staff and appropriate transportation resources to respond to the hits. The additional resources being requested will be used to locate aliens--both criminal and non-criminal, including failed asylum seekers--who have been issued final orders of deportation or exclusion.

	Positions	Workyears	Amount
Detention and Deportation	59	21	\$8,565

INS is requesting an additional 30 deportation officers, 26 docket clerks, and 3 support staff, and detention and removal resources, to respond to positive NCIC identifications. These resources will be used for coding, validation, auditing and quality control of the data being entered. These are mandatory functions for all agencies entering data into the NCIC system, as required by the Federal Bureau of Investigation. The resources will support an additional 150 beds in FY 1998. (Note that there are a total of 864 detention beds in State or local facilities in this request. In addition, the resources available in the Immigration Detention account is expected to provide 1,136 beds)

	Positions	Workyears	Amount
Legal Proceedings	4	2	337

The requested resources (3 attorneys and 1 legal assistant) are required to assist with the projected number of deportations that would result from expansion of the NCIC.

	Positions	Workyears	Amount
Data and Communications			\$360

The funding requested will provide for the installation, contract and maintenance costs of the NCIC terminals. The FY 1998 request supports the contract costs for the additional terminals for 6 months.

Currently, data entry is performed centrally at INS Headquarters. Decentralizing data entry is the ultimate goal, as it is less time consuming and much more effective. This initiative will allow information to be entered into the system, at 45 additional locations, on aliens who have been issued a final order of deportation and whose removal is probable. This approach provides for a local check, such as through Departments of Motor Vehicles, etc., and also feeds into the national system.

	Positions	Workyears	Amount
Management and Administration	3	1	\$250

INS is requesting resources to provide the appropriate management and administrative support functions related to the hiring, training, procurement, payroll, etc., of the additional staff. The increase also includes funding for security build-out costs to protect and secure the NCIC terminals.

Interior Deterrence Violent Crime Reduction Program (Dollars in Thousands)			
	Positions	Workyears	Amount
Investigations	44	22	\$4,860
Detention and Deportation	13	7	1,595
Information and Records Management	69	35	12,039
Legal Proceedings	16	8	1,350
Management and Administration	14	7	1,156
Total:	156	79	\$21,000

•This request includes funding for the following enforcement personnel: 5 Special Agents, 30 Immigration Agents, 13 Detention and Deportation Officers, and 12 Attorneys.

Proposed Actions

The interior enforcement mission of the INS is to address the presence and consequences of illegal migration in the interior United States (U.S.). INS must anticipate and respond to changes in illegal migration patterns which flow from the success of the Southwest Border Strategy. When aliens move into the country illegally or through fraudulent means, or violate the terms under which they were legally admitted, their actions have consequences for both citizens and legal aliens. People suffer from illegal immigration particularly when they are victimized by crime committed by aliens or become displaced in the workforce by unauthorized workers. The interior enforcement strategy for FY 1998 builds on a multi-year effort to gain control of the border, deter and correct unlawful employment, combat alien-related crime, and develop a meaningful removal system.

Even with increased employer sanctions resources received in FY 1996, INS will only moderately increase its enforcement presence in limited geographical areas. There remains a significant level of unauthorized employment in the United States that INS needs to address. INS will continue to expand efforts to deter illegal employment and will increase its investigation and prosecution of employers who intentionally violate immigration and labor laws. Efforts will be expanded to increase apprehensions of unauthorized workers, facilitate the hiring of legal workers, and expand assistance to employers seeking to comply with the law through employment verification.

INS has adopted a strategy to investigate and prosecute employers in industries and locations with a history of reliance on unauthorized labor,

who intentionally employ unauthorized aliens and violate criminal statutes, violate other regulatory requirements, and/or who are repeat offenders. Additionally, INS will continue to pursue case-development strategies that renew the Service's commitment to apprehending unauthorized workers from the workplace and removing them from the workplace. A total of 156 positions, 79 workyears, and \$21,000,000 is requested to enhance worksite enforcement by augmenting resources within the seven States with high illegal immigrant populations. This will expand enforcement coverage for the nation's employers and businesses within the industries historically dependent on illegal labor. Under this initiative, INS will:

- Increase targeting of major violations by pursuing those employers who
 - employ unauthorized aliens and violate criminal statutes such as document fraud, smuggling, harboring, inducement and slavery,
 - violate other regulatory requirements such as labor laws, and/or
 - continually depend upon unauthorized labor.
- Increase Verification Information System referral investigations -- criminal and 274C civil document fraud,
- Increase detention and removal of unauthorized workers,
- Increase surveillance activities and task force operations,
- Develop analytical capabilities to better target sweatshops and other abusive employment sectors, and
- Promote compliance by working directly with employers within the targeted industries

The following provides a summary of this request by program

Investigations.	Positions	Workyears	Amount
	44	22	\$4,860

INS requests a total of 44 positions, 22 workyears, and \$4,860,000 for the Investigations program. The positions include 30 Immigration Agents, 5 Special Agents, and 9 support positions. The positions will be distributed to states with the highest illegal immigrant populations

<u>Detention and Deportation:</u>	<u>Positions</u>	<u>Workyears</u>	<u>Amount</u>
	13	7	\$1,595

INS requests a total of 13 positions, 7 workyears, and \$1,595,000 for the Detention and Deportation program. The request is based upon the need to support the additional investigative personnel. The positions include 2 Supervisory Detention and Deportation Officers, 7 Detention Enforcement Officers, 2 Deportation Officers, and 2 Docket clerks. The request also includes \$268,000 for alien detention and welfare and \$311,000 for alien removal.

<u>Information and Records Management:</u>	<u>Positions</u>	<u>Workyears</u>	<u>Amount</u>
	69	35	\$12,039

A total of 69 positions, 35 workyears, and \$12,039,000 is requested for the Information and Records Management program. The request includes 69 technical and clerical positions to provide verification services to new clients. Employment verification allows employers to quickly verify the employment eligibility of a newly hired non-citizen. In 1995, INS initiated a pilot employment verification system with over 200 employers in Orange County, California. The pilot proved so successful that in FY 1996, it was expanded to several other states and to over 1,000 businesses. Of the proposed request, approximately \$7,000,000 will sustain the capability to administer the Verification Information System (VIS). These funds will expand the verification pilot programs to include additional participants and a variety of verification approaches, including large-scale pilots that involve other Federal, State, and local government agencies. This enhancement also will provide resources to continue to improve immigration records supporting VIS, to design and deploy improved verification business practices, and to re-engineer existing business practices that support verification services. Such improvements are critical in order for INS to comply with the Welfare Reform legislation and the 1996 Act enacted in 1996. For example, the 1996 Act specifically directs INS to conduct 3 pilot programs for employment eligibility. They include 1) a basic pilot program involving 5 of the 7 States with the highest estimated unlawful alien populations, 2) a citizen attestation pilot program in at least 5 States that meet certain conditions, and 3) a machine-readable-document pilot program in at least 5 States that meet certain conditions.

In addition, this includes contract funding for approximately 6 Information Records Technicians. Increased enforcement initiatives will result in increased file maintenance and control functions in the Field. For example, enhanced worksite enforcement will generate the need for increased A-file creation, file transfer requests, and maintenance functions related to the life cycle of records. Also, enhanced worksite enforcement will result in an increased number of deportations. The expeditious removal of criminal aliens requires tight records control over direct, physical file movement. Since deportation procedures dictate the direct, physical movement of INS A-files for detainees as they are transported from District offices to Service Processing Centers (SPCs), or from SPC to SPC, processing this workload requires effective coordination and control of high volume nearly continuous file movement. These contract positions will be distributed to field offices and will provide timely and accurate alien information for effective implementation and enforcement of section 274A of the Immigration and Nationality Act.

Legal Proceedings.			
	Positions	Workyears	Amount
	16	8	\$1,350

A total of 16 positions, 8 workyears, and \$1,350,000 is requested for the Legal Proceedings program. This includes 12 Attorneys and 4 support positions. The Attorney positions are required to assist with the increased number of deportations projected as a result of the initiative.

Management and Administration			
	Positions	Workyears	Amount
	14	7	\$1,156

A total of 14 positions, 7 workyears, and \$1,156,000 is requested for the Management and Administration program's Office of Business Liaison. These 14 positions are requested for Headquarters to establish and support a national telephone bank for employer questions.

Employers want and need the information to comply with the law. They are motivated to use information both to avoid penalties imposed by law for failure to comply and to avoid the costs resulting from workers pulled off the line. In addition, employer education is an essential element of a successful worksite enforcement strategy. Limited Special Agent resources are best reserved for enforcement of the law against serious violators. INS must accomplish employer education more efficiently and cost-effectively, taking advantage of centrally controlled, automated information systems.

Employers continue to suffer both from false documents that cannot be identified on their face and from lack of access to reliable and accurate information about employment-related immigration law, policies and processes. The demand for this information, which is gauged by calls to INS, feedback from industry conferences, trade associations, and legal organizations is acute. It is this demand that drives the requested initiatives. Employers need to comply for business reasons, including the need to 1) avoid wasted investments in employee training, recruitment, and medical exams, 2) interruptions in work processes or missed production deadlines, 3) loss of perishable raw materials, 4) lapses in assembly line hygiene or quality control, 5) worker's compensation claims arising from accidents that happen to illegal aliens 6) and negative community image. All of these things can and do happen regularly when illegal aliens are removed from workplaces--often in large numbers or percentages of employees.

INS is proposing the establishment of a nationwide telephone bank to respond to employer's questions. These questions will run the gamut including: the employment eligibility process, employing permanent and temporary foreign workers, changes in employment-related immigration law/regulation/policy/practice, hiring foreign students, independent contractors, asylum-based work authorization, hiring under

NAFTA, hiring nannies and domestic workers, and retention of documents, among other things

Employer Assistance-Internet Service-

A total of \$250,000 will provide hardware and software for an Internet server LAN for the Office of Business Liaison to assist employers obtain critical information

The Internet LAN costs address the need to provide the Office of Business Liaison with file server capability that, in addition to Internet access, provides some commercial off-the-shelf software for employer mail support and Faxback capabilities, a help line, receipt and tracking, pamphlet distribution, seminar/speaking engagement calendar, and regulatory update changes

INS needs to provide a system to employers that is useful to them and identifies their needs and posts information in text and format that is comprehensible, accessible, well-organized, cross-referenced, and free of extraneous graphics that are expensive and time consuming to download. INS' present dissemination systems either do not include information requested by employers or do not present it in a way that is comprehensible.

Improving Services and Benefits
Violent Crime Reduction Trust Fund
(Dollars in Thousands)

	Positions	Workyears	Amount
Data & Communications	4	2	\$7,800

Proposed Actions

INS' customer base has been growing rapidly as its involvement in a variety of enforcement and benefits functions increases. The records and information infrastructure has not grown or transformed accordingly to support the agency's multitude of missions.

Strengthen Records Infrastructure

The resources requested in the Data and Communications program will provide the following:

Information Network (\$836,000)--

This request includes funding for cabling (\$200,000), automated data processing (ADP) equipment (\$266,000), Receipt Allen File Accountability and Control System (RAFACS) installation (\$300,000), telephone/communications installment (\$70,000), and other infrastructure enhancements required to implement the records restructuring.

Electronic A-File (2 Positions, 1 Workyear, and \$5,500,000)--

This request includes activities designed to ensure the development and implementation of a new method of keeping records for INS, including re-engineering INS records and supporting business processes for the development and implementation of production standards and control procedures to support access to information in the form of images. This process, known as electronic A-Files, will reduce the number of lost files, the cost of mailing and warehousing, and delays in support of enforcement and benefit activities.

These resources will also allow INS to analyze the information to be retained in the electronic A-File, develop a migration plan for INS to move from a paper-based to electronic-based environment, and develop services to implement a pilot electronic A-File. Included in this would be the required hardware and software costs associated with the management of the imaging client service capabilities and the electronic A-File repository management in a centralized records center. The funding also includes the development of electronic files for 600,000 immigrant visa applications and the establishment of a core image file hardware and software platform. Approximately 3 offices would receive the ability to "scan on demand".

Electronic Filing (2 positions, 1 workyear, and \$1,464,000)--

INS spends considerable time and resources converting data contained on the application to electronic form for system use. Not only does this increase processing time, but it is also error prone. For this reason, INS will explore best practices from public and private entities utilizing electronic filing approaches to develop an electronic filing strategy for INS.

This initiative will include acquiring, installing, and evaluating new tools and processes by which benefits can be submitted electronically and monitoring each prototype to evaluate cost effectiveness, customer satisfaction, and the ability to support nationwide deployment.

This effort will be closely coordinated with other INS initiatives (i.e. electronic A-Files) to develop electronic repositories (including imaging). This initiative will be a separate initiative that will produce "front end" input and processes which provide the electronic data for the INS repository. This will enable INS to enhance the speed and accuracy of the process and to reduce the burden to INS and the public.

Justification of Adjustments to Base
(Dollars in thousands)

	Work- years	Amount
Transfers to and from other accounts:		
Transfer from Salaries and Expenses Appropriation		
A total of \$40,138,000 is to be transferred in 1998 from the Salaries and Expenses appropriation to the Detention and Deportation program of the Violent Crime Reduction Programs for alien travel, detention and welfare costs associated with increased activities related to the Detention and Deportation program		-\$40,138
Increases:		
1998 pay raise		1,946
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$1,946,000 represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$1,441,000 for pay and \$505,000 benefits = \$1,946,000).		
Annualization of 1997 pay raise		645
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent, plus appropriate personnel benefits (\$479,000 for compensation and \$166,000 for benefits)		
Annualization and Non-Recurring of 215 additional positions approved in 1997	107	-37,054
This provides for the annualization of 215 additional positions provided in Congressional Action for the Border Patrol, Detention and Deportation, Data and Communications Systems, and Management and Administration programs. This request includes nonrecurring costs for one-time items associated with the increased positions.		

1692

	Approved 1997 Increases	Annualization Required

Net Compensation	4,087	4,089
Associated employee benefits	1,164	992
Travel	828	1,068
Transportation of Things	54	...
GSA Rent	1,857	-567
Communications/Utilities	100	102
Other Services	88,940	1,038
Supplies/Materials	288	288
Equipment	69,586	-44,064
Total costs subject to annualization	166,904	-37,054

... 4,931

General pricing level adjustments The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs, and utilities.

Restoration of FY 1996 FTE Reduction
In FY 1996, this account absorbed a reduction of 314 FTE over the FY 1996-1997 time frame. An analysis of the workyears required by this account indicates a total of 76 FTE are required to be added in FY 1988.

**Immigration and Naturalization Service
Construction Account
Summary Statement
Fiscal Year 1998**

The Immigration and Naturalization Service (INS) requests 16 positions, 19 workyears, and \$73,831,000 in the Construction Account. This request represents a total increase in funding of 1 position, 1 workyear, and \$53,719,000 above the FY 1997 enacted Appropriation (2 positions, 1 workyear, and \$9,841,000), and includes base transfers and adjustments totaling 13 positions, 17 workyears, and \$10,271,000.

The INS Construction account was established in the FY 1995 Appropriations Act for the Department of Justice (P.L. 103-317). Section 34 of the law provided an initial \$50,000,000 to fund prioritized border infrastructure requirements of INS. Due to the INS' immediate focus on "prevention through deterrence" along the Southwest border, the first priority for obligations from this account were for border stations, station-related infrastructure, and for frontline enforcement-related activities.

The current request includes 1 position, 1 workyear, and \$5,272,000 to establish a long-term Building Management Program that will include an inventory of all structures and equipment at INS-owned facilities, provide a schedule for preventive maintenance and continuing annual multi-year maintenance for all structures. This program will ensure that INS facilities are maintained in a safe and healthful manner to avoid the past problems of facilities prematurely deteriorating as a result of inadequate preventive maintenance, repair and replacement resources.

In addition, the FY 1998 funding request includes \$34,276,000 for the construction of new projects in support of the Border Patrol program. These resources will be used to construct new stations, as well as plan and design future buildings, and to provide materials for military construction projects supporting the Border Patrol along the Southwest border. Also included is a total of \$14,171,000 to support the construction and renovation of additional detention facilities. One of the INS' core responsibilities is to apprehend and remove those aliens unlawfully within the United States. The total number of illegal aliens has consistently outweighed available detention space.

Finally, the INS is proposing a major change in FY 1998 concerning construction planning and budget requests. Prior to FY 1998, the INS requested the entire amount required to design and construct a new facility in one fiscal year. This practice resulted in low obligation rates during the first two years of the project -- the planning and design phases. To correct this problem, a Construction Program Steering Committee was established to review requirements and approve a single set of INS construction priorities. Each approved project has been segmented into a multi-year construction plan, in order to best estimate when each phase of construction will require funding. The INS intends to only request planning, environmental, site acquisition, and design funds in the first year of the cycle, while the actual construction funds will be requested in the following fiscal year budget. This phased approach to construction budgeting will allow for close alignment of resources by construction phase.

Immigration and Naturalization Service
 Construction
 Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Construction

For planning, construction, renovation, equipping and maintenance of buildings and facilities necessary for the administration and enforcement of the laws relating to immigration, naturalization, and alien registration, not otherwise provided for, (\$5,341,000) ^ .to remain available until expended. \$23,831,000

BASE PROGRAM DESCRIPTION:

- The INS has in excess of 100 fuel storage tanks in operation throughout the country. The INS operates facilities that are currently contaminated with petroleum products; are urgently in need of upgrade or replacement, or are in non-compliance with EPA regulations. Severely leaking underground storage tank problems at a number of Border Patrol locations have been identified. In several instances, leakage has created hazardous situations for the surrounding communities. A five-year plan designed to correct these deficiencies has been implemented in order to address these fuel tank projects. Project prioritization will be based on immediate requirements related to health and safety and environmental impact on the communities involved, and will be coordinated with the Border Patrol's Strategic Plan geographic "phases." The base-level resources are for continued implementation of a five-year plan for the removal of leaking underground storage tanks and the cleanup of

contaminated areas. The INS has already begun to remediate the most serious storage tank problems. The FY 1998 budget proposal represents year three of INS' five-year plan.

The functions of the Construction and Engineering Program also include the acquisition, design, construction, alteration, repair, maintenance, and management of all buildings, structures, and facilities for which the INS is the owning or leasing agency. Space is acquired through the General Services Administration (GSA), by lease, by INS construction and through assignment by airport authorities. New inspection facilities are coordinated as necessary with U.S. Customs Service, Public Health Service, Department of Agriculture, GSA, and with State, county, local and foreign authorities.

The Construction and Engineering program is responsible for preparing an annual work-space management plan and related rent and obligation estimates for submission to GSA and the Office of Management and Budget.

In FY 1998, Construction and Engineering program resources (13 positions, 16 FTE, and \$7,710,000), as well as repair and alteration funding (a total of \$7,913,000 from the Inspections, Border Patrol, Investigations, Detention and Deportation, Intelligence, International Affairs, Data and Communications, Information and Records, Legal Proceedings, and Management and Administration programs) in the Salaries and Expenses appropriation, are proposed to be consolidated in the Construction appropriation.

Proposed Actions

In recent years, INS has expanded and intensified program activities in the areas of enforcement, deterrence, and benefits. This expansion has facilitated the entry of legally admissible individuals to the United States, prevented illegal entry and improper granting of benefits, and has resulted in increased apprehensions and removals of illegal aliens, and the enforcement of Immigration laws at the worksite. Program expansion has placed a strain on the basic infrastructure of INS and the ability of INS to provide adequate facilities support to the thousands of new employees who have been brought into the organization. Infrastructure and facilities issues are highlighted through the inability of INS to provide necessary vehicles, equipment, and facilities management support required by the workforce. These basic resources are critical if the INS workforce is to effectively carry out their program requirements and if the organization as a whole is going to promote professionalism, employee welfare and success in its priorities.

INS must build and maintain its infrastructure base and provide sufficient mission support to maximize the efficiency, effectiveness, safety and health of its workforce. In FY 1997, INS received resources to begin addressing the deficiencies in the infrastructure base and mission support. In FY 1998, basic operational support requirements must be addressed further for INS to fully achieve its goals. Additionally, initiatives developed and implemented with resources from the Violent Crime Reduction Trust Fund and the Border Construction Trust Fund between FY 1995 and FY 1997 must now be maintained. It is imperative that INS focus its efforts and resources on promoting professionalism through the continued restoration and maintenance of the infrastructure base and mission support as we move into FY 1998.

The INS Professionalism initiative will focus its efforts and resources on the delivery of mission-critical support to INS components to maximize the effectiveness and efficiency of the INS workforce. INS will focus on the assimilation of the thousands of new employees

into the organization, and with the resources of the Construction Account will concentrate on providing safe, healthy and efficient physical working environments.

The Construction and Engineering program request includes 1 position, 1 workyear and \$5,272,000 for the Building Management Program. The INS is committed to the repair of existing facilities and the establishment of a program for preventive maintenance. Without routine repair and alteration of our buildings and structures, the health and safety of INS personnel will be endangered. In order to ensure that INS properly dedicates resources and workhours to facility maintenance and management, INS requests the following initiative.

Building Management Program (1 position, 1 workyear and \$5,272,000) --

Included in this initiative is a request for 1 position, 1 workyear and \$5,272,000 to establish a long-term Building Management Program that will include an inventory of all structures and equipment at INS-owned facilities, provide a schedule for preventive maintenance and continue annual maintenance for all structures. This program will also provide funding to ensure that regular, routine, and recurring maintenance is performed and INS facilities are maintained in a safe and healthful condition. Lack of resources in the past has led to premature deterioration and accelerated aging of INS facilities. In order to correct the problems associated with premature deterioration and obsolescence, INS must create and properly resource a Buildings Management program that will ensure that our facilities are maintained and repaired routinely and kept in top shape to provide the support and service they are designed and built to achieve. Preventive maintenance, and routine repair and replacement of those parts of the plant and equipment that are not designed to last forever (e.g., roofs, tile, plumbing, HVAC systems and components, carpets, lights, security and fire-systems, paving fences) is essential to protect and extend the useful life of our facilities.

As part of the request in the first year, \$4,500,000 will be used to establish a Service-wide contract to conduct an inventory of structures and plant and equipment at each INS facility. This funding will provide contractual services, with the largest expenditures being associated with the conduct of the inventory and the establishment of appropriate maintenance schedules, that are based upon accepted industry standards and customized to meet the operational demands placed upon a particular facility. The balance of the funds will be used to replace or repair plant and equipment that can no longer be effectively supported and maintained. Finally, initial funding for local service contracts to perform scheduled preventive and recurring maintenance will be allocated to the field. In subsequent years, the majority of the funding will be provided to the local facility managers in the field to fund local service and maintenance contracts based upon established schedules. The remaining funds will support policy, oversight and maintenance of the inventory database including upgrades, adding new facilities, and instituting energy efficient improvements.

Construction & Engineering	\$34,276

Proposed Actions

One of INS' highest priorities is to regulate entry to the United States (U.S.) in a manner that facilitates lawful travel and commerce while ensuring border integrity. In the past several years, INS has achieved considerable success with its border strategies -- INS components have identified and removed more than two million unlawful immigrants annually. Nonetheless, large numbers of illegal aliens continue to enter the U.S., utilizing both traditional means and innovative new avenues. In order to maintain and advance recent gains in the Southwest, INS must further enlarge its border control capabilities and staffing. In recent years, the increase in the strength of the Border Patrol -- the number of new Border Patrol Agents -- has far exceeded INS' ability to keep pace in terms of providing appropriate physical facilities. Many older Border Patrol stations have become dilapidated to the extent that they constitute safety and health hazards, and many more have reached or gone beyond the saturation point in terms of providing adequate space for assigned staff. These facilities and construction issues have long been recognized and have now reached a point of critical importance.

This initiative includes \$34,276,000 for construction of projects that are essential if INS is to meet the facility requirements for the additional agents authorized to be stationed along the Southwest border. These resources will be used to construct new stations, as well as plan and design future buildings.

The INS is proposing a major change in FY 1998 concerning construction planning and budget requests. Prior to FY 1998, the INS requested the entire amount required to design and construct a new facility in one fiscal year. This practice resulted in low obligation rates during the first two years of the project -- the planning and design phases. To correct this problem, a Construction Program Steering Committee was established to review requirements and approve a single set of INS construction priorities. Each approved project has been segmented into a multi-year construction plan in order to best estimate when each phase of construction will require funding. Only planning, environmental, site acquisition, and design funds will be requested in the first year of the cycle. The actual construction funds will be requested in the following fiscal year. This phased approach to construction budgeting will allow for close alignment of resources by construction phase.

Full Construction Projects (\$25,070,000) --

Brownfield Utility Connection	\$ 700,000
Tucson Border Patrol Station (cost increase)	3,000,000
Del Rio Sector Headquarters	7,700,000
Rio Grande Border Patrol Station	4,200,000
Laredo-North Border Patrol Station	7,670,000
Presidio Housing	1,800,000
Total	\$25,070,000

Brownfield Utility Connection (\$700,000) - INS will be constructing five buildings on a 38 acre site provided by the U.S. Navy. This project will include the Brownfield station, the annex building to accommodate expected staff growth, and the San Diego Sector support facilities for vehicles, electronics, and facility maintenance. The resources requested will be used to provide water and sewage connection for the Brownfield facility.

Tucson Border Patrol Station (\$3,000,000) - This station is collocated with Sector headquarters and housed in a small building and four modular trailers. Currently, the station is staffed by approximately 80 agents and operates 24 hours per day, seven days a week. Current funds will allow the Service to proceed with site acquisition and station design in FY 1996 and FY 1997. The resources requested for FY 1998 will be used for the construction phase of the project. The project will consist of a 32,000 square foot station and will include a fuel island, wash rack, parking for 490 vehicles, covered parking for 110 Service vehicles, radio tower, emergency generator, and kennel.

Del Rio Sector Headquarters (\$7,700,000) - The facility is housed in a GSA building constructed in '96/3 and currently has a staff of 37 employees. This request will provide for construction of three buildings, a headquarters building, a vehicle repair facility and a maintenance shop. A fuel island, car wash, 80 parking spaces, covered parking for 40 Service vehicles, and all-terrain vehicle parking are also included in this request.

Rio Grande Border Patrol Station (\$4,200,000) - The existing station is a Service-owned 1,320 foot cinder block building built in 1956 to support a staff of six agents. The station is currently staffed by 38 agents, with greater anticipated growth within the next few years. The requested resources will be used to construct a 21,000 square foot building with 215 parking spaces, covered parking for 90 Service vehicles, and parking for all-terrain vehicles. Also included will be a fuel island, wash rack, emergency generator, vehicle maintenance, and kennel.

Laredo-North Border Patrol Station (\$7,670,000) - The existing station is a 7,344 square foot GSA building built in 1985 to support a staff of 50 agents and one support employee. Currently, there are 125 agents assigned to the station, and staffing levels are expected to grow with the deployment of new agents. The resources requested will be used to construct a 38,000 square foot building that will include a fuel island, car wash canopy, parking for 500 vehicles, covered parking for 200 Service vehicles, an all-terrain vehicle parking area, radio tower, emergency generator, vehicle maintenance, and a firing range.

Presidio Housing (\$1,800,000) - Currently there are 12 aging mobile trailers located in Presidio, Texas -- one of INS' two "hardship" duty stations -- utilized as Government housing for Border Patrol personnel and their families. The resources requested will be used to replace the presently unacceptable housing with permanent housing units between 1,200 and 1,400 square feet, that will include three bedrooms, two and one-half baths, and covered parking.

Planning/Site Acquisition/Design (\$4,206,000) --

Yuma Sector Headquarters	\$ 922,000
EI Centro Border Patrol Station	666,000
EI Centro Sector Headquarters	450,000
Hebronville Border Patrol Station	422,000
Sierra Blanca Border Patrol Station	322,000
Alpine Border Patrol Station	308,000
Brownsville Border Patrol Station	809,000
Douglas Border Patrol Station	307,000
Total	\$4,206,000

Yuma Sector Headquarters (\$922,000) - This facility consists of four separate buildings totaling 13,000 square feet built in 1955. They house the anti-smuggling unit, communications center, electronics shop, maintenance shop and a small garage. The resources requested will be used to design and plan for the construction of approximately 30,000 square feet of Headquarters office and support space. The project will include vehicle maintenance facility, a facilities maintenance shop, radio tower, firing range, 100 parking spaces, 40 covered parking spaces for Service vehicles, emergency generator, fuel island and a car wash rack.

EI Centro Border Patrol Station (\$666,000) - This facility has outgrown a modular building solution that was designed in 1985 to accommodate the station's 77 personnel and activity level of 196 apprehensions per day. This construction project will provide a new 28,000 square foot station, 340 parking spaces, covered parking area for 130 vehicles, radio tower, emergency generator, fuel island, wash rack, vehicle maintenance, and kennels.

El Centro Sector Headquarters (\$450,000) - This facility is presently collocated with both the El Centro Border Patrol Station and the Service Processing Center. This project will provide a 19,000 square foot Headquarters building, a vehicle repair facility, and a facilities maintenance shop, 100 parking spaces, covered parking for 40 Service vehicles, an emergency generator and an indoor firing range.

Hebbronville Border Patrol Station (\$422,000) - The current facility is a 1,200 square foot under block building that was constructed in the 1950s to support eight agents. The station is currently staffed by 59 employees. The resources requested will be used to plan for the construction of a new 17,000 square foot building with fuel island, car wash canopy, parking for 150 vehicles, covered parking for service vehicles, and a firing range.

Sierra Blanca Border Patrol Station (\$322,000) - The current station is a 927 square foot block building that was constructed in 1960 and staffed by five agents. The Station is currently staffed by 28 agents. This project consists of the construction of a 12,000 square foot building that will include parking for 124 vehicles and covered parking for 52 Service vehicles, a radio tower, emergency generator, fuel island, wash rack, and a kennel.

Alpine Border Patrol Station (\$308,000) - This facility is a leased building that formerly housed an automobile dealership. The Station was originally planned to house only 25 agents. It has grown significantly, with an anticipated staffing level that will reach 65 agents with the deployment of new positions in FY 1998 and FY 1999. The resources requested will be used to plan the construction of an 11,600 square foot building that will include a fuel island, car wash canopy, covered parking for Service vehicles, emergency generator, a radio tower, vehicle maintenance, a kennel, and a firing range.

Brownsville Border Patrol Station (\$809,000) - The Brownsville Station was completed in 1976 and designed to accommodate a staff of 25 personnel. The present staffing level is approximately 100 agents and is expected to grow to 250 agents by FY 1998. This request will provide resources to plan the construction of a 36,000 square foot building with 420 parking spaces, covered parking for 170 Service vehicles, parking for all-terrain vehicles, a fuel island, wash rack, radio tower, emergency generator, vehicle maintenance, and kennels.

Douglas Border Patrol Station (\$307,000) - The present 6,144 square foot facility was built in 1987 and designed to accommodate a staff of 35 agents. The current staffing level is 177 agents and 18 support personnel. The resources included in this request will be used to plan the construction of a 9,250 square foot addition to the current station. The project will also include covered parking for 30 Service vehicles and a vehicle maintenance facility.

Military Engineering Support to the Border Patrol (\$5,000,000) --

For several years, INS has taken advantage of a service offered by the Department of Defense, whereby INS provides funding for materials for various "engineering missions that have . . . a counter-drug benefit to the Nation." DOD, in turn, through its Joint Task Force Six (JTF-6), furnishes all labor and conducts all necessary engineering and environmental work at no charge to INS. Because of the many demands made upon the services of JTF-6, it is necessary for them to schedule their projects up to three years in advance, and strictly hold to these schedules.

INS and the Border Patrol have identified a need for \$5,000,000 for eleven JTF-6 projects for border lighting, fencing, vehicle barriers, and roads that will require FY 1978 funding. It should be noted that these projects are all in addition to, and do not duplicate, any of the lighting projects included in the 15 miles of border lighting separately requested above or any of the other projects on the most recent \$50 million Border Patrol Construction List. If INS does not receive funding for these eleven projects in the FY 1978 Budget, it is likely that many of them will never be able to be reinstated on JTF-6's project schedule. If INS were to complete these projects using commercially provided materials, labor, plan and site development, the final cost would increase to \$10-\$15 million.

The eleven projects are listed below, by state and sector:

JOINT TASK FORCE SIX (JTF-6) Military Construction Support for the Border Patrol:
(INS pays for materials only, no charge for labor)

California:		
San Diego Sector:	Vehicle Barriers (20.0 mi) -	\$ 400,000
El Centro Sector:	Calexico, California - Fencing (3.5 mi) -	\$ 200,000
	Vehicle Barriers (25.0 mi) -	\$ 450,000
Arizona:		
Yuma Sector:	Vehicle Barriers (20.0 mi) -	\$ 400,000
Tucson Sector:	Douglas, Arizona: Fencing (2.0 mi) -	\$ 100,000
New Mexico:	Vehicle Barriers (35.0 mi) -	\$ 650,000
El Paso Sector:		
	New Mexico - Vehicle Barriers (35.0 mi) -	\$ 650,000
Texas:		
Del Rio Sector:	Eagle Pass, Texas - LLLTV, erect & install -	\$1,200,000
	Drag Roads (30.0 mi)	\$ 50,000
Laredo Sector:	Stadium Lights (5 mi) -	\$ 400,000
Marfa Sector:	Border Roads (100 mi) -	\$ 500,000
Total		\$5,000,000

Remove Criminal and Non-Criminal Deportable Aliens
Construction Account
(Dollars in thousands)

	Positions	Workyears	Amount
Construction & Engineering	\$14,171

Proposed Actions

One of the INS' core responsibilities is to apprehend and remove aliens who are unlawfully within the United States. INS' detention and removal resources, however, have consistently been overwhelmed by the number of aliens unlawfully in the country and the prohibitive cost to remove them. Beginning in FY 1995, Congress began to address this imbalance with increased appropriations, but limited detention and removal resources remain a major problem. The number of illegal aliens removed has increased significantly in FY 1995 and FY 1996, but thousands of illegal aliens still avoid apprehension or abscond after being issued a final order of removal.

A further strain on INS detention and removal resources resulted with the passage of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (1996 Act). The 1996 Act dramatically changes some of the provisions of the Immigration and Nationality Act (INA), and results in significant resource and program implications for the INS. In particular, the 1996 Act requires the Attorney General to detain, without possibility of release, a far greater number of aliens than under previous law, including terrorists, many criminal aliens, aliens in expedited removal, and all aliens issued a final order of removal. Once fully implemented, this expanded mandatory detention requirement will consume most of the INS' existing detention space, leaving little room for the detention of other removable aliens.

The FY 1998 request for the removal of criminal and non-criminal deportable aliens has two objectives: 1) to respond to the new requirements as a result of the 1996 Act and, 2) to sustain INS' current efforts toward removing non-criminal deportable aliens. One of the foremost and most basic methods by which INS will restore credibility to the detention process will be by increasing significantly the amount of detention space. It is imperative that INS have the physical facilities to actually place and detain those individuals apprehended by INS' enforcement programs.

A total of \$14,171,000 is requested to support the construction of additional detention bed spaces. One of the INS' core responsibilities is to apprehend and remove those aliens unlawfully within the United States. The total number of illegal aliens has consistently outweighed available detention space. In addition, the existing detention facilities operated by INS require significant renovations and improvements. Without these construction resources, the INS will be unable to adequately detain the rising population

of illegal aliens.

In addition, the INS is proposing a major change in FY 1998 concerning construction planning and budget requests. Prior to FY 1998, the INS requested the entire amount required to design and construct a new facility in one fiscal year. This practice resulted in low obligation rates during the first two years of the project -- the planning and design phases. To correct this problem, a Construction Program Steering Committee was established to review requirements and approve a single set of INS construction priorities. Each approved project has been segmented into a multi-year construction plan, in order to best estimate when each phase of construction will require funding. The INS intends to only request planning, environmental, site acquisition, and design funds in the first year of the cycle, while the actual construction funds will be requested in the following fiscal year. This phased approach to construction budgeting will allow for close alignment of resources by construction phase.

New Construction (\$12,000,000):--

Construction	
Krome Utility Connection	\$2,000,000
Port Isabel Service Processing Center	10,000,000
Total	\$12,000,000

Krome Utility Connection (\$2,000,000) - The Metropolitan Dade County has requested that INS fund a portion of the cost of constructing water and sewer service to the Krome Service Processing Center. The resources requested will provide funds to allow INS to contribute to the Krome utility connection. Water and sewer service is presently provided at the site using an INS owned and operated water and sewage treatment plant. The present capacity of the plant will not support the addition of the 300-bed lockdown dormitory and, therefore, the facility must be connected to the Dade County service.

Port Isabel Service Processing Center (\$10,000,000) - This request will provide resources for construction of Phase II of the Port Isabel Service Processing Center. Phase II includes the construction of those sites designed with FY 1997 resources. These facilities include three additional 200-bed dormitories, a new medical services clinic, interim improvements to the kitchen and dining facility, and completion of site security improvements.

Plan/Site/Design (\$2,171,000):--

Port Isabel Service Processing Center Phase III	\$1,000,000
El Centro Service Processing Center (Renovate)	486,000
Florence Service Processing Center (Renovate)	\$65,000

Varick Street Service Processing Center (Renovate) 100,000
Total 2,171,000

Port Isabel Service Processing Center (\$1,000,000) - The resources requested will be used for the planning and design of Phase III of the Port Isabel Service Processing Center. The projects included in Phase III include facilities for courts, administration, support functions, and vehicle maintenance. These facilities are required to ensure that each bed is utilized to support the detention, processing, and eventual deportation of the maximum number of deportable aliens.

El Centro Service Processing Center (\$486,000) - These resources will be used for the planning, site preparation, and design for renovations and improvements to enable the INS to utilize the existing facility at its maximum capacity. The renovations include the replacement of an existing open drainage canal with an underground pipe system, security improvements, and other general improvements to the administrative and support buildings.

Florence Service Processing Center (\$585,000) - This request will be used for the planning and design of renovations and improvements to enable the INS to utilize the existing facility at its maximum capacity. The renovations include expansion of the medical facility, laundry, storage/warehouse space, and the recreation area.

Varick Street Service Processing Center (\$100,000) - The resources requested will be used for planning and design for numerous safety and health improvements. The projects include the replacement of security glazing, upgrading the emergency generator, separating the detainee day rooms, expanding restrooms, renovating the CCTV system, and adding a secure library and laundry room in the detainee area.

Justification of Adjustments to Base
(Dollars in thousands)

	Pos.	Work- years	Amount
Adjustments to Base:			
Transfers:			
Base transfer from Salaries and Expenses appropriation	13	16	\$15,623
This transfer from the Salaries and Expenses appropriation combines construction and repair and alteration resources into one account.			
Increases:			
1998 pay raise			2
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 1998 Budget Submissions, August 1, 1996. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$2,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$2,000 for pay).			
Net annualization and non-recurring costs of 1997 program increases			
This provides one FTE and \$89,000 for the annualization of 2 additional positions provided in the FY 1997 appropriation for the Construction and Engineering Program. This request includes \$5,443,000 in nonrecurring costs for one-time items associated with the increased positions approved in FY 1997.

Immigration and Naturalization Service
Immigration Legalization
Summary Statement
Fiscal Year 1998

The Immigration and Naturalization Service (INS) is requesting 25 positions, 21 workyears, and \$1,259,000 in the Immigration Legalization Account. This resource level contains a decrease of 30 positions, 4 workyears, and \$728,000, reflecting a phase-down of activities supported by this account.

The Immigration Reform and Control Act of 1986 (IRCA), P.L. 99-603, Title II, Sections 201-204, established a legalization program that provided temporary resident status to aliens who entered the United States illegally or lapsed into illegal status prior to January 1, 1982, resided continuously in the United States since then, and are not excludable. The legislation also provided for adjustment to permanent resident status after 18 months of temporary status upon showing general admissibility and basic citizenship skills. Section 202 further provided for adjustment to permanent resident status of certain Cubans and Haitians who entered the U.S. prior to January 1, 1982. The Immigration Act of 1990 provided a one-year extension of the deadline for filing applications for adjustment from temporary to permanent resident status.

This request will allow INS to complete the processing of applications for permanent resident status and to shift its remaining resources to process appeals. There are several class action lawsuits pending against INS which are related to the Legalization program. The INS will keep the committees apprised of any legal settlements or judicial decisions that affect future resource requirements.

Immigration Legalization
Program Performance Information
(Dollars in Thousands)

The Immigration Reform and Control Act of 1986 (IRCA), P.L. 99-603, Title II, Sections 201-204, established a legalization program that provided temporary resident status to aliens who entered the U.S. illegally or lapsed into illegal status prior to January 1, 1982, resided continuously in the U.S. since then, and are not excludable. The legislation also provided for adjustment to permanent resident status after 18 months of temporary status upon showing general admissibility and basic citizenship skills. Section 202 further provided for adjustment to permanent resident status of certain Cubans and Haitians who entered the U.S. prior to January 1, 1982. The Immigration Act of 1990 provided a one-year extension of the deadline for filing applications for adjustment from temporary to permanent resident status.

The processing of appeals of denials for permanent resident status will continue through 1998. The request will allow the Service to complete processing of the small number of applications for permanent resident status and to shift additional resources to processing of appeals. Sufficient carryover resources will exist to fund the ongoing costs of this level of activity. All of the Legalization Offices have been closed except for the Los Angeles and Manhattan offices. The Legalization Regional Processing Facilities have been merged into the INS Service Centers within the Examinations program. The Legalization component of these centers will be phased out as work is completed, and remaining resources, such as equipment, will be used to improve the processing of ongoing casework at the Centers.

Several class action suits relating to the Legalization program are pending final resolution in the courts. The Service's field offices continue to accept applications related to these court cases until there is a final resolution in the Federal courts.

Depending upon the outcome, final court action resolving these cases could generate limited additional processing in the future. The request for FY 1998 will cover processing costs and the costs of appeals processing.

BASE PROGRAM DESCRIPTION:

- The Immigration Legalization program is responsible for processing applications for permanent resident status in accordance with the Immigration Reform and Control Act of 1986 (IRCA) (P.L. 99-603, Title II, Sections 201-204). The Act established a legalization program that provided temporary resident status to aliens who entered the U.S. illegally or lapsed into illegal status prior to January 1, 1982, resided continuously in the U.S. since then, and are not excludable. The legislation also provides for adjustment to permanent resident status after 18 months of temporary status upon showing general admissibility and basic citizenship skills.
- With the exception of residual cases, the processing of all applications was completed in 1993. Processing of appeals of denials will continue during 1998.

1732

BASE PROGRAM DESCRIPTION:

- The Legal Proceedings program provides legal representation for the United States Government in legalization cases and matters arising before Immigration Judges and the Board of Immigration Appeals;
- Represents INS in other legalization-related administrative hearings; provides legal advice and support to INS personnel regarding legalization-related matters;
- Represents INS in cases stemming from the legalization statutes being tried in the Federal courts.

Proposed Actions

The workload supported by the Immigration Legalization account is winding down. At this time, INS is adjudicating and litigating the remaining appeals. These program changes represent a reduction in positions and workyears and associated funding to reflect current receipts and the workload levels for the Immigration Legalization account.

Immigration and Naturalization Service Immigration Legalization Justification of Adjustments to Base (Dollars in thousands)		Amount
Adjustments to Base.		
Increases (Automatic, Non-Policy):		
1998 pay raise		\$60
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. The amount requested, \$60,000, represents the pay amounts for three quarters of the fiscal year plus appropriate benefits (\$45,000 for pay and \$15,000 benefits = \$60,000).		
Annualization of 1997 pay raise		18
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent, plus appropriate personnel benefits (\$13,000 for pay and \$5,000 for benefits).		
Within-grade increases		11
This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition/separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$8,000 for pay and \$3,000 for benefits.		
General pricing level adjustments		3
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, equipment, contracts with the private sector, printing costs, transportation costs and utilities.

Immigration and Naturalization Service
Immigration User Fee Account
Summary Statement
Fiscal Year 1998

For FY 1998, the Immigration and Naturalization Service (INS) requests 3,649 positions, 3,539 workyears, and \$419,296,000 for the Immigration User Fee account. This request represents an increase of 298 positions, 599 workyears, and \$41,897,000 over the enacted level for FY 1997.

The Immigration User Fee account was established in the 1987 Appropriations Act for the Department of Justice (P.L. 99-591).

Section 205 of the Act directed the Attorney General to charge and collect a \$5.00 user fee from each individual arriving in the United States aboard a commercial aircraft or vessel from foreign locations (other than Mexico, Canada, and the adjacent islands).

In the 1991 Appropriations Act, the Congress removed the fee exemption for Canada, Mexico, and the contiguous territories for air ports-of-entry, as well as placing a 45-minute immigration inspection standard at air ports-of-entry. The Department of Justice Appropriations Act of 1994 (P.L. 103-121) increased the user fee from \$5.00 to \$6.00.

These fees are deposited into the Immigration User Fee account and are available for use to provide immigration inspection services for commercial aircraft and vessels; administer debt collection activities, including the establishment and operation of a National Collections Office; expand and operate information systems for non-immigrant control and debt collection; detect fraudulent documents used by air and sea passengers traveling to the United States; detain and deport excludable aliens arriving on commercial aircraft and vessels; detain and deport excludable aliens who attempt illegal entry through avoidance of immigration inspection at air or sea ports-of-entry; provide exclusion and asylum proceedings at air or sea ports-of-entry; and provide necessary operations support to ensure that the objectives of the programs are achieved.

Prior to FY 1997, two-thirds of the Immigration and Nationality Act (INA) Section 271 and 273 fines were deposited into the Immigration User Fee account, but were unavailable to be spent on User Fee activities as required by Section 286(h) of the INA. However, beginning in FY 1997, these fines, plus additional fines as stated under Section 382 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996, will be deposited into the Immigration Enforcement Account.

Revenue Assumptions

The FY 1997 and FY 1998 collections estimates used FY 1996 as a collections base, and include an annual increase in international passenger traffic of 6.6 percent based upon Federal Aviation Administration projections. The estimated revenue could also be affected by changes in legislation.

An amendment to the appropriations language has been submitted to remove the User Fee exemption for passengers arriving in the United States from Canada, Mexico, and adjacent islands on commercial vessels as part of the President's FY 1998 budget submission. It is estimated that removal of the commercial vessel exemption will generate \$20.4 million in FY 1998. This revenue is assumed in this budget proposal.

Professionalism

INS requests an increase of 4 positions, 2 workyears and \$2,000,000 for the Statistical Analysis Program. The resources will allow INS to keep pace with an increasing workload and expand the quantity and quality of professional analytical services provided to other program areas within INS, and to external audiences. The increased demand for information for management purposes has placed greater emphasis on INS statistical activities, including improvements in the timeliness, accuracy, usefulness, and frequency of reporting of the captured data. The Statistical Analysis Program must also provide essential information and statistical models to assist the Office of Budget in projecting future revenue in the User Fee account. In addition, the request will enable the Office of Policy and Planning to properly carry out planning activities, data analyses responsibilities, and evaluations of the operational requirements for User Fee funded programs.

Border Control and Facilitation

Total program increases of 294 positions, 147 workyears, and \$28,145,000 are requested to support the Border Control and Facilitation Initiative. Specifically, the FY 1998 request includes 277 positions, 136 workyears, and \$17,699,000 to increase airport and seaport staffing, as well as to allow INS to meet the 45-minute standard for air passenger inspection. This increase will be allocated to offset moderate nationwide traffic growth at the major locations and to allow INS to target dedicated positions to ports undergoing extensive facilities expansion. This request includes 265 inspectors and 12 support positions. An additional \$200,000 is requested for carbon dioxide detectors to be used to determine the presence of stowaways in hidden compartments on vessels.

In addition, this request includes 12 positions, 6 workyears, and \$1,715,000 to provide staffing to three new airports that will become operational in Medford, OR; Palm Springs, CA; and Halifax, Nova Scotia. INS also requests 4 positions, 2 workyears, and \$2,507,000 to expand the departure management program at airports through the I-94 automation project and the joint INS-Department of State DataShare project.

Resources are also being requested to improve and expand the automation used by the Inspections program at air and sea ports-of-entry. A total of \$2,100,000 is requested to expand INSPASS to 10 sites. These resources will also support the installation of IBIS imaging workstations at 5 sites (\$100,000); the deployment of 100 PALS notebooks to remote air and sea ports to allow inspectors to quickly identify persons, detect fraud, share intelligence with Department of State on possible terrorists or other potential targets, and exclude violators of immigration law (\$500,000); 1 position, 1 workyear, and \$1,324,000 to oversee the deployment of new IBIS program technology and 11 contractor positions; and, \$2,600,000 for expansion of the IDENT and ENFORCE systems to inspectors and other user-fee funded personnel.

Transfer Between Accounts. This reflects the transfer of \$11,700,000 from Fines to the new Immigration Enforcement Account, which has been established in compliance with Section 382 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996.

Reprogramming. The reprogramming of resources reflects the permanent effects of the August 8, 1996, and December 23, 1996, reprogramming notifications. In the narrative accompanying the August 8, 1996, notification, it was stated that the reprogramming was of a permanent nature and would carry over into FY 1997.

Immigration and Naturalization Service
Program Performance Information
Immigration User Fee
(Dollars in thousands)

The Immigration User Fee account was established in the Department of Justice Appropriations Act of 1987, (P.L. 99-591). Section 205 of the law directed the Attorney General to charge and collect a \$5.00 user fee from each individual arriving in the United States aboard a commercial aircraft or vessel from foreign locations (other than Mexico, Canada, and the adjacent islands).

In the FY 1991 Appropriations Act, the Congress removed the fee exemption for Canada, Mexico and the contiguous territories for air ports-of-entry, and placed a 45 minute immigration inspection standard at air ports-of-entry. The Department of Justice Appropriations Act of 1994 (P.L. 103-121) increased the user fee from \$5.00 to \$6.00.

All fees are deposited into an Immigration User Fee account. The resources are to be used to provide immigration inspection services for commercial aircraft and vessels; administer debt collection activities, including the establishment and operation of a National Collections Office; expand and operate information systems for non-immigrant control and debt collection; detect fraudulent documents used by air and sea passengers traveling to the United States; detain and deport excludable aliens arriving on commercial aircraft and vessels; detain and deport excludable aliens who attempt illegal entry through avoidance of immigration inspection at air or sea ports-of-entry; provide exclusion and asylum proceedings at air or sea ports-of-entry; and provide necessary support for operations to assure that the objectives of the programs are achieved.

BASE PROGRAM DESCRIPTION:

- The function of this program is to enforce and administer the immigration and nationality laws with respect to the inspection of all persons seeking admission into the United States at air and sea ports-of-entry. Applicants for admission are inspected at air and sea ports-of-entry to determine if they qualify for admission, and, if so, under what conditions. This process is coordinated with the Department of State, the U.S. Customs Service, the Department of Agriculture, and local port authorities. Determination of inadmissibility is based on the examination of the applicant, related documents, or prior information. Local and national lookout systems containing information relating to excludable aliens are available for use at each port-of-entry. Inadmissible aliens are denied entry. Any criminal activity discovered in the inspection process is referred to the appropriate law enforcement agency for investigation. Applications and petitions for a full range of benefits under the immigration laws are adjudicated during periods of standby time at most ports-of-entry during non-peak workload hours.

1998 Base	69	66	5,516
1998 Estimate	69	66	5,516
Increase/Decrease

BASE PROGRAM DESCRIPTION:

- Generally, the functions of the Investigations program include the detection of criminal law violations and the identification of violators through undercover operations and traditional investigative procedures to initiate criminal prosecution and/or administrative action. Many cases investigated involve violators associated with large-scale, organized criminal conspiracies. Quite often, these criminal alien organizations are simultaneously engaged in other illegal activities such as racketeering, alien smuggling, immigration benefit fraud, counterfeiting, prostitution, official corruption, extortion, narcotics and weapons trafficking on a national or international scale. Special Agents identify these organizations through interviews, informants, surveillance, and through undercover and task force operations. Investigative task force operations include a combination of resources of several offices and agencies.

- More specifically, these resources are focused on one of the basic enforcement priorities of the INS: detection and deterrence of fraud and smuggling. The principal goal is to discourage illegal immigration through major ports-of-entry (primarily airports) via fraud. In an effort to accomplish this goal, the INS is aggressively targeting complex criminal organizations involved in immigration benefit fraud and counterfeit document fraud. Smuggling cases typically involve the investigation of major international alien smuggling and criminal organizations. Many smuggling cases have shown extensive networks used to move aliens via the use of fraudulent documents and circuitous routes to reach this country.

1998 Estimate	190	190	75,339
Increase/Decrease

BASE PROGRAM DESCRIPTION:

- Detention and Deportation program functions include the detention, removal, parole and deportation of aliens. INS utilizes Service Processing Centers (SPC's), contract facilities, Joint INS/BOP Federal Facilities, and State/Local facilities to detain, until ready for removal, those aliens subject to exclusion proceedings who are likely to abscond or whose freedom at-large would represent a danger to public safety and security. In the performance of the deportation function, the INS maintains a system of controls that ensures that every case involving an excludable alien is efficiently and correctly processed and, if necessary, the alien's removal from the country is effected promptly.

1998 Base	27	27	3,244
1998 Estimate	27	27	3,244
Increase/Decrease

BASE PROGRAM DESCRIPTION:

- This program provides strategic and tactical intelligence support to INS offices enforcing the provisions of the Immigration and Nationality Act, and assists other Federal agencies in addressing national security issues. The INS' document laboratory is a critical component of the program. Intelligence support contributes to efforts aimed at preventing the entry of illegal aliens, terrorists and narcotics traffickers, and detecting fraudulent documents, alien smuggling, false claims to citizenship and other fraud.
- The INS will pursue a proactive international enforcement strategy in identifying, investigating, deterring, disrupting and reducing illegal activities at their source, and at key overseas transit locations used by smugglers and mala fide aliens bound for the United States.

1998 Base	30	32	2,969
1998 Estimate	30	32	2,969
Increase/Decrease

BASE PROGRAM DESCRIPTION:

- The function of the Training program is to provide the staff and the resources necessary to maintain an employee development program that meets the diverse training needs of this agency's workforce. Training requirements are identified annually and are revised, as needed, due to new regulations, legislation, or organization needs.
- These resources are used to implement a strategic plan for the long-range career development of our journeyman-level employees through the use of emerging technology keyed to a distributed learning environment.
- New training technology affords the INS an opportunity to provide continuous training for all INS employees at or near their duty station in order to reduce travel costs. Distributed learning methodology will be utilized to reduce the INS' dependency on residential-based training. While certain requirements such as basic training, firearms and driver training, and other courses involving group interaction and practical exercises may justify a group/residential learning environment, many learning objectives can be addressed by distributed learning packages utilizing video cassettes, workbooks, and computer-based instruction and, in certain instances, video conferences. This training can be learner-based, self-paced, ongoing, and reusable. Distributed learning technology allows for disseminating information, increasing certain skills, and changing attitudes.

1998 Base	31	29	36,227
1998 Estimate	32	30	42,251
Increase/Decrease	1	1	6,024

BASE PROGRAM DESCRIPTION:

- The Data and Communications Program provides direct support for operational programs as well as for administrative support functions of the Service. There are six major technology programs included under the Data and Communications Program plus the functions collectively known as Information Resources Management (IRM) Operations. Of the six program areas, each of

which consist of one or more projects in addition to the normal operations and maintenance required for existing systems and technologies, there are three that apply to the Immigration User Fee Account. They are:

Inspections Systems - The Inspections System Program supports efforts to control admissions at ports-of-entry and enhance the INS Inspection function. Three major automation efforts included under this program are the Interagency Border Inspection System (IBIS), the INS Passenger Accelerated Services System (INSPASS), and the Dedicated Commuter Lane (DCL).

IBIS, a system operated jointly with the U.S. Customs Service and Departments of State and Agriculture, is used at ports-of-entry to facilitate inspection and to identify criminals. IBIS is currently installed at major air and land border ports-of-entry. INSPASS is an automated inspection system for low-risk, frequent travelers using automated inspection kiosks. This system is currently installed at several of the Nation's major international airports. DCL allows border crossers already inspected by INS to use automated verification instead of manual inspection. This program will develop and deploy machine readable travel documents, which will allow for positive identification of air travelers destined for the United States.

A combination of technology and advanced production techniques will produce entry documents that are fraud resistant and easy to use. Profile scanning and a sophisticated worldwide law enforcement network will quickly and accurately identify persons of interest. Smart card technology, with positive identification features, will facilitate the quick and accurate inspection of low-risk, frequent land travelers. Technology will allow for improved service to the public while increasing the number of inspection hours devoted to high-risk activities.

In FY 1998, INS will provide services to operate and maintain the Inspections information technology systems developed and employed in FYs 1995 through 1997.

Biometric Identification Systems - The INS is developing a single fingerprint-based identification system that will enable it to rapidly and accurately identify persons of interest. IDENT is the current INS fingerprint-based identification subsystem that is used by INS law enforcement and benefit systems to assist in the positive identification of persons who are arrested well as those who apply for benefits, including the identification of travelers referred to secondary inspection processing and for automation inspection.

Enforcement System - In FY 1998, INS will continue with the deployment of ENFORCE Phase II at designated INS sites and the continued implementation of the EVRP. The INS will also continue providing services to support and maintain the applications systems that support the Enforcement Systems Program (i.e., ENFORCE and ICAD).

BASE PROGRAM DESCRIPTION:

- INS attorneys represent the Service before Immigration Judges, the Board of Immigration Appeals, the Merit Systems Protection Board, the Equal Employment Opportunity Commission, and boards of contract appeals. The program provides litigation support in agency litigation being conducted in U.S. District Courts, U.S. Courts of Appeals, and the U.S. Supreme Court. Attorneys provide advice to the Headquarters staff and field officials on legal matters arising at all levels of agency operations associated with programs supported by the Immigration User Fee account.

BASE PROGRAM DESCRIPTION:

The Management and Administration program functions include:

- providing management direction and support for the implementation and operation of regional and field activities and functions to those managers and supervisors who are responsible for and exercise authority over multiple programs;
- executing the provisions of the Immigration and Nationality Act and related policies through the development and implementation of immigration programs and the management of resources; and
- providing for the development, implementation, direction, operation and evaluation of administrative support systems and services that meet internal operational and managerial needs and externally mandated requirements. This includes duties related to providing executive direction and control of the INS; furnishing accurate and prompt responses to congressional and public inquiries; administering and maintaining effective budgeting and financial management systems; performing audits; conducting internal investigations; providing informational responses to frequent inquiries of GAO, OIG, OMB and Departmental offices; and developing and evaluating policies and systems to improve the effectiveness of INS programs. The major administrative functions within the program include: personnel; budget; accounting; equal employment opportunity; procurement; property management; fleet management; security and health; and other miscellaneous general services that support all programs funded by the Immigration User Fee account.

Total:	294	147	\$28,145

Proposed Actions

This enhancement will augment INS' current efforts to regulate entry to the United States at air and sea Ports-of-Entry (POE). In order to fulfill the Agency's commitment to the facilitation of entry for U.S. citizens and other legal visitors, INS requests resources that will aid in the streamlining of the inspections process, while expanding technologies that identify inadmissible entrants. The Inspections program will also utilize new inspector positions at airports to combat terrorism and detect passengers attempting to enter the United States illegally. This request anticipates the removal of the fee exemption on certain cruise line passengers. Requisite staffing, equipment, and automation to improve facilitation at sea POEs are included in the request.

	Positions	Workyears	Amount
Inspections	293	146	\$22,121

Improve facilitation at air and sea POEs (277 positions, 138 workyears, \$17,699,000) --

Based on historical trends and passenger data collected over the past five years, the air transport industry estimates that air traffic will increase at the current rate of 6.5 percent for FY 1998. This traffic increase, coupled with the additional growth occurring because of the implementation of the Open Skies agreement and the development of the bi-national initiatives associated with the United States - Canada Accord on Our Shared Borders, necessitates a significant increase in airport staffing. This increase of 265 inspectors and 12 immigration assistants will enable INS to maintain the congressionally-mandated requirement that all flights be inspected within 45-minutes of arrival. Considering that many air and sea POEs are combined operations, seaport inspections will also improve as INS receives new positions. In recent years, the cruise lines have begun to utilize larger ships and supercruisers. With additional positions, INS will be better able to facilitate the inspections process for these cruise line passengers.

These resources will also support INS' commitment to combat terrorism and alien smuggling by detecting dangerous mala fide entrants before they enter the United States. Of the 265 inspector positions requested, 30 inspectors will concentrate their efforts on interdicting alien smugglers, gathering intelligence, detecting fraudulent document users and vendors, conducting pre-primary roving and gate checks, and spot checking the immigration status of people departing the United States. With the advent of improved photocopyers and advanced computer systems, the Inspections program requires new positions to employ new techniques to identify, apprehend, and prosecute persons engaged in alien smuggling and document fraud at POEs. With these added personnel resources, INS expects detection of fraud and mala fide aliens to rise between 10 and 15 percent in the first year.

Provide staffing for new POEs in FY 1998 (12 positions, 6 workyears, \$1,715,000) --

In FY 1998, INS expects three new air POEs to become fully operational in Medford, OR; Palm Springs, CA; and Halifax, Nova Scotia. Due to the locations of these sites, INS cannot send inspectors from larger POEs that handle international flights to these new airports. Analysis of current travel industry statistics indicates that each airport requires the following number of positions: Medford - 2, Palm Springs - 2, and Halifax - 8. The request includes a total of \$153,000 for new computers, furniture, and cabling costs to support these new POEs.

Deploy new technology for enhanced detection at air and sea POEs (\$200,000) --

The escalating focus on alien smuggling and the apprehension of criminal aliens, coupled with increased sophistication in counterfeit and altered documents, has changed the procedures and equipment used to conduct inspections. As a result, most POEs are now equipped with highly technical forensic equipment such as carbon dioxide detectors used to identify and deter criminal activities. As smuggling and the techniques used to detect it become more sophisticated, initiatives have been developed to allow officers to become more adept at identifying fraud, resulting in an increase in the detection of criminal violators. The Inspections program requires 100 carbon dioxide detectors to be distributed at all sea POEs for the detection of stowaways in ship compartments. The detectors allow an inspector to measure the level of carbon dioxide within a compartment. As a result, the inspector knows immediately where alien stowaways are hiding. This equipment will enable inspectors to perform inspections quickly and more accurately identify illegal aliens aboard vessels.

Expand departure management automation initiatives (4 positions, 2 workyears, \$2,507,000) --

As a result of the need to monitor the control of aliens departing the United States, INS is proposing the continuation of a pilot program for management of departure at airport locations. INS' commitment towards departure management relies heavily upon the improvement of the timeliness and accuracy of arrival and departure data for nonimmigrant aliens through the use of automation. The number of overstay, coupled with the lack of ability for the existing arrival-departure tracking system to provide accurate statistics regarding overstay, has given rise to significant concern. This issue has also surfaced in connection with deliberations on continuation and expansion of the Visa Waiver Pilot Program, as well as in reports concerning unlawful migration to the United States. INS requests 4 inspectors and \$2,507,000 for improvements to airport automated systems begun with resources from FY 1996, namely the pilot program to automate Form I-94 for arrivals and departures and the DataShare initiative with Department of State. As INS strives to match arrival and departure data more accurately, the agency will be better able to identify annual overstay rates for nonimmigrant aliens.

The deployment of automated I-94 equipment to 300 booths will require \$1,500,000. These booths will be deployed to the 10 largest air POEs (New York, Newark, Seattle, San Francisco, Los Angeles, Honolulu, Chicago, Philadelphia, Miami and Boston). This program will provide more accurate information on overstay, allow inspectors to better identify status violators, streamline the inspections process, and will yield up-to-the-minute arrival data. Automated I-94s will also facilitate departure management through the improved collection and processing of the automated I-94 exit receipt at the actual departure point.

The expansion of the DataShare project, which streamlines the processing of immigrant and nonimmigrant visas, to the 10 largest air POEs will require \$750,000. Customer service is improved through the establishment of a central inquiry system, as well as a means of producing cards faster through the use of electronic biometric data. Enforcement is also improved due to the increased availability of data to inspectors to validate legal entry and detect fraudulent visas.

Data & Communications	Positions	Workyears	Amount
	1	1	\$6,024

The resources requested in the Data and Communications program will provide the following:

Increase the number of automated entry lanes (\$2,100,000) --

This initiative will expand the use of INSPASS to 10 POEs for FY 1998. The increase in the use of automated entry lanes not only facilitates legal entry but also aids enforcement by sorting traffic into high- and low-risk groups, thus making both facilitation and enforcement efforts more efficient, secure, and cost-effective. The use of INSPASS enables all lanes to move more quickly and steadily, while allowing for increased scrutiny of high-risk applicants for admission. Frequent low-risk commuter traffic will receive an expedited inspection, allowing existing staff to devote a greater percentage of primary lane hours to both processing of general traffic and enforcement priorities. The travel documents used in this system can also be used in the Automated Permit Ports (APP) and Dedicated Commuter Lanes (DCL). This customer service initiative has been well-received by the traveling public.

Improve efficiency at POEs through automation (1 position, 1 workyear, \$1,324,000) --

Numerous automation initiatives are requested in FY 1998 to support the facilitation of legal entry, pursue innovative technological approaches to streamline the inspections process, and deter unlawful migration. Resources are requested for the following initiatives:

The installation of IBIS imaging workstations at 5 sites (\$10,000) will allow INS to attach photographs and other images to lookout records, as well as provide the capability for rapid transmission of these records and images to other agencies and locations.

The deployment of PALS to remote air and sea locations (\$500,000). PALS is a portable notebook with software which allows the inspector to query the INS lookout database contained on CD-ROM. In FY 1996, 200 PALS systems were deployed to remote POEs. In FY 1997, another 200 systems will be deployed. In FY 1998, the deployment of 100 PALS notebooks to remote air and sea POEs will be sufficient to eliminate the printing and distribution of the Service Lookout Book, which is a Department of Justice audit requirement. PALS equipment will allow inspectors at remote locations to quickly identify persons, detect fraud, share intelligence with Department of State on possible terrorists or other potential targets, and exclude violators of immigration law.

11 ADP position and 11 contract staff are required to oversee the IBIS program and the deployment of new technology at POEs (\$724,000). In order to provide the detailed computer support required to keep new systems in operation, 11 technical support positions will be deployed to the field. In the past, inspectors have had to provide ADP support for POEs as a collateral duty. With the increased sophistication of systems being deployed and the increased dependency on systems to perform the inspections mission, a dedicated ADP professional is essential to POE operations. One INS position will be used to oversee the IBIS program. A commitment of \$724,000 will be required.

Biometric ID Systems (IDENT) (\$1,500,000) --

IDENT is a fingerprint identification initiative that will assist INS in the positive identification of repeat illegal entrants and identify aliens wanted by other law enforcement agencies. These resources will allow for the expansion of the IDENT system to 12 air ports-of-entry for use by inspectors, as well as in sites where other user fee-funded personnel are stationed. The air POEs will include Chicago, Philadelphia, JFK (New York City), Los Angeles, Honolulu, Washington-Dulles, and six others. Inspectors will be able to perform expedited secondary inspections through fingerprint-based identity verification and lookout checks. The IDENT system will also facilitate case processing and arrest record preparation.

Enforcement Case Tracking and Management System (ENFORCE) (\$1,100,000) --

ENFORCE is the INS' case and report tracking system. This system streamlines the processes associated with the identification, apprehension, and deportation of illegal aliens. ENFORCE automates enforcement report writing to allow officers and agents more time to pursue operational requirements rather than perform administrative functions. In addition, ENFORCE provides intelligence analysis and statistical management capabilities. The Inspections program can utilize ENFORCE in secondary, in order to more quickly process exclusion cases. The following air POEs will receive ENFORCE in FY 1998: Chicago; Philadelphia; Denver; John F. Kennedy in New York City; Los Angeles; Honolulu; Washington-Dulles; and six others to be determined.

Proposed Actions

These resources will be used to build and maintain its infrastructure base and provide sufficient support to maximize the efficiency and effectiveness of the workforce. The Statistical Analysis Program includes data on immigrants, refugees, temporary visitors (nonimmigrant), naturalization, and productivity and management statistics relating to INS mission programs. Additional resources are required in order for INS to submit mandated reports on schedule and to develop new regular and special reports for internal and external customers to meet the need for data and analysis on immigration. With present staffing levels, INS has not been able to meet current requirements.

Statistical Analysis Program (4 positions, 2 workyears and \$2,000,000) --

An increase of 4 positions, 2 workyears and \$2,000,000 is being requested for the Statistical Analysis Program. The resources will allow INS to keep pace with an increasing workload and expand the quantity and quality of professional analytical services provided to other program areas within INS and to external audiences. The Statistical Analysis Program works closely with data on immigrants and non-immigrants, as well as other travelers who travel through U.S. ports-of-entry. In addition, this program also compiles information concerning productivity and resource management statistics relating to INS mission programs. The increased demand for information on all these topics for management purposes and especially from Congress, the General Accounting Office (GAO), and the general public has placed greater emphasis on INS statistical activities, including improvements in the timeliness, accuracy, usefulness, and frequency of reporting of the captured data. Without this increase, INS will be unable to meet its reporting mandates as stipulated in the Immigration Reform and Control Act of 1986 and the Immigration Act of 1990, and will be unable to successfully meet the demand for performance measurement data required by the Government Performance and Results Act (GPRA) and the reinventing government initiative. A May 1996 Inspector General audit of the fee accounts recommended that the Statistical Analysis Program provide essential information and statistical models to aid in projecting future revenue in the User Fee account. In addition, the request will enable the Office of Policy and Planning to properly carry out planning activities, data analyses responsibilities, and evaluations of the operational requirements for User Fee funded programs.

Justification of Adjustments to Base
(Dollars in thousands)**

	Pos.	Work- Years	Amount
Adjustments to Base:			
Increases:			
1998 pay raise			\$3,775
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$3,775,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$2,791,000 for pay and \$978,000 for benefits = \$3,775,000).			
Annualization of 1997 pay raise			1,270
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent, plus appropriate personnel benefits (\$941,000 for pay and \$329,000 for benefits)			
Within-grade increases			1,914
This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$1,418,000 for pay and \$496,000 for benefits.			

100 1,017

Annualization of 198 additional positions approved in 1997
 This provides for the annualization of 198 additional positions provided in 1997 Congressional Action for the
 Inspections program. This request includes nonrecurring costs for one-time items associated with the increased
 positions as well as nonrecurring costs related to the expansion of INSPASS to six major airports.

Total costs subject to annualization

Foreign allowances

Allowances for Government employees in foreign areas are determined by the Department of State (DOS).

The requested increase of \$7,000 provides a 1.7 percent increase over the obligations of \$411,765, which are
 committed for 1996.

Accident compensation	65	
This increase reflects the billing provided by the Department of Labor for the actual costs in 1996 of employees' accident compensation, which will be billed in 1998. The 1998 increased cost will be \$65,000.		
Medical Hospital Service costs	87	
The Department of Health and Human Services is projecting an increase in health care costs. The Department is applying a factor of 5.3 percent against medical services. An increase of \$87,000 will be required for 1998.		
General pricing level adjustments	3,591	
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation: costs and utilities.		
ICASS Increase for Staffing	26	
Under the ICASS an annual charge will be made by the DOS for administrative support based on the number of overseas staff for each Federal agency. Because the law enforcement operations of the Department of Justice have increasing international demands, additional overseas staffing since 1995 will result in increased ICASS costs in 1998. Based on the additional overseas staffing, DOS has provided an increased cost estimate of \$26,000 for this account in 1998.		
Restoration of FY 1996 FTE Reduction	350	
In FY 1996, this account absorbed a reduction of 238 FTE over the FY 1996-1997 time frame. An analysis of the work years required by this account indicates a total of 350 FTE are required to be added in FY 1998.		
Total adjustments to base	450	11,752

**Immigration and Naturalization Service
Immigration Enforcement Account
Summary Statement
Fiscal Year 1998**

The Immigration and Naturalization Service (INS) requests a total of \$3,800,000 for the Immigration Enforcement Account for FY 1998. This request represents a decrease of \$7,900,000 below the FY 1997 level of \$11,700,000. The decreased level of fine receipts available in the Immigration Enforcement Account resulted from regulations on airline fines mitigation. The INS negotiated regulations based on the Immigration and Nationality Technical Corrections Act of 1994 (P.L. 103-416), which amended the Immigration and Nationality Act (INA) Section 273(e) to allow the Attorney General in prescribed cases to reduce, refund, or waive fines. The INS established an Acceptable Performance Level (APL) based on statistical analysis of the performance of all carriers, as a means to determine eligibility for a reduction of fines. For FY 1998, it is projected that approximately 50% of the 273 fines cases will be canceled or appealed to the Board of Immigration Appeal. Of the remaining fines cases, approximately 40% of the 273 cases will be eligible for either 25% or 50% mitigation. In addition, INS anticipates that the FY 1997 levels of fines will not meet the approved level of \$11,700,000. Because the fines regulation is not anticipated to take into effect until mid-year FY 1997, neither the airline fine backing cases nor the new fines cases were billed or collected. In FY 1997, INS anticipates collecting approximately \$6,200,000 in fines. There are no enhancement requests for the Immigration Enforcement Account for FY 1998.

The Immigration Enforcement Account was authorized in Section 382 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996. The Act amends Section 280 of the Immigration and Nationality Act of 1952, as amended, by establishing in the General Fund of Treasury a separate account known as the Immigration Enforcement Account. Prior to FY 1997, two-thirds of the fine receipts for INA Sections 271 and 273 were collected and deposited in the User Fee Account, but were unavailable to be spent on User Fee activities as outlined in INA Section 286 (b)(2)(A). These fines receipts plus additional monies relating to fines and penalties as outlined in Section 382 (a) of the 1996 shall be deposited into the account to remain available to INS until expended. Expenses may be incurred by the Attorney General for the identification, investigation, apprehension, detention, and removal of criminal aliens; the maintenance and updating of a system to identify and track criminal aliens, deportable aliens, inadmissible aliens, and aliens illegally entering the United States; and for the repair, maintenance, or construction on the United States border, in areas experiencing high levels of apprehensions of illegal aliens, of structures to deter illegal entry into the United States.

In FY 1998, INS plans to spend these fines receipts for the Data and Communications program. This account will allow INS to expand its remote video surveillance (RVS) systems for the Border Patrol. The current low light level television (LLLTV) systems are reaching the end of their life cycle, and are in desperate need of replacement and augmentation. These new thermal infrared imagers mounted with daylight cameras improve the Border Patrol's 24-hour surveillance capability along the Southwest border. The integration of RVS

with the new generation of "smart" sensors through the ICAD command and control system, will allow for the development of a true "electronic fence" between the United States and Mexico. In addition, INS may use these resources to support the general operations of the Investigations program in FY 1998.

BASE PROGRAM DESCRIPTION:

- The Immigration and Naturalization Service (INS) requests a total of \$3,800,000 for the Immigration Enforcement Account for FY 1998. This request represents a decrease of \$7,900,000 below the FY 1997 level of \$11,700,000.
- The Immigration Enforcement Account was authorized in Section 382 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996. The Act amends Section 280 of the Immigration and Nationality Act (INA) of 1952, as amended, by establishing in the General Fund of Treasury a separate account known as the Immigration Enforcement Account.
- Prior to enactment of the 1996 Act, two-thirds of the fine receipts for INA Sections 271 and 273 were collected and deposited into the User Fee Account as reflected as recently as the President's FY 1997 budget request. However, these funds were unavailable to be spent on User Fee activities as outlined in INA Section 286 (b)(2)(A). According to the 1996 Act, these fine receipts, plus additional monies relating to fines and penalties as outlined in Section 382 (a) of the 1996 Act, shall be deposited into the account to remain available to INS until expended.

- This account may be used for the identification, investigation, apprehension, detention, and removal of criminal aliens; the maintenance and updating of a system to identify and track criminal aliens, deportable aliens, inadmissible aliens, and aliens illegally entering the United States; and for the repair, maintenance, or construction on the United States border, of structures to deter illegal entry into the United States, in areas experiencing high levels of apprehensions of illegal aliens.
- The \$7,900,000 decrease in available fine receipts for FY 1998 resulted from regulations on airline fines mitigation. The INS negotiated regulations based on the Immigration and Nationality Technical Corrections Act of 1994 (P.L. 103-416), which amended the INA Section 273 (e) to allow the Attorney General in prescribed cases to reduce, refund, or waive fines. The INS established an Acceptable Performance Level (APL) based on statistical analysis of the performance of all carriers, as a means to determine eligibility for a reduction of fines. For FY 1998, it is projected that approximately 40 percent of the 273 fines cases, which are reviewed, excluding all cases anticipated to be canceled or appealed to the Board of Immigration Appeal, will be eligible for either 25 percent or 50 percent mitigation.
- In FY 1998, INS plans to spend these fine receipts for the Data and Communications program. This funding will allow INS to expand its remote video surveillance (RVS) systems for the Border Patrol. The current low light level television (LLLTV) systems are reaching the end of their life cycle, and are in desperate need of replacement and augmentation. These new thermal infrared imagers mounted with daylight cameras improve the Border Patrol's 24-hour surveillance capability along the Southwest border. The integration of RVS with the new generation of "smart" sensors through the ICAD command and control system, will allow for the development of a true "electronic fence" between the United States and Mexico.
- In addition in FY 1998, INS may use these fine receipts for the Investigations program. This would support a pilot for a computer data base subscription of public records to serve as a profiler service. The data base would contain a compilation of subscriber lists from various entities, which would allow INS to track and locate individuals nationwide. As a result, this service will aid in the investigation and identification of aliens engaged in criminal or terrorist activities. The additional resources would support the general operations of the Investigations program.

Immigration and Naturalization Service
 Land Border Inspection Fee Account
 Summary Statement
 Fiscal Year 1998

The Immigration and Naturalization Service (INS) is requesting 79 positions, 91 workyears, and \$8,888,000 in the Land Border Inspection Fee account. This request represents a decrease of 7 workyears and \$2,166,000 from the FY 1997 enacted level of 79 positions, 98 workyears, and \$11,054,000. The overall decrease is the result of the annualization and non-recurring costs associated with 12 new positions approved in FY 1997. No program increases are requested for FY 1998.

The Land Border Inspection Fee account was authorized in Section 210 of the Department of Justice Appropriations Act of 1991 (P.L. 101-515). The Act authorized the Attorney General to establish, by regulation, pilot projects under which fees may be charged at one or more land border ports-of-entry to study the feasibility of charging fees to provide inspection services at land border ports-of-entry. The regulations stated that the projects may include the establishment of commuter lanes to be made available to pre-qualified United States citizens and aliens. This provision, as amended, authorizes projects on the Northern border and the entire Southwest border, but prohibits the implementation of a universal border crossing fee. Based on the Appropriations Act of 1997, the authorization of this account expires on September 30, 1999; however, the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 extended authorization of this account to September 30, 2000.

INS is currently operating sites in Blaine and Point Roberts, Washington, and in Detroit, Michigan (Detroit Tunnel and Ambassador Bridge); and Otay Mesa, California. The Otay Mesa site was implemented as a National Performance Review pilot project with the U.S. Customs Service, Drug Enforcement Administration, Federal Bureau of Investigation, and the U.S. Attorney's Office.

In FY 1997, Congress approved five new sites in Nogales, AZ; San Luis, AZ; El Paso, TX; Laredo, TX; and Hidalgo, TX.

Program Performance Information
Land Border Inspection Fee
(Dollars in thousands)**

The Land Border Inspection Fee account was authorized in Section 210 of the Department of Justice Appropriation Act of 1991 (P.L. 101-515). The Act authorizes the Attorney General to establish, by regulation, pilot projects under which fees may be charged at one or more land border ports-of-entry to study the feasibility of charging fees to provide inspection services at land border ports-of-entry. The regulations stated that the projects may include the establishment of commuter lanes to be made available to pre-qualified United States citizens and aliens.

The INS is currently operating sites in Blaine and Point Roberts, Washington, and in Detroit, Michigan (Detroit Tunnel and the Ambassador Bridge). In cooperation with U.S. Customs Service and the Department of Agriculture, INS implemented a pilot National Performance Review (NPR) site at Otay Mesa, California on November 1, 1995. Land Border Inspection Fee funding has been used for such items as personnel, overtime, equipment, and minor facility modifications.

The original authorization for the Land Border Inspection Fee project terminated on September 30, 1993. The Department of Justice Appropriations Act of 1994 (P.L. 103-121) extended the Land Border Inspection Fee project to September 30, 1996, but only for projects on the northern border of the United States. In conjunction with action taken in the FY 1995 budget request, Congress changed this prohibition to allow the Service to implement projects on the California/Mexico border as well. The FY 1997 Appropriations Act extends the sunset date for the Land Border Inspection fee until September 30, 1999, allowing implementation of the projects across the Southern border, but prohibited a universal border crossing fee. At the same time, the 1996 Immigration Act set a sunset date of September 30, 2000, and limited the account to only six fee-generating dedicated commuter lane projects nationwide.

Considerable benefit to the traveling public in the states of Arizona, New Mexico, and Texas can be derived through the use of dedicated commuter lanes, as well as other means of expediting inspection traffic. The Congress removed the remaining prohibition regarding projects on the Southwest border in the FY 1997 Appropriations Act, but specifically prohibited the implementation of a universal border crossing fee.

BASE PROGRAM DESCRIPTION:

- The Land Border Inspection Fee program is a pilot project under which the Attorney General is authorized to charge a fee at one or more land border POEs. The program is designed to study the feasibility of charging fees for inspection services at land border POEs. The projects may include the establishment of commuter lanes to be made available to pre-qualified United States citizens and aliens.
- This program enables low-risk, frequent border crossers who apply and are approved for participation in the program to transit the border through a specific vehicle traffic lane with an abbreviated inspection process. The INS currently operates commuter lanes in Blaine and Port Roberts, WA; Detroit MI; and Otay Mesa, CA. In FY 1997, five new sites were approved; they are: Nogales, AZ; San Luis, AZ; El Paso, TX; Laredo, TX; and Hidalgo, TX. The INS anticipates that the lane in El Paso will be operational by the end of FY 1997.
- Another similar program, the Automated Permit Port (APP) program, will allow the entry of pre-screened local border residents through selected Northern border POEs by means of an automated access system during periods when the port is closed to general traffic. The program would be utilized at low-volume, limited-hour, low-risk locations on the Northern border, using different forms of automated technology (such as voice verification systems, video inspections systems, card access systems, hand geometry, or other forms of biometrics) depending on specific location requirements. The use of automation will extend POE hours of operation for selected border crossers. The INS is progressing in instituting the first APP at Scobey, MT.

BASE PROGRAM DESCRIPTION:

- The Data and Communications Program provides direct support for operational programs, as well as administrative support under the Inspections Systems program. The Data and Communications Program primarily funds the Secure Electronic Network for Traveler's Rapid Inspection (SENTRI) system. The Data and Communications Program funds allow for the expansion and maintenance of the transponder and biometric technology, as well as other means for automated inspection.

BASE PROGRAM DESCRIPTION:

- In order to establish a Dedicated Commuter Lane (DCL) at land border ports, INS must make modifications to the roads, primary booths, and secondary areas already in existence. For each DCL site, construction costs include enlargement of the secondary area for an enrollment center; expansion of the queuing area and lane to accommodate automation; security enhancements such as bollards, fire deflators, and jersey barriers; and the necessary signs to direct vehicles to the appropriate lanes.

Immigration and Naturalization Service
Land Border Inspection Fee
Justification of Adjustments to Base
(Dollars in thousands)

Adjustments to Base.	Pos.	Work- years	Amount
<u>Increases.</u>			
1998 pay raise. This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$106,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$79,000 for pay and \$27,000 for benefits = \$106,000).			\$106
<u>Annualization of 1997 pay raise</u> This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent, plus appropriate personnel benefits (\$16,000 for pay and \$5,000 for benefits)		21	
<u>Within-grade increases</u> This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$44,000 for pay and \$10,000 for benefits			54
<u>Annualization of 12 additional positions approved in 1997</u> This provides for the annualization of 12 additional positions requested in 1997 Congressional action for the Inspections program as well as nonrecurring costs for one-time items associated with the increased positions as well as nonrecurring costs related to expansion of the DCLs		6	-2,413

Total costs subject to annualization	4,149	-2,413

66

General pricing level adjustments
 This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.6 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.

Reduction of FTE	-13	
In FY 1996, this account absorbed a reduction of 5 FTE over the FY 1996-1997 time frame. An analysis of the workyears required by this account indicates an additional 13 FTE are justified to be reduced in FY 1998

Immigration and Naturalization Service
Breached Bond/Detention Fund
Summary Statement
Fiscal Year 1998

The Immigration and Naturalization Service (INS) requests a total of 48 positions, 40 workyears, and \$104,471,000 for the Breached Bond/Detention Fund for FY 1998. This request represents an increase of 1 workyear and \$23,558,000 over the FY 1997 level of 48 positions, 39 workyears, and \$80,913,000.

The Breached Bond/Detention Fund was authorized in Section 112 of the Department of Justice Appropriations Act of 1993 (P.L. 102-395). The Act amends Section 286 of the Immigration and Nationality Act of 1952, as amended, by establishing in the General Fund of the Treasury a separate account known as the Breached Bond/Detention Fund. Breached cash and surety bonds totaling in excess of \$8,000,000, posted under the Immigration and Nationality Act of 1952, as amended, which are recovered by the Department of Justice, are deposited as offsetting receipts into the Fund. Amounts deposited into the Fund remain available to the INS, until expended, for expenses incurred in the collection of breached bonds and for expenses associated with the detention of illegal aliens.

The INS uses immigration delivery and exclusion bonds as a means of ensuring that illegal aliens appear at deportation and exclusion hearings. Aliens in custody of the INS may be released on their own recognizance or through the posting of delivery bonds, which are either cash or surety bonds (and a limited number of Treasury bonds or notes). These bonds become contracts between the INS and persons acting on the behalf of aliens (obligors) who promise their appearances in court. Under a cash bond, an obligor deposits the entire amount in cash with the INS. If the alien fails to appear as scheduled, the bond is breached and the Government retains the amount of the posted bond. Under a surety bond, the surety (insurance) company guarantees the amount of the bond and, if the alien fails to appear as required, the surety is liable to INS for the breached bond amount.

In FY 1998, resources from the Breached Bond/Detention Fund will be used to: support the detention of criminal and illegal aliens; continue bond management and collection activities; support the use of litigation to obtain compliance from surety companies found to be delinquent in meeting their obligations to the INS; and, continue the operation of automated systems to support these activities.

In September 1996, the Illegal Immigration Reform and Immigrant Responsibility Act (Section 286 (s), P.L. 104-208) authorized a new detention account titled the Immigration Detention Account. Receipts from this account will be derived from the penalty portion of receipts collected under the provisions of section 245(i) of the INA. Specifically, these resources may be used for expenses incurred for the detention of aliens under Sections 236 (c), mandatory detention of criminal and terrorist aliens, and 241 (a), mandatory detention of aliens with final orders of deportation. The amount projected to be available for this purpose in FY 1998 is \$97,700,000, an increase of

with final orders of deportation. The amount projected to be available for this purpose in FY 1998 is \$97,700,000, an increase of \$23,400,000 over the levels expected to be deposited in the fund in FY 1997. In order to simplify the INS resource structure, INS proposes to merge the newly created Immigration Detention Account with the Breached Bond/Detention Fund. This is requested in Section 111 (General Provisions, Department of Justice), which amends the language authorizing the Immigration Detention Account to require that the receipts made available under section 245(i) of the INA, noted above, be deposited into the Breached Bond/Detention Fund. These receipts would support activities related to detention operations, including additional State and local detention capacity.

Immigration and Naturalization Service
Breached Bond/Detention Fund
Program Performance Information
(Dollars in thousands)

The Breached Bond/Detention Fund was authorized in Section 112 of the Department of Justice Appropriations Act of 1993 (P.L. 102-395). The Act amends Section 286 of the Immigration and Nationality Act of 1952, as amended, by establishing in the General Fund of the Treasury a separate account known as the Breached Bond/Detention Fund. Breached cash and surety bonds totaling in excess of \$8,000,000, posted under the Immigration and Nationality Act of 1952, as amended, which are recovered by the Department of Justice, are deposited as offsetting receipts into the Fund. Amounts deposited into the Fund remain available to the INS, until expended, for expenses incurred in the collection of breached bonds and for expenses associated with the detention of illegal aliens.

The INS uses immigration delivery and exclusion bonds as a means of ensuring that illegal aliens appear at deportation and exclusion hearings. Aliens in custody of the INS may be released on their own recognizance or through the posting of delivery bonds, which are either cash or surety bonds (and a limited number of Treasury bonds or notes). These bonds become contracts between the INS and persons acting on the behalf of aliens (obligors) who promise their appearances in court. Under a cash bond, an obligor deposits the entire amount in cash with the INS. If the alien fails to appear as scheduled, the bond is breached and the Government retains the amount of the posted bond. Under a surety bond, the surety (insurance) company guarantees the amount of the bond and, if the alien fails to appear as required, the surety is liable to INS for the breached bond amount.

In FY 1998, resources from the Breached Bond/Detention Fund will be used to: support the detention of criminal and illegal aliens; continue bond management and collection activities; support the use of litigation to obtain compliance from surety companies found to be delinquent in meeting their obligations to the INS; and, continue the operation of automated systems to support these activities. The authorization for the INS to retain these services has provided the agency with the means to effect improvements in bond processing and debt management.

In September 1996, the Illegal Immigration Reform and Immigrant Responsibility Act (Section 286 (g), P.L. 104-208) authorized a new detention account titled the Immigration Detention Account. Receipts from this account will be derived from the penalty portion of receipts collected under the provisions of section 245(i) of the INA. Specifically, these resources may be used for expenses incurred for the detention of aliens under Sections 236 (c), mandatory detention of criminal and terrorist aliens, and 241 (a), mandatory detention of aliens with final orders of deportation. The amount projected to be available for this purpose in FY 1998 is \$97,700,000. In order to simplify the INS resource structure, INS proposes to merge the newly created Immigration Detention Account with the

Breached Bond Detention Fund. This is requested in Section 111 (General Provisions, Department of Justice) which amends the language authorizing the Immigration Detention Account to require that the receipts made available under section 245(i) of the INA, noted above, be deposited into the Breached Bond/Detention Fund. These receipts would support activities related to detention operations, including additional State and local detention capacity.

BASE PROGRAM DESCRIPTION:

- Detention and Deportation program personnel, located in INS field offices, process all required documents needed to issue cash or surety bonds to permit the release of aliens in deportation or exclusion proceedings. These personnel are also responsible for reviewing aliens' files and taking appropriate actions to cancel bonds when their provisions have been satisfied, and to breach bonds in the event that the aliens do not appear as required.
- The Detention and Deportation program detains aliens who are subject to deportation or exclusion proceedings who are likely to abscond or whose freedom at large would clearly represent a danger to public safety and security until they are ready for removal. Performance of this function includes the transportation of aliens to INS and non-INS (contract) facilities, secure detention, medical care and other necessary support services.
- The Immigration Detention Account (IDA) was authorized in the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (P.L. 104-208), for the purpose of making available a portion of the receipts obtained from the adjustment of immigration status under the provisions of section 245(i) of the Immigration and Nationality Act (INA). These resources may be used for expenses incurred for the detention of aliens Sections 236(c) and 241(a) of the INA. In FY 1998, as noted above, the Administration is proposing that these receipts be deposited in the Breached Bond/ Detention Fund.
- In FY 1997, the INS estimates that up to \$74.3 million may be collected in the IDA. However, INS does not anticipate that these resources will become available for operational use until the last quarter of FY 1997. Following notification to the Appropriations Committees on the use of the resources, INS plans to position itself at the end of FY 1997 to increase its State and local bed spaces by up to 1,136 beds. It is anticipated that these beds will not become fully operational until FY 1998.

BASE PROGRAM DESCRIPTION:

- The function of the Management and Administration program is to direct implementation of INS-wide policy as it relates to collection of breached bonds and ensure its effective and uniform application; establish a system to track, report, and bill breached surety bonds posted by aliens; and continue improvements in the forfeiture and collection process to allow increased resources to be directed toward the detention of criminal and other illegal aliens.

Immigration and Naturalization Service
Breached Bond/Detention Fund
Justification of Adjustments to Base
(Dollars in thousands)

	Pos.	Work- years	Amount
--	------	----------------	--------

Adjustments to Base:

Increases:

Annualization of Immigration Detention Account	\$23,400
Receipts available for obligation in the Immigration Detention Account are estimated to be \$74,300,000 in FY 1997. In FY 1998, the amount estimated for the full year is \$97,700,000. Annualization of \$23,400,000 is required.			

1998 pay raise	18
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 1998 Budget Submissions, August 1, 1996. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$18,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$14,000 for pay and \$4,000 for benefits = \$18,000).			

Annualization of 1997 pay raise	6
This pay annualization represents first quarter amounts (October through December) of the anticipated 1997 pay increase of 3.0 percent, plus appropriate personnel benefits (\$4,000 for pay and \$2,000 for benefits).			

1820

Within-grade increases	18
This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$14,000 for pay and \$4,000 for benefits.		
Medical Hospital Service costs	4
The Department of Health and Human Services is projecting an increase in health care costs. The Department is applying a factor of 5.3 percent against medical services. An increase of \$4,000 will be required for 1998.		
General pricing level adjustments	112
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.8 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.		
Restoration of FY 1996 FTE Reduction	1	..
In FY 1996, this account absorbed a reduction of 9 FTE over the FY 1996-1997 time frame. An analysis of the workyears required by this account indicates a total of 1 FTE is required to be restored in FY 1998.		
Total adjustments to base	1	23,558

Immigration and Naturalization Service
Immigration Examinations Fee Account
Summary Statement
Fiscal Year 1998

The Immigration and Naturalization Service (INS) is requesting 5,139 positions, 5,579 work years, and \$646,916,000 in the Immigration Examinations Fee account. This request represents an increase of 71 positions, 646 work years, and \$22,131,090 from the FY 1997 funded level.

The Immigration Examinations Fee account was established in the Department of Justice Appropriations Act of 1989 (P.L. 100-459). Section 209 of the Act amends 8 U.S.C. 1356 by establishing a separate account into which the Attorney General may deposit adjudication fees collected under the regulations governing INS. All deposits to the account are paid out of this appropriation for expenses in providing immigration adjudication and naturalization services. The resources are to be made available for adjudication of applications and petitions for benefits under the Immigration and Nationality Act of 1952, as amended; asylum, refugee, parole and overseas activities; adjudication-related work performed in other INS and non-INS programs; and the necessary support for all of these activities.

1825

In action taken in FY 1995, the Congress amended Section 245(f) of the Immigration and Nationality Act of 1952, as amended, to allow certain categories of aliens to adjust their status in the United States upon payment of fees for this benefit. The provision has resulted in an increased workload, as well as an increase in resources available to INS for processing these and other applications for immigration benefits. This provision expires on September 30, 1997, but INS has proposed legislative language to extend this provision indefinitely.

The Illegal Immigration Reform and Immigrant Responsibility Act of 1996, Public Law 104-208, amends section 245(f) to allow INS to collect \$1,000 in addition to the regulatory filing fee required for the processing of an application for adjustment of status.

Over the past year, the Immigration and Naturalization Service conducted a fee study of immigration adjudication and naturalization fees in the Examinations Fee Account. The purpose of the just completed study was to develop a more consistent and reliable cost accounting methodology, and to produce a legally defensible Examinations Fee Account Fee Schedule. Work is now proceeding to

develop and refine a proposed rule. The target for publishing a proposed rule is February 1997, with implementation of a new fee schedule on October 1, 1997. Subsequent budget requests will incorporate new fee schedules.

Professionalism

A total of 11 positions, 5 workyears, and \$5,008,000 is requested under the Professionalism initiative to support the Statistical Analysis Program. The resources will allow INS to keep up with an increasing workload and expand the quantity and quality of professional analytical services provided to other program areas within INS and to external audiences. The increased demand for information for management purposes has placed greater emphasis on INS statistical activities, including improvements in the timeliness, accuracy, usefulness, and frequency of reporting of the captured data. The Statistical Analysis Program also must provide essential information and statistical models to the Office of Budget for projecting future revenue in the Immigration Examinations Fee account. In addition, the request will enable the Office of Policy and Planning to properly carry out planning activities, data analyses responsibilities, and evaluations of the operational requirements for Examinations Fee funded programs.

Improving Services and Benefits

A total of 60 positions, 30 workyears, and \$46,485,000 is requested under the Improving Services and Benefits initiative. Of this total, the Adjudications and Naturalization program requires 50 positions, 25 workyears, and \$6,497,000 for efforts to create a corps of representatives that would strengthen customer service, as well as maintain the level of operations established in FY 1997. For the International Affairs program \$1,800,000 is requested to increase support for the Humanitarian Affairs program. The Training program requests includes \$500,000 to develop a training module that will provide customer service training to all INS employees that have direct contact with customers. The Data and Communications program requests \$16,847,000 for projects related to the enhancement of the current records infrastructure and information network such as ENFORCE; Receipt Alien File Accountability and Control System (RAFACS), and IDENT; enhancement of the Central Index System (CIS); automation of the fingerprint collection and clearance process; increasing public access to INS information and forms via the Internet and the Ask Immigration system; and re-engineering of the CLAIMS naturalization case processing capabilities. For the Information and Records program 10 positions, 5 workyears, and \$19,841,000 are required to relocate files and transition to electronic A-Files; establish a single INS 1-800 telephone service for public inquiries; to improve delivery of forms from the two forms centers; expand the direct mail program to San Francisco and Newark; and maintain FY 1997 operations. An additional \$1,000,000 is also requested for the Construction and Engineering program to fund a contractor study of the office location and layout of INS offices to meet customer needs with respect to accessibility.

Congressional Appropriation Action on the 1997 Budget Request. The Congress directed the transfer of 388 positions, 261 workyears, and \$29,567,000 in resources associated with the Asylum program and \$26,922,000 for automation and infrastructure requirements from the VCRP to the Examinations Fee account.

Reprogrammings. The reprogramming of resources reflects the permanent effects of the May 23, 1996, the August 8, 1996, the August 18, 1996, the December 18, 1996, and the December 23, 1996 reprogramming notifications. In the narratives accompanying the notifications, it was stated that portions of the reprogrammings were of a permanent nature and would carry into 1997.

**Immigration and Naturalization Service
Immigration Examinations Fee
Program Performance Information
(Dollars in thousands)**

The Immigration Examinations Fee account was established in the Department of Justice Appropriations Act of 1989 (P.L. 100-459). Section 209 of the Act amends 8 U.S.C. 1356 by establishing a separate account into which the Attorney General may deposit adjudication fees collected under the regulations governing INS. All deposits to the account are paid out of this appropriation for expenses in providing immigration adjudication and naturalization services. The resources are to be made available for adjudication of applications and petitions for benefits under the Immigration and Nationality Act; asylum, refugee, and parole and overseas activities; adjudication-related work performed in other Service and non-Service programs; and to provide necessary support to all of these activities.

In action taken in FY 1995, the Congress amended Section 245 of the Immigration and Nationality Act to allow certain categories of aliens to adjust their status in the United States upon payment of fees for this benefit. The provision has resulted in an increased workload, as well as an increase in resources available to the INS for processing these and other applications for immigration benefits. The provision expires at the end of FY 1997. Appropriation language is proposed in the General Provisions that would repeal the sunset date of Section 245(i).

The Illegal Immigration Reform and Immigrant Responsibility Act of 1996, Public Law 104-208, amends section 245(i) to allow INS to collect \$1,000 in addition to the regulatory filing fee required for the processing of an application for adjustment of status. The Examinations Fee account will be allowed to retain the \$130 application fee and the \$1,000 penalty fee will be deposited in the Immigration Detention account.

Over the past year, the Immigration and Naturalization Service conducted a fee study of immigration adjudication and naturalization fees in the Examinations Fee Account. The purpose of the just completed study was to develop a more consistent and reliable cost accounting methodology, and to produce a legally defensible Examinations Fee Account Fee Schedule. Work is now proceeding to develop and refine a proposed rule. The target for publishing a proposed rule is February 1997 with implementation of a new fee schedule on October 1, 1997. Subsequent budget requests will incorporate new fee schedules.

BASE PROGRAM DESCRIPTION:

- The function of this program in the Immigration Examinations Fee account is to process and adjudicate applications for immigration benefits. Applications and petitions for a full range of benefits under the immigration laws are adjudicated during periods of standby time at most ports-of-entry during non-peak workload hours. Certain types of applications are presented directly at land border ports-of-entry located on the United States borders where they are adjudicated and issued by inspections personnel.
- Additional resources within the Immigration Examinations Fee account are targeted to the Inspections program for the Fees for Services, which INS began assessing at land border ports-of-entry on October 9, 1995. The documents are issued to visitors from Mexico and Canada who are qualified to enter the United States, and are afforded such special privileges as extending length of stay and broadening areas of travel beyond that offered to nonresident alien Mexican or Canadian border crossing cards.

1998 Estimate	94	92	9,930
Increase/Decrease

BASE PROGRAM DESCRIPTION:

- Generally, the functions of the Investigations program include the detection of criminal law violations and the identification of violators through undercover operations and traditional investigative procedures to initiate criminal prosecution and/or administrative action. Many cases investigated involve violators associated with large-scale, organized criminal conspiracies. Quite often, these criminal alien organizations are simultaneously engaged in other illegal activities such as racketeering, alien smuggling, immigration benefit fraud, counterfeiting, prostitution, official corruption, extortion, narcotics, and weapons trafficking on a national or international scale. Special Agents identify these organizations through interviews, informants, surveillance, and through undercover and task force operations. Investigative task force operations include a combination of resources from several offices and agencies.
- More specifically, these resources are focused on one of the basic enforcement priorities of the INS: detection and deterrence of fraud. The principal goal of the fraud program is to discourage illegal immigration through fraud and to protect the integrity of benefits and documents legitimately provided to authorized aliens by the INS. Many investigations concentrate on individual applications which have led to the identification of large-scale production of fraudulent documentation. Therefore, the INS is aggressively targeting complex criminal organizations involved in immigration fraud for criminal prosecution.

BASE PROGRAM DESCRIPTION:

- This program provides strategic and tactical intelligence support to Service offices enforcing the provisions of the Immigration and Nationality Act, and assists other Federal agencies in addressing national security issues. The Service's Forensic

Document Laboratory (FDL) is a critical component of the program. Intelligence support in the Immigration Examinations Fee account contributes to efforts aimed at detecting fraudulent documents and false claims to citizenship and other benefits and privileges.

1998 Estimate	2,866	3,226	259,696
Increase/Decrease	50	25	6,497

BASE PROGRAM DESCRIPTION:

- The function of this program is to process, adjudicate, and ultimately grant or deny applications and petitions for benefits provided under the immigration laws. Adjudications activities include processing applicants for permanent resident status, petitions for relatives, worker's applications, reentry permits, refugee travel documents, and extensions of temporary stay. Naturalization activities include the examination of aliens to determine their qualifications for naturalization, issuance of citizenship documents, appearances of Service officials before naturalization courts, and the conduct of administrative naturalization ceremonies.
- The INS Adjudications and Naturalization program operates in field offices located throughout the country and in four Service Centers located in California, Texas, Vermont, and Nebraska. Applications for immigration, nationality and citizenship benefits, and for naturalization are received and adjudicated by a corps of immigration officers (examiners) and adjudications support personnel. District offices adjudicate cases involving personal appearances by petitioners or applicants. The Service Centers concentrate on cases that can be processed without individual appearances and which benefit from volume processing and a production-oriented environment where the immigration officers can conduct their reviews without interruptions caused by telephone inquiries or by meetings with applicants.

1998 Base	803	756	90,999
1998 Estimate	803	756	92,799
Increase/Decrease	1,800

BASE PROGRAM DESCRIPTION:

- The function of this program is to adjudicate refugee applications, process parolees, conduct investigations for preference and relative visa petitions, and conduct other records checks and background investigations as required at overseas Service offices. Officers assigned to this program provide assistance to citizens and lawful permanent residents abroad regarding adoptions, immigration or parole of alien spouses and children into the U.S., as well as the availability of other benefits for deserving individuals, and coordinate with the U.S. Coast Guard on the asylum screening process of the Cuban Migrant Interdiction Program.
- The Refugee Act of 1980 created a statutory basis for asylum in the United States and made withholding of deportation of those who qualify mandatory rather than discretionary. While Congress, in passing the Act, established a statutory definition of "refugee", it did not legislate a specific method by which claims for asylum or withholding of deportation were to be adjudicated. Rather, the Congress directed that the Attorney General establish the necessary procedures for such adjudication. Interim regulations were published in June 1980 and remained in effect until superseded by new asylum regulations signed by the Attorney General, which were published as a final rule in the Federal Register on July 27, 1990, and took effect on October 1, 1990. The asylum process was streamlined and integrated between INS and EOIR through regulations, which were published in December 1994 and were effective in January 1995.
- Asylum interviews can only be conducted by members of the Asylum Officers Corps (AOC). The Asylum Officers are centrally managed from INS Headquarters and are located at eight sites throughout the country. These officers also travel throughout the nation performing asylum interviews. Support activities at the eight sites and Headquarters are provided by

- support personnel who perform data updates, as well as mail, file, and correspondence work. A quality control function is performed by supervisory personnel located on site and by Asylum Officers at Headquarters.
- The Congress transferred responsibility for the Cubans and Haitians Entrant Program (CHEP) from the Community Relations Service (CRS) to the INS in 1996. Through grants and cooperative agreements, staff who are part of this program administer:
 - (1) the primary Resettlement Program which provides transitional community-based refugee resettlement services to Cuban and Haitian nationals paroled into the United States;
 - (2) the secondary Resettlement Program which provides resettlement services, emphasizing employment placement and retention at specialized sites outside the state of Florida, to Cubans and Haitians whose initial resettlement in South Florida did not lead to self-sufficiency; and
 - (3) CRS' Unaccompanied Minors Program which provides foster care, residential shelter care, health, counseling, educational, recreational, and family reunification services to unaccompanied Cuban and Haitian minors held in the legal custody of the INS.
- Congressional action on the FY 1997 budget request provided for the transfer of resources in the International Affairs program associated with the Asylum program (388 positions, 261 workyears, and \$29,567,000) from the Violent Crime Reduction Programs appropriation to the Examinations Fee account.

BASE PROGRAM DESCRIPTION:

- The function of the Training program is to provide the staff and the resources necessary to maintain an employee development program that meets the diverse training needs of INS' workforce. Training requirements are identified annually and are revised, as needed, due to new regulations, legislation, or organizational needs. The program is accomplished in a variety of ways: through in-Service training at the Federal Law Enforcement Training Center facilities (FLETC) at Glynco, Georgia (basic officer training) and at Artesia, New Mexico (journeyman-level officer training); through programs conducted by other Federal agencies; by private contractors; or in combined presentations using Service and non-Service resources.

BASE PROGRAM DESCRIPTION:

- The Data and Communications program provides direct support for operational programs as well as administrative support functions of the Service. There are six major technology programs included under the Data and Communications program, plus the functions collectively known as Information Resources Management (IRM) Operations. The five program areas, each of which consist of one or more projects in addition to the normal operations and maintenance required for existing systems are: 1) Infrastructure; 2) Examination Systems; 3) Biometric Identification Systems; 4) Corporate Information Systems; and 5) Management Systems (financial and administrative). IRM Operations includes the functions necessary to support the activities of the Data and Communications program.
- The Examination Systems Program provides for an integrated set of functions that incorporate all individual casework-oriented subsystems used to support the processing of applications and petitions for immigration benefits and associated processes such

as the production of immigration documents. These functions and processes include employment authorization, asylum, resident alien processing, and citizenship application and processing for naturalization.

In FY 1998, INS will provide services to operate and maintain the Examinations information technology systems developed and deployed in FYs 1995 through 1997. Such services include: making corrections to existing software to eliminate functional errors, failures, and deficiencies that could affect operational performance; modifications in response to legislative and/or policy changes; the costs for maintaining and upgrading licenses to existing application-specific software; and the costs for maintaining validation and verification capabilities that can be used to test application systems before they are deployed and placed into operation.

- Congressional action on the FY 1997 budget request provided for the transfer of \$26,922,000 in funding for the Data and Communications program from the Violent Crime Reduction Programs account to the Immigration Examinations Fee account

BASE PROGRAM DESCRIPTION:

The functions of this program are to:

- provide responses to inquiries from the public and private sectors; local, State and Federal agencies, and the various branches of government, by telephone, in-person, and in writing
- maintain alien records and files from which data may be readily obtained to respond to requests from both within and outside INS;

- develop guidelines, policies and procedures and responses to FOIA/PA requests;
- compile, analyze and evaluate statistics for use in preparing regular and special reports about Service operations and work accomplishments;
- provide for the coordination, development, preparation and review of the Service's regulations, directives, operating instructions and forms, to ensure that these materials are issued and published in accordance with established Federal regulations and laws; and
- monitor and ensure internal compliance to standards for systems and Service delivery.

BASE PROGRAM DESCRIPTION:

The functions of this program are:

- to provide management direction and support for the implementation and operation of regional and field activities and functions to those managers and supervisors who are responsible for and exercise authority over multiple programs;

- to execute the provisions of the Immigration and Nationality Act and related policies through the development and implementation of immigration programs and the management of resources; and
- to provide for the development, implementation, direction, operation and evaluation of administrative support systems and services that meet internal operational and managerial needs and externally mandated requirements. Included in this program are duties related to providing executive direction and control of the Service; furnishing accurate and prompt responses to Congressional and public inquiries; administering and maintaining effective budgeting and financial management systems; performing audits; conducting internal investigations; providing informational responses to frequent inquiries from GAO, OIG, OMB and Departmental offices; and developing and evaluating policies and systems to improve the effectiveness of Service programs. The major administrative functions within the program include: personnel; accounting; equal employment opportunity; procurement; property management; fleet management; security; safety and health; and other miscellaneous general services that support all programs within INS.

**Improving Service and Benefits
Immigration Examinations Fee Account**
(Dollars in Thousands)

	Positions	Workyears	Amount

International Affairs	1,800
Training	500
Data & Communications	16,847
Information & Records Management	10	5	19,841
Construction & Engineering	1,000
Total	60	30	\$46,485

Proposed Actions

In previous years, INS has accrued application processing backlogs in addition to experiencing insufficient and inadequate records support, misdirected information and forms delivery, and the preponderance of labor-intensive, manual processing procedures. In FY 1998, INS intends to focus on the entire benefits delivery process, from initial information dissemination and forms distribution, through the records and files activities and adjudication of the case, to the final close-out of the case and file.

The requested enhancements will provide a framework and theme that aligns the INS service arm with the agency's strategic plan and permits INS to build on the progress begun with previous enhancements. This resource request will allow INS to manage its benefits workload to ensure timely and efficient processing for its customers.

This enhancement will improve the services and support components of INS so that services are more accessible, consistent, and structured to better serve its customers. These initiatives will continue and expand on the records support services provided to the key Districts (designated as "key" because of the magnitude of applications filed), extend Direct Mail for naturalization applications to additional Districts, provide funding for expanding capacity in the Service Centers so that the Centers can accommodate further increases in Direct Mail, and develop and pilot automation procedures in the benefits process.

These initiatives will provide INS the resources necessary to maintain pace with the anticipated workload in FY 1998 (about 5 million applications) and the ability to meet the challenges posed by new legislation and the increased demand for a broad range of information.

Strengthen Records Infrastructure

	Workyears	Amount	Positions
Data and Communications	\$6,037
Information and Records Management	1,806
Total	\$7,843

A total of \$7,843,000 is requested to allow INS to implement an information network for records restructuring and relocating existing physical files in preparation for the eventual transition to electronic filing and electronic A-Files. Resources are also being requested in the Violent Crime Reduction Program for this initiative that will allow INS to accomplish improvements that will directly affect the quality of service provided to the INS customer. This initiative includes \$1,700,000 for Enforcement Case Tracking and Management System (ENFORCE). Also included are resources totaling \$3,500,000 to provide a catastrophic backup capability for the IDENT system.

	Positions	Workyears	Amount
Data and Communications	\$6,037

Information Network (\$837,000) -

The resources requested in the Data and Communications program will provide funding for cabling (\$200,000), automated data processing (ADP) equipment (\$267,000), Receipt Alien File Accountability and Control System (RAFACS) installation (\$300,000), telephone/communications installment (\$70,000) and other infrastructure enhancements required to implement the records restructuring.

Biometric ID Systems (IDENT) (\$1,500,000):

These resources will allow INS to continue its servicewide deployment and support of IDENT. Of the total amount being requested, \$1,000,000 will be used to deploy IDENT to the following District Offices: Anchorage, AK; Bloomington, IN; Cleveland, OH; Denver, CO; Detroit, MI; Helena, MT; Kansas City, MO; Omaha, NE; Portland, ME; and Seattle, WA. The resources included in this initiative will fund the examinations fee related portion of the program initiative. Resources for IDENT are also being requested in the Violent Crime Reduction Program and User Fee accounts. The remaining \$2,500,000 will be used to provide catastrophic backup capability. The IDENT system currently does not have this essential backup capability. These resources will be used for a "shadow" system at the Justice Data Center in Dallas, Texas to continuously and automatically copy and backup the primary IDENT control system and database.

Enforcement Case Tracking System (ENFORCE) (\$1,700,000):

This initiative will provide a total of \$1,700,000 for Enforcement Tracking and Management System (ENFORCE). ENFORCE is a case and report tracking system with automated report writing to allow officers to devote more time to operational activities rather than administrative requirements. These resources will fund the Examinations Fee account portion of expanding the ENFORCE system to 25 new sites with the installation of over 1,200 workstations. Of the total amount being requested, \$800,000 will be used to fund the input of intelligence data and \$900,000 will provide resources for the computer based information repository. Additional resources are also being requested for the expansion of ENFORCE in the Violent Crime Reduction Program and the Immigration User Fee accounts.

	Positions	Workyears	Amount
Information and Records Management	\$1,806

Relocating Files and Transition to Electronic A-Files--

An increase of \$1,806,000 will be used to fund the costs attributable to the Examinations Fee account associated with relocating files and the transition to electronic A-Files. The additional resources that INS will require for space, staffing, and other equipment to centralize records operations is being requested in the Violent Crime Reduction Program. These additional resources will allow INS to facilitate the transfer of files to a more centralized operation. The implementation of electronic A-Files will reduce the number of lost files, the cost of mailing and warehousing, and delays in support of enforcement and benefit activities.

Enhance Automated Information Control

	Positions	Workyears	Amount
Data and Communications	\$1,250

Enhance Automated Information Control (\$1,250,000)--

An increase of \$1,250,000 will be used to enhance INS' centralized computer-based information repository, the Central Index System (CIS). These additional resources will allow INS to capture and maintain the most recent biographical and/or biometric information on an alien. This initiative will improve the accuracy of information and reduce the thousands of hours spent on data collection from separate sources and manual reconciliations. Additional resources for this initiative are also being requested in the Violent Crime Reduction Program.

Improve and Automate the Fingerprint Clearance Process

	Positions	Workyears	Amount
Data and Communications	\$1,000

Improve and Automate the Fingerprint Clearance Process (\$1,000,000)--

A total of \$3,000,000 is requested to enhance the fingerprint collection and clearance process. The current fingerprint clearance performed by the FBI can become a lengthy process. INS proposes the development of a system that would provide the capability to electronically capture, store, and eventually transmit fingerprint data to the FBI for verification. This initiative would result in potentially faster and much more accurate clearances (for application processing purposes) because INS will have the ability to verify the quality of prints before they are sent to the FBI.

Single INS 1-800 Telephone Service

	Positions	Workyears	Amount
Information and Records Management	\$9,500

Single INS 1-800 Telephone Service (\$9,500,000)--

A total of \$9,500,000 is requested to expand and consolidate current telephone improvement efforts to establish a sole 1-800 line that would act as a front-end to all non-enforcement related questions. This telephone system would direct all customer calls with initial services including: requests for forms, information, application status, and a method for responding to customer complaints. As additional modules are developed, other types of informational services will become available. Approximately \$1,500,000 is requested for one-time installation costs and \$8,000,000 for connection charges.

Improved Customer Service

	Positions	Workyears	Amount
Adjudications & Naturalization	50	25	\$2,907
Training	"	"	500
Total	50	25	\$3,407

A total of 50 positions, 25 workyears, and \$3,407,000 is requested to allow INS District Offices to create a corps of representatives that would primarily strengthen customer and community relations, in addition to providing customer relations training to current INS service-related employees. INS will foster a commitment to improving customer relations by ensuring there is adequate staff, training, and managerial focus on the importance of establishing and maintaining a positive customer service attitude and approach to providing INS services.

	Positions	Workyears	Amount
Adjudications and Naturalization	50	25	\$2,907
<u>Customer Service Representatives (50 positions, 25 workyears, and \$2,907,000)--</u>			

A total of 50 positions, 25 workyears, and \$2,907,000 is requested so that INS may create a customer service representative position at Districts and Asylum Offices. The representative would have two functions; "troubleshooting" by handling problem cases and complaints, and on the proactive side, gathering information from customers that can be used to improve processes, facilities, and other facets in the service delivery process.

	Positions	Workyears	Amount
Training	\$500
<u>Customer Service Training for All Service-Related INS Personnel (\$500,000)--</u>			

An increase of \$500,000 is being requested to develop a training module that will provide customer service training to all INS employees who have direct contact with customers or manage employees who provide direct service to customers. This training will focus on customer communication, dealing with problem customers and cases, stress management, sensitivity to customer needs, and implementing process changes. An increase for customer service training is also being requested in the Violent Crime Reduction Program.

Service Facilities

	Positions	Workyears	Amount
Construction and Engineering	\$1,000

Office Location/Layout Assessment and Renovation (\$1,000,000)--

A total of \$1,000,000 is being requested to fund a contractor study of the demographic aspects of the INS customer base to determine if the current location and configuration of INS offices meet customer needs with respect to accessibility, parking, public transportation, officer workstation configurations, etc. Based on the results of the study and assessment of space needs, the contractor will propose recommendations regarding facility locations and layouts.

Maintain Productivity in FY 1998

	Positions	Workyears	Amount
Adjudications and Naturalization Information and Records Management	\$1,940
Total	\$2,640

A total of \$2,640,000 is requested to continue the level of productivity previously established.

Adjudications and Naturalization

	Positions	Workyears	Amount
	\$1,940

Maintain Productivity in FY 1998 (\$1,940,000)--

INS is requesting \$1,940,000 to offset increased costs of FBI fingerprint clearances and naturalization ceremonies based on the projected volume of applications for FY 1998.

	Positions	Workyears	Amount
Information & Records Management	\$700

Maintain Currency in FY 1998 (\$700,000) --

Support services contract provides mail and data entry support at the Service Centers. In FY 1998, it is estimated that the volume of applications filed will exceed 5 million. These resources will allow INS to keep pace with the growing volume of applications to be handled at the Service Centers.

Increase Access to Information and Forms

	Positions	Workyears	Amount
Adjudications and Naturalization	\$1,650
Data & Communications	1,350
Information and Records Management	10	5	1,385
Total	10	5	\$4,385

A total of 10 positions, 5 workyears, and \$4,385,000 is requested to improve responsiveness to the customer's need for forms and information.

	Positions	Workyears	Amount
Adjudications and Naturalization	\$1,650

Increase Access to Information and Forms (\$1,650,000)--

A total of \$1,650,000 is requested to increase accessibility to forms for INS customers. INS has traditionally provided information and forms through local offices and through telephone requests. These resources will not only increase the accessibility and availability of INS forms and information, but will be used to redesign INS forms and applications to make them more user-friendly and provide a consolidated, one-step forms package for related forms. This request also includes funding to increase the volume of forms produced. Forms will be made available in community-based organizations, fingerprint service entities, and Forms Centers.

Pamphlets explaining INS services will be designed and prepared to distribute to INS customers through the Forms Centers, Telephone Centers, and other designated sites.

	Positions	Workyears	Amount
Data & Communications	\$1,350

Increase Access to Information and Forms (\$1,350,000)--

A total of \$1,350,000 is requested so that INS can focus on improving the quality and comprehension of information regarding applications for benefits. INS has determined that providing simpler forms and instructions, in addition to instructional pamphlets, is more beneficial to the INS applicant. Recommendation 3 of Justice Management Division's (JMD) Management Report on Service Centers states that "INS should make improving the handling of public and internal INS telephone inquiries about applications and benefits a higher priority. INS should move quickly to complete and install "INS Direct" to give fee-paying customers the information they need and deserve." This request would also permit the expansion of 2-d bar code technology to the Service Centers. This technology is currently being piloted in the Los Angeles District to select community-based organizations (CBOs) for filing naturalization applications. The initiative also includes making INS information and forms available on the Internet, which the JMD Service Center report also supports.

	Positions	Workyears	Amount
Information and Records Management	10	5	\$1,385

Increase Access to Information and Forms (10 positions, 5 workyears, and \$1,385,000)--

A total of 10 positions, 5 workyears, and \$1,385,000 is requested to improve the delivery of forms from the two forms centers; specifically, to routinely provide next day mailing, to ensure that mailing always occurs within 48 hours of the receipt of the request, and add sufficient equipment and personnel required to meet the demand that exceeds current capacities causing customers to either call back or seek less efficient venues such as appearing in-person at our District Offices. These standards require the acquisition of "just-in-time" printing capabilities, which will also generate sufficient savings in inventory costs to recoup these costs within five years. This request includes 10 positions (\$485,000), equipment (\$700,000), and contract support (10 contractors at \$200,000). Only \$100,000 of the equipment cost is recurring.

Humanitarian Affairs Program

	Positions	Workyears	Amount
International Affairs	\$1,800

Humanitarian Affairs Program (Formerly known as the Cuban and Haitian Entrant Program (CHEP)) (\$1,800,000)--

A total of \$1,800,000 is requested to increase support to the Humanitarian Affairs Program. In 1998, it is anticipated that 15,000 Cuban nationals will arrive directly in the United States from Havana through the Cuban legal migration program. It is expected that a significant number of these individuals will be visa lottery parolees without family members or other ties to the United States. This request will be used to provide comprehensive reception services to the increased numbers of lottery parolees. This increase will minimize the financial burden on State and local resources and ensure that Cuban migration is orderly and does not adversely impact State and local governments.

Direct Mail Expansion

	Positions	Workyears	Amount
Information and Records Management	\$1,650

Direct Mail (\$1,650,000)--

A total of \$1,650,000 is requested to expand Direct Mail in San Francisco and Newark, and transition Baltimore's naturalization cases into Direct Mail. (At this time, Baltimore is the sole District with CLAIMS automation.) The JMD Management Report on Service Centers recommends that INS "should continue to shift more work to the Service Centers by pre-processing naturalization cases at the Service Centers." These modifications will allow INS to more effectively process naturalization applications. This influx of additional records support permits INS to gain control of the massive records workload at these locations that, at the current staffing level, is difficult to manage. The costs associated with this transfer of naturalization cases provide for additional records contract support in the Service Centers, and for mail, file, and data entry operations.

Continue Records Contract in San Francisco and New York

	<u>Positions</u>	<u>Workyears</u>	<u>Amount</u>
Information and Records Management	\$4,800

Contractual Records Operations to San Francisco and New York (\$4,800,000)--

A total of \$4,800,000 is requested to continue the local office contract records pilot in FY 1998 at the San Francisco and New York offices. This will permit INS to have contract records operations in all five key naturalization sites. Contractors augment existing records staffing to improve operations and reduce or minimize records processing backlogs. This would provide relief to these large Districts while INS awaits the completion of the records re-engineering study and the transition to centralized records.

CLAIMS Naturalization Case Processing Support

	<u>Positions</u>	<u>Workyears</u>	<u>Amount</u>
Data and Communications	\$4,210

CLAIMS Naturalization Case Processing Support (\$4,210,000)--

A total of \$4,210,000 is requested to provide naturalization case support to the Service Centers by modifying CLAIMS. Re-engineering the naturalization process has been and continues to be an INS objective. INS has developed a naturalization module (NATS) within the CLAIMS environment that is ready to be deployed to a Service Center. This new system will improve naturalization case scheduling and processing. The JMD Management Report on Service Centers supports this initiative by requesting that INS provide the Service Centers with an effective systems solution that will modify CLAIMS to handle naturalization cases. The request provides hardware, software enhancements, staff training, and contractor support for NATS in two of the four Service Centers.

CLAIMS Case Scheduling Development

	Positions	Workyears	Amount
Data and Communications	\$1,000

CLAIMS Case Scheduling Development (\$1,000,000)--

A total of \$1,000,000 is requested to expand the case scheduling functions now available in CLAIMS at the Service Centers. All cases supported by CLAIMS could potentially be supported by this function. In tandem with Direct Mail, CLAIMS must be able to provide support to cases requiring interviews, specifically adjustment of status cases. With this enhancement, chronological scheduling and development of interview profiles could be accomplished electronically.

Professionalism Initiative
Immigration Examinations Fee Account
(Dollars in Thousands)

	Positions	Workyears	Amount
Management and Administration	11	5	\$5,008

Proposed Actions

These resources will be used to build and maintain INS' infrastructure base and provide sufficient support to maximize the efficiency and effectiveness of the workforce. The Statistical Analysis Program includes data on immigrants, refugees, temporary visitors (nonimmigrant), naturalization, and productivity and management statistics relating to INS mission programs. Additional resources are required in order for INS to submit congressionally mandated reports on schedule and to develop new regular and special reports for internal and external customers to meet the need for data and analysis on immigration. With present staffing levels, INS has not been able to meet current requirements.

An increase of 11 positions, 5 workyears and \$5,008,000 is requested for the Statistical Analysis Program in the Examinations Fee account. Note, an additional increase of 4 positions, 2 workyears and \$2,000,000 is also being requested for the Statistical Analysis Program in the User Fee account. The resources will allow INS to keep up with an increasing workload and expand the quantity and quality of professional analytical services provided to other program within INS and to external audiences. The increased demand for information on all these topics for management purposes, and especially from Congress, GAO, and the general public, has placed greater emphasis on INS statistical activities, including improvements in the timeliness, accuracy, usefulness, and frequency of reporting of the captured data. Without the funding increase, INS will be unable to meet its reporting mandates as stipulated in the Immigration Reform and Control Act of 1986 (IRCA) and the Immigration Act of 1990, and will be unable to successfully meet the demand for performance measurement data for the Government Performance and Results Act (GPRA) and the reinventing government initiative. The request will enable the Office of Policy and Planning to properly carry out data analyses responsibilities and conduct evaluations of operational requirements for various programs for INS, with which it is currently tasked.

Major immigration related bills in the past decade have increased the statistical reporting requirements significantly. IRCA established the requirement for the Triennial Report, a comprehensive recurring report on immigration impacts, as well as many smaller reports on IRCA implementation. The Immigration Act of 1990 mandated the creation of a "Statistical Information System" and annually reporting "useful in evaluating the social, economic, environmental, and demographic impact of immigration laws." It also created the Commission on Immigration Reform and tasked it with analysis of many aspects of immigration for which INS is the only source of data. The Statistical program has the responsibility of providing data for performance measurement and analysis as required by the Chief Financial Officer's Act of 1990 and the GPRA of 1993. The welfare reform and immigration legislation of 1996 contain additional reporting requirements on immigrant sponsors, nonimmigrants, removals, detainees, parolees, and others. Timely and accurate data, and a staff capable of analyzing it, are needed for strategic planning. In brief, responsible management of INS resources and responsibilities rests on good organizational performance data.

These additional resources will also allow INS to institute work sampling to measure efficiency, effectiveness, and progress toward mission goals. The growing importance of immigration in domestic policy will require INS to play a leadership role within the Executive Branch with regard to providing the information needed to develop and implement policy and legislation.

GENERAL GOAL #4: INS Benefits and Service - INS will deliver services in a manner which shows we highly value our public. Services will be timely, consistent, fair, and of high quality.									
Element #1: Adjudications and Naturalization Application Processing

<p>A. Definitions of Terms or Explanations for Indicators:</p> <p>Input - The number of FTE as measured by NFC payroll records at a specific point in time converted to hours.</p> <p>Output - The number of completions as reported by the Performance Analysis System (PAS).</p> <p>End Outcome - The application processing times is computed by dividing the End Pending by the number of Completions multiplied by 365 (days in year) and indicates INS' ability to not only maintain pace with incoming applications, but to work into pending (backlogged) workload.</p> <p>Productivity/Efficiency - Are determined by the dividing the total completions by the total paid hours, which represent the relative completions accomplished per hour.</p>	<p>B. Factors Affecting FY 1995 and 1996 Program Performance</p> <p>During FY 1995, there was a significant increase in application receipts as compared to previous fiscal years, particularly in adjustment of status and naturalization applications, due to the Section 245(j) Provision and the legislative environment regarding entitlements and benefits to non-citizens. By the time INS could respond with reinforcements (additional personnel) in the field offices and service centers to accommodate the higher level of workload, INS had fallen further behind in processing. (The FY 1995 Exams Reprogramming did not become effective until June 7, 1995). FY 1995 was a transitional year for the Adjudications and Naturalization Program, whereby the level of services was enhanced not only to meet the challenges of processing the expected continued strong flow of benefit applications in FY 1996 and FY 1997, but to also regain control of and reduce pending (backlogged) case levels.</p> <p>Also due to steadily increased number of application receipts, a FY 1996 Exams Reprogramming request was generated during the first quarter of FY 1996, and was enacted January 16, 1996. The additional funds are being used to hire contract and temporary employees to manage the increased naturalization and adjustment of status workload. In addition, INS is reexamining the entire naturalization process to determine where re-engineering concepts could permanently improve the procedure for both the applicant and the agency.</p>	<p>C. Factors Affecting Selection of FY 1996, 1997 and 1998 Targets.</p>
---	--	---

INS is in the process of developing plans and pilot projects to re-engineer the naturalization process, and to reduce the naturalization backlog, which involves processes and procedures new to INS. Because these initiatives are primarily either pilots or temporary ventures, these measures will not necessarily be applicable in the long term. INS chooses to track them in FY 1996 and FY 1997 to measure the successes or gains from these initiatives.

Immigration Examinations Fee
Justification of Adjustments to Base
(Dollars in thousands)**

	Pos.	Work- year	Amount
Adjustments to Base:			
Annualization of 1997 reprogrammings	...	-477	-36,792
This decrease reflects a reduction for the non-recurring costs included in the FY 1997 reprogrammings.			
Increases:			
Annualization of 1997 enhancements	-5,773
This decrease reflects a reduction for non-recurring temporary staffing efforts for Citizenship USA and 245(i) processing. The reduction includes \$5,430,000 for salaries and benefits and \$343,000 for general expenses.			
1998 pay raise	\$5,021
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the Preliminary Pay Raise Guidance for 1998 Budget Submissions, August 1, 1996. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$5,021,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$3,719,000 for pay and \$1,302,000 for benefits = \$5,021,000).			
Annualization of 1997 pay raise	1,924
This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent plus appropriate personnel benefits (\$1,425,000 for compensation and \$499,000 for benefits).			

1,957

Within-grade increases
 This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$1,450,000 for pay and \$507,000 for benefits.

Supplies/Materials	343	-343
Equipment		
Total costs subject to annualization	23,000	-5,773

Foreign allowances	15
Allowances for Government employees in foreign areas are determined by the Department of State (DOS). The requested increase of \$15,000 provides a 1.7 percent increase over the obligations of \$882,353 which are committed for 1996.			
Accident compensation	76
This increase reflects the billing provided by the Department of Labor for the actual costs in 1996 of employees' accident compensation, which will be billed in 1998. The 1998 increased cost will be \$76,000.			
ICASS Increase for Staffing	408
Under the ICASS an annual charge will be made by the DOS for administrative support based on the number of overseas staff for each Federal agency. Because the law enforcement operations of the Department of Justice have increasing international demands, additional overseas staffing since 1995 will result in increased ICASS costs in 1998. Based on the additional overseas staffing, DOS has provided an increased cost estimate of \$408,000 for this account in 1998.			
General pricing level adjustments	3,802
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.8 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs and utilities.			
Restoration of FY 1996 FTE Reduction	1,088	...
In FY 1996, this account absorbed a reduction of 784 FTE over the FY 1996-1997 time frame. An analysis of the workyears required by this account indicates a total of 1,088 FTE are required to be added in FY 1998.

FEDERAL BUREAU OF PRISONS

Electronic Freedom of Information (1996 Amendments)

For FY 1996, consistent with the additional requirements, BOP is requesting a total of \$1,452,000, 37 positions and 19 workyears to meet the newly passed Electronic Freedom of Information Act Amendments of 1996. This action amends Section 552 of title 5, United States Code, popularly known as the Freedom of Information Act, to allow public access to information in an electronic format, and impose new requirements related to the processing of requests submitted under the Freedom of Information and Privacy Act.

Federal Prison System
Salaries and Expenses
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.]

Salaries and Expenses	834	599
For expenses necessary for the administration, operation, and maintenance of Federal penal and correctional institutions, including purchase of land to exceed \$350,000, of which \$272,825 for replacement of land for the Federal Prison System, for the purchase of vehicles, and for the provision of technical assistance and advice on corrections related issues to foreign governments; (\$2,768,316,000):		
Provided, That the Attorney General may transfer to the Health Resources and Services Administration such amounts as may be necessary for direct expenditures by that Administration for medical relief or treatment of prisoners of the Federal Prison System (FPS), where necessary, may enter into contracts with a fiscal agent/fiscal intermediary claim processor to determine the amounts payable to persons who, on behalf of the FPS, furnish health services to individuals committed to the custody of the FPS: Provided further, That uniforms may be purchased without regard to the Federal Acquisition Regulation (FAR) for the FPS, and that the amount of such purchases shall not exceed \$4,000,000 for the representation expenses: Provided further, That not to exceed \$90,000,000 for the activation of new facilities shall remain available until September 30, (1998):		
Provided further, That of the amounts provided for Contract Confinement, not to exceed \$20,000,000 shall remain available until expended to make payments in advance of the actual costs of the program, and that the amounts shall be expended by section 501(c) of the Refugee Education Assistance Act of 1980, as amended, for the care and security in the United States of Cuban and Haitian entrants: Provided further, That notwithstanding section 4(d) of the Service Contract Act of 1965 (41 U.S.C. 353(d)), FPS may enter into contracts and other agreements with private entities for a term of not to exceed 3 years and additional option years for the confinement of prisoners of the Federal Prison System (FPS) in the United States of America: Provided further, That the salaries and expenses budget of the Federal Corrections hereafter shall be included in the FPS Salaries and Expenses budget in the Contract Confinement program and shall continue to perform its current functions under 18 U.S.C. 4351, et seq., with the exception of its grant program and shall collect reimbursement for services whenever possible: Provided further, That any unexpended balances available to the National Institute of Corrections' account shall be credited to and merged with this appropriation, to remain available until expended.		
(18 U.S.C. 3059, 3653, 4001, 4002, 4007, 4008, 4013, 4041, 4042, 4081, 4082, 4353, 4381, 4351-4353, 5035; Department of Justice Appropriations Act, 1997)		

Expiration of Changes:

1. The Federal Prison System is requesting changes in the ceilings for new and replacement automobile purchases. In support of the 1998 budget request, the Federal Prison System would require a total authority for purchase of not to exceed 834 motor vehicles of which 599 are for replacement only.

Program Performance Information

Mission: The Federal Bureau of Prisons (BOP) protects society by confining offenders in the controlled environments of prisons and community-based facilities that are safe, humane, and appropriately secure, and which provide work and other self-improvement opportunities to assist offenders in becoming law-abiding citizens.

General Goals:

- 1) BOP will proactively manage its offender population to ensure safe and secure operations.
- 2) BOP will have a competent and representative workforce meeting the organization's needs up to and beyond the year 2000.
- 3) BOP will maintain its facilities in operationally sound conditions and in compliance with security, safety and environmental requirements.
- 4) BOP will manage its operations and resources in a competent and effective manner which encourages creativity and innovation in development of exemplary programs as well as excellence in maintaining the basics of correctional management. BOP continually strives toward improvements in its effective use of resources and its efficient delivery of services.
- 5) BOP provides services and programs to address inmate needs, providing productive use-of-time activities, and facilitating the successful reintegration of inmates into society, consistent with community expectations and standards.

- 6) BOP will continue to seek opportunities for expanding the involvement of community, and local, state, and Federal agencies, in improving the effectiveness of the services it provides to offenders and constituent agencies. The active participation by BOP staff to improve partnerships will allow the BOP to carry out its mission within the criminal justice system and to remain responsive to other agencies and the public. BOP will develop partnerships to focus the shared responsibility for the establishment of a supportive environment promoting the reintegration of offenders into the community.

ACTIVITY: INMATE CARE AND PROGRAMS

	Perm. Pos.	FTE	Amount (\$000)
1997 Enacted	11,923	10,128	\$1,043,457
1998 Base	12,133	11,046	1,125,170
1998 Estimate	12,252	11,065	1,126,314
Increase/Decrease	119	19	1,144

BASE PROGRAM DESCRIPTION:

The purpose of Inmate Care is to provide offenders incarcerated in BOP with a nutritional diet; adequate health care services; clean clothing, footwear, linens; toiletries and stationery; and to properly manage the Inmate Trust Fund. The purpose of Inmate Programs is to improve inmate self-control and establish healthy relationships between staff and inmates by dividing the large institution population into smaller, more manageable groups. A team of multi-disciplinary staff who have administrative and supervisory authority in most institutional aspects of programming and living are permanently assigned and located in the unit to work with the inmates. This places services closer to the users and permits decision-making by those who are most knowledgeable of the inmates and their programs. The increased interaction between inmates and staff enhances communication and understanding of inmate needs to a level not possible in a centralized correctional environment.

Inmate programs include general and occupational education programs, psychology services, religious and leisure time activities. General education programs are designed to meet specific inmate needs for functional literacy, high school equivalency, continuing education, and personal growth. There are seven major components of the general education program: Literacy, Adult Continuing

Education, English as a Second Language, Structured Leisure Activities (e.g. Physical Fitness and Health Education), Guidance and Counseling, Secondary and Advanced Occupational Education, and Life Skills.

The BOP provides daily meals which are certified for nutritional adequacy by registered dietitians and meet the Recommended Dietary Allowances established by the Food and Nutrition Board Commission of Life Sciences, National Research Council. Meal preparation is accomplished primarily by inmate workers (about 12 percent of the population) under the supervision of staff. The United States Penitentiary at Lompoc, California and the Federal Correctional Institution at El Reno, Oklahoma utilize available land resources in limited production of beef and milk. Farm products are consumed at the producing institutions and are also shipped to nearby institutions to offset their need to purchase some products on the open market.

Medical services are provided by a variety of professional and para-professional health care personnel including physicians, dentists, nurses, pharmacists, and physician assistants. Within 14 days of admission, all newly sentenced inmates receive a complete physical, mental health, and dental examination. Sick call, which includes examination of patient complaints, ordering and assessment of diagnostic tests, and a medical treatment plan is conducted five days a week. Medical emergencies during other than normal working hours or on weekends and holidays are handled on an on-call basis. If an inmate has a health condition which is beyond the professional capability of an institution's medical staff, the inmate is referred to a contract physician, a hospital in the community, or one of BOP's medical referral centers.

The Medical Center for Federal Prisoners (MCFP) at Springfield, Missouri is the major medical referral center for the Federal Prison System. There are five additional regional medical centers within the BOP health care delivery system. The Federal Medical Center (FMC), Rochester, Minnesota accepts referrals of both male and female specialty medical, surgical and psychiatric cases nationwide. The Federal Correctional Institution (FCI), Butner, North Carolina provides for male psychiatric cases. FMC, Lexington, Kentucky is a chronic disease and long-term care institution for male inmates. FMC, Carswell, Texas handles female medical, surgical and psychiatric cases nationwide. Also, selected chronic (disabled, handicapped, geriatric) female cases will be referred to Carswell on a nationwide basis.

Finally, FMC, Fort Worth, Texas accepts referrals for male inmates with chronic disease and in need of long-term care.

The U.S. Public Health Service continues to provide personnel in support of the BOP medical program. In addition to providing 16-hour or 24-hour medical coverage at all institutions, all major medical facilities have accreditation by the Joint Commission on Accreditation of Healthcare Organizations. Medical, surgical, and rehabilitative services not available in BOP medical facilities are provided to inmates through contract arrangements with community hospitals and/or governmental health facilities. Increasing numbers of federal inmates are requiring medical care, primarily as a result of the population explosion, general aging of the population, and the increased numbers of inmates with a history of drug abuse. The incidents with HIV/AIDS and Infectious Diseases has remained stable throughout the bureau population. However, new treatment protocol are becoming more complex and expensive. For example, HIV/AIDS patients are now treated with two or more drugs simultaneously.

BOP maintains an inventory of clothing, footwear, toiletries, linens, and writing supplies for issue to all inmates during incarceration. Clean clothing and linens are issued weekly in exchange for clothing and linens to be laundered. A laundry operation is maintained to clean all clothing and linens. All services are performed with inmate labor under staff supervision.

BOP manages an Inmate Trust Fund account for all monies on deposit for each inmate. Monthly inmate earnings received for work with Federal Prison Industries, performance pay, and money from family or friends are deposited directly to each inmate's account. BOP continues a successful record with the Inmate Financial Responsibility Program for court-imposed fines, fees, and their legitimate financial obligations by developing a financial plan which considers both outside assets and inmate earning capabilities while incarcerated. At the end of FY 1996, BOP collected \$5,142,695 through inmate institution accounts. In addition, inmates can withdraw funds when needed to make purchases from the commissary, send money to family members, pay for legal services, or pay for supplies to participate in programs such as college courses.

BOP's Literacy Program is designed for the approximately 40 percent of Federal offenders who lack a high school diploma and consists of basic literacy and high school equivalency courses, and general equivalency examinations. All inmates, with few exceptions, are required to enroll if they do not have verification of a high school diploma or a GED equivalency. A mandatory involvement is required for 120 days. Adult Continuing Education courses are designed for inmates who have a desire to "brush up" in a special area or enroll in a special program, e.g., speed reading, English, mathematics, history, and foreign language. The Crime Control Act of 1990 requires all non-English speaking Federal prisoners to participate in an English as a Second Language program until they function at the equivalent of the eighth grade level. Advanced occupational education courses are for inmates who have successfully completed high school and want to further their preparation for post release employment, e.g., drafting, building maintenance, data processing, and dental technology. The Guidance and Counseling program assists inmates to focus on realistic planning and goal setting for work and related activities during their incarceration and after release.

Occupational education programs serve to enhance skills during incarceration and increase the employability of offenders upon release, particularly those who either lack solid employment history or a marketable skill. BOP has recently distributed new Post-Release Employment Project data, which support earlier findings that prison industries and vocational training programs decrease recidivism. The majority of Federal offenders are unskilled at the time of commitment to prison. Federal offenders can choose a vocation, through instruction, work experiences, and career orientation; acquire or improve productive work skills and habits; and gain practical knowledge essential to working and functioning in a complex industrial-technical world of work.

Chaplaincy personnel conduct religious services of their particular faith group and arrange for delivery of religious services of other faith groups to fulfill their role as correctional program providers. Chaplaincy staff play a positive role in inmate and religious groups management as they provide programs across the spectrum of faiths represented in the inmate population. Chaplains also train and sensitize staff regarding the variety of faiths that inmates practice.

Chaplains additionally provide guidance to the institution to comply with the Religious Freedom Restoration Act. A common fare diet is provided to meet the religious diet requirements of a variety of faith groups. BOP strictly follows the expectations of the Religious Freedom Restoration Act.

Approximately 375 contracts are issued annually for the delivery of services to smaller faith groups and for other related religious services. Chaplains also recruit, train, supervise, and sustain approximately 7,800 volunteers from the community who regularly visit the institution to participate in the religious programming. Approximately 69,000 religious worship services will be conducted in FY 1997 representing the various religious disciplines within the prisoner population. In addition to worship services, chaplaincy personnel offer a wide variety of non-worship religious program options.

Psychology staff are an integral part of correctional treatment as they administer programs of group and individual psychotherapy, crisis intervention, personal development classes, and staff consultation/training. BOP policy requires that every inmate admitted to a BOP facility be given an initial psychological screening which consists of psychological testing, psychological interviews, social history reviews, and behavioral observation. The purposes of the screening are to identify special treatment and/or referral needs; provide information useful in future crisis-counseling situations; identify strengths as well as potential adjustment problems to imprisonment; and discuss possible program needs with the inmates and provide information about them.

Both individual and group psychotherapy are available to inmates who express a desire and demonstrate the need for it. Training and orientation programs are also offered for developing "life competency skills" including communication, assertiveness, self-image, interpersonal relationships, conflict resolution, problem solution and work skills. Short-term crisis counseling has been acknowledged by mental health professionals as a powerful, viable skill, and BOP psychologists with expertise in this area have provided training and consultation to staff in institutions. BOP psychologists have traditionally provided the courts, parole officials and prison administrators with quality psychological evaluations. Leisure time activities, both structured and unstructured, reduce inmate idleness, enhance personal fitness and wellness, and promote positive life styles. The Life Skills component helps inmates develop a positive self-image and positive interaction skills, including parenting.

In response to the rapid growth in the Federal inmate population having drug abuse histories, BOP has developed a comprehensive drug abuse treatment strategy consisting of four components: drug abuse education, non-residential drug abuse counseling services, residential drug abuse program, and community-transitional services programming.

Participation in BOP's Drug Abuse Education Program is required for all inmates who have a judicial recommendation for treatment, an instant offense involving drugs and/or a violation of supervision involving drugs. The Drug Abuse Education component provides the inmate with specific instruction on the risks involved in drug using and abusing behaviors, presents strategies toward living a drug-free lifestyle, while introducing the inmate to the concepts of drug treatment and motivating the inmate to enter and participate in BOP's residential drug abuse treatment program.

Non-residential Drug Abuse Counseling Services consist of both group and individual therapy delivered through the psychological services department in each institution. These services offer flexibility and service delivery to those who do not meet the eligibility requirements for BOP's residential drug abuse treatment program. Non-residential treatment services are also provided for those inmates who have completed the residential treatment phase who remain in the institution, and who require aftercare treatment while awaiting release to the community.

The residential drug abuse program is designed for extended drug abuse treatment. Six-to-twelve-month residential programs are available in 37 institutions. The residential programs provide unit-based living with extensive assessment, treatment planning, and individual and group counseling. In late summer of FY 1996, BOP opened three residential programs at FPC Cumberland, MD, FCI Florence, CO, and FPC Texarkana, TX. In addition, a 16-bed "pilot program" for inmates with dual-disorders (substance abuse and mental health) at Lexington, KY, was recently implemented. Two existing programs at FPC Yankton, SD and FCI Rochester, MN have expanded their residential programs.

Community transition programs were originally developed for inmates who complete the residential drug abuse treatment program and are released to the community under BOP custody. This component of treatment is the most critical period for the inmate's adjustment back into society. Additionally, the community transition program now accepts inmates who have been identified as requiring

community treatment, as part of their community program plan while still in BOP custody, (i.e., Intensive Confinement Center inmates, inmates participating in the Electronic Monitoring program).

The residential programs maintained an average daily population of 4,000 inmates. Community drug transition programs served an average daily population of 1,500 by the close of FY 1996.

ACTIVITY: INSTITUTION SECURITY AND ADMINISTRATION

	Perm. FTE	FTE	Amount (\$000)
1997 Enacted	19,083	17,359	\$1,345,187
1998 Base	19,466	18,574	1,446,838
1998 Estimate	19,784	18,640	1,451,066
Increase/Decrease	318	66	4,228

BASE PROGRAM DESCRIPTION:

All institutions are assigned a security classification based in part on the physical design of each facility. There are four security levels: minimum; low; medium; and high. Additionally, there is an administrative category for specialized populations such as pre-trial, medical, etc. A separate classification system for females has been developed based on extensive research which indicates that female offenders generally do not require the same degree of security as male offenders.

Offenders are assigned a custody status which relates to the degree of supervision needed and ensures that offenders are placed in the least restrictive and least expensive correctional environment appropriate to their custody and security level needs. Each inmate is tracked through the SENTRY Information System. The result is a grouping of offenders with similar custodial needs in an institution. This significantly reduces the mixing of aggressive and non-aggressive offenders.

Within each institution, correctional officers are assigned to security posts which are primarily established on the basis of structural/visual considerations. The two basic categories of security are perimeter security and internal security. Perimeter security consists of a walled or fenced perimeter, supplemented by staffed security towers, razor wire strung between a double fence, high mast lighting to illuminate the perimeter, motorized perimeter patrols and highly technical equipment such as alarm systems, and video surveillance. Entrances through the perimeter are controlled by a series of gates, both electrical and manual, supplemented by metal detection systems and search procedures for weapon and contraband control. For all practical

purposes, all other security measures, processes and activities can be called internal security, commencing when an inmate is committed and terminating upon his/her release.

Supervision of inmates is provided in living units, visiting areas, dining halls, and any other area where inmates may be located or have access. Regularly scheduled counts are conducted several times a day in all institutions to monitor the whereabouts of inmates. Work supervisors and program personnel are held strictly accountable for all inmates under their supervision.

Violations of institution regulations are dealt with through the Inmate Disciplinary Process. Correctional staff investigate the incident, prepare a report and submit it to the Unit Discipline Committee. Depending on the seriousness of the charge, the Unit Discipline Committee may hear and decide the case or refer it to the Discipline Hearing Officer for appropriate action. An administrative remedy process provides for appeals to decisions of the Committee.

The Administrative Detention program provides for the separation of offenders from the general population who require special protection and for those who pose a serious escape risk or threat to the security and orderly operation of the institution. The Disciplinary Segregation Program provides for segregation of offenders who have committed serious prohibited acts within the institutional setting. Inmates who have committed serious prohibited acts are held in segregation only after a due process hearing where the inmate is given the opportunity to rebut the charges.

The maintenance program meets the requirements for adequately maintaining and operating the physical plants of BOP. This program finances maintenance projects estimated to cost \$10,000 or less. Maintenance requirements in excess of \$10,000 are included in the Modernization and Repair Program of the Buildings and Facilities appropriation. Facilities vary in age from recently constructed to those 100 years old. One-third of the facilities are nearly 30 years old, which is the expected life of buildings without major upgrading and renovation. At the beginning of FY 1997, BOP facilities were situated on approximately 31,071 acres and contained approximately 37 million square feet of floor area, all of which must be maintained and furnished utility services. Complex heating and air conditioning systems, high pressure steam power plants, sophisticated hospital equipment, emergency electrical power systems and fire protection and

life safety systems all require regular maintenance. Each institution maintains communication systems including complete private automatic branch exchange telephone systems, radio systems including base station and mobile units and several electronic detection and control systems. Additionally for FY 1997, this program estimates providing for the maintenance and operation of approximately 2,853 vehicles. Physical plant requirements are identified through regular inspections conducted in the on-going preventive maintenance program; formal semi-annual inspections; and through requests for specific needs identified by institution staff members.

The work within this program is accomplished almost entirely by inmate crews under staff supervision. Each work crew consists of a staff foreman and five to fifteen inmates. Each institution must have highly skilled staff with experience and training in every phase of construction and maintenance work including steamfitting, air conditioning, mechanics and/or electronics repair. A few specific jobs are contracted out because special skills or equipment items are required, or because the work may be extremely dangerous. Examples of these jobs are elevator inspection and repair, radio frequency alignment, and water tower painting.

ACTIVITY: CONTRACT CONFINEMENT

	Perm. Pos.	FTE	Amount \$000)
1997 Enacted	287	287	\$248,315
1998 Base	287	287	252,593
1998 Estimate	287	287	252,593
Increase/Decrease	0	0	0

BASE PROGRAM DESCRIPTION:

Over 10 percent of the current BOP inmate population are housed in alternative confinement.

Certain categories of Federal offenders are designated for confinement in state, local and private facilities. These include: Persons committed under the Federal Juvenile Statutes, who must be separated from adult offenders and placed in community-based facilities near their residence whenever possible; adult offenders, whose lives might be endangered in Federal facilities (protection cases); and offenders with short sentences (generally three years or less) who are placed in local detention facilities (jails) for service of sentence. Also, BOP oversees the Joint BOP and INS 1,000 and 1500 for BOP prisoners and 500 for INS Detainees) private detention facility in Arizona.

Contract confinement is provided for those offenders who: the Federal courts determine need more than probation and less than full institution confinement and services; are under probation or parole supervision but need more intensive services and/or programs than can be provided under the "community" supervision of the U.S. Probation Officer, and; are committed directly from court generally serving short sentences

In addition, BOP contracts with State, local, and private community corrections centers for community residential bed space for offenders who are eligible and need a pre-release transition program at the end of their sentences before returning to the community. Since January 1982, BOP has increased the number of inmates monitored by contract CCCs from 1,425 to a current average daily population of 6,094

CCCs provide services to inmates attempting to establish themselves as fully functioning citizens while still under supervision. Available services include individual and group counseling, supervised living quarters, and employment assistance.

All Community Corrections Centers contain two program components, a Pre-Release Component for those offenders entering the community after serving a portion of their sentence in an institution and a Community Corrections Component, which is more punitive and restrictive for all other types of offenders.

Home Confinement is a program that permits an inmate to reside at his or her own home and work at gainful employment, or participate in an alternative correctional program while continuing in official custody of the BOP. Home Confinement is a selective program that is authorized discriminantly according to an offender's needs. It is a time of testing and an opportunity for a resident to assume increasing levels of personal responsibility. At the same time, it provides sufficient restriction on a resident's freedom to promote community safety and to continue the sanction of the sentence.

Community Corrections Managers (CCMs) develop contract resources and monitor contracts for the boarding of Federal offenders in State and local institutions and in private residential community corrections centers. CCMs also make recommendations for designation of newly sentenced offenders and are responsible for the placement of direct commitments to non-Federal facilities. They provide case management services to all Federal inmates placed in non-Federal institutions, and serve as technical consultants to contractors on BOP policy. In addition, CCMs serve as the BOP liaison with members of the U.S. Marshals Service, U.S. Probation Service, U.S. Parole Commission, Federal courts, other Federal agencies, State and local government agencies and local community agencies. As of December 1986, there were 29 Community Corrections field offices throughout the United States.

BOP has a National Office of Citizen Participation (NOCP) which engages community resources in the reintegration of offenders into the community through expansion of current institution volunteer programs as well as to tap into new-traditional services.

Maribel Cuban outplacement through BOP CCCs provides highly structured residential and community-based services for those whose needs and criminal histories dictate substantial support and intensive supervision in order for them to become self-sufficient. Outplacement through family sponsorship provides transitional assistance to individuals whose needs and criminal histories do not require intensive residential or community supervision.

The Institutional Hearing Program, a cooperative effort of the BOP, INS and EOIR, was established to enable INS and EOIR to complete deportation proceedings while criminal aliens are serving their sentences.

Also included in this decision unit is the National Institute of Corrections (NIC), the only Federal government correctional agency that provides comprehensive, technical assistance to State and local correctional agencies. NIC provides technical assistance either by a correctional consultant and/or an NIC staff member to the requesting agency, or an individual or team of individuals visits another agency to gain expertise and experience in the specific area of concern. The National Institute of Corrections Academy is the training division which provides training and related services for State and local correctional practitioners. By developing and delivering training to prison, jails and community corrections practitioners, the Academy enhances interaction among correctional agencies, other components of the criminal justice system, public policymakers, and concerned public and private organizations.

ACTIVITY: MANAGEMENT AND ADMINISTRATION

	Perm. Pos.	FTE	Amount (\$000)
1997 Enacted	1,264	1,264	\$331,337
1998 Base	1,264	1,264	334,599
1998 Estimate	1,286	1,276	335,679
Increase/Decrease	22	12	1,080

BASE PROGRAM DESCRIPTION:

This budget activity covers costs associated with general administration and provides funding for the central office, six regional offices, and three staff training centers. Included are oversight functions of the executive staff; and regional and central office program managers in the areas of: personnel management; equal employment opportunity; financial management; inmate systems management; safety; staff training; facilities management; procurement and property management; mail; printing and reproduction; space management; research and evaluation; program analysis; budget development; budget execution; policy development and implementation; systems support; ADP services; and legal services.

The Bureau of Prisons is managed from a Central Office in Washington, D.C., where the Director, Assistant Directors, and Assistant Director/General Counsel guide the agency's headquarters functions, and six regional offices, each of which is led by a Regional Director. The Executive Staff, which includes the Director, Assistant Directors, and Regional Directors meet every other month to review all major issues and determine policy for BOP. The management staff at each institution, including wardens, associate wardens, and executive assistants, provide overall direction and implement policies. Staff training is provided on site at each institution; at three training centers; through external training provided by the Office of Personnel Management, National Academy of Corrections; by other Federal agencies; by colleges/universities; and by private agencies.

BOP sets and enforces high standards of personal and professional conduct in its workforce. The Office of Internal Affairs reports to the Director and provides liaison and investigative assistance to the Department of Justice Office of the Inspector General (OIG) regarding allegations of waste, fraud, mismanagement, and improper activities on the part of agency employees.

The Office of General Counsel provides legal advice, assistance, and representation to officials of the Federal Bureau of Prisons and Federal Prison Industries in the areas of Commercial Law, Legislative and Correctional Issues, Litigation, Administrative Complaints, Ethics Legal Administration and Labor Law.

The Community Corrections and Detention Division has an instrumental role in the designation of new offenders to BOP and to non-BOP facilities; develops and manages contract residential resources that provide pre-release assistance for inmates who are nearing their eventual release date, an option to institutional confinement for certain short-term offenders, and a structured environment for certain probationers, parolees and supervised releasees who need more assistance and supervision than can be provided by community supervision. In addition, the Division develops and provides oversight to contract resources that provide secure confinement for all sentenced Federal juvenile offenders; long-term Federal inmates confined in non-Federal institutions, and detention of Federal offenders serving short sentences. The Division maintains working relationships with U. S. District Courts, U. S. Probation, U. S. Marshals Service, U. S. Parole Commission, U. S. Attorneys, State, and local government agencies for the purpose of processing offenders into and out of the Bureau of Prisons. This Division also provides inmate systems and case management services to offenders in non-BOP facilities, and provides technical assistance to State and local criminal justice agencies.

The Correctional Programs Division ensures a safe, secure institution environment for inmates and staff, and encourages inmate population activities and programs designed to eliminate idleness and instill a positive work ethic. The Division provides leadership and policy direction in five areas: Correctional Services, Correctional Programs, Psychology Services, Religious Services, and Inmate Systems Management.

The Correctional Services Branch has primary responsibility for security and custody issues. This includes oversight for emergency preparedness (to include Special Operations Response Teams), locksmith operations, inmate discipline, the urinalysis program, inmate transportation, and the intelligence gathering network. Additionally, this Branch is responsible for monitoring and revising all Program Statements applicable to the Correctional Services discipline and developing specifications for all contracts pertaining to weapons, chemical agents, and emergency equipment. This Branch continues to seek ways to reduce violence in BOP facilities by handling disturbances, minimizing drug introductions, operating and maintaining security posts within Federal institutions, and enhancing the intelligence network for the detection and prevention of security hazards and the commission of crimes on Federal property.

The Correctional Programs Branch is responsible for planning, documenting, monitoring, and providing the delivery of correctional programs and services to inmates. The Branch provides guidance, instruction, and technical support to field staff in the areas of Witness Security, the central inmate monitoring system, unit management issues and training, case management, policy development, Victim/Witness and Financial Responsibility Program, and population issues. This Branch ensures inmates are placed in an institution commensurate with their security and custody requirements and sets forth and implements individual pre-release planning for inmates' successful reintegration into the community through the implementation of policy.

The Correctional Programs Branch is also responsible for completing controlled correspondence assigned by the Executive Secretariat in addition to answering written and telephonic inquiries from the general public and other law enforcement agencies.

The Psychology Services Branch is responsible for planning and monitoring the delivery of psychology services, hostage negotiation training, the suicide prevention program, psychological evaluations for the community Witness Protection Program, the employee assistance program, and victims assistance training. In addition, the Branch is responsible for drug abuse treatment program initiatives through standardized drug education programs, comprehensive treatment programs, and institution transitional services programs.

Inmate Systems Management (ISM) ensures accurate computing of sentences, proper processing of inmates and property through receiving and discharge; provides

mail services; assures special care is taken to detect the introduction of contraband; and ensures that all inmates are released on the correct statutory release date. In addition, ISM provides paralegal services; interprets court orders; cause orders; determines sentence computation problems; interprets court orders; represents institutions in court matters pertaining to inmate records; provides expert testimony regarding sentence computation, and; maintains liaison with other law enforcement agencies and authorities regarding outstanding charges, detainees, and processing under the interstate agreement.

The Special Needs Offender Coordinator works with Bureau staff at all levels to ensure that female offenders, offenders with disabilities, and offenders with mental health concerns receive the programs and services afforded the rest of the inmate population.

The Chaplaincy Services Branch facilitates opportunities for Federal inmates to pursue their individual religious beliefs and practices, and extends this mission of pastoral care to institution staff members as their personal spiritual needs may require. This Branch has provided extensive educational materials to ensure that BOP provides provision for all faith groups in light of the Religious Freedom Restoration Act. As of January 9, 1997, there were approximately 210 Chaplains serving BOP's 86 institutions.

The Health Services Division has three missions: provision of sound medical care, safety and environmental health, and food services. The Health Care Branch ensures that essential medical, dental, and mental health services are provided to inmates by professional staff consistent with acceptable community standards. The Safety and Environmental Health Branch is responsible for a safe and healthful environment in which staff and inmates can work and live. The Food Service Branch establishes requirements for healthy, nutritionally sound, and appetizing meals that meet the needs of the general population and those at nutritional risk.

The Human Resource Management Division (HRMD) is responsible for the development, implementation, and administration of a merit system for employees which includes recruiting, examining, selecting, training, and promoting individuals on the basis of their knowledge, skills and abilities regardless of their race, religion, sex, political influence, or other factors; staff discipline; contract negotiations; performance management; and oversight of security background investigations. HRMD also establishes Bureau-wide

personnel/training policies that meet legal and regulatory requirements of the Federal Government.

HRMD develops and implements the Bureau's Federal Equal Opportunity Recruitment Program plan; monitors the recruitment efforts coordinated at the regional level to ensure a diverse pool of qualified applicants are available from which to choose from for positions Bureau-wide; plans, develops, and implements the Bureau's Affirmative Action Programs for Minorities and Women, Disabled Veterans, and Persons with Disabilities; develops and operates a nationwide staffing program for the processing of job applications; manages seven nationwide Office of Personnel Management registers to provide timely processing of applications for those seeking employment with BOP; maintains registers for Correctional Officer, Correctional Treatment Specialist, Drug Treatment Specialist, Clinical Psychologist, Counseling Psychologist, Physician Assistant, and Medical Doctor; develops an effective correctional workforce through challenging staff development experiences; designs and implements management and executive level development programs to meet leadership needs; provides expert advice and guidance on matters relating to the employees' union, employee grievances, and employee disciplinary actions; provides agency representation before administrative third parties; provides advice on local negotiations; represents the agency at national negotiations; ensures all positions are properly classified and employees receive all benefits, rights and entitlements; conducts research and analysis of Human Resource programs to support the development and enhancement of various initiatives; responsible for the personnel security and background investigation program, ensuring all employees receive appropriate background investigations and subsequent reinvestigation, with employment security approvals processed in a timely manner.

BOP operates a Training Academy at the Federal Law Enforcement Training Center (FLETC), Glynnco, Georgia, which provides introductory correctional training for all new employees. The Training Academy provides facilities for the housing of students, training in academics, firearms and self-defense. Course materials provide instruction on hostage situations, ethics, interpersonal communication skills, special offenders, inmate discipline, legal procedures, etc. BOP also conducts Self-defense Instructor training at the FLETC, Glynnco facility. BOP conducts advanced correctional skills training such as disturbance control, firearms, side-handle baton and bus operations, at the FLETC, satellite facility in Artesia, New Mexico.

Most of BOP's advanced workshops, and managerial and technical training are held at the Management and Specialty Training Center in Aurora, Colorado. A wide range of courses are available for institution Executive Staff, department heads and technical support staff. These include courses for associate wardens, correctional services supervisors, food service administrators, legal staff, education and recreation staff, UNICOR, trust fund staff and others.

Approximately 80 percent of BOP's training is conducted on site at the institutions. Each institution has an Employee Development Manager who plans, manages, and organizes the institution's training programs. Certain institution-conducted courses are required by national policy. For example, it is mandatory that each new employee receive two weeks of orientation training immediately upon entry-on duty. Each experienced employee must be given correctional refresher training annually in subjects such as self defense, disturbance control, firearms, fire protection, and inmate supervision. Each new case manager and unit manager must complete a self-study course in case management operations within sixty days of appointment. Most other positions also have mandatory training requirements.

The Information, Policy, and Public Affairs Division facilitates the use and dissemination of information within BOP and to external constituents, including Congress, other components of Federal, State, and local governments, members of the criminal justice community, the media, and the general public. The Division includes offices of Public Affairs, Research and Evaluation, Information Systems, Policy and Information Resource Management and Security/Technology.

The Office of Public Affairs is responsible for public information, public and media relations, Congressional liaison and communications functions and provides a wide range of public information services to the media, the public, and other organizations; serves as primary contact for six regional offices and 86 institutions seeking advice on media policy and national media contacts. In addition, this office coordinates responses to major media contacts; responds to numerous inquiries from local and national news organizations; compiles a detailed weekly report from the Director to the Attorney General; tracks and analyzes legislation in coordination with the Department of Justice Office of Legislative Affairs; maintains direct contact with Members of Congress and their staffs; responds to Congressional inquiries and concerns as necessary; prepares the Director for Congressional hearings and visits with members of Congress; works with the Federal Judicial Center in coordinating Sentencing Institute

Seminars for Federal judges; develops documents and publications about Bureau-related issues, and prepares informational videotape programs. This office also develops projects that enhance public knowledge of BOP and its programs; coordinates information regarding Community Relations Boards in BOP institutions nationwide and coordinates and advises on international issues of interest to BOP; maintains liaison with foreign governments and international organizations requesting technical assistance, advice and information, and assists other U. S. Government agencies in their efforts to provide international assistance.

The Office of Public Affairs also conducts historical research; develops books, articles, and special presentations on BOP history for both internal and external audiences; responds to requests from BOP offices, other Federal agencies, scholars, the press, and the general public for historical information and records; collects and preserves historical records and artifacts; conducts oral history interviews; and develops displays on BOP history. The Office of Public Affairs handles records management issues for BOP by devising records disposition schedules and standards, compiling a comprehensive agency records schedule, conducting liaison with the National Archives and Records Administration, coordinating transfers of records to the National Archives, and providing staff training and advice on records management procedures.

The Office of Research and Evaluation provides information relevant to current and future questions in the field of corrections through social science research which include analyzing current and proposed government policies, conducting studies, developing and maintaining information systems, producing and distributing reports, responding to information and technical assistance requests, and processing research proposals. The Research Office generates and distributes reports on such topics as recidivism, institution social climate, substance abuse problems of inmates, shock incarceration, impact of Drug Law Sentencing on the prison population, the relationship of work and vocational training of inmates to post-release employment and criminality, and privatization. The office also responds to requests for prison impact assessments, information or technical assistance from BOP staff and outside agencies; and generates data on such issues as population projections, inmate classification, inmate misconduct, non-citizens, low-risk segments of the prison population, and career paths of staff.

The Policy and Information Resource Management Branch is responsible for system-wide management of directives, forms, printing, electronic publishing, quality assurance review of the Bureau's directives before and after issuance.

Moreover, the Branch has Bureau-wide coordination responsibility for the management and safe keeping of information as a valuable and vital resource to the successful day-to-day operation of the agency. The Branch also has responsibility for coordinating the agency's information resource management strategic planning process.

The Office of Security Technology is responsible for identifying, evaluating, assisting, and developing security/technology initiatives and equipment within BOP; centralizing the identification and screening of new equipment and technology for potential use; establishing relationships with other Federal and State law enforcement agencies; responding to field requests for technical solutions to operational problems; coordinating evaluations with other BOP branches, divisions, regions and institutions potentially affected; distributing information to institutions and offices regarding the results of evaluations and tests; and establishing standards for the use of security systems.

The Office of Information Systems ensures the provision of modern, automated data and information systems for all BOP locations including computer services, application system development, technical support, personal computer support, financial systems, and field support.

The Program Review Branch reviews compliance with the laws, regulations and policy, adequacy of controls, efficiency of operations, and effectiveness in achieving program results, including exploring and developing all pertinent and significant information necessary to properly evaluate, support, and present findings. Through this process, the Branch is able to provide assurance that BOP programs are operating within policy and are free of fraud, waste, abuse, mismanagement, and illegal acts.

The Program Review Division facilitates organizational self-assessment by BOP managers to determine strengths and weaknesses; gathers information about BOP operations in a consistent and objective manner; provides accurate, relevant information to management in a timely manner; provides training, insight and strategies to assist management in the strategic planning process and the

efficient, effective gathering, monitoring and sharing of data; coordinates and monitors appropriate oversight activities of audit and regulatory authorities; and ensures that effective management and operational procedures exist throughout the Bureau of Prisons.

The Competition Advocate seeks to enhance deficit reduction, avoid wasteful spending, and accrue savings to the BOP through various competitive strategies which are designed to reduce contract costs.

The Program Analysis Branch is responsible for monitoring and evaluating BOP programs in order to provide timely and relevant information about specific program performance and Bureau-wide patterns and trends. Program Analysis Branch also assists BOP staff with the development of management information systems and trains them in the use of these systems to monitor, evaluate and plan.

The Strategic Management Branch facilitates, monitors, and evaluates the agency's implementation of the Federal Managers' Financial Integrity Act by coordinating management assessments, providing a quality assurance mechanism for the progress review process, and organizing the Year-End Management Control Report for the Director, which is forwarded to the Attorney General. The program provides a liaison service for the Bureau of Prisons' contacts with external audit agencies, such as the General Accounting Office, the Office of Inspector General, and the American Correctional Association. The Strategic Management Branch encourages the implementation of strategic planning through training, publication, and the dissemination of strategic planning updates, and by providing assistance to agency managers in the development and implementation of strategic goals, objectives and action plans. The branch is responsible for soliciting input from staff regarding needed changes in the agency and providing feedback on suggestions.

The Administration Division provides the resources and support necessary for BOP to perform in an effective and efficient manner. This includes the development of budget requests; the stewardship of financial resources; procurement and property management; the design and construction of new correctional facilities, as well as the renovation and maintenance of existing facilities; and other administrative support services required by the organization.

The Budget Development Branch formulates BOP's resource requests including budget submissions, amendments, supplementals, prison impact assessment estimates and reprogrammings; justifies the budget estimates by preparing formal budget exhibits, written testimony and detailed data which support the agency's funding requests before the Department of Justice, the Office of Management and Budget, and the House and Senate Appropriations Subcommittees; and represents the BOP at various interagency budget related workgroups.

The Budget Execution Branch ensures operation within the appropriated funding and position levels by developing and overseeing adequate monitoring and control mechanisms; develops national policy to ensure compliance with requirements and instructions issued by agencies such as the Department of Justice, Office of Management and Budget, General Accounting Office, Department of Treasury, etc.

The Finance Branch ensures that all financial transactions are recorded in an accurate and timely manner in the financial management system in order to produce the financial reports necessary for the monitoring of the financial status of the Bureau and its institutions; develops BOP accounting policies and internal controls to ensure compliance with the requirements of the Department of Justice, the Office of Management and Budget, the General Services Administration, and the Department of Treasury; pays Central Office vendor and travel payments; manages contract programs which support the financial management mission of the Bureau such as American Express Travel Charge Card Program, the Mellon Bank third party draft program, the Visa Card Small Purchase payments, and the Central Office Travel Management Center contract; and develops specifications for the design and operation of the Bureau's financial management system.

The Capacity Planning Branch coordinates and analyzes information related to capacity planning, covering such varied areas as female offenders, detention needs, medical facilities, population projections, new facilities construction and contract confinement; produces and updates the Bureau's Capacity Plan, which is the official composite plan for the utilization of correctional capacity; and produces the Federal Detention Plan, which is an interagency plan between the Bureau of Prisons, Immigration and Naturalization Service, and the U. S. Marshals Service. The Branch is also responsible for reviewing rated capacity changes at each institution and assuring that those changes are properly reflected in SENTRY.

Facilities Management directs and monitors the existing institution repair and improvement program; establishes policy governing the maintenance of existing facilities; and provides technical support to both BOP staff and outside entities regarding architectural, engineering, and facilities issues.

The Design and Construction Branch is responsible for the planning, design, and construction of new institutions for the Bureau of Prisons; develops design and related technical standards and policies for development of new BOP facilities; participates in BOP's long range capacity expansion planning; and provides technical advice and support within BOP and to outside entities related to architectural, engineering, construction, and project management issues.

The Procurement and Property Branch develops Bureau-wide procurement policy to ensure goods and services are acquired in a timely manner, within Federal statutory regulations, and at the best value to the Government; provides accurate accountability and control of BOP's real and personal property resources, and automated data processing equipment to include inmate telephone system and automated collect call operator services; provides direct national contract services in the areas of community corrections, new facility construction, prime vendor pharmaceutical products, and other large volume requirements; provides contract oversight and training to regions and institutions; provides direct contract services and develops procurement and oversight policies for the private operation and management of secure adult corrections/detention facilities.

The Site Selection and Environmental Review Branch identifies sites for new correctional facilities; provides public information programs for local officials and the general public to garner support for proposed facilities; and coordinates the development of the required environmental impact studies.

Finally, the Trust Fund Branch provides commissary services; ensures the financial integrity of the Trust Fund and Inmate Deposit Fund; and implements and manages a Bureau-wide inmate telephone calling program.

INITIATIVE #1

	Perm. Fog.	FTE	Amount (\$000)
Activations			
Inmate Care	119	19	\$1,144
Institution Security & Administration	279	47	2,409
TOTAL	398	66	\$3,553

Proposed Actions

This initiative seeks to address the following objectives:

- 1) Activate 1 sentenced capacity facility in FY 1998, which will add 1,152 beds.
- 2) Reduce the overcrowding rate.
- 3) Provide offenders incarcerated in BOP with a nutritional diet; comprehensive, accessible health care services; clean clothing, footwear, linens, toiletries and stationery; and to provide manage the Inmate Trust Fund.
- 4) Establish a safe, humane environment which minimizes to the extent possible, the detrimental effects of confinement; and to provide a variety of counseling programs which are most likely to aid inmates in a successful adjustment to the institution and, upon release, a successful return to the community.
- 5) Provide general and occupational education opportunities to all inmates desiring or required to participate; provide Federal offenders with activities to improve their physical and mental health and promote the development of personal, interpersonal and social skills to better enable them to cope with the psychological and physical impact of their incarceration; and to enhance post-release employment and positive life styles.

- 6) Provide all prisoners with reasonable and equitable opportunities to pursue individual religious beliefs and practices within the constraints of confinement.

For FY 1998, BOP is requesting a total of \$3,553,000, 398 positions and 66 FTE for one facility which will require activation resources. Beaumont, Texas will add a total of 1,152 critically needed beds. Opening a new facility is the culmination of four steps: site selection, design, construction, and activation. To avoid delays in acceptance of inmates, it is necessary to staff facilities a minimum of three months prior to activation, and equipment which requires long lead time is ordered at least six months prior to activation.

FCC Beaumont will be BOP's largest complex consisting of the following security levels: minimum, low, medium, and high. This complex will add a total of 4,160 beds when fully activated. In addition, this will be the site of the health care privatization project directed by Congress. BOP's medium security prisons are 45 percent overcrowded, nearly double the systemwide rate. Higher security capacity is required as the federal inmate population has become increasingly more violent. Thus, resources to activate Beaumont medium are critical for FY 1998 to address the increasingly violent population and relieve overcrowding.

INITIATIVE #2

	Perma. Pos.	FTE	Amount (\$000)
Intelligence Gathering			
Institution Security and Admin.	20	10	\$1,205
Management and Administration	4	2	242
Total	24	12	1,447

Proposed Actions

This initiative seeks to address the following objectives:

- 1) Evaluate and assess the system for responding to significant incidents and develop methods for reporting accurate and timely communication between institutions, regions and the Central Office.
- 2) Continue to enhance the BOP's ability to adequately respond to emergencies.
- 3) Implement and monitor comprehensive plans to more effectively manage disruptive, aggressive inmates in our population.

In FY 1998, BOP is requesting a total of \$1,447,000, 24 positions and 12 FTE to enhance its ability to identify the skills, capabilities, and background of inmates coming into BOP. BOP believes that the best way to do this is by coordinating its intelligence gathering efforts with other law enforcement organizations, including investigative and prosecutorial entities. BOP seeks to establish an intelligence structure to provide information that would be vital for day-to-day prison operations. The purpose is to collect intelligence on Security Threat Groups coming into BOP institutions. These groups include inmates that may be collaborating to threaten the safety of other inmates, BOP staff, institutions, the local community, or national security. Often, information useful to BOP, such as whether an inmate possesses skills that could pose unique problems within prisons, may not be gathered or deemed useful by other law enforcement organizations.

The 24 positions would be deployed as follows: 2 positions each at: MDC Brooklyn, New York; MCC Chicago, Illinois; MCC Guaynabo, Puerto Rico; MDC Los Angeles, California; FDC Miami, Florida; MCC New York, New York; MCC San Diego, California; FDC Seattle, Washington; USP Atlanta, Georgia; and FCI Otisville, New York (Atlanta and Otisville are Detention Overflow facilities). Three positions will be placed at the BOP Intelligence Section in the Central Office and 1 position at the FBI, Counter-terrorism Center.

The detention centers, including the overflow facilities, are gateways into BOP and are located in major metropolitan areas with high gang populations. Intense intelligence gathering at that point is crucial in order for BOP to appropriately designate (determine security level), manage and place inmates. Of the two positions, one would be an Intelligence Officer and the other would be an Intelligence Research Specialist.

The intelligence officer would participate in task forces, and criminal intelligence squads, and generally become a member (in a limited role) of key operations expected to result in the conviction of sophisticated, particularly dangerous, or numerous inmates. The intelligence research specialist would consolidate, analyze, and process the data. The three positions requested for BOP's Intelligence Section would centrally coordinate the activities and sharing of information gathered by the intelligence officers and analysts.

The FBI requested that BOP place one employee at the Counter-terrorism Center, which is expected to have representatives from various law enforcement organizations. BOP requires a presence to gain knowledge on terrorist threats from existing inmates and persons under surveillance who may have contacts with inmates or may, themselves, be convicted.

Overall, the proposed structure would enable BOP to focus on particular detainees as soon as they arrive, because information would be gathered beforehand. Since many outside contacts are made during the first few days of an inmates' stay, the initiative is also expected to yield valuable information to other law enforcement entities.

INITIATIVE #3

	Perm. FTE	FTE	Amount (\$000)
Electronic Freedom of Information	19	9	\$614
Institution Security and Admin.	18	10	838
Management and Administration	37	19	1,452
Total			

Proposed Actions

This initiative seeks to address the following objectives:

- 1) To bring FOIA into the Information Age by requiring that information maintained by the government in electronic form be subject to disclosure -- a principle already established in the case law. It also requires agencies to maintain their records in forms or formats "that are reproducible" and enables requesters to secure responses to FOIA requests in an electronic format -- e.g., by computer diskette or CD-ROM -- if they are "readily reproducible by the agency in that form or format;"
- 2) To ensure better agency compliance with the time limits imposed by the Act (extended from 10 days to 20 working days) and to limit the availability of "structural stays" under the Open America case precedent unless an agency demonstrates "reasonable progress in reducing" its existing backlog; and
- 3) To provide for "expedited processing" of certain requests, and judicial review thereof, where the requester demonstrates a "compelling need," which is defined to include, for requests by persons "primarily engaged in disseminating information, urgency to inform the public concerning actual or alleged Federal government activity."

For FY 1998, BOP is requesting a total of \$1,452,000, 37 positions and 19 workyears to meet requirements of the newly passed Electronic Freedom of Information Act Amendments of 1996. This action amends Section 552 of title 5, United States Code, popularly known as the Freedom of Information Act, to allow public access to information in an electronic format, and to impose new requirements related to the processing of requests submitted under the Freedom of Information and Privacy Acts.

PERFORMANCE MEASUREMENT TABLE PRESENTED BY GENERAL GOAL						
GENERAL GOAL 6 BOP will continue to seek opportunities for expanding the involvement of community, and local state, and Federal agencies, in improving the effectiveness of the services it provides to offenders and constituent agencies. The active participation by Bureau staff to improve partnerships will allow the Bureau to carry out its mission within the criminal justice system and to remain responsive to other agencies and the public. BOP will develop partnerships to focus the shared responsibility for the establishment of a supportive environment promoting the reintegration of offenders into the community.

Status of Congressionally Requested
Studies, Reports, and Evaluations

The Conference Report for the Department of Commerce, Justice, and State, the Judiciary and Related Agencies for Fiscal Year 1997 directed the Bureau of Prisons to submit the following report back to the Committees on Appropriations of both the House and Senate

1 Prime Vendor Assistance Program due June 1, 1997

BOP is to provide a report on the findings of the evaluation of the prime vendor subsistence pilot program by no later than June 1, 1997, and that no expansion or extension of this program beyond April 1997 shall occur prior to the Committee's review of BOP's findings

BOP's Northeast Region has been piloting the vendor subsistence program, a workgroup has established clear criteria for measuring the results of the program. The report is expected to be compiled and forwarded as directed by June 1, 1997

2 Five Year Prison Privatization Demonstration Project at FCI and PPC Taft, California

The Request for Proposal was issued November 27, 1996 and closes February 18, 1997. Between 40 and 50 vendors have expressed an interest in submitting proposals. When awarded, the contract will be for three years with one year options to extend up to ten years

EY 1996 Report Update
National Institute of Corrections (NIC)

1 Section 151 of the Fiscal Year 1996 District of Columbia Appropriation (P.L. 104-134) directed the NIC acting for and on behalf of the District of Columbia to hire a consultant to develop a plan by September 30, 1996 for short-term improvements on a limited number of administrative and physical plant reforms that can be completed within a three to five month time-frame and at least four optional long-term plans for the Lorton Correctional Complex. The language also requires that NIC submit their reports to the President, the Congress, the Mayor, and the District of Columbia Financial Responsibility and Management Assistance Authority. The short-term plan to be submitted no later than September 30, 1996, long-term no later than December 31, 1996

The short-term plan was prepared and forwarded as required. BOP/NIC requested an extension for completion of the long-term study until January 31, 1997

Pos. WT Amounts

1976 Adjustment to Base:

Increases (Automatic, non-policy):

1. **1976 pay raise**..... This provides for the proposed 3.0 percent pay raise to be effective in January, 1976 and is consistent with Administration policy included in the 1968 General Appropriations Act. This includes Locality pay adjustments as well as the general pay raise. The amount requested, \$34,930,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$25,499,000 for pay and \$9,431,000 benefits = \$34,930,000).
2. **Annualization of 1977 pay raise**..... This pay raise is the first quarter amount (October through December of the 1977 pay raise) which is being provided for in the 1976 fiscal year. The amount requested, \$10,996,000, represents the pay amounts for three-quarters of the year (\$8,227,000 for compensation and \$2,769,000 for benefits).
3. **Annualization of 2,465 additional positions approved in 1977**..... This provides for the annualization of 2,465 additional positions provided in 1977 Congressional Action for activations of new prisons. This request includes nonrecurring costs for one-time items associated with the increased positions.

Increases (Automatic, non-political)		Page	VI	Amount
4.	<u>Accident Compensation</u> This increase reflects the billing provided by the Department of Labor for the actual costs in 1998 of employees' accident compensation, which will be billed in 1999. The 1998 increased cost will be \$1,924,000.	\$1,924
5.	<u>Medical Hospital Service Costs</u> The Department of Health and Human Services is projecting an increase in health care costs. The Department is applying a factor of 5.5 percent against medical services. An increase of \$4,211,000 will be required for 1999.	4,211
6.	<u>Mileage Allowance Rate Increase</u> The mileage allowance rate has increased from 30 cents to 31 cents per mile. An increase of \$55,000 is requested in 1999 to cover this rate adjustment.	55
7.	<u>Correspondence Management System</u> An increase of \$23,000 is requested in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system, provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability.	23
8.	<u>Investigative/Inspection</u> The Department of Justice requires that appointments for Government employees be made subject to investigation. Additional funding is required to cover the costs of additional contractor support needed to ensure timely compliance with this Executive Order. It is critical to accommodate the Department's security requirements by ensuring investigations and reassignments are timely initiated on newly appointed civilian officers and employees.	42
9.	<u>Spectrum/Frequency Management</u> Public Law 104-134 authorizes the Secretary of Commerce to charge federal agencies for spectrum management services. The National Telecommunications and Information Administration estimates that the Department of Justice costs for 1998 will be \$723,000 based on the annual number of frequency assignments. Given the dependence of the Department's law enforcement operations on sufficient and available frequency assignments, it is necessary to continue operations. Funding of \$17,000 is requested for the Bureau of Prisons.	17
10.	<u>General Pricing Level Adjustments</u> This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 1.5 percent against the existing price base. The increased costs for the General Services Administration will be funded through the existing system instead of by the private sector. The factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs, and utilities.	14,612
11.	<u>Northern Mariana Islands</u> Prior to 1998, the Department of Interior administered the Department of Justice's costs for addressing the Northern Mariana Islands. The Department of Justice's costs for the Northern Mariana Islands in 1998, reimbursement of these costs will not be available. Funding of \$100,000 is requested to maintain current efforts in CNMI.	100

Federal Prison System
Violent Crime Reduction Program, FY
Summary Statement
Fiscal Year 1998

The Violent Crime Control and Law Enforcement Act of 1994 (VCCLEA) established the Violent Crime Reduction Trust Fund (VCRTF). It also requires the Bureau of Prisons (BOP) to provide residential treatment to 50 percent of all eligible inmates by the end of FY 1995, 75 percent by the end of FY 1996 and 100 percent by the end of FY 1997.

In response to the rapid growth in the Federal inmate population having drug abuse histories, BOP has developed a comprehensive drug abuse treatment strategy consisting of four components: drug abuse education, non-residential drug abuse counseling services, residential drug abuse program, and community-transitions services programming. Participation in BOP's Drug Abuse Education Program is required for all inmates who have a judicial recommendation for treatment and/or a history of drug use.

The Drug Abuse Education component provides the inmate with specific instruction on the risks involved in drug using and abusing behaviors, presents strategies toward living a drug-free lifestyle. While introduced in 1994, the inmate to the concepts of drug treatment and motivating the inmate to volunteer for participation in BOP's residential drug abuse treatment program.

Non-residential Drug Abuse Counseling Services consist of both group and individual therapy delivered through the psychological services department in each institution. These services offer flexibility and service delivery to those who do not meet the eligibility requirements for BOP's residential drug abuse treatment program. Inmates who do not meet the eligibility requirements for the residential treatment program are referred to the non-residential program, and who require aftercare treatment while awaiting release to the community.

The residential drug abuse program is designed for extended drug abuse treatment. Six-to-twelve-month residential programs are available in 37 institutions. The residential program provides unit-based living with extensive assessment, treatment planning, and individual and group counseling. In late summer of FY 1996, BOP opened three new residential programs at FPC Cumberland, MD; FCI Florence, CO, and FPC Teasdale, TX. In addition, a new "Prison to Prison" program was initiated in FCI Lexington, KY, has recently implemented. Two existing programs at FPC Yorkton, SD and FCI Rochester, MI have expanded their residential programs.

Community transition programs were originally developed for inmates who complete the residential drug abuse treatment program and are released to the community under BOP custody. This component of treatment is the most critical period for the inmate's adjustment back into society. In FY 1995, the community transition program was extended to accept inmates who have been identified as requiring community treatment, as part of their community program plan while still in BOP custody, (i.e., Intensive Confinement Center inmates, inmates participating in the Electronic Monitoring program).

Federal Prison System
Violent Crime Reduction Program
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.]

Violent Crime Reduction Program

For substance abuse treatment in Federal prisons as authorized by section 3201(e) of the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322), as amended (P.L. 103-660), the Federal Prison System is authorized to receive funds from the Violent Crime Reduction Trust Fund. (Department of Justice Appropriations Act, 1997.)

\$26,135,000

No substantive changes proposed.

BASE PROGRAM DESCRIPTION: In response to the rapid growth in the Federal inmate population having drug abuse histories, BOP has developed a comprehensive drug abuse treatment strategy consisting of four components: drug abuse education, non-residential drug abuse counseling services, residential drug abuse program, and community-transitional services programming.

Participation in BOP's Drug Abuse Education Program is required for all inmates who have a judicial recommendation for treatment, an instance offense involving drugs and/or a violation of supervision involving drugs. The Drug Abuse Education component provides the inmate with specific instruction on the risks involved in drug using and abusing behaviors, presents strategies toward living a drug-free lifestyle, while introducing the inmate to the concepts of drug treatment and motivating the inmate to enter and participate in BOP's residential drug abuse treatment program.

Non-residential Drug Abuse Counseling Services consist of both group and individual therapy delivered through the psychological services department in each institution. These services offer flexibility and service delivery to those who do not meet the eligibility requirements for BOP's residential drug abuse treatment program. Non-residential treatment services are also provided for those inmates who have completed the residential treatment phase who remain in the institution, and who require aftercare treatment while awaiting release to the community.

The residential drug abuse program is designed for extended drug abuse treatment. Six-to-twelve-month residential programs are available in 37 institutions. The residential programs provide unit-based living with extensive assessment, treatment planning, and individual and group counseling. In late summer of FY 1996, BOP opened three residential programs at FPC Cumberland, MD, FCI Florence, CO, and FPC Texarkana, TX. In addition, a 16-bed "pilot program" for inmates with dual-disorders (substance abuse and mental health) at Lexington, KY, has recently implemented. Two existing programs at FPC Yankton, SD and FCI Rochester, MN have expanded their residential programs.

Community transition programs were originally developed for inmates who complete the residential drug abuse treatment program and are released to the community under BOP custody. This component of treatment is the most critical period for the inmate's adjustment back into society. Additionally, the community transition program now accepts inmates who have been identified as requiring community treatment, as part of their community program plan while still in BOP custody, (i.e., Intensive Confinement Center inmates, inmates participating in the Electronic Monitoring program).

PERFORMANCE MEASUREMENT TABLE PRESENTED BY GENERAL GOAL

GENERAL GOAL 5: BOP provides services and programs to address inmate needs, providing productive use - of - time activities, and facilitating the successful reintegration of inmates into society, consistent with community expectations and standards

Justification of Adjustments to Base
(dollars in thousands)**

1998 Adjustments to Base:

Increases (Automatic and Policy):

	Est.	MT	Amount
1. 1998 pay raises.....	\$301
This request provides for the proposed 2.8 percent pay raise to be effective in January of 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$301,000, represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$226,000 for pay and \$85,000 benefits = \$301,000).			
2. Equalization of 1997 pay raises.....	45
This pay equalization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$45,000, represents the pay amounts for three quarters of the year (\$33,000 for compensation and \$12,000 for benefits).			
3. Within-grade increases.....	108
This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition or separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$78,900 for pay and \$29,100 for benefits.			
4. General across-the-board adjustments.....	12
This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.0 percent against those subject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs, and utilities.

Federal Prison System
BUILDING AND FACILITIES
FUNDING REQUEST
FISCAL YEAR 1998

The Federal Bureau of Prisons (BOP) is requesting for 1998, a total of \$492,833,000, 204 positions, and 291 workyears for Buildings and Facilities. This request represents an increase of 7 positions and 6 workyears, and a net decrease of \$142,887,000 from the 1997 enacted level.

The mission of the BOP is to protect the public by confining offenders in the controlled environments of prisons and community-based facilities that are safe, humane, and appropriately secure, and which provide work and other self-improvement opportunities to assist offenders in becoming law-abiding citizens. The BOP currently manages 100 facilities in all regions of the country. As of January 9, 1997, BOP supervised 106,358 inmates, including nearly 94,000 in BOP facilities and more than 12,000 federal inmates in community corrections centers, contract detention centers, other contract facilities, and home confinement. By the end of year 2001, we project an increase of 29 percent in the total population to 136,676.

There are two major appropriations for BOP Buildings and Facilities and Salaries and Expenses. The purpose of the Buildings and Facilities appropriation is to enable construction of a safe and secure environment which provides a complete range of program and activities for improving offenders' capabilities to achieve a law-abiding life. The purpose of the Salaries and Expenses appropriation is to maintain existing facilities thereby protecting capital investment. Hence, the Buildings and Facilities appropriation has two distinct units, (1) New Construction and (2) Modernization and Repair. The request for funding to accomplish major initiatives are summarized under each section unit.

The BOP has fully reviewed the status of construction on previously funded projects. In addition, BOP personnel reevaluated those projects for which site and planning funding has already been provided to determine if construction monies could be obligated in 1998 or whether the construction funding request should be deferred. The projects for which funding is requested in 1998 will allow BOP to maintain the necessary capacity expansion to keep pace with inmate population growth and increase the security at two U.S. Penitentiaries by converting dormitory housing to cells.

New Construction

For sentenced federal offenders, \$10,415,000 is requested to build a 900 bed high security facility and to complete a 256 bed minimum security facility at Castle Air Force Base, California. Preliminary funding (\$11,000,000) was provided in 1996 for site and planning at Castle. Currently, the project is in the design phase. The project is a high security facility which will house inmates who are considered high risk. The facility will be a state of residence as practicable. Therefore, construction of a high security facility in this area will allow BOP to better manage the influx of West coast gang members and other disruptive groups entering the Federal Prison System from this region. In addition, this facility will take advantage of existing infrastructure due to military base closures and minimize costs associated with purchasing this land.

Scheduled New Construction

	Fy81	Work- Year	Amount \$1,000's
Castle Air Force Base, California High and Minimum Security Facilities.....	6	3	\$120,615
Total, New Construction.....	6	3	120,615

The BPO has an ongoing Modernization and Repair (MAR) program for the replacement and/or rehabilitation of obsolete structures and plant facilities. The program has been operating since 1970; during this time, BPO has experienced historical levels of activity requiring approximately \$30 million per year in capital expenditures. For 1998, an increase of \$16,707,000 is being requested for its facilities, which subjects the physical plants to heavier than normal use. For 1999, an increase of \$16,707,000 is being requested for modernization and repair funds to convert dormitory style housing into single cells at the U.S. Penitentiaries at Lewisburg and Lampas. This style housing does not provide an appropriate level of security for some of the most dangerous felons in the Federal Prison System. Open dormitories do not allow for securing inmates in the unit, and pose management, safety and security problems. The request is as follows:

	<u>Pos.</u>	<u>Work- Year</u>	<u>Amount \$ (000's)</u>
Convert Dorms to Cells at 2 U.S. Penitentiaries (Louisburg and Leppos).....	2	2	\$16,707
Total, Modernization and Repair.....	2	2	16,707

Buildings and Facilities

Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Buildings and Facilities

For planning, acquisition of sites and construction of new facilities; remodeling, repair and maintenance of existing facilities; purchase and acquisition of facilities and equipment; siting, design, construction, equipping of such facilities for penal or correctional use, including all necessary expenses incident thereto, by contract or force account; and contracting, remodeling, and equipping necessary buildings and facilities at existing penal and correctional institutions, including all necessary expenses incident thereto, by contract or force account.

The total amount available to carry out the authorized activities provided for herein shall be \$70,000,000, which shall be available to carry out the authorized activities provided for herein until expended. That portion of United States prisoners may be used for work performed under this appropriation as deemed appropriate by the Attorney General, subject to the following conditions:

(1) Not more than ten percent of the funds appropriated to "buildings and facilities" in this Act or any other Act may be transferred to "salaries and expenses," except upon notification by the Attorney General to the Committee on Appropriations of the House of Representatives and the Senate in accordance with provisions of Public Law 86-369.

(2) Not more than five percent of the total appropriation shall be available for the renovation and construction of United States Penitentiary, Federal Reformatory for Women, and Federal Prison for Women at Leavenworth, Kansas, and Federal Prison for Women at Maricao, Puerto Rico.

18 U.S.C. 6003, 6009, 6010, 6013(a)(4), 6042, 6122; Department of Justice Appropriations Act, 1997.

Explanation of Changes:

1. In Fiscal Year 1998, all resources in the Buildings and Facilities appropriation for renovation of the United States Marshals Service (USMS) prisoner holding cells are transferred to the USMS appropriation. This includes \$2,300,000 from the Buildings and Facilities base.

Mission: The Federal Bureau of Prisons (BOP) protects society by confining offenders in the controlled environments of prisons and community based facilities that are safe, humane, and appropriately secure, and which provide work and other self improvement opportunities to assist offenders in becoming law-abiding citizens.

General Goals:

- 1) BOP will proactively manage its offender population to ensure safe and secure operations.
- 2) BOP will maintain its facilities in operationally sound conditions and in compliance with security, safety and environmental requirements.

New Construction and Expansions
1997 Enacted
1998 Base
1998 Estimate
Increase/Decrease

BASE PROGRAM DESCRIPTION: The Bureau of Prisons continuously reviews capacity requirements, considering the projected inmate population level, current law enforcement initiatives, geographic origin of the confined population, and the age and condition of present facilities. As Federal inmate population levels are projected to exceed the capacity of the Bureau of Prisons, every possible action is taken to keep institutional overcrowding at manageable proportions to ensure that Federal inmates continue to serve their sentences in a safe and humane environment.

The Federal Prison System (FPS) is at the end of the administration of justice pipeline. Most other criminal justice agencies have at least some degree of discretion in controlling their workloads, typically through priority systems developed to ensure that the important cases are handled. Prison systems, however, have virtually no discretion and must accept all inmates sentenced to confinement by the courts.

There has been a substantial increase in Federal law enforcement, prosecutorial and adjudication activity during the past decade. Time served in prison increased significantly, especially for drug-related offenses. The Federal Prison System has responded by increasing the number of inmates and the amount of time inmates must serve in prison. Low, however, BOP's population growth is more sensitive to changes in rate of admissions and less sensitive to changes in sentencing which occurred in the last decade. To accommodate the increasing population in the most cost effective manner, the BOP follows a policy of adding capacity through the utilization of contract facilities, expansion of existing facilities, the acquisition and conversion of military and other properties to prison use, and the construction of new prisons.

1998 Base	120	120	87,343
1998 Estimate	120	120	100,000
Increase/Decrease	0	0	12,657

BASE PROGRAM DESCRIPTION: The Modernization and Repair (MDR) program provides the resources to undertake essential rehabilitation and renovation or replacement projects at existing institutions to ensure that structures, utilities systems, and other plant facilities are kept in a good state of repair. Proper maintenance, modernization and repair of our existing institutions is essential. Failure to adequately maintain structures and utility systems erodes capital investment and multiplies the costs in future years for accomplishing the required maintenance and repair. Most important, failure to maintain structures can cause direct and/or indirect security problems.

Work is identified by two specific categories of projects: major line item requirements (projects valued at \$500,000 or more) for which funds are specifically requested by project; and repair and improvement (RI) requirements (projects valued at \$10,000 to under \$500,000). RI projects address immediate needs resulting from routine repairs, emergencies, correctional program changes, etc., and are considered the base requirements for this program.

Most maintenance and repair projects are performed using inmate crews. This provides work for inmates and labor for the work performed. Inmate work crews require staff supervision to direct the work being performed and for obvious security reasons. Thus, nearly every project large enough to be listed as a line item, regardless of the number of projects per location, will require staff positions and workyears.

Of 86 BOP institutions, 19 are over 50 years old and more than 40 facilities are over 30 years old. As these facilities age, they require continual maintenance and repair. The Department of Corrections (DOC) standards. Moreover, prison facilities are subjected to heavier than normal use, especially during periods of high overcrowding.

BOP classifies MDR projects under six categories (Life Safety, General Improvements, Major Renovations, Utility Improvements, Hazardous Waste and Energy Savings). Within each of these categories are special projects to meet various regulations and codes requirements. Life Safety projects are required to meet various codes and standards and are usually completed within a specific time period. General Improvements projects are established to modernize and/or improve specific areas within a room or building. Major renovation projects are required when entire areas, such as kitchens, or buildings require total rehabilitation of structures, such as walls, utilities, and equipment. Utility improvement projects are established to modernize or replace utilities, such as water pipes and electrical systems. Hazardous waste projects are established to abate hazardous waste, such as asbestos and lead, through removal, encapsulation, and other methods as necessary. Energy savings projects are established to conserve energy by using more energy efficient equipment and systems. Every project is assigned a priority rating. Projects are ranked from highest to lowest priority based on the Department's 1998 and Executive Order No. 12002, March 8, 1998, which mandates federal agencies to reduce energy consumption by 10 percent of the 1985 base BTU consumption per square foot by 1995 and by 30 percent from the 1985 base by 2005.

These categories may each contain other subcategories of projects, such as Accessibility, Environmental and other projects to meet specific needs. For example, General Improvement projects and Major Renovation projects may each contain subcategories. Life Safety projects, Utility projects, and Energy Savings projects are required for the BOP to be in compliance with environmental and safety regulations required by the Environmental Protection Agency (EPA) and the Office of Safety and Health Administration (OSHA).

INITIATIVES

New Construction and Expansions

Castle AFB, CA - High (960 beds) with Minimum (256 beds)

Total, New Construction and Expansion Initiative (1,216 beds)

Perme. Est.	ELI	Amount \$0000
6	2	9,120,635
6	3	120,615

Proposed Actions

This initiative seeks to address the following objectives:

- 1) Continue increasing capacity, keeping pace with projected increases in the inmate population and simultaneously reducing prison overcrowding to a more manageable level.
- 2) Prepare designs for new facilities.
- 3) Construct new Federal prisons and expand existing Federal prisons as required.
- 4) Begin construction of a new high security facility with a minimum security facility, which will add a total of 1,216 beds to capacity.

End of Year (EOY) Population, Capacity, and Overcrowding Rates at BOP Facilities
FY 1981 to Current

	1981	1985	1987	1988	1989	1990	1991	1992	1993	1994	1995	1996	1/9/97
EOY Population.....	26,195	36,001	44,194	44,142	51,153	58,021	64,131	70,670	79,799	85,860	90,139	94,695	95,910
EOY Rated Capacity..	23,643	25,312	27,654	28,145	31,791	34,252	42,531	48,534	57,684	64,791	72,059	76,442	76,971
Percent Overcrowded..	11%	41%	59%	57%	61%	69%	51%	46%	39%	33%	25%	24%	25%

As illustrated in the above table the Federal inmate population in BOP facilities was 26,195 in 1981, and by January 9, 1997, the Federal inmate population in BOP facilities had more than tripled to nearly 96,000. In addition, BOP supervises over 10,400 inmates in community corrections centers, contract detention centers, other contract facilities, and home confinement.

The dramatic growth in the Federal inmate population over the last decade is attributed to increases in both the number of new admissions and the average time served per inmate. In general, earlier in the decade the driving force was the increased rate of admissions. Then, because of sentencing legislation, the increase in average time served became a much greater factor in causing BOP population growth. BOP's current growth is more sensitive to changes in rate of admissions and less sensitive to changes in sentencing which occurred in the last decade.

By the end of fiscal year 2006, the BOP institution population is expected to reach 128,103 (the table includes Federal inmates only, and does not include District of Columbia inmates with the administration is proposing to transfer to the Federal Prison System in three to five years). With the activation of nearly 29,000 beds and current policy changes, the capacity of the Federal Prison System will increase to 104,616 by 2008. As illustrated in the following table, resources approved/requested through 1998 should have a dramatic impact on the overcrowding rate in Federal prisons. The year-end capacity in this table ties to the date by which the majority of beds are available for inmates.

Total Federal Prison

From a cost perspective, the expansion of existing institutions is the least expensive technique for increasing pig capacity, and the GOP is currently utilizing additional institutional facilities. However, the expansion of existing institutions can absorb further population increases. As the number of existing institutions grows, the cost of new construction will increase. When existing institutions are already saturated, expansion may approach the cost of newly constructed facilities.

For FY 1998, \$120,615,000 is requested to build a 900 bed high security facility with a 256 bed minimum security facility at Castle AFB, California. Preliminary funding of \$1,000,000 has been provided in FY 1997 for planning and design. The proposed facility will allow for the construction of a high security facility in this area will allow BOP to better manage the influx of West coast gang members and other disruptive groups entering the Federal Prison System. In addition, this facility will take advantage of existing infrastructure due to military base closures and minimize costs associated with purchasing land.

As of January 9, 1997 the total federal inmate population was 106,358, with a system-wide average crowding rate of 25 percent over capacity. BOP's population projections show an increased need for additional higher security level facilities, as the numbers of violent offenders entering the prison system have increased, and this trend is expected to continue. Further, BOP is experiencing a significant increase in the number of street gang members being incarcerated. BOP's population projections show that high security level facilities are currently 53% overcrowded. However, overcrowding at high security level facilities is expected to be reduced to 30% by the year 2001 with the activation of Cape Henry, Mid-Atlantic Region facility, and additional high security level facilities to manage the more violent inmate population.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY GENERAL GOAL
(\$000)

GENERAL GOAL 1: BOP will proactively manage its offender population to ensure safe and secure operations.

Modernization and Repair			Perms. Fees	LFE	Amount (\$,000)
Convert Dorms to Cells at 2 USPs (Lewisburg, PA and Lompoc, CA)			2	2	\$16,707
Total, Modernization and Repair Initiative			2	2	16,707

Proposed Action

This initiative seeks to address the following objectives:

1. Repair and renovate facilities as required.
2. Increase the security at two U.S. Penitentiaries by converting dormitory housing to cells.
3. Comply with all requirements of the National Fire Protection Association (NFPA), 101 Life Safety Code pertaining to penal facilities.
4. Comply with all Federal and State Environmental Regulations.
5. Bring applicable utilities into compliance with National Electrical Code and American Waterworks Standards and ensure safety and security of facilities.
6. Modernize antiquated Federal prisons.

USP Lewisburg, USP Lompoc - Convert Dorms to Cells

For this project, \$16,707,000 is requested to convert open style dormitory housing to cells at two high security U.S. Penitentiaries. The USPs at Lewisburg and Lompoc have open dormitory housing units which do not allow for securing inmates within the unit. USP Lewisburg has 216 high security inmates in dormitory settings who should be in secure cells and USP Lompoc has 208 such inmates. These dormitories pose management, safety and security problems. In addition, the physical areas are older and require renovation. The plumbing systems require high maintenance due to their age and condition. The electrical systems are also energy inefficient. Current steel frame single pane windows are rusting and are easily vandalized and can not handle the present demands. This project will convert these dormitory areas to single cell units with steel security doors and provide space for unit team offices and inmate programs. Structural, architectural and utility improvements will be performed on each dorm. This includes window replacement, plumbing for each cell as well as replacement of the heating/ventilation systems and updating of the electrical systems. These projects will require A/E services and contractors to complete the construction.

PERFORMANCE MEASUREMENT TABLE PRESENTED BY GENERAL GOAL
(\$000)

GENERAL GOAL 2 BOP will maintain its facilities in operationally sound conditions and in compliance with security, safety and environmental requirements

A. Definitions of Terms or Explanations for Indicators:

Indicators 4,6 and 7 - Special projects include Life Safety, Accessibility, Environmental and Energy projects

B. Factors Affecting FY 95 Program Performance.

Indicator 7 - Emergency projects and changing priorities

C. Factors Affecting Selection of FY 93 and 97 Targets.

M&R funding, changes to codes, regulations, and laws Only five projects of more than \$500,000 were requested in FY 1996 and none were requested in FY 1997
Indicators 3 and 6 - A policy increasing the minimum dollar amount to fund R&I projects from \$4,000 to \$10,000 is being implemented in FY 1998 A decrease resulting from this change will be offset by the increasing number of BOP facilities

Federal Prison System
Federal Prison Industries, Incorporated
Summary Statement
Fiscal Year 1974

The Federal Prison System is requesting for Federal Prison Industries, Incorporated, in FY 1974 a total of 2,011 positions and 1,816 workyears. This request represents an increase of 25 positions and a decrease of 116 workyears from the 1973 level.

Federal Prison Industries, Incorporated (FPI), was created by Congress in 1934 and is a wholly owned Government corporation which operates at no cost to the U.S. taxpayer. FPI is authorized to operate the Federal Prison System, who has jurisdiction over all Federal penal and correctional institutions, is the Chief Executive Officer. Federal Prison Industries reduces undesirable inmate idleness by providing a full-time work program for the inmate population (25 percent of the inmates in 1973). More than 50 percent of the inmate population do not have marketable skills. FPI provides a program of constructive industrial work wherein job skills can be developed and work habits acquired. Earnings from the Corporation's industrial activities are used for all operating costs of the Corporation, including marketing expenses, inmate work areas, compensation of inmates performing in industrial work detail, and compensation to former inmates for injuries they received while in Federal prisons.

A board of six Directors, appointed by the President, reviews and approves the policies of the Corporation, long-range corporate plans, establishment of new industries, and bylaws and capital investments in excess of \$500,000. The Board also makes annual reports to Congress on the conduct of the business of the Corporation and the condition of its funds. General management of the Corporation is vested in a Chief Operating Officer and carried out by a staff of 35 Corporate Management employees located in Washington, D.C. Expenses of this function are subject to Congressional limitation.

There were 17,377 inmates in 95 factories at 59 locations employed on September 30, 1973. Inmate employment is expected to reach 19,657 by September 1977 reflecting the Bureau of Prisons' projected population growth. Inmate manufactures such items as furniture, clothing, electronic cable assemblies, metal and textile products. They also work in service industries such as furniture refinishing, data processing, vehicular component manufacturing, and laundries. All products and services of the Corporation are sold to Federal Agencies. The Department of Defense, the Postal Service, the Veterans Administration, and the General Services Administration are the largest customers. In 1973, an additional 100 inmate employees are anticipated as a result of the projected population increases.

Federal Prison Prisons
Federal Prison Industries, Incorporated
Notification of Proposed Changes to the Appropriation Language

The 1996 budget entries include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Federal Prison Industries, Incorporated

The Federal Prison Industries, Incorporated, is hereby authorized to make such expenditures, within the limits of funds and amounts heretofore appropriated to it, and to incur such obligations to make such contracts and commitments, without regard to fiscal year limitations as provided by section 9104 of title 31, United States Code, as may be necessary in carrying out the program set forth in the budget for the current fiscal year for such corporation, including purchase of (not to exceed five for replacement only) and hire of passenger motor vehicles.

(18 U.S.C. 4121-4123; Department of Justice Appropriations Act, 1997).

Limitation on Administrative Expenses
Federal Prison Industries, Incorporated

Not to exceed [\$3,042,000] (of the funds of the corporation shall be available for its administrative expenses, and for service as authorized by 5 U.S.C. 3109, to be computed on an accrual basis to be determined in accordance with the corporation's current prescribed accounting system, and such amounts shall be exclusive of depreciation, payment of claims, and expenditures which the said accounting system has been required to account for, and shall not include expenditures for operation, maintenance, improvement, protection, or disposition of facilities and other property belonging to the corporation or in which it has an interest.

\$3,330,000

(Department of Justice Appropriations Act, 1997).

**Federal Prison System
Federal Prison Industries, Incorporated
Financial Information
(In Thousands)**

Mission: It is the mission of Federal Prison Industries to employ and provide skill training to the greatest practicable number of inmates in Federal correctional facilities necessary to ensure the safe and efficient operation of such institutions, and in doing so, to produce market priced, quality goods in a self-sustaining manner that will cause potential impact on private business and labor.

General Goal:

1. Provide services and programs to address inmate needs, providing productive use-of-time activities, and facilitating the successful reintegration of inmates into society, consistent with community expectations and standards.

1998 Estimate	2011	1966	522,255
Increase/Decrease	25	0	5,036

BASE PROGRAM DESCRIPTION:

Federal Prison Industries (FPI) reduces undesirable inmate idleness by providing a full-time work program for approximately 25 percent of the eligible inmate population. More than 50 percent of the inmate population do not have marketable skills. FPI provides a program of constructive industrial work wherein job skills can be developed and work habits acquired.

Federal Prison Industries, Inc., is self-supporting. Revenues are derived from the sale of products and services to other Federal agencies. Operating expenses such as the cost of raw materials and supplies, inmate wages, and overhead are charged to the Federal Government. Revenues are applied against these revenues, resulting in operating income of 166, which is applied toward operating costs for future production.

Production facilities and shops are operated by civilian supervisors and managers, training and overseeing the work of inmates. The facilities utilize raw material and component parts purchased from the private sector to produce finished goods. These goods are shipped to Government customers. Primarily the Department of Defense, the facilities produce a wide variety of products including electronic, electrical, electronic, metal and ceramic products, services and materials. In addition, the facilities produce a wide variety of products including electronic, electrical, electronic, metal and ceramic products, services and materials. A portion of the earnings realized by these operations is reinvested in equipment to improve and build new facilities and purchase equipment, maintain state-of-the-art capability and provide working capital.

Extensive testing and product development procedures are required to operate modern facilities that produce products which meet Government specifications. Inmate training is also extensive because most of the inmates have no previous training, experience or skills. Much of the needed training occurs on-the-job, with the civilian supervisors and experienced inmates explaining and demonstrating the work to newly assigned inmates. Where skills require more formal training, such as soldering, classroom instruction is provided by UNICOM staff.

FPI makes capital investments in building and improvements, machinery and equipment as necessary in the conduct of its industrial operations. Other expenses charged to the industrial manufacturing program include inmate accident compensation.

As a result of private sector concerns that the Corporation was becoming an undue burden of competition, Congress adopted guidelines for the production of new products and significant product expansion which are incorporated into statute. Before any significant product expansion or new products are manufactured, the guideline process is conducted with full knowledge of interested parties.

As required under the federal rules, commonly referred to as the Guidelines process, when PPI proposes to produce a new product or service, it must first submit a market impact study to the Federal Trade Commission. This study must identify and consider: the number of vendors currently meeting the requirements of the federal government; the proportion of the federal market for the product currently served by small businesses; small disadvantaged businesses, or businesses operating in labor surplus areas; the size of the federal and non-federal markets for the product; the projected growth in the federal government demand for the product; and, the projected ability of the federal market to sustain both PPI and private vendors. PPI then must announce in the Commerce Business Daily its proposal and invite comments from private industry. PPI must also directly notify those trade associations affected and allow to provide comment.

The Board of Directors is provided copies of the market impact study, the comments received, and PPI's recommendations. The Board also holds hearings at which the public can come and provide testimony.

At the conclusion of the process, the Board renders its decision, which is also published in the Commerce Business Daily.

INITIATIVES

		(\$ 000)	
		Est.	Est. Amount
25		4	85,098

Activation: Factory at Beaumont, TX (Med. 9/98)

Proposed Actions

This initiative seeks to address the following objectives:

1. Continue to employ an average of 25% of the inmate population at newly activated low, medium and high security institutions. Through this request Federal Prison Industries (FPI) seeks 25 positions and 4 workyears to establish one factory at a new medium security prison being activated at Beaumont, Texas during FY 1998.
- As the Federal Prison System adds secure facilities to reduce overcrowding pressures created by inmate population growth, FPI builds factories in these facilities. These factories reduce undesirable inmate idleness by providing a full-time work program for approximately 25 percent of the eligible inmate population. More than 50 percent of the inmate population do not have marketable skills. FPI provides a program of constructive industrial work wherein job skills can be developed and work habits acquired.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY GENERAL GOAL

GENERAL GOAL 1: Provide services and programs to address inmates needs, providing productive use-of-time activities, and facilitating the successful reintegration of inmates into society, consistent with community expectations and standards.						
PERFORMANCE INDICATOR INFORMATION		PERFORMANCE TARGETS AND ACTUAL RESULTS				
Type of Indicator	Performance Indicators	1994 Actual	1995 Actual	1996 Actual	1997 Estimate	1998 Target
Input	1. Base number of factories	97	100	98	101	98
	2. FTEs	1,508	1,555	1,587	1,960	2,005
	3. Sales volume (\$ 000)	\$459,148	\$456,392	\$495,466	\$512,000	\$528,000
Output/Activity	4. Number of inmate jobs added	519	808	547	2,330	100
	5. Inmates employed at year-end	15,972	16,790	17,327	19,657	19,757
	6. New orders received (\$ 000)	\$455,363	\$440,500	\$511,059	\$547,000	\$551,000
Intermediate Outcome	7. New factory activations	4	4	3	7	7
	8. Increase in sales volume (\$ 000)	\$64,247	(\$2,756)	\$38,074	\$16,534	\$16,000
End Outcome	5. Number of inmates employed as a percentage of inmates housed in low, medium and high security institutions	29%	28%	25%	25	25%
	6. Actual sales as percent of sales projections	92%	100%	100%	100%	100%
A. Definitions of Terms or Explanations for Indicators:						
Indicator 1: Base number of factories equals factories at the beginning of the year and previous year's activations/deactivations.						
Indicator 3: Sales volume is equal to the annual sales or shipments to other agencies.						
Indicator 6: New orders received equals the value of new customer orders for FPI products.						
Indicator 7: New Factory activations is the number of new factories added during the fiscal year.						
Indicator 8: Increase in sales volume is the increase in sales over the prior year sales.						
B. Factors Affecting FY 94 - 96 Program Performance:						
Indicator 1: Deactivations affecting base number of factories: FY94 - 1; FY95 - 6; FY96 - 3						
C. Factors Affecting Selection of FY 97 and 98 Targets:						
Indicator 4 and 5: Continuing downsizing of Department of Defense will reduce military procurements.						
Indicator 4 and 5: National Performance Review recommendations on reduction of federal employment levels (272,000 positions eliminated by 1998) could reduce non-Department of Defense agencies' procurement of goods and services.

OFFICE OF JUSTICE PROGRAMS

Approved by: Janet Reno Date: 3/12/89
JANET RENO
Attorney General

Office of Justice Programs
Justice Assistance
Summary Statement
Fiscal Year 1998

For Justice Assistance in 1998 the Office of Justice Programs (OJP) is requesting a total of \$172,387,000, 411 permanent positions, and 411 workyears (excluding VCRP reimbursable 369 positions and 369 workyears). This request represents an increase of \$49,158,000, 25 positions and 26 workyears(excludes VCRP reimbursable increase of 60 positions and 60 workyears) over the 1997 appropriation of \$40,615,000 from the 1998 base.

The primary mission of the Office of Justice Programs is to provide Federal leadership in developing the Nation's capacity to prevent and control crime, administer justice and assist crime victims. This mission is accomplished through the following programs of the Justice Assistance account:

Research, Evaluation, and Demonstration Programs

The National Institute of Justice (NIJ) is the Nation's primary source of research and development on crime and the criminal justice system. NIJ's mandate includes responsibility for understanding the causes of crime, identifying and demonstrating programs and methods for preventing and reducing crime, studying and improving the criminal justice system, evaluating the effectiveness of criminal justice programs to determine what programs work and why they work, and disseminating this information by serving as a national and international clearinghouse for the exchange of criminal justice information. The Institute conducts research on a wide variety of justice policies, conducts demonstration projects, tests new technology that can be used to combat crime, administers technical assistance programs to expand the capacity of State and local criminal justice systems, evaluates existing programs and policies, and provides for a multi-media dissemination program to inform the public of important research, evaluation and demonstration findings. The total 1998 request of \$48,670,000 includes an increase of \$4,400,000 for ADAM, the Arrestee Drug Monitoring System, \$7,000,000 for the Violence Against Women Research Agenda and \$2,300,000 for the Federal Drug Testing Initiative.

1990

Criminal Justice Statistical Programs

The Bureau of Justice Statistics (BJS) is responsible for the collection, analysis, and publication of statistical information on crime, criminal offenders, victims of crime, and the operations of justice systems at all levels of government and internationally. The mission of the Bureau is two fold: to provide senior officials of the Justice Department, the White House, Congress, the Judiciary, criminal justice practitioners and academia, and the public with accurate and timely justice data and to support the emerging capacity of State and local governments to use justice data as a cornerstone of their justice programs. In 1998 the funding level of \$21,529,000 maintains the 1997 level and includes an adjustment to base increase of \$150,000.

National Sexual Offender Registry

This new program will be administered by BJS as a component of the Criminal Records Upgrade Program. It will initiate the development of a national sexual offender registry by assisting states to identify, collect and provide data for exchange through this registry. For 1998, \$25,000,000 is being requested for this new program.

Emergency Assistance

This program offers a Federal response to situations of an emergency nature that exceed the capacity of local law enforcement resources. The legislation authorizes the provisions of funds, equipment, training, intelligence information, and personnel to a State in the event of a law enforcement emergency. Budget authority was last provided for the program in 1992. No funds are requested for the program in 1998. The program will be continued with the 1996 unobligated balance of \$808,735 and any future deobligated funds that become available.

Missing Children

This program, which was first authorized and funded by Congress in 1985, provides funds to combat crimes against children, particularly kidnapping and sexual exploitation, by assisting families, citizen groups, law enforcement agencies and government institutions in a national effort to ensure the safety and protection of children. The 1998 request maintains the 1997 level of \$5,971,000.

Regional Information Sharing System

The RISS program provides funds to maintain six regionally-based information sharing centers throughout the United States that service State and local law enforcement agencies in addressing major, multi-jurisdictional crimes. The program encourages and facilitates the rapid but controlled exchange and sharing of information pertaining to known or suspected criminals or criminal activity among State and local law enforcement agencies and enhances coordination and communication among agencies in pursuit of criminal activity determined to be multi-jurisdictional in nature. For 1998, \$14,500,000 is being requested for the RISS program which is consistent with the 1997 appropriation.

White Collar Crime Information Center

The National White Collar Crime Information Center assists Federal, State and local law enforcement and regulatory agencies in multi-State investigations of white collar crime. The Center is developing a national support system for the prevention, investigation and prosecution of economic crimes, and is pursuing an educational and training component targeting agencies which have the responsibility of investigating economic crime. Prior to 1995 this project had been included within the RISS activity. The 1998 request will maintain this activity at the 1997 appropriation level of \$3,850,000.

Local Firefighter and Emergency Services Training

This program is authorized by the Antiterrorism and Effective Death Penalty Act of 1996, and will enhance the capability of metropolitan fire and emergency service departments to respond more effectively to terrorist attacks. The 1998 request maintains the 1997 funding level of \$5,000,000.

Terrorism Training

This program will provide for specialized multipurpose response training as authorized by the Antiterrorism and Effective Death Penalty Act of 1996. The 1998 request maintains the 1997 funding level of \$2,000,000.

Development of Counterterrorism Technologies

The National Institute of Justice will administer this program which was authorized by the Antiterrorism and Effective Death Penalty Act of 1996. This program will help identify and assess technologies to assist State and local law enforcement agencies to combat terrorism. The 1998 request will maintain this activity at the 1997 appropriation level of \$10,000,000.

Management and Administration

This activity provides executive direction and control, policy coordination, and the full range of management responsibilities of the Office of Justice Programs (OJP) and its 9 Bureaus and program offices. The 1998 request of \$35,867,000, 411 positions, and 411 workyears represents an increase of \$5,338,000, 25 positions and 26 workyears over the 1997 appropriation. This increase includes \$3,423,000 in adjustments to base and \$1,915,000 for 25 positions and 13 workyears, to provide increased support for the National Institute of Justice and the Office of Juvenile Justice. In addition, an increase of 60 positions and 60 workyears are required for the management and administration of the \$2.2 billion requested under the Violent Crime Reduction Program account for programs authorized by the Violent Crime Control and Law Enforcement Act of 1994 (VCCLEA).

Office of Justice Programs
Justice Assistance
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Justice Assistance

For grants, contracts, cooperative agreements, and other assistance authorized by title I of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, and the Missing Children's Assistance Act, as amended, including salaries and expenses in connection therewith, and with the Victims of Crime Act of 1984, as amended, [\$101,429,000] to remain available until expended, as authorized by section 1001 of title I of the Omnibus Crime Control and Safe Streets Act, as amended by Public Law 102-534 (106 Stat. 3524) ^

\$149,665,000

of which, \$25,000,000 is for the National Sexual Offender Registry.

For an additional amount, \$17,000,000, to remain available until expended; of which \$5,000,000 shall be for Local Firefighter and Emergency Services Training Grants as authorized by section 819 of the Antiterrorism and Effective Death Penalty Act of 1996 ("the Antiterrorism Act"); of which \$10,000,000 shall be for development of counterterrorism technologies to help State and local law enforcement combat terrorism, as authorized by section 821 of the Antiterrorism Act; of which \$2,000,000 shall be for specialized multi-agency response training; Provided, That the entire amount is designated by Congress as an emergency requirement pursuant to section 251(b)(2)(D)(i) of the Balanced Budget and Emergency Deficit Control Act of 1985, as amended: Provided further, That the

and

entire amount not previously designated by the President as an emergency requirement shall be available only to the extent an official budget request, for a specific dollar amount that includes designation of the entire amount of the request as an emergency requirement, as defined in the Balanced Budget and Emergency Deficit Control Act of 1985, as amended, is transmitted to Congress).

(Department of Justice and Related Agencies Appropriations Act, 1997.)

Explanation of Changes:

1. Adds language to fund the National Sexual Offender Registry, as authorized by section 170102 of the Violent Crime Control and Law Enforcement Assistance Act of 1994.

Congressional Action: Congressional action provided no program enhancements for the Research, Evaluation and Demonstration Program, or the Criminal Justice Statistical Program which will keep them at their 1996 level of funding. Of the amount appropriated, \$17,000,000 was provided for counterterrorism, \$5 million for firefighter and emergency services training, \$2 million for terrorism training, and \$10 million for development of counterterrorism technologies as authorized by the 1996 Antiterrorism Act. Congressional action also provided 14 positions and 14 FTEs to administer the NIJ defense/law enforcement technology program. Congress provided an overall decrease of \$3,527,000 for Management and Administration.

Transfers from Other Accounts: Provides \$4,800,000 from the Juvenile Justice Programs account for Management and Administration.

**OFFICE OF JUSTICE PROGRAMS
RESEARCH, EVALUATION AND DEMONSTRATION PROGRAMS
PROGRAM PERFORMANCE INFORMATION
GOVERNMENT PERFORMANCE AND RESULTS ACT REQUIREMENTS**

Mission: To develop new information on crime and to determine what works and why in prevention, enforcement, and adjudication of crime and its consequences, and in institutional and community corrections.

General Goals:

1. Reduce violent crime, drug-related crime, and victimization.
2. Reduce the consequences of crime for neighborhoods and communities.
3. Develop new technology for law enforcement and the criminal justice system.
4. Improve the effectiveness of law enforcement, criminal justice, correctional and service systems' responses to offenses and victimization.
5. Develop community, household, school, and workplace crime prevention programs.
6. Implement the statutory mandate requiring NIJ to conduct program evaluations of the Bureau of Justice Assistance block and discretionary grant drug control programs.
7. Communicate research findings to policy officials, practitioners, and researchers through modern communication technology as well as through traditional media.

<i>Increase/Decrease</i>	13,700

BASE PROGRAM DESCRIPTION: Authorized by the Omnibus Crime Control and Safe Streets Act of 1968, as amended, (42 U. S. C. 3721), NIJ is the nation's primary source of research and development in the field of criminal justice. Key operational, policy, and management achievements of the Institute for 1996 are as follows.

- NIJ significantly increased the volume of research conducted by establishing research and evaluation partnerships with other agencies, including the Department's Crime Act agencies. Through collaboration, NIJ leveraged its \$30 million in appropriated funds to obtain and invest an additional \$66 million in research and evaluation projects.
- As a result of new collaborative efforts, NIJ received nearly 1,064 research proposals in response to 17 separate research solicitations.
- NIJ reduced processing time for research proposals from 243 days in 1994, to 120 days in 1995, to 100 days in 1996.

A description of the accomplishments of the Institute in each of the key areas of activity is presented in the pages that follow.

1. NIJ Fosters Innovation

NIJ is a catalyst for ideas by supporting the development of knowledge. Many innovations supported by NIJ are now part of everyday criminal

justice practice. For example, NIJ supported the research which led the FAA to use metal detectors in airports. NIJ-supported researchers trained the first bomb-sniffing dogs. NIJ has published safety standards on over 90 critical items of law enforcement equipment, such as handcuffs, jail and prison locks, and officer weapons. The concept of community policing as a method for reducing crime was, in part, an outgrowth of a program of research funded by NIJ. Other examples include:

- **Protecting police.** Researchers sponsored by NIJ developed protective body armor, which has saved the lives of approximately 2,000 police officers. An estimated \$2 billion in survivor and replacement costs to law enforcement agencies has been saved as a result. This year, we developed the requirements for the world's lightest armor capable of stopping armor-piercing rifle rounds. And, because many officers who are killed in the line of duty are shot with their own weapons, we have developed five prototypes of "smart guns," capable of being fired only by their owner.
- **Revolutionizing fingerprint collection.** NIJ-funded researchers developed an electronic wand the size of a fountain pen to collect fingerprints at the crime scene. Under the old technology, a bathub with a suspect's fingerprints on it would have to be removed from the crime scene and taken to the crime lab. Our initial investment of \$96,000 launched a new industry, with 200,000 fingerprint wands in use today.
- **Bringing technology directly to law enforcement and corrections professionals.** In 1995, NIJ established 5 regional technology centers and a technology commercialization office. These field locations bring law enforcement and corrections technology assistance directly to those who need it -- practitioners.
- **Reducing police use of batons.** This year NIJ published guidelines explaining the safe use of pepper spray as an incapacitant. As a result, in New York City alone, the use of pepper spray has tripled, and the use of police batons has decreased by one sixth. Citizen complaints resulting from police use of batons has decreased by nearly half.
- **Reducing redundancies within government.** This year the Attorney General established the DOJ Technology Policy Council to improve collaboration and to reduce duplication among federal law enforcement technology initiatives. NIJ has completed a draft compendium of all DOJ and Treasury projects under way. The Institute also works with the Department of Defense to identify technologies of mutual interest. As an example, the sticky foam used by U. S. Marines in Somalia to protect troops and supplies from rioters was a technology borrowed from NIJ. This year, NIJ developed a safe new x-ray to detect contraband which has been shown to dramatically reduce the amount of contraband brought into prison by visitors. Another project will dramatically improve weapons detections systems for use in public areas such as airports, schools, and in prisons.

- **Demonstration programs.** Our "Girl Scouts Beyond Bars" is a mother-daughter visitation program that improves correctional outcomes. Our \$15,000 investment has leveraged more than 50 times that amount in private funds to replicate the program in 18 other correctional facilities across the country.
- **Fostering discussion of a community approach to justice.** With our DOJ colleagues, NJI hosted a symposium to explore a justice model that places emphasis on offender accountability, healing for the victim, and proactive community involvement in the justice system. We recently funded a number of research and demonstration initiatives in community prosecution, and have published the story of an innovative community court. Our "Communities, Crime and Justice" conference explored ways to make the criminal justice system more responsive to the needs of the individual.

In 1997 and 1998, NJI will focus its base resources for innovation on:

- **Involving the private sector as a partner in the criminal justice system.** Our Office of Law Enforcement Technology Commercialization will work with private industry to develop affordable new products for law enforcement. Among other projects, we are currently working to find manufacturers for rear seat airbags to demobilize suspects and protect officers and for retractable steel strips to stop fleeing vehicles. This fall, NJI sponsored the first national corporate summit to share business approaches to involvement in prison industries, victim assistance efforts, prevention programs, offender job training, and post-release employment efforts.
- **Sharing and developing new technologies.** NJI will continue its dual use effort with the Department of Defense, including a project to bring specialized medical care to federal prisons in a cost-effective manner through telemedicine. NJI will also continue its effort to develop concealed weapon detection devices that reduce false alarms, detect even small weapons, distinguish weapons from other metal items, and are appropriate in a variety of settings.
- **Continued improvement of forensic DNA testing.** NJI brought DNA testing to law enforcement by developing testing standards and proving the reliability of DNA evidence. NJI-funded researchers are working to produce a new and less complex technology for DNA testing which works faster and costs less. This year, NJI released a report on 28 cases in which DNA evidence exonerated individuals who were unjustly convicted of crimes. This report is the subject of a PBS documentary to be aired in January 1997.

2. NJI Investigates the Causes and Correlates of Crime

NJI research findings are reducing crime and saving law enforcement dollars in communities across the country. Much of today's common knowledge about crime comes from NJI-funded research. For instance, NJI-funded researchers identified the link between drugs and crime and found that reducing the level of drug use reduces the level of criminal behavior, even among hard core drug users. It was NJI research

that showed that a majority of all crimes are committed by very few criminals. Common law enforcement management techniques such as community policing, differentiated response to 911 calls, and the design of foot patrols for optimal crime reduction all resulted from NIJ-sponsored research. A sample of the practical applications of our research findings follows.

- **Gang enforcement.** Specialized police gang/drug units may not be the best use of resources to combat gangs and drugs because gangs are not the predominant source of drug sales. In an NIJ-funded study, less than one third of Los Angeles area drug cases were found to involve gang members. Most gang conflicts are about turf, not drug sales, according to an NIJ-funded study of gangs in Chicago.
- **Enforcing gun laws can dramatically decrease crime.** More than two gun crimes were prevented for every illegal gun seized in a Kansas City demonstration project examined by NIJ. Overall, there was a 49 percent drop in gun crimes in the targeted area, and drive-by shootings dropped from 7 to 1 while doubling in the comparison area.
- **Abuse begets violence.** One NIJ-funded researcher has shown that individuals sexually abused, physically abused, or neglected as children are more likely to commit crimes as adults than those who do not suffer abuse. Surprisingly, neglect was just as damaging to children as physical abuse. The difference in outcomes by race was startling -- 82% of the black males in the study who were victims of abuse as children were arrested as adults, while only 64% of the comparison group were arrested as an adult.
- **Understanding our vulnerability to domestic terrorism.** Recently-published NIJ-supported research indicates that local preparedness to prevent and fight acts of terrorism is best in our largest cities and more limited in smaller communities. Small communities are more vulnerable to attacks from extremist political and issue-specific groups because they lack detection and response capacity and because extremist groups find remote locations attractive. This year, NIJ brought together law enforcement and civic groups from communities experiencing a threat of domestic terrorism. Participants discussed common strategies of these groups and possible approaches to diffusing hostile situations.
- **National drug use data.** Our Drug Use Forecasting (DUF) program tests newly arrested men, women, and juveniles for drug use in 23 cities. DUF gives us a large, national data base on drug use by suspected criminals and is the only large national source of drug use that verifies self-report through urinalysis. While urinalysis can detect illegal drug use over the last 72 hours, testing a 2-inch strand of someone's hair can detect drug use over a 4-month period. DUF now uses both types of assays. DUF can quickly address specific policy concerns by adding questions to the existing survey. In this way, we recently found that some juveniles have easy access to illegal firearms -- 40% of the recently-arrested juvenile males stated that they owned at least one firearm, and 22% reported carrying the gun all or most of the time. Of the total sample of arrestees, nearly half said they had been shot at and 38% of the juvenile males agreed that "it is OK to shoot someone who has disrespected you."

- One day, one trial. NJ-fund research on court delay and jury management led to a variety of reforms, including the American Bar Association's time standards and the one-day, one trial jury system now prevalent throughout the country.
 - Boot camps, electronic monitoring, and day fines. NJ's support of intermediate sanctions has fostered innovative alternatives to incarceration which seek to reduce recidivism and lower the cost of corrections. NJ launched an evaluation program to look at the effectiveness of some of the 80 military style boot camps around the country that aim to instill discipline and change the behavior of prisoners. Our research has also fostered the development of various electronic monitoring devices which allow some offenders to live in the community instead of in a prison, providing significant savings and constant surveillance of the offender's activities. Day fines, restitution, and other flexible sanctions have flourished based on our positive evaluation findings.
 - Anti-Terrorism Technologies. NJ will continue to develop new technologies to assist local law enforcement in investigating terrorist activities. This effort will involve efforts to improve equipment as well as initiatives to aid in information-sharing among municipalities on the most effective methods to fight against terrorist activities.
- In 1997 and 1998, NJ will focus its base resources for investigation on:
- Holding drug offenders accountable. As part of the President's Drug Testing Initiative, NJ will evaluate a bold new program to identify drug abusing offenders and to take steps to curb their drug use and resultant criminal activity. Working with the Office of National Drug Control Policy (ONDCP) on our "Breaking the Cycle" initiative, NJ has designed a research demonstration project to test the hypothesis that criminal justice intervention and treatment can reduce drug and crime activity. Potential new projects in this area include a demonstration effort of coerced abstinence in several jails; research and demonstration on use of methamphetamine; a study of the relationship between juvenile drug use and violent crime; and a demonstration effort on community based treatment and aftercare.
 - Learning how criminal behavior develops. NJ will continue to support a study of 11,000 subjects from birth through young adulthood and will document the development of behavior patterns. Cognitive and abstract reasoning, language abilities, and community factors will be studied to learn how criminal behavior develops.
 - Understanding changing homicide patterns. NJ's Intramural Research Working Group is examining rises and declines in homicide rates in American cities. This broad research effort examines the current literature as well as national and regional trends, and an in-depth analysis of 8 case study cities is underway.

- **Continued commitment to existing research goals.** NIJ will continue to devote resources to research on our six goal areas:
 - **Violence** - including studies of offenders, patterns of violence, and firearms violence
 - **Drug- and alcohol-related crime** - including study of the relationships among drugs, alcohol and violence; and evaluation of substance abuse prevention, treatment, and aftercare programs
 - **Consequences of crime** - including study of victim needs, victim services programs, and criminal justice responses to victims
 - **Crime prevention** - including evaluation of community based crime prevention partnerships, and study of crime by and related to illegal aliens
 - **Criminal justice system** - including evaluation of specialized courts, and analysis of restorative justice and community-based prosecution programs
 - **New technology** - including virtual reality officer training, means of detecting concealed weapons, and ways to detect and disable explosives
- **A federal partnership on family violence research.** At the suggestion of the experts who assisted us in devising our multi-year violence against women research agenda, we have entered into a three-year family violence collaboration with several agencies within the National Institutes of Health, as well as the Centers for Disease Control and Prevention and the National Center for Child Abuse and Neglect.
- **Evaluating projects funded under the Edward Byrne Memorial Program.** NIJ has a statutory mandate to conduct evaluation of Bureau of Justice Assistance (BJA) programs. NIJ staff manage research grants funded by BJA for this purpose. NIJ has typically not had the resources to fully address this responsibility, but is working with BJA to take an increasing role in assessing the effectiveness of local programs.
- 3. **NIJ Informs the Public on Research Findings**
 NIJ is mandated by Congress to share the results of its research with the public. Last year was a banner year for NIJ in its efforts to achieve this mandate. Highlights include tripling our publications output, establishing our Web site for electronic dissemination, and dramatically increasing our outreach through alternative media such as conferences, seminars and videotapes.
 - **Sharing research results.** Last year, NIJ more than tripled its publications output, from 35 documents in 1994, to 115 in 1996. In addition, our grantees published their research findings in journals and newsletters. NIJ research results were cited in 40 professional and practitioner journal articles last year.

- **Providing access to criminal justice information.** The National Criminal Justice Reference Service (NCJRS) is the largest clearinghouse for criminal justice information in the world, with a library of 138,000 documents on 13 criminal justice topics which the public can request via an 800 telephone number or via the Internet. Last year NCJRS distributed 4 million documents in paper or electronic format -- over 126,000 people requested one or more of our different publications.
- **Moving into the electronic age.** Last year, NIJ established instantaneous access to 400 documents via our Web site. In FY 1996, NCJRS recorded over 600,000 requests for information. Of those, almost 50% were via the Internet. In addition, NCJRS launched *JUSTINFO*, a bimonthly electronic newsletter reaching over 2,300 subscribers. The NCJRS document data base is now available on CD-ROM, and 500 copies have been distributed to date. Our electronic Technology Information Network (JUSTNET) has responded to 35,000 information requests since its establishment this year.
- **Exploring new means of outreach.** Last year, 160,000 people had direct contact with NIJ staff and NIJ information at our conferences, workshops, focus groups, issue-specific strategic planning sessions, and Research in Progress seminars. In addition, we distributed 2,200 videotapes of our Research in Progress seminar lecture series, showcasing early findings from significant research projects.
- **Reinventing our internal processes.** In 1996, NIJ established a staff committee to "reinvent" our publication process. The group sought input from all of our "customers" and has devised an action plan to improve the quality of our publications and the timeliness of their release.
- **Building new partnerships.** This year, NIJ established a new vehicle for the dissemination of research results. Our Research in Action Partnership grants were awarded to the 3 national criminal justice and public policy membership organizations to help NIJ develop new and more creative means of bringing our research results to practitioners and policy makers.
- **Collaborating with our federal partners.** Our Partnerships Against Violence Network (PAVNET) identifies promising or effective local programs to combat and prevent youth and family violence, bringing together in one centralized data base information from 35 federal clearinghouses from 7 agencies. PAVNET is available on paper or as a searchable data base.
- **Sharing vital market information with industry.** Many industries don't understand the equipment and technology needs of, or the market potential offered by, the nation's 17,000 local law enforcement agencies. Therefore, NIJ made available to industry this year, for the first time, a systematically-developed list of technology needs for state and local law enforcement.

In 1997 and 1998, NJ will focus its base resources for information on:

- **A new policy maker focus.** NJ has long been an important source of information to criminal justice practitioners. In the next fiscal years, we hope to improve our outreach to federal, state, and local policy makers so we can be sure that our research agenda is consistent with their data needs, and we can provide them with the information they need to make sound policy decisions.
- **Targeted regional workshops.** We anticipate convening regional workshops on innovative practices in community and restorative justice to disseminate lessons learned from previous developmental seminars and conferences on these topics, as well as to track and facilitate the advancement of such practices throughout the U. S.
- **Lecture series for policy makers.** NJ recently initiated a series of breakfast meetings, held on or near Capital Hill, presenting prominent researchers and discussants to inform members, Congressional staff, and State and local policy makers about new research findings in key policy areas.

PROGRAM CHANGES:

	Amount
ADAM, the Arrestee Drug Abuse Monitoring System.....	\$4,400
This proposed initiative would test arrestees quarterly for drug use in the nation's 75 most populous cities, with an annual outreach to test arrestees in outlying locations, including suburban towns, rural communities and tribal lands. This project will provide critical national, local, and regional-level assessments of changing patterns of drug use, drug markets, and related criminal activity. The data would be available to communities within 60 days of collection. The data would also be published quarterly, so that government agencies, including law enforcement, can respond appropriately and rapidly to emerging drug problems. In 1998, an increase of \$4.4 million above the \$2.3 million in NJ's base resources, for a total of \$6.7 million will be required to make one-half of these sites (35) operational. On-site costs include funding for data collection (1,600 interviews per site), collection and analysis of urine specimens, delivery of completed interviews to the national data center, and associated on-site security costs. Annual data analysis costs for years one and two are \$1.5 million and are \$2.5 million annually after that.	

The following reflects the 5-year costs to make ADAM fully operational.

Annual Costs for ADAM:

Year	Amount	Cost Item
1998	\$6.7 million (\$4.4m increase) (\$2.3m base)	Site Costs (for 35 sites @ \$120,000) - \$4.2million Data Analysis - \$1.5 million Annual Training - \$ 1 million
1999	\$10.5 million	Site costs for 50 sites - \$6 million Data Analysis - \$1.5 million Annual Training - \$ 1 million Local research - \$ 1 million
2000	\$14.5 million	Site costs for 75 sites - \$9 million Data Analysis - \$2.5 million Annual Training - \$ 1 million Local research - \$ 1 million Publication and dissemination - \$1 million
2001	\$17.5 million	Site costs for 75 sites - \$9 million Data analysis - \$2.5 million Annual training - \$ 1 million Local research - \$ 1 million Outreach to outlying locations - \$3 million Publication and dissemination - \$1 million
2002	\$17.5 million	Site costs for 75 sites - \$9 million Data analysis - \$2.5 million Annual training - \$ 1 million Local research - \$ 1 million Outreach to outlying locations - \$3 million Publication and dissemination - \$1 million

Major objectives for the five year period 1998-2002 include:

- To create a national partnership between federal and local officials using timely drug abuse data to develop drug control policy.
- To provide a tested research "tool" to drug use researchers and policy makers in the nation's 75 largest cities, allowing them to quickly, easily, and inexpensively answer pressing local research and policy impact questions.
- To provide regular data regarding arrestee drug use in suburban, rural, and tribal lands, and to apply this information to policy making and operational decision making.
- To develop an annual report on drugs and crime, reporting national, regional, and sub-regional patterns and trends in drug use for various categories of drug users, highlighting emerging issues and providing an early warning system, and as a context for policy decisions.

Program Description

Drug use is increasing, especially among youth. And drug use is moving into communities that had once been safe havens -- small and medium sized cities are becoming hubs of drug and gang activity, and even suburban and rural areas are beset by illegal drugs and associated criminal behavior. As experience with crack and methamphetamine shows, new drugs can spread very rapidly through existing distribution channels, and increased criminal activity soon follows.

A decade after the "crack epidemic" began, community and political leaders and law enforcement officials are still searching for effective policies to eradicate drugs from their neighborhoods. Practitioners and policy makers have come to realize that the search for solutions is hampered by a lack of reliable local data about the extent and nature of the drug problem and its relationship to community crime problems. A recent report by the Office of National Drug Control Policy lists more than 60 federally-funded national surveys of drug abuse provide no data on local drug problems -- and it is local communities that are on the front lines combating illegal drug use. National surveys can describe historical drug use trends, but communities need speedy feedback on the specific drugs that are being consumed and sold on their street corners.

This program change requests funding for a program to bring local drug use data to communities in a timely fashion and to assist the communities in using drug abuse data to formulate policies to decrease illegal drug activity and associated criminal behavior.

The proposed initiative, ADAM, the Arrestee Drug Abuse Monitoring System, would test arrestees quarterly for drug use in the nation's 75 most populous cities, with an annual outreach to test arrestees in outlying locations including suburban towns, rural communities and tribal

lands. Our proposed data collection targets the group most prone to drug use, that is, those involved with the criminal justice system, and tests them at arrest, the point of entry into the system. The President's Drug Testing Initiative advocates screening Federal arrestees for potential drug problems as they enter the criminal justice system, recognizing the point of arrest as an opportune time for testing and research into the causes of criminality, and for crafting and implementing effective responses. At the State and local level, the target locations for this effort, the nation's 75 largest cities represent only one fifth of the nation's population, but account for half of all reported murders -- it is in these areas that an understanding of the impact of drugs on crime is most critical. This research initiative will complement and support Federal and local operational drug testing programs by providing research information to make policy decisions.

A national program providing powerful local data. This project would provide critical, national, local, and regional-level assessments of changing patterns of drug use, drug markets, and related criminal activity. The data would be available to communities within 60 days of data collection. The data would also be published quarterly, so that government agencies, including law enforcement, can respond appropriately and rapidly to emerging drug problems. ADAM would be a natural, national extension of our successful Drug Use Forecasting program which brings independent, scientifically valid drug use information to 23 American cities.

Starting with DUF, building from strength. For the past twelve years, the National Institute of Justice has been administering the DUF program, in which individuals arrested and detained are interviewed regarding their drug use, and are tested for drug use via urinalysis. DUF results are published regularly in widely disseminated NIJ publications.

DUF data are available for local analysis by the 23 sites. In New Orleans and in Indianapolis, analysis of these data has resulted in new mayoral policy initiatives to combat drugs and crime. San Diego is developing a comprehensive city-wide strategy to combat the influence of methamphetamines. It was DUF data that first identified the introduction of that drug. DUF data spotted methamphetamine use in San Diego last year, and recent data document that drug's spread throughout California and the Southwest.

NIJ's DUF research first established that the link between drugs and crime was far stronger than originally thought -- arrestee drug test results showed that between 50 and 80 percent of the arrestees had used drugs. And NIJ's DUF data provide practitioners and policy makers at the national, state and local levels with key insights into the complex inter-relationships among drugs used by arrestees. For example, while DUF data show a steady increase in marijuana use among arrestees, especially young male arrestees, and an overall decrease in cocaine use, careful analysis of the data indicates that among some young marijuana users, the surge in marijuana use may be coupled with *greater* use of cocaine. A recent addendum to the DUF instrument allowed a unique comparison of the purchase patterns and severity of use of heroin, powder cocaine, and crack users. Preliminary results show that crack and heroin appear to be more addictive than powder cocaine and that one in five users report only casual use. Preliminary results also suggest that policing strategies to disrupt drug markets can have an impact -- in New York City, 40% of crack market participants reported that police activity kept them from buying crack on at least one occasion.

Responding to an existing demand for local data. Over the years and without solicitation, NIJ has received requests from 14 cities to join the DUF program because those jurisdictions wanted to know more about their local drug problems. Because of limited funding, NIJ has had to turn them down. We have thus been hampered in our ability to look at important trends -- regional, national and local -- in drug use and related crime issues in those jurisdictions where the drug problem is most severe, and those cities have lacked this very effective policy analysis tool.

ADAM: already a collaborative effort. An undertaking this significant should not be attempted alone. NIJ has already consulted with a number of federal research partners. The DEA has indicated support of the concept, and we anticipate working with DEA to select sites which complement their existing data collection efforts. NIDA plans to fund research based on ADAM data. ONDCP has been briefed on our plans, and is supportive of the effort.

Unique Characteristics of ADAM. While other research efforts attempt to paint a national portrait of drug use, only ADAM will offer the potential to provide accurate national and local estimates and a flexible research vehicle for quickly and easily exploring national and local policy and research issues. A comparison of the attributes of ADAM and of other national data sources on drug use is included in Exhibit A, and summarized below.

- *To encourage use of ADAM data in policy making, NIJ will fund community drug research policy collaboratives, convened by the local Law Enforcement Coordinating Council (LECC) representative.*
- *With simple modifications to the existing data collection vehicle, local researchers can provide quick answers to specific research questions. In this way, NIJ has studied arrestee use of handguns and heroin and has learned about needle sharing and local drug market dynamics.*
- *ADAM will be the only drug use assessment tool in the country using urinalysis to confirm self-report, so the data will be reliable -- we know from our Drug Use Forecasting (DUF) program that self-report substantially underestimates actual drug use.*
- *NIJ is a research agency and is a credible local research partner, without an enforcement or advocacy mission.*
- *The data will be collected quarterly, and the data sets will be made public within 60 days of data collection, allowing researchers access to analyze the more than 1,000 variables on 150,000 respondents.*

A modest investment, compared to the benefits. The nation currently spends \$30 billion to combat drug abuse, according to the National Drug Control Strategy. With this investment to transform NIJ's current DUF program to a nationwide drug assessment for arrestees, the

Department of Justice would be able to establish an independent method of tracking and assessing criminal behavior for decades to come. Twenty years ago, the Department of Justice broke new ground with the first National Crime Victimization Survey. As a result, we learned about under-reporting of crime and repeat victimization, particularly within family settings, and made a commitment to collect this data annually. If institutionalized at the national level, the ADAM program will break similar ground by developing an ongoing survey of drug use and crime that focuses on a population of great policy significance -- individuals arrested and charged with crimes. Project implementation steps, and anticipated project costs are identified below.

Site selection. Sites will be chosen in cooperation with our research partners. We propose that this drug testing initiative be set in the nation's 75 largest cities (with some modification to enhance regional coverage). Our proposed sites include all jurisdictions with populations greater than 200,000, and account for about one-fifth of the nation's population. These cities represent nearly one-half of all the homicides reported to the FBI and 40% of all other Part 1 crimes reported to the FBI.

Once ADAM sites are selected, on-site training of staff will begin, using over a decade of DUF experience. In addition, we anticipate annual training conferences to assure consistency of data collection methods across sites. Basic site costs include 1,600 interviews each year, on-site quality control, collection and analysis of urine specimens, delivery of completed interviews to the national data center, and the associated site security costs. Total site costs will be \$9 million, or roughly \$120,000 per site. Site costs will be incurred gradually, as the program expands from the existing 23 DUF sites to 75 ADAM sites over a period of three years. An additional \$1 million annually will support training for site staff.

Annual outreach to suburban, rural, and tribal lands. Each year, the 75 ADAM sites will each conduct an additional series of assays to assess the extent of drug use in a specific non-urban area of interest. These areas will be chosen by the 75 sites and the data collection would be completed by the staff of the site. Typical outreach sites include suburban locations near to the city that are suspected sites of migration of gangs or drug activity, unincorporated rural areas, or tribal lands. Annual costs for this part of the initiative would be \$3 million.

National data center. NIJ currently contracts with a research firm for the centralized collection and analysis of urine samples, data "cleaning," archiving of data for public use, and the preparation of data for quarterly and other reports. Annual costs to provide this service for ADAM are estimated at \$1.5 million per year in the first two years and \$2.5 million per year thereafter.

ADAM can be used as a policy platform. We will encourage use of drug research in policy making at each ADAM site. As part of this effort, local researchers will be eligible for research funded by NIJ and by our federal research partners. To establish a local infrastructure for input of research into policy, we propose to constitute a drug policy board, building on the existing role of the LECC representatives in each U. S. Attorney's Office. LECC representatives could convene the interested parties to policy making in the jurisdiction (including police,

schools, DEA, drug treatment providers, public health officials, prosecutors, etc.) and provide a forum for research questions about crime and drug use. For example, a city concerned about the rise in methamphetamine use would be able to construct a simple addendum to the quarterly survey to learn about the patterns of use and of acquisition of this drug, and the profile of users, and sellers. A city interested in the spread of intravenous HIV could ask questions about patterns of needle sharing. Of the total proposed budget, \$1 million annually will be spent to support and develop local research initiatives beginning in 1999. Approximately half of these funds will support an annual nationwide research competition for analysis of local data. The remaining funds would be available for jurisdictions to use at their discretion: for researcher development of targeted addenda; any desired extra data collection efforts; local analysis of both national and local drug use data; or local dissemination efforts.

Develop an annual report on drugs and crime. Using ADAM data, we will design and publish an Annual Report on Drugs and Crime -- the report will set benchmarks for a number of indicators of the state of drug use and crime. This is a methodologically challenging endeavor, and will require substantial consultation with statisticians, field testing, and revisions. We will plan to have this ready for implementation in the third year. Total costs for this effort will be \$1 million annually.

Violence Against Women Research Agenda.....	Amount
	\$7,000

This initiative will implement the recommendations of the Congressionally mandated, National Academy of Sciences Report, Understanding Violence Against Women. The NAS study was conducted with NIJ funding in response to a requirement in the Violence Against Women Act of 1994 to develop a research agenda on violence against women. In developing the 1998, NIJ worked with CDC to prepare a joint proposal for a government-wide Violence Against Women Research Agenda. In 1998, NIJ will require \$7 million to: sponsor secondary analysis of five to seven existing longitudinal data sets on the development of violent behavior to specifically examine violence against women; synthesize the findings of research studies commissioned since 1992 by NIJ and others on this subject; initiate community longitudinal studies of prevention and intervention programs in three to five sites; develop new measures on the amount of violence against women and its consequences; fund evaluation studies of criminal justice program strategies; develop targeted, practitioner oriented reports on research findings and their implications in the field; and broadly disseminate research findings.

2016

Annual funding over 5 years is summarized below:

Year	Amount	Cost Item
1998	\$7 million	Five to seven secondary analysis studies-\$1.3million Synthesis of research - \$500,000 Community longitudinal studies - \$1.2 million New measures - \$1million Evaluation - \$1.6 million Publication and dissemination - \$1.4 ml/ion
1999	\$5.2 million	Community longitudinal studies - \$1.2 million New measures - \$1 million Evaluation - \$1.6 million Publication and dissemination - \$1.4million
2000	\$8.7 million	Data collection for longitudinal studies- \$3.5million Community longitudinal studies - \$1.2 million New measures - \$1 million Evaluation - \$1.6 Publication and dissemination - \$1.4million
2001	\$5.2 million	Community longitudinal studies - \$1.2 million New measures - \$1 million Evaluation - \$1.6 million Publication and dissemination - \$1.4 million
2002	\$5.2 million	Community longitudinal studies - \$1.2 million New measures - \$1 million Evaluation - \$1.6 million Publication and dissemination - \$1.4 million

Major Objectives, which reflect the Academy's recommendations, for the five year period 1998-2002 include :

- Improving the tools researchers use, including the development of standard definitions, improvements in the validity and reliability of research instruments, and clarification of theory; improved measurement of the incidence and prevalence of violence against women, and the development of new measures of effectiveness for prevention, intervention and control programs.
- Preventing the development of violent behavior toward women in offenders through research on how such behavior develops over the life span, especially during early childhood and adolescence.
- Reducing the costs to society of violence against women through studies on the economic impact of violence against women, as well as cost benefit and cost effectiveness studies on prevention, intervention and control programs.
- Improving preventive interventions through longitudinal and experimental studies of school-based, media, health, and criminal and civil justice system programs to prevent and control violence against women.
- Developing practitioner oriented reports and other dissemination tools such as videotapes, teleconferences, national and regional meetings, and telecommunications media to disseminate the findings of research and ensure that it is used to develop prevention, intervention and control programs.

Gradual implementation of this initiative will require incremental funding with an initial commitment of \$7 million in 1998 to support these goals and objectives.

Program Description

NIJ's Leading Role. NIJ has played a leading role in research on violence against women for over twenty years. NIJ's research in the early and mid-1970's on rape and domestic violence led to current research efforts as well as prevention, intervention and control programs in these areas. Examples include early studies on rape which supported calls for changes in state laws to protect rape victims; and studies of police calls for service in Kansas City and Detroit, which found that police might have prevented domestic homicides if they had responded differently to domestic violence calls. These findings led to NIJ support of the 1979 Minneapolis Experiment On the Use of Arrest in Domestic Violence cases, as well as research on prosecution strategies in domestic violence. NIJ also developed and published practitioner oriented reports on these topics, for example a report on how the criminal justice system should handle offenders in domestic violence cases.

Since 1992, violence against women has been a major area of study in NU's long range research plan. NU currently has 35 active studies on various aspects of domestic violence and sexual assault, and has invested more than \$4 million in studies of violence against women. Surveys, evaluations, and longitudinal and experimental studies are currently examining the incidence and prevalence of women's experiences with violence, the development of violent behavior, and the effectiveness of prevention, intervention and control programs. NU continues its development of practitioner oriented reports based on this research. However, because of the lack of funding in this area, even this multi-year investment in research on violence against women supports only studies of single programs or single issues such as assault or rape, rather than addressing the multiple ways in which women experience violence. Synthesis of these studies remains difficult because of different definitions of violent behavior or different measures of violence and its consequences.

In the Violence Against Women Act of 1994, Congress recognized the lack of research information on the issue of violence against women, and in recognition of NU's leading role, included language requiring that eight separate studies be conducted by NU in the areas of domestic violence, sexual assault and stalking. All of these studies have been completed and reports have been submitted to Congress. Under one of these mandates, the National Research Council of the National Academy of Sciences developed a research agenda on violence against women. This request is based on their report.

NU's continued leadership is crucial: NU's long range research plan has generated several studies which provide a strong base for carrying out the Academy's recommendations. Chief among these is a survey of 8,000 women age 18 and older in U.S. households which collects data on the extent, nature and consequences of various forms of violence and threats of violence against women, including stalking and childhood victimization. The Centers for Disease Control and Prevention (CDCP) has added funds to this survey for the past three years. This national survey will provide critical information about women's victimization experiences, and will identify those gaps in knowledge that can only be addressed through the regional and local surveys called for in the Academy's report. In addition, NU is currently funding three longitudinal studies that have collected data related to violence against women. These studies have large sample sizes, and are appropriate for secondary analysis of the data they have collected on both males and females, as well as for new data collection specific to violence against women. NU also has significant evaluation studies in the areas of violence prevention and control. These studies will be expanded to develop new concepts for prevention and intervention programs specific to violence against women. Finally, NU is well positioned to provide government leadership in this crucial area because of its broad mandate to study the causes and correlates of crime and to develop research information in support of crime prevention strategies. NU has no operational mission to design and implement prevention programs, and can bring objectivity and independence to the research task. Most importantly, the scope of NU's mission has required the interdisciplinary approach to research recommended by the National Research Council's report, an approach evidenced by the many interagency funding partnerships that characterize NU's research program, and the interdisciplinary character of NU's more than 350 active grantees and 1,000 consultants.

NU works in partnership with other federal agencies and foundations. Other government agencies share NU's interest in violence against women. Since the early 1980's NU has co-sponsored national conferences on domestic violence with the National Institutes of Mental Health,

developmental antecedents of violence against women. Secondary analysis would be conducted in year 1 at a cost of approximately \$1.3 million.

2) **A synthesis of findings** from current NIJ, IHS and privately sponsored studies which should be completed by the end of 1998 will be undertaken and combined with the results of the secondary analysis studies described above. This synthesis will be completed by the end of year 2 at a cost of \$500,000 (year 1 funds).

3) **New data collection on violence against women** looking specifically for violent events among adolescents and adults would be undertaken using these same existing samples. For most of these studies, the study subjects are now adults. Data would be gathered from interviews and existing records to fill in the gaps in information identified by the secondary analysis. New data collection would be commissioned at the beginning of year 3 at a cost of approximately \$3.5 million. Results from these efforts would be expected 15 months after award.

4) **Community studies of prevention and intervention programs:** Although there are longitudinal data sets that can be re-analyzed and expanded to examine developmental issues related to violence against women, there are virtually no such existing data sets or studies on program effectiveness. Most evaluation studies are of single programs or approaches, and follow-up of subjects tends to range from 6 months to two years. Experimental studies featuring random assignment have been undertaken, most notably on the effects of arrest, but the findings from such efforts are mixed at best. As the Academy noted, these studies fail to take into account the context in which violence against women occurs. Longitudinal studies examining community and neighborhood culture, ethnicity, resources, programs, risk factors and protective factors for the prevention of violence against women should be undertaken. Programs to be studied in three to five communities would include prevention/education programs, counseling and other health related and social service prevention and intervention programs, shelter programs, legal services programs, and criminal and civil justice programs and processes. These longitudinal community studies would include a multi-year examination of community resources/programs, and surveys with follow-up of program participants regarding program effectiveness. Members of the community at large would also be surveyed to determine their awareness and use of these resources, and their perceptions of the contribution of these programs to individual and community safety for women. NIJ will examine the data from the community study under its Program on Human Development in Chicago neighborhoods to develop appropriate design parameters for these studies. Overall cost would be \$6 million over a five year period.

New measures: how can we determine the amount of violence against women and its consequences? The Academy's report notes the lack of good measures of violence perpetrated against and experienced by women. NIJ will mount a program of basic research to correct this problem. Activities would include: **representative surveys** of physical violence against women, **new instruments** to measure relationships such as the severity of threats or injuries in relation to the charges filed in criminal cases, or the co-occurrence of substance abuse and violence against women; **new measures of the discretionary processes** and their outcomes within the criminal justice system; **new outcome measures**

for program effectiveness such as stage of change in violence levels for victims and perpetrators, or level of empowerment for women participating in programs, measures of the co-occurrence of violence; estimates of the lifetime prevalence of violence perpetration; new instruments to assess violent experiences of women of color, including African American, Asian American, Native American, and Hispanic American women; and a cost studies program including impact costs for victims and society, and cost benefits and cost effectiveness studies on prevention, intervention and control programs. NIJ would also participate in co-funding arrangements with other agencies to develop measures in the realms of health and education. Costs would be \$1 million per year for a five year period to conduct these studies and participate in interagency collaborations.

Evaluation studies: how can we determine what works? Information is needed on what works to prevent violence against women, and also on the effects of interventions on both victims and perpetrators. NIJ is currently evaluating special domestic violence courts in Miami and Milwaukee, and the effects of traditional court processes through official records and interviews in Quincy, MA. However, because of state and local differences in how these cases are handled, many improvements in criminal justice system interventions are specific to a particular jurisdiction. Moreover, there is a need for more systematic study of police intervention strategies, prosecution strategies, diversion programs, and victim support programs than is possible with current funding. In addition, the Academy Report calls for more randomized trials of experimental interventions. Importantly, NIJ would ensure that practitioners and advocates for women's safety who work with victims and offenders are included in the research process. NIJ proposes a two part response to these issues. This program would supplement the NIJ evaluation of programs funded under VAWA.

1) NIJ would fund multi-site evaluations of the effectiveness of new programs or experimental constructs such as domestic violence courts, or special mechanisms for emergency protection orders for women. NIJ would conduct such evaluations using experimental designs where possible. Cost analysis studies would be included in these evaluations. Cost for evaluations in up to 25 sites would be \$1.6 million per year for 5 years.

2) NIJ would fund research partnerships between universities or research firms and local community agencies to address the specific evaluation needs of local programs and to ensure the participation of local practitioners and advocates in the research process. NIJ would initiate these partnerships in year one and would fund a new round of such partnerships every year over a five year period. Cost would be \$1 million per year for five years.

Making Study Findings Useful: Communities, state and local criminal justice, health, education, and social service agencies, and advocacy groups for women's safety need to be aware of research results as soon as they become available. NIJ will work close coordination with the Violence Against Women Grants Office (VAWGO), OJP to develop approaches and strategies for communicating research results to these client groups, and for including these practitioners in the research process. Approximately 20 percent of this total request will be set aside to address this need in two ways:

- 1) Whenever feasible, NIJ will involve state and local practitioners in the research process as consultants and advisors in the development of NIJ's research agenda, as reviewers of research proposals under NIJ's peer review process, and as advisors to individual research projects.
- 2) NIJ will develop a wide array of research products to support this program, including practitioner oriented reports, printed previews of preliminary findings, electronic dissemination on the Internet, at least one research conference in the year 2000 that will be developed in partnership with other research agencies, especially at HHS and DoEd, and telecommunications media including videotapes, and teleconferences.

Federal Drug Testing Initiative.....	Amount
	\$2,300

This increase of \$2.3 million will provide for a total funding level of \$7 million to expand the President's Drug Testing Initiative Program as part of the federal system Operation Drug TEST. This program is designed to lead to identification of drug abusers and link treatment and other interventions to those who need it. It will ensure that prosecutors and judges are aware of the drug status of defendants and will enable them to respond to defendants' failed drug tests appropriately. It will provide for detoxification or other appropriate intervention measures for drug-using defendants in pretrial detention who may be released back into the community. And it will provide critical tracking information systems as the defendant progresses through the criminal justice system, so that whatever substance abuse interventions are provided are informed by previous drug testing and treatment records.

In FY 96 Congress appropriated \$4.7 million to the Department of Justice, General Administration Account to be used to fund the 25-district pilot program in which criminal defendants will be drug tested either immediately before of following their initial appearance in court. These funds will be transferred to NIJ in 1998 to be combined with the requested \$2.3 million increase to implement this new federal policy. This level of effort will include: (1) drug testing all federal arrestees before a hearing on pre-trial release and related conditions, continued testing throughout the pre-trial, trial, and post-conviction process and appropriate sanctions for failing the drug test and/or violating related conditions; (2) marshaling of treatment and rehabilitation resources for those in this population determined to need them; and (3) providing a model for state criminal justice systems in order to break the cycle between drugs and crime. The program will be managed by the Administrative Office of the United States Courts. In addition, the \$5 million provided to BJA as part of Byrne discretionary program funding for federal drug testing purposes a portion will fund NIJ's evaluation of the Federal drug testing initiative.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: National Institute of Justice						
MISSION: To develop new information on crime and to determine what works and why in prevention, enforcement, and adjudication of crime and its consequences, and in institutional and community corrections.						
PERFORMANCE INDICATOR INFORMATION						
Type of Indicator	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target

B. Factors Affecting 1996 Program Performance: NA						
C. Factors Affecting Selection of 1997 and 1998 Targets.						
1998 is too early to show end outcomes for final reports and products of awards issued that year. These outcomes can be expected in 1999 and 2000.						
* Outcome measures depend on the number of field-generated applications that meet NU standards for awards in all areas.						
** The final reports of the violence against women research awards will be submitted by the end of 1999, with products published in early 2000.						

**OFFICE OF JUSTICE PROGRAMS
CRIMINAL JUSTICE STATISTICAL PROGRAMS
PROGRAM PERFORMANCE INFORMATION
GOVERNMENT PERFORMANCE AND RESULTS ACT REQUIREMENTS**

Mission: To assist policy and decision-makers at the Federal, State, and local levels of government by providing for the collection, analysis, publication and dissemination of comprehensive and accurate statistical information concerning crime and the operation of the Nation's justice systems.

General Goals:

1. Collect, analysis, publish, and disseminate statistical information on crime and the operation of justice systems to the President, Congress, the Department, State and local executives and officials, the media and the public.
2. Maintain and develop an analytic program that addresses the implication of national justice statistics for Administration and Departmental policy and legislative initiatives.
3. Recommend national and international standards for justice statistics and to ensure the interstate comparability, reliability, and validity of justice statistics.
4. Conduct, support, and implement recommendations to improve the quality of justice statistics, records and information systems.
5. Encourage the development, maintenance, and utilization of State and local government organizations and facilities responsible for the collection and analysis of justice data and statistics.
6. Ensure compliance with requirements relating to confidentiality and security of data.
7. Assist users of BJS data in understanding statistics and methodologies, as well as interpreting published data.

Increase/Decrease	---

BASE PROGRAM DESCRIPTION: The Bureau of Justice Statistics (BJS) is the United States' primary source for criminal justice statistics. BJS's statistical series capture data from the entire range of the justice system covering criminal victimizations and the consequences of these crimes for victims, law enforcement agencies, the nation's felony trial courts, and correctional agencies at all levels of government providing institutional and non-institutional supervision to about 5 million adults on an average day. In conducting these data collection programs, BJS:

- ▶ Interviews almost 100,000 citizens in 50,000 households about their experiences as crime victims.
- ▶ Details characteristics and consequences of over 43 million criminal victimizations.
- ▶ Analyzes operations of some 50,000 agencies, offices, courts, and institutions that together comprise the justice system.
- ▶ Counts populations and conducts surveys among the more than 5 million adults who during an average day are subject to the care, custody, or control of criminal justice authorities.

CRIMES AND VICTIMS

The *National Crime Victimization Survey (NCVS)* is the Nation's second largest ongoing household survey. Survey data tell us how

many rapes, sexual assaults, robberies, assaults, thefts, household burglaries, and motor vehicle thefts. U.S. residents age 12 or older and their households experience each year. Ongoing from 1973 and redesigned in 1992, the National Crime Victimization Survey is the Nation's primary source of information on crime victimization and the victims of crime, and is the only national crime measure that includes both those crimes that people experience but do not report to law enforcement authorities and those that they do report. During a collection year, data are obtained from a nationally representative sample of roughly 49,000 households comprising more than 100,000 persons on the impact, frequency, and consequences of criminal victimization in the United States. The NCVS furnishes the only national forum for victims to describe outcomes of crime and characteristics of violent offenders.

THE JUSTICE SYSTEM

Law Enforcement

Law Enforcement Management and Administrative Statistics (LEMAS) survey, conducted every three to four years, collects data from over 3,000 agencies, including all those that employ 100 or more sworn officers and a nationally representative sample of smaller agencies. Detailed data are obtained on the organization and administration of police and sheriff's departments. In addition, censuses of Federal, State, and local law enforcement agencies are conducted periodically, as well as the survey of campus law enforcement agencies.

Prosecution

National Prosecutors Survey Program, a biennial series, collects data on resources, policies, and practices of local prosecutors from a nationally representative sample of 290 prosecutors' offices in State court systems. The survey obtains basic information on staffing and operations and collects data on current topics such as the use of innovative prosecution techniques, intermediate sanctions, plea bargaining, and work-related assaults and disabilities.

Courts and Sentencing

National Judicial Reporting Program, conducted every two years, surveys a nationwide sample of county felony trial courts in 300 counties, collecting detailed information on demographic characteristics of felons, conviction offenses, type of sentences, sentence

lengths, and amount of time from arrest to conviction and sentencing.

State Court Processing Statistics (SCPS) (formerly, through 1994, National Pretrial Reporting Program (NPRP)) provides data on the criminal justice processing of persons charged with felonies in 40 jurisdictions representative of the 75 largest counties. The program prospectively tracks felony defendants from charging by the prosecutor until disposition of their cases or for a maximum of 12 months. Data are obtained on demographic characteristics, arrest offense, criminal justice status at time of arrest, prior arrests and convictions, bail and pretrial release, court appearance record, rearrests while on pretrial release, type and outcome of adjudication, disposition, and type and length of sentence.

Civil Justice Survey of State Courts collects civil caseload data for a one-year period from a sample of counties representative of the nation's 75 largest counties, including case type, outcome, jury awards, type of parties, legal representation, and dates of filing and disposition.

Survey of State Court Organizations provides basic descriptive information on the Nation's court systems such as grand juries, jury verdict rules, case selection, judicial selection, and sentencing provisions.

Federal Justice Statistics Series provides annual data on workload, activities, and outcomes associated with Federal criminal cases. Information is acquired on all aspects of processing in the Federal justice system, including the number of persons investigated, prosecuted, convicted, incarcerated, sentenced to probation, released pretrial, and under parole or other supervision; initial prosecution decisions, referrals to magistrates, court dispositions, sentencing outcomes, sentence length, and time served. The program collects data from the Executive Office of U.S. Attorneys, the Pretrial Services Agency, the Administrative Office of the U.S. Courts, the U.S. Sentencing Commission, and the Federal Bureau of Prisons.

Corrections

The corrections statistics program provides systematic information on correctional populations and facilities gathered from Federal, State, and local governments, and covers the major sub-units of the corrections system -- probation, jails, prisons, and parole. The overall program consists of the following components: (1) annual counts and characteristics of persons entering or exiting probation and parole; (2) annual and mid-year counts of incarcerated persons in State and Federal prisons and local jails; (3) annual statistics on persons admitted or released from State and Federal prisons and on persons released from parole supervision; (4)

annual counts and characteristics of persons sentenced to death; (5) quinquennial surveys of national samples of prison and jail inmates and adult probationers; (6) censuses of State and local correctional facilities and parole and probation agencies; and (7) follow-ups of persons discharged from a correctional status in order to evaluate post-release outcome.

Expenditure and Employment

Criminal Justice Expenditure and Employment Program collects, analyzes, and publishes data on the cost of operating the Nation's criminal justice systems. Using extract data from the Census Bureau's ongoing finance and employment survey series, BIS produces national estimates of expenditures and employment relating to major criminal justice activities, including police protection, prosecution, legal services, public defense, and corrections.

Criminal Records Systems

Criminal Records Data Quality Program supports surveys, studies, conferences, and technical assistance on issues relating to criminal justice records. Primary emphasis is on accuracy and completeness of records, limitations on dissemination, commingling of juvenile and adult records, data auditing techniques and the interstate exchange of records. Under this program, the 50 State Survey of Criminal History Information Systems is conducted, providing information on the technology, policy and legislative status of criminal history records.

STATE-LEVEL ANALYTICAL SUPPORT

BIS has continued to encourage the development and utilization of State-level statistical data by providing technical and financial support to State statistical and operating agencies responsible for a wide variety of analytical activities in their own State. The State Statistical Analysis Centers (SACs) analyze and disseminate statistical information, coordinate State criminal justice statistical activities among State, county, and city agencies, and provide improved State data for BIS analyses. They also assist the executive and legislative branches in each State to assess the likely consequences of new legislation on the operations and resources of the criminal justice system. Through Federal funding over the years, BIS has created SACs in every State, the District of Columbia, and three Territories; presently, there are 48 active SACs. Beginning in 1997, BIS, in conjunction with other OJP components, is funding the state statistical analysis centers to focus their analysis activities on particular criminal justice issues which will be selected for nationwide consistency and interest across the states and will change every six months.

ACCOMPLISHMENTS/GOAL-ORIENTED RESULTS: The Bureau of Justice Statistics continues year after year to bring critical information to bear on criminal justice issues that challenge the American society.

BJS Produces Comprehensive and Accurate Data on Crime and Justice System Operations

Victimization Statistics

- BJS released 1995 preliminary National Crime Victimization Survey findings in September 1996 which report that non-fatal crimes of violence and theft in the nation declined by almost 7 percent in 1995, amounting to almost 3 million fewer offenses than in 1994. The NCVS reveals a 9-percent decline in non-fatal violent offense levels (9.9 million for 1995 compared to 10.9 million for 1994), interrupting a rising trend since the mid-1980s; and a decrease in the rate of crimes of theft, continuing a 20-year pattern of decreasing rates.
- *Female Victims of Violent Crime: Selected Findings*, published by BJS in December 1996, includes 1992-94 data for rape/sexual assault, robbery, and assault from the redesigned NCVS, victimization trend data for 1973-94 adjusted for the redesign, and homicide data from the 1995 FBI Uniform Crime Reports. It summarizes the latest published data on both fatal and nonfatal violence between intimates (present or former spouse, boyfriend, or girlfriend) as opposed to relatives, friends or acquaintances, and strangers. Findings reveal that in 1994, women were about two-thirds as likely as men to be victims of violence, females represented 21 percent of all known homicide victims in the U.S. and 9 out of 10 female murder victims were killed by males.
- In spring 1997, BJS in collaboration with the Administration for Children and Families of the Department of Health and Human Services and the Consumer Product Safety Commission (CPSC), will release findings from a 27-month study of the CPSC's national sample of hospital emergency rooms which obtained information on intentional injuries, such as domestic violence, rape, and child abuse, that require emergency room treatment. This is a major new area for data collection and is designed to supplement existing NCVS statistical information. Data to be released indicate that about 1.4 million people were treated in hospital emergency rooms in 1994 for intentionally or possibly intentionally sustained injuries. Of these injuries, about 7 percent were inflicted by a spouse or ex-spouse and an additional 8 percent were inflicted by another relative.

Law Enforcement Statistics

- BJS published findings from the first-ever data collection of the Campus Law Enforcement Agency Survey which collects

data from nearly 600 campus law enforcement agencies serving 4-year colleges and universities with 2,500 or more students describing agency operations, personnel characteristics, expenditures and salaries, equipment, computers and information systems, policy directives, and general campus characteristics, including crime statistics. Findings based on this new BJS survey reveal that three-fourths of these agencies used sworn police officers while the remainder relied on nonsworn security officers. Public campuses (93%) were more likely to have sworn officers than those under private control (43%); however, about three-fourths of the private universities with 10,000 or more students used sworn police. Per student employment and expenditure for law enforcement at private institutions was nearly twice that of public campuses. Nearly all agencies operated general crime prevention programs on campus, and about two-thirds had programs aimed specifically at rape prevention.

- Based on 1993 Law Enforcement Management and Administrative Statistics (LEMAS) program data, BJS released *Local Police Departments, 1993 and Sheriffs' Departments, 1993* which present data from nationally representative samples of the more than 12,000 general-purpose local police departments and the nearly 3,100 sheriffs' departments operating nationwide describing the number and size of agencies, job classification of personnel, race and sex of sworn personnel, agency functions, 911 system, lockup facilities, operating expenditures, starting salaries, special pay, education and training requirements, sidearms, nonlethal weapons, body armor policies, vehicle use policies, computers, and written policy directives. *Law Enforcement Management and Administrative Statistics, 1993: Data for Individual State and Local Agencies with 100 or More Officers* reports agency-specific data collected from 661 State and local agencies that employed 100 or more sworn officers.

Court and Sentencing Statistics

- BJS is currently collecting data from a national sample of felony trial courts in 300 counties under the National Judicial Reporting Program (NJRP) for reference year 1994. The most recent findings from the 1992 data collection are presented in: *Felony Sentences in the United States, 1992* which reports that almost 900,000 felons were convicted in State courts throughout the U.S. in 1992. One-third of these offenses were for drug offenses. *State Court Sentencing of Convicted Felons, 1992*, provides data on the number of felony offenders in State courts, convictions and sentences received, demographic characteristics of convicted felons, processing of felony conviction cases, regional variation in adjudication and sentencing, and trends in drug trafficking from 1986 to 1992.

- The civil justice statistics project was the first of its kind to assess scope and nature of the civil court workload in the Nation. The study documented the number and type of civil actions, outcomes, and jury awards. Study findings on tort cases and jury awards in particular will serve as benchmarks for evaluating the numerous civil justice reforms taking place throughout the Nation. To facilitate widespread use of these data, BJS produced a civil justice CD-ROM containing all datasets, programs, and reports for general distribution. Recently released findings from this first-ever survey include: *Contract Cases in Large Counties*; *Civil Justice Survey of State Courts, 1992*; *Tort Cases in Large Counties, 1992*; and *Civil Jury Cases and Verdicts in Large Counties, 1992*.
- BJS recently published findings from the 1994 National Prosecutor Survey. Prosecutors in State Courts, the most recent in a series of biennial sample surveys of the Nation's 2,300 State court prosecutors. Almost 90% of the offices prosecuted domestic violence and child abuse cases. Half the offices reported that a staff member received a work-related threat or assault. More than half the offices in large metropolitan areas had specialized units to handle juvenile cases in adult criminal court. New topic areas covered in this report include juvenile cases waived to criminal court, the cross-designation of prosecutors to litigate in Federal court, procedures for handling civil actions against prosecutors and other professional staff, and types of community involvement by prosecutors.
- State court processing data are currently being analyzed for those offenders charged with a felony during the month of May 1994 with published findings from this data collection expected in the spring of 1997. The most recent published data are available in *Felony Defendants in Large Urban Counties, 1992* which presents characteristics of felony defendants in large urban counties; criminal history; pretrial release by type of release, bail amount, and most serious arrest charge; time from arrest to adjudication; adjudication outcome; and sentences received.
- BJS recently published selected findings drawn from various BJS surveys containing information related to the indigent defense for criminal defendants. Twenty-eight percent of State court prosecutors reported in 1992 that their jurisdiction used public defender programs exclusively to provide indigent counsel. About three-fourths of the inmates in State prisons and about half of those in Federal prisons in 1991 received publicly-provided legal counsel for the offense for which they were serving time.
- The Federal Justice Statistics program continues to serve as a valuable information resource. BJS recently provided statistics describing substantial assistance departures by Federal judicial district to an Attorney General-sponsored working

group on racial disparity. Additionally, BJS is currently providing assistance to the policy committee on Youth in Federal Custody on identifying juveniles processed in the Federal criminal justice system. In August 1996, BJS released the special report, *Noncitizens in the Federal Criminal Justice System, 1984-94*, which describes noncitizens processed in the Federal justice system, including the number prosecuted and incarcerated from 1984 to 1994, the offenses for which they were prosecuted, and the sanctions imposed. The report reveals that the number of noncitizens prosecuted in U.S. district courts increased almost 350%, from 3,462 during 1984 to 10,352 during 1994. Approximately 50% of noncitizens prosecuted in U.S. district courts were charged with a drug offense.

Corrections Statistics

- BJS is conducting the 1997 Survey of Inmates in State and Federal Correctional Facilities to collect information on individual characteristics of prison inmates, current offenses and sentences, characteristics of victims, criminal histories, family background, gun possession and use, prior drug and alcohol use and treatment, educational programs and other services provided while in prison, as well as other personal characteristics. Data are collected through personal interviews with a nationally representative sample of 14,000 State prison inmates and 3500 Federal inmates in about 300 State prisons and 40 Federal prisons.
- BJS is currently analyzing data collected from the first National Survey of Adult Probationers representative of 2.5 million adults with interviews and data collection in 166 probation departments with preliminary findings being released at the American Probation and Parole Association conference in January 1997. The survey provides for the first time a thorough understanding of the backgrounds of offenders receiving the least severe criminal sanction; estimates of probationers' level of drug and alcohol use; for violent offenders, a profile of victims; measurement of the amount of drug treatment available and used; examination of the effects of early application of probation on recidivism and on seriousness of crimes; and a description of how probation is applied with other sentence elements like incarceration, fines, and program participation.
- In 1996, BJS completed the data collection for the 1995 Survey of Inmates in Local Jails which relies on personal interviews with a nationally representative sample of nearly 6,500 inmates. The local jail inmate population includes persons who belong to all parts of the criminal justice continuum - those awaiting trial, those sentenced to jail and serving their sentence, and those sentenced to prison and awaiting transfer. The survey will provide a current understanding of the criminal histories and patterns of alcohol and drug abuse of the offenders who are incarcerated. This set of interviews was

the first BJS survey administered with laptop computers which is expected to significantly increase efficiency.

- Other recent findings on corrections are reported in:
Prison and Jail Inmates, 1995 reports that there were almost 1.6 million men and women in the nation's jails and prisons in 1995.
Probation and Parole Populations, 1995 presents that at the end of 1995, 3.8 million men and women were on probation or parole, an increase of 119,000 during the year.
Capital Punishment, 1995 reports that sixteen states executed 56 men in 1995 -- the most in 35 years.
HIV in Prisons, 1994 reveals that at yearend 1994, 2.3 % of the 999,693 State and Federal prison inmates were known to be infected with the human immunodeficiency virus.

BJS Data Is of Critical Importance to Many Administration and Legislative Goals

BJS will continue to develop and maintain an analytic program which addresses the implications of national justice statistics for Administration and Departmental policy and legislative initiatives.

- BJS prepared the congressionally-mandated study of offenders who committed crimes against children required under the National Child Protection Act of 1993. The report, *Child Victims: Violent Offenders and Their Victims*, released March 1996, presents that (a) 1 in 5 violent State prisoners (about 65,000 offenders) reported a victim under age 18; (b) older violent inmates were substantially more likely than younger inmates to have victimized a child; and (c) 8 out of 10 prisoners convicted of sexual assault had committed their crime against a victim under age 18. The report describes the sociodemographic data on these offenders, the physical or sexual abuse they may have experienced, their current offense, their criminal history backgrounds (including prior offenses against children), and their use of drugs or alcohol at the time of the offense. For child victims of adult offenders, the study includes their sociodemographic backgrounds, the victim-offender relationship, and the consequences to the victim, such as injuries and weapon use by the offender.
- The *National Data Collection on Police Use of Force*, jointly published by BJS and NIJ in April 1996, as required under Section 210402 of the Violent Crime Control and Law Enforcement Act of 1994, describes the findings about police use of

force from existing research, explains the efforts being undertaken by the Department, and summarizes the issues associated with establishing a national data collection system.

Because a national data collection system which records police use of force incidents does not exist, the Department of Justice has embarked on a number of steps that will collect such data: (1) BJS has field tested a National household survey to assess how often police-public contacts result in use of force; (2) BJS and NIJ are sponsoring the National Police Use of Force Database; and (3) NIJ is funding several site-specific research projects on use of force.

The congressionally mandated report, *Domestic and Sexual Violence Data Collection: A Report to Congress under Violence Against Women Act*, supported by the National Institute of Justice and the Bureau of Justice Statistics, looks at how States and the Federal Government collect data on the incidence of sexual and domestic violence offenses. It identifies ways in which States could centralize data collection and examines problems of Federal statistical recordkeeping of criminal complaints of domestic violence-related. Information for the report came from a panel of experts on sexual and domestic violence and a survey of the States. The most significant finding was that the Federal Government and a majority of States (35 for domestic violence and 30 for sexual violence) gather annual statistics on these crimes. To improve reporting and to obtain more comprehensive statistics will require coordination and cooperation at all levels of government. As mandated by Congress in the Violence Against Women Act of 1994, the report represents first step in analyzing how to ensure reliable statistics on the extent and nature of violent crimes against women.

BJS provided assistance to the Department's Corrections Program Office in implementing the grant provisions of the Crime Act relating to the Violent Offender Incarceration and Truth-in-Sentencing Incentive programs. Staff have reviewed draft language, met with Congressional appropriations staff, and developed questionnaires required for determining eligibility and allocation of funds. Data collections efforts involve working with the states and territories to estimate needed arrest and incarceration data where actual counts are unavailable. BJS staff are structuring the methodology and worksheets for calculating percentage increases in persons arrested for violent crime sentenced to prison, average prison time served, average percent of sentenced served by violent offenders, and increases in new court commitments of violent offenders.

The Department, the Administration, and the national law enforcement community continued to rely on BJS for accurate and timely information on the Nation's police strength. Through its national census of state and local law enforcement agencies, BJS provided critical information on the number of police agencies and officers to Administration officials

designing national law enforcement assistance programs.

- BJS conducted special analyses to estimate the number of juvenile defendants in the Federal criminal justice system. These analyses supported policy development activities of the Policy Committee on Youth in Federal Custody as part of the Juvenile Justice Coordinating Committee chaired by the Attorney General.
- At the request of the Attorney General, BJS produced the report *Comparing Case Processing Statistics for the Interagency Working Group on Federal Statistics*. This report is designed to better inform policymakers of the differences in statistics reported by the various Federal criminal justice agencies. BJS is leading an interagency effort to identify the differences in case processing statistics and to reconcile the reported statistics and develop methods that will facilitate the comparison of criminal case processing statistics across agencies.

BJS Provides High-Tech Access to Statistical Information, Publications, and Databases

BJS is currently making substantial changes to the way it provides access to its statistical data reports and data files. BJS provides many new ways for users to electronically obtain its products -- Internet access, Fax-on-Demand and Automated Mass Faxing Systems, and BJS-sponsored Bulletin Board Systems.

- The latest BJS crime data are now available free of charge on the Internet at BJS's new home page -- <http://www.ojp.usdoj.gov/bjs/>. Criminal justice reports, spreadsheets and news releases are electronically available in a variety of formats. BJS reports are linked to the raw datasets used in the report, which can be downloaded from the BJS-sponsored National Archive of Criminal Justice Data. The BJS Internet site was named "Best 5% on the Web" within the last six months.

Users of BJS publications can access electronic spreadsheets of data tabulations that appear in the publications, and from those spreadsheets users will be linked to the documentation for data utilized in a report. In this way the technical information on published analyses will be extended beyond the printed methodological appendices routinely included in BJS documents. The very popular BJS report, *Sourcebook of Criminal Justice Statistics, 1995*, is now available online at <http://www.albany.edu/sourcebook>.

The BJS homepage also includes the most current BJS data releases and activities, descriptions of BJS statistical series and intergovernmental assistance programs and provides links to many other criminal justice statistical sources. The BJS Internet site is accessed by approximately 450 users per day with about 4,000 total requests. BJS encourages all users of its homepage to send electronically comments, suggestions, and information inquiries to askbjs@ojp.usdoj.gov. The Internet has proved to be the most efficient way BJS can make its information accessible to those who need it instantly.

- BJS staff provided technical assistance in the development of the White House's *Social Statistics Briefing Room* Internet site which provides access to a variety of social science data, including BJS criminal justice statistics, as well as links users to the Internet sites of the Federal agencies maintaining the data. Likewise, users of the BJS site can directly access the White House homepage as well as other Federal agencies.
- BJS conducted a user survey to explore demand for its products and how customers may use a variety of electronic means to meet their information requirements. The responses indicated a feasibility of any combination of fax technology (64%), computers (69%), or online transmission (60%). This outcome also pointed the way to greatly expanded services through the Internet. *The Flow of Criminal Justice Statistical Information by Electronic Means* reports the results of this survey.
- Approximately a year ago, BJS implemented a fax broadcasting system to replace as much media mailing as possible with mass-faxing, which is cheaper and faster. Nearly 70% of our media customers, 800 out of 1200, now get their faxes overnight instead of 1 to 7 days later. Since the media are the middlemen between BJS and the public and timeliness and convenience to the media drive our success, BJS is pleased to have received positive feedback from those media contacts using mass-faxing.

In addition, BJS has implemented a fax-on-demand system in which users can immediately receive faxed reports and press releases from BJS by ordering them through a touch tone telephone menu.

BJS Assists in the Development and Utilization of State and Local Data and Information Systems

- BJS is sponsoring a joint BJS/FBI project on the Study of National Incident Based Reporting Systems (NIBRS) Reporting in Law Enforcement Agencies. Through a cooperative agreement to SEARCH Group Inc., the National Consortium for Justice Information and Statistics, the study will identify the most important impediments to full NIBRS participation and the most

promising and cost effective approaches to encouraging wider and more rapid adoption of full NIBRS.

The study will include a brief history of the course of NIBRS implementation over the last decade, including the response of law enforcement agencies, states, the private software industry, Federal agencies, and associations such as the Association of State Uniform Crime Reporting Programs, International Association of Chiefs of Police, and National Sheriffs Association. The current status of NIBRS will be summarized with input from BJS and the FBI. The impediments to the full implementation of NIBRS will be identified, categorized, and clarified. The concerns expressed by state UCR programs, states that do not have State-level programs, major city and county law enforcement agencies, smaller law enforcement agencies, and major associations will be described. As part of this research effort, specific examples of state and local "advanced" incident-based systems that do not conform to NIBRS will be identified.

- BJS has continued its Federal role in conducting and supporting activities to improve the quality of justice statistics, records, and information systems at the State level. BJS recently conducted the third Survey of Criminal History Record Information Systems, which obtained data as of year-end 1993 on the number of records maintained by each State, the percentage of automated records in the system and in the master name index, levels of fingerprint-supported data, the number of dispositions received, the percentage of records with disposition data included, State membership in the FBI's Interstate Identification Index, and procedures followed in connection with presale firearm checks.

BJS recently released the report, *Compendium of State Privacy and Security Legislation: 1994 Overview*, which presents an overview of State legislation governing the privacy, security, maintenance, and dissemination of criminal history records.

- In 1997, BJS announced the State Justice Statistical Program for Statistical Analysis Centers. Under this program, BJS, in conjunction with other OJP components, identifies particular criminal justice topics for in-depth analysis and encourages SACs to conduct research and publish findings on these issues. During the first six months of FY 1997, BJS and OJJDP are encouraging SACs to focus on topics related to juvenile justice and violence including offenders, incarceration with the adult system, and the impact of trends.

PROGRAM CHANGE: There is no change from the 1997 appropriated level.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Criminal Justice Statistical Programs									
MISSION: To assist policy and decision makers at the Federal, State, and local levels of government by providing for the collection, analysis, publication, and dissemination of comprehensive and accurate statistical information concerning crime and the criminal justice system.									
PERFORMANCE INDICATOR INFORMATION									
Type of Indicator	Performance Indicators	PERFORMANCE TARGETS AND ACTUAL RESULTS							
		1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target

	General public	--	12%	12%	12%
	Other	--	8%	2%	2%

A. Definitions of Terms or Explanations for Indicators: Fax-on-demand refers to an automated fax delivery system in which customers call a toll free number and request documents through a touchtone menu. Fax broadcasting refers to mass faxing to several hundred destinations at a single time. Please note that the figures describing results of the datasets disseminated by the data archives do not include those datasets acquired remotely through the University of Michigan terminal system; no records are maintained on this usage.

B. Factors Affecting 1996 Program Performance: The reduction in statistical reports disseminated by mail is attributable to the decrease of bulk mailings of reports and an increase in use of electronic dissemination mechanisms. The reduction in telephone requests for data and the number of subscribers on the BIS mailing list is attributable to the increase in the use of on-line services. The reduction in the number of datasets distributed on CD Rom and customized diskette results from an increase in the number of datasets downloaded by users. BIS reports are available through various Bulletin Board Systems (BBS) and Internet. BIS distributed many of its publications through mass faxing, as well as fax-on-demand systems.

C. Factors Affecting Selection of 1997 and 1998 Targets: BIS anticipates a continual decrease in its customers' use of traditional (paper) methods of dissemination due to the increased preference of users to obtain reports and data from electronic means, such as the Internet and automated faxing systems. BIS expects that its support of electronic BIS will be short term as users make a transition to Internet use.

**OFFICE OF JUSTICE PROGRAMS
NATIONAL SEXUAL OFFENDER REGISTRY
PROGRAM PERFORMANCE INFORMATION
GOVERNMENT PERFORMANCE AND RESULTS ACT REQUIREMENTS**

MISSION: To identify, collect and exchange state-level sexual offender data through an automated national registry.

GENERAL GOAL: Assist states in developing complete and accurate in-state registries and to transmit registry information to the national system.

OFFICE OF JUSTICE PROGRAMS
NATIONAL SEXUAL OFFENDER REGISTRY
PROGRAM PERFORMANCE INFORMATION
(Dollars in thousands)

National Sexual Offender Registry		Amount
1997 Appropriation		\$ 0
1998 Base		0
1998 Request		25,000
	<i>Increase/Decrease</i>	+ 25,000

BASE PROGRAM DESCRIPTION: On June 21, 1996, the President issued a directive to the Attorney General to identify obstacles to building a national sexual offender registry. On August 24, 1996 the President announced that DOJ would begin development of the registry and that implementation of the registry plan will begin in early fiscal year 1997. The FBI will manage the registry that will be supported with data on sexual offender records supplied by the states. This new program will initiate the development of such a registry on a nationwide basis by assisting states to identify, collect, and provide sexual offender data for exchange through the registry. Because this Presidential initiative is closely related to the ongoing efforts to improve criminal history records and to provide for a national instant background check system (NICS) as required by the Brady Act, this effort will be closely tied to and coordinated with the overall goals of having better and more useable records on the criminal careers of offenders.

The National Sexual Offender Registry (NSOR) component of the Criminal Records Upgrade Program will have two principal objectives--to assist States in developing complete and accurate in-state registries which meet the requirements of the Jacob Wetterling Act, Megan's Law, the Pam Lychner Sexual Offender Tracking and Identification Act, and related State standards and to assist States in sharing their registry information with the FBI "Flash" system which identifies those offenders for whom special law enforcement interest has been noted. Unlike the name-based background check provided by NICS system, the NSOR requires the submission of fingerprints to the State registry in order to attach "Flash" notices to records for the proper individuals.

NSOR development in the States will be carried out through agencies already identified by the governor to administer funds received under the National Criminal History Improvement Program (NCHIP). In addition, technical assistance will be provided

to aid States in interfacing their own registries with the FBI record holding and the Interstate Identification Index (IJI) to make certain that "Flash" notices are attached to records. In this way, by either fingerprint inquiry or by IJI inquiry, the inquiring agency will be made aware of the presence of a "Flash" notice.

Nearly all States have developed some form of sexual offender registration. The number of offenders who must comply with the registration statutes is not yet known. States vary in the types of offenders subject to registration and the period of time following conviction or release to the community after serving a prison term when they must continue to register. Registration may be necessary for many years following the conviction and, in some states, is required for life. Most States also provide a wide variety of procedures for obtaining court-ordered reductions in registration requirements, often permitting substantial decreases in the duration of registration.

States also vary enormously in their capabilities to initiate and maintain an automated registry which can accurately interface with the national registry in a timely fashion. Some States' criminal records systems, from which registry-eligible sexual offenders will need to be identified, will require substantial development before their full and complete participation in the national registry will be possible. Some may only be capable of identifying newly convicted sexual offenders; for these jurisdictions, assistance will be necessary to automate or retrieve relevant records of convictions from the past which would identify covered offenders. Some states with well-developed State registries will need assistance in developing the communication interface with the FBI and continuing maintenance of their own systems and their input to the national registry.

Any funding under this program will give priority to assisting those States with the least developed capability to participate in the national registry. Because of the potential direct and collateral consequences of erroneous identification through the national registry, it is imperative that a strong emphasis be placed upon the accuracy and completeness of the information contained in the contributing State registries. In addition, there is substantial concern about the ability of offenders to cross State lines to evade State registration requirements in those jurisdictions with lesser developed registries. Continuous maintenance of the highest possible level of accuracy and timeliness by the States is essential to ensure that the President's goal to establish an effective national registry of sexual offenders is realized.

PROGRAM CHANGE: In 1998, \$25 million is requested for this program. This funding will enhance State systems to: (1) permit automated input from courts, corrections, etc; (2) automate non-automated registries; (3) develop online access for law enforcement across the state; (4) develop procedures and software to permit automated input to the FBI "Flash" system; (5)

provide education to persons responsible for inputting data on registrants; (6) support fingerprinting for out-of-state registrants; (7) provide access to juvenile records where appropriate under State law; and, (8) ensure that data in the registries is accurate, complete, and up-to-date. Additionally, since most systems currently operating have only been established since 1993, records of sexual offenders previously convicted and released from prisons or placed on probation may be included. Funds are also needed to review existing records (both manual and automated) to include such sexual offenders.

In addition to the development of the registries, technical assistance is also needed to ensure compliance with the FBI's system requirements ("Flash" or any successor design). To provide high visibility for the National Registry, a national conference (and/or regional workshops) will be convened with representatives of every state registry. The two-day meeting will describe relevant legislation and policy, provide details on submission procedures, provide technical assistance on modification of existing systems to facilitate submissions to "Flash", and address differences in definitions/classifications. Documents prepared from the meeting transcripts would be provided for later use by the states.

PROGRAM CHANGE: This is a new program in 1998.

**OFFICE OF JUSTICE PROGRAMS
MISSING CHILDREN
PROGRAM PERFORMANCE INFORMATION
GOVERNMENT PERFORMANCE AND RESULTS ACT REQUIREMENTS**

MISSION: To reduce the incidence of crimes against children, particularly kidnapping and sexual exploitation, and to improve the criminal justice, social services and treatment systems that are responsible for dealing with these crimes when they occur

GENERAL GOALS:

1. To ensure that there is effective coordination among all Federally funded programs related to missing children
2. To establish and maintain a national resource center and clearinghouse to:
 - a. provide to State and local governments, public and private non-profit agencies, and individuals information regarding free or low cost legal, restaurant, lodging, and transportation services available to benefit missing children and their families; and information on Federal programs available to assist missing children and their families;
 - b. coordinate public and private programs that locate and recover missing children;
 - c. nationally disseminate information on innovative missing children's programs, services, and legislation; and;
 - d. provide technical assistance and training to law enforcement agencies, State and local government, private non-profit agencies, and individuals in the prevention, investigation, prosecution and treatment of the missing or exploited child case and in locating and recovering missing children.
3. To periodically conduct national incidence studies to determine the actual number of children reported missing each year, the number of children who are victims of stranger abductions, the number of children who are victims of parental kidnappings, and the number of missing children who are recovered each year.

4. To provide to State and local governments, public and private non-profit agencies, and individuals information to facilitate the lawful use of school records and birth certificates to identify and locate missing children.
5. To prepare an annual report to the President, Speaker of the House, and President pro tempore of the Senate that includes information contained in Section 404(o)(5) of the Juvenile Justice and Delinquency Prevention Act, as amended.
6. To provide a program to establish and maintain a 24-hour national toll-free telephone line where individuals may report information regarding the location of missing children and request information on reuniting such children with their families.

1998 Base	5,971
1998 Request	5,971
Increase/Decrease

BASE PROGRAM DESCRIPTION: The public and the criminal justice community continues to be concerned about runaways and other missing and exploited children. During 1990, the National Incidence Studies of Missing, Abducted, Runaway and Thrownaway Children (NISMAART) was conducted, in which it was determined that the missing children problem is a set of five very different, and distinct problems. This study provided the first national estimates of the number of children in each of these categories for a given year. Results indicated that in 1988, there were an estimated 345,100 children who met the study definitions for family abductions. While an estimated 3,200 to 4,600 children were abducted by non-family members, of which 200-300 were defined as stereotypical (stranger) kidnappings, there were an estimated 114,000 attempted stranger abductions. An estimated 450,700 children ran away from their homes or from juvenile facilities; an estimated 127,100 were thrown out of their homes or abandoned by their parents; and finally, an estimated 438,200 children were lost, injured or otherwise missing for a specified period of time, depending on their age and disabilities. It was discovered that many of the children in the first four categories were not literally missing; caretakers did know where they were, but the problem was in recovering them. In 1994, a program solicitation was issued for NISMAART II which will be a new incidence study mandated by Title IV to look at other categories of missing children and update the previous study. This program is administered by the Office of Juvenile Justice and Delinquency Prevention and authorized under the Juvenile Justice and Delinquency Prevention Act of 1974, Title IV, as amended.

The Missing Children Program funds are used to enhance the efforts of State and local communities in their comprehensive response to missing and exploited children issues through such activities as direct assistance in planning and program development at the local level, and developing and disseminating policies, procedures and programmatic information related to search teams, investigations, crisis intervention activities, as well as reunification of youth with their family, and responding to issues related to victimization of the families and youth involved in the missing and exploitation problem.

Missing Children funds are also used to support research and demonstration programs that assess the psychological impact of abduction on children and families, the legal obstacles to the recovery and return of parentally abducted children, problems with reunification of missing children, identification of early risk factors and prevention of family abductions, examining the National Incidence-Based Reporting System as a potential source of data on child abductions, increasing understanding of child sexual exploitation, and effective screening of child care and youth service workers. Funds also support training and technical assistance for law enforcement, including State missing children clearinghouses, and prosecutors in missing child cases.

The Juvenile Justice and Delinquency Prevention Act (JJDPA) requires the Office of Juvenile Justice and Delinquency prevention to publish in the Federal Register for public comment annual research, demonstration and service program priorities for making grants and contracts pursuant to section 405 and the criteria based on merit for making such grants and contracts. The 1996 program priorities were published in July 1996, for 60 day public comment period and subsequently published in the Federal Register in final. The 1997 program priorities are expected to be published in the Federal Register in February for a 60 day comment period.

PROGRAM CHANGE: The 1998 request will maintain the Missing Children Program at its current appropriation level of \$5,971 million.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Missing Children's Program										
MISSION: To reduce the incidence of crime against children, particularly kidnapping and sexual exploitation, and to improve the criminal justice, social services and treatment systems that are responsible for dealing with these crimes when they occur.

	Performance Indicators	1995 Actual	1996		1997 Target	1998 Target				
			Target	Actual						
Input	1. Appropriations (dollars in thousands) 2. Number of applications received	\$5,971 35	\$5,971 35	\$5,971 35	\$5,971 22	\$5,971 23	\$5,971 46*			
Output/Activity	3. Number of applications reviewed. 4. Number of awards made.	23 24	58 24	22 24	23 22	23 23	46 30*			
Intermediate Outcome	5. Number of monitoring site visits made.	25	30	30	35	35	35			
End Outcome	6. Incidence of technical assistance provided by state clearinghouses. 7. Number of law enforcement investigators trained. 8. Number of hot line calls. 9. Publications distributed. 10. Number of criminal justice, regulatory and social service personnel trained. 11. Native American training and technical assistance.	13,000 2,500 119,000 1.82m 20,000 ..	13,250 2,550 125,000 1.85m 20,000 ..	13,250 2,550 107,181 1.7m 30,000 8	13,250 4,016 125,000 1.7m 30,000 49	13,250 4,016 125,000 1.4m 30,000 49	13,250 4,016 125,000 1.4m 30,000 49			
Productivity/ Efficiency	12. Average Full-Time-Equivalent spent on grant activity.	5 FTE	5 FTE	5 FTE	3.5 FTE	3.5 FTE	3.5 FTE			
A. Definitions of Terms or Explanations for Indicators: Measuring outcomes in terms of missing children is difficult due to wide spectrum of Title IV programming. For example, while there may be some correlation between training and increased recoveries of missing children, it is difficult to establish a direct relationship between training and a specific recovery. Other program products include: "A Report Card to the Nation" a document that promotes self assessment by states regarding their laws and procedures; establishment of time lines on known serial murderers to close previously unsolved homicides; studies that produce resource manuals, catalog of Federal services to missing, exploited children and their families; evaluations of state clearinghouses and non-profit organizations; resource and investigative guides for law enforcement involved in child homicide investigations and demonstration models all contribute to recovery of missing children.										
B. Factors Affecting 1996 Program Performance: N/A										
C. Factors Affecting Selection of 1997 and 1998 Targets:										
* In 1996, the number of applications increase as some of the continuation grants end, new programs are completed, and new grants are awarded. The difference between the number of applications received and the number of grants awarded is that less applications may be received for one new program while only one or two grants will be awarded.										

**OFFICE OF JUSTICE PROGRAMS
REGIONAL INFORMATION SHARING SYSTEM
PROGRAM PERFORMANCE INFORMATION
GOVERNMENT PERFORMANCE AND RESULTS ACT REQUIREMENTS**

MISSION: To enhance the ability of State and local criminal justice agencies to identify, target, and remove criminal conspiracies and activities spanning jurisdictional boundaries.

GENERAL GOALS:

1. To encourage and facilitate the rapid exchange and sharing of information pertaining to known or suspected criminals or criminal activity among Federal, State, and local law enforcement agencies.
2. To enhance coordination and communication among law enforcement agencies in addressing multi-jurisdictional crime.
3. To provide technical and financial resources to augment existing multi-jurisdictional enforcement resources (including loaning specialized equipment, training, and investigative expenses).

REGIONAL INFORMATION SHARING SYSTEM
PROGRAM PERFORMANCE INFORMATION
(Dollars in thousands)

Regional Information Sharing System		Amount
1997 Appropriation		\$14,500
1998 Base		14,500
1998 Request		14,500
	<i>Increase/Decrease</i>	...

BASE PROGRAM DESCRIPTION: The Regional Information Sharing System (RISS) Program provides for regionally based information sharing centers throughout the United States to service State and local criminal justice agencies. The program maintains the operations of the six existing regional information sharing centers: the Middle Atlantic-Great Lakes Organized Crime Law Enforcement Network; the Mid-States Organized Crime Information Center; the New England State Police Information Network; the Regional Organized Crime Information Center; the Western States Information Network; and the Rocky Mountain Information Network. A description of the resources available through RISS is provided below. The first three are available from all sites. The remaining resources are available from some of the RISS sites.

Information Sharing. Every project maintains and operates an automated information sharing component that responds to the needs of participating enforcement agencies in addressing multi jurisdictional offenses and conspiracies. This component is capable of providing controlled input, dissemination, rapid retrieval, and systematic updating of information.

Analysts. Every project operates an analytical component to assist the project and participating agencies in the compilation, interpretation, and presentation of data provided to the project. This component responds to participating agency requests for analysis of investigative data.

Telecommunications. Projects maintain telecommunication systems designed to directly support the operation of the Information Sharing Component and Analytical Component and to support project-sponsored investigations and activities.

Investigative Support. Some projects operate an investigative support component by providing financial assistance to participating agencies so they can conduct multi-jurisdictional investigations.

Specialized Equipment. Most projects maintain a pool of specialized investigative equipment for loan to participating agencies.

Technical Assistance. Some projects maintain a component to provide technical assistance to member agencies. Project personnel and others in participating agencies offer consultation, advice, and information to member agencies concerning use of specialized equipment, investigative procedures, accounting of project funds, and information analysis.

Training. Most projects provide training to upgrade investigative skills of participating agency personnel. Such training assistance may consist of financial support to send personnel to training courses, seminars, and conferences, or more commonly the design and delivery of specialized training courses by project staff.

Electronic Connectivity. The RISS Program is currently in the final stages of completing electronic connectivity among six projects. This initiative, entitled "RISSNET," was completed in December 1996 and enables the RISS projects to access each project database electronically. This will provide a more timely and effective response to member agencies in the sharing and dissemination of information.

RISS and the FBI have entered into a cooperative agreement on domestic terrorism, specifically analytical products, training and information sharing. With electronic connectivity of the RISS projects (RISSNET), the FBI's National Security Division will have a node on the RISSNET network to better facilitate the sharing of information with State and local law enforcement in the area of domestic terrorism.

Prison Gangs. The RISS projects are currently working on a prison gang initiative with the National Major Gang Task Force (NMGTF). This prison gang intelligence project targets the sharing and dissemination of gang intelligence between the law enforcement and corrections community and encourages ongoing communication between the two fields. Through this effort, each project will have a prison gang analytical staff person dedicated exclusively to this effort.

PROGRAM CHANGE: The 1998 RISS funding request is \$14.5 million. This is the same level of funding requested in 1997.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

<i>Increase/Decrease</i>	...

BASE PROGRAM DESCRIPTION: The National White Collar Crime Center (NWCCC) supports member agency multi-state investigations of white collar crimes. Investment, telemarketing, and securities fraud; boiler room operations; and advanced fee loans represent a sampling of the Center's undertakings. The Center is developing a National support system for the prevention, investigation, and prosecution of economic crimes, and is pursuing an educational and training component targeting agencies, both criminal law enforcement and regulatory, which have the responsibility of investigating economic crime. The Center will also enhance efforts to address health care fraud and fraud against the elderly. A description of services provided by the NWCCC follows.

Training and Research. The NWCCC has opened its Training and Research Institute (TRI) in Morgantown, West Virginia. The TRI has established a partnership with West Virginia University, in Morgantown to address research and technology related issues impacting economic crime investigations and prosecutions. The University makes available the extended resources of their schools of business, law, sociology, and computer science.

Civil/Administrative Database. In addition to their Criminal Intelligence Database, the NWCCC plans to develop a Civil/Administrative database which will contain non-criminal information related to civil or administrative economic or white collar violations.

Fraud. As a consultant to the Federal Trade Commission (FTC), Bureau of Consumer Protection, the Center analyzes information on telemarketing frauds stored in the FTC's automated database.

PROGRAM CHANGE: The 1998 NWCCC funding request of \$3.85 million is unchanged from the 1997 appropriation.

PROGRAM PERFORMANCE INFORMATION
(Dollars in thousands)

Local Firefighter and Emergency Services Training		Amount
1997 Appropriation		\$5,000
1998 Base		5,000
1998 Request		5,000
	<i>Increase/Decrease</i>	0

BASE PROGRAM DESCRIPTION: This program, authorized under section 819 of the Antiterrorism and Effective Death Penalty Act of 1996, provides grant funding to metropolitan fire and emergency services departments to train personnel and purchase equipment to enhance their ability to respond to terrorist attacks including nuclear, biological and chemical warfare and other explosive incidents. The Bureau of Justice Assistance (BJA) administers this program and estimates that approximately 120 "metropolitan" jurisdictions are eligible to participate. The Senior Interagency Coordination Group on Terrorism is coordinating the identification and training effort for State and local officials. BJA will participate, as appropriate, once the Group defines the training process to be utilized.

Program priorities in 1997 include:

- Identification of training priorities and gaps, to ensure program resources focus on meeting the training needs of metropolitan jurisdictions.
- Coordination of the funding process with the broad Federal training plan, to ensure that eligible jurisdictions receive the funds necessary to fully participate in training activities.
- Development of a process to provide the necessary protective equipment for training purposes and, to the extent possible, provide similar equipment to participating jurisdictions for use in subsequent training courses.

PROGRAM CHANGE: The 1998 program funding request is \$5 million, the same amount appropriated in 1997. The 1998 funding level will enable BJA to target local jurisdictions that did not receive program funding in 1997.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Local Firefighter and Emergency Services Training									
MISSION: To support the federal integrated initiative for counter-terrorist training through grants to provide specialized training and equipment to enhance the capability of metropolitan fire and emergency service departments to respond to terrorist attacks.

Process for funding training and equipment expenses through this program is not known at this time; process will be finalized upon completion of the "Integrated Approach to Counter Terrorism Training."									
B. Factors Affecting 1996 Program Performance. N/A									
C. Factors Affecting Selection of 1997 and 1998 Targets.									
Appropriation language targets metropolitan jurisdictions which, based on analysis, represents approximately 120 jurisdictions; BJA will work with FEMA and other involved Federal agencies to identify the jurisdictions to be supported recognizing significant training support is forthcoming from DOD per Nonum/Lugar initiative, which at this time, appears to be targeting the 20 largest metro areas for training in 1997.									

**OFFICE OF JUSTICE PROGRAMS
TERRORISM TRAINING
PROGRAM PERFORMANCE INFORMATION
GOVERNMENT PERFORMANCE AND RESULTS ACT REQUIREMENTS**

Mission: To train and prepare State and local law enforcement and prosecution agencies to respond to acts of domestic terrorism.

General Goal: Establish a program to expand delivery of specialized, multi-agency, anti-terrorism preparedness training to State and local law enforcement and prosecution agencies.

**OFFICE OF JUSTICE PROGRAMS
TERRORISM TRAINING
PROGRAM PERFORMANCE INFORMATION**
(Dollars in thousands)

Terrorism Training	Amount
1997 Appropriation	\$ 2,000
1998 Base	2,000
1998 Request	2,000
<i>Increase/Decrease</i>	<i>0</i>

BASE PROGRAM DESCRIPTION: This program, administered by the Bureau of Justice Assistance (BJA) and authorized by section 822 of the Antiterrorism and Effective Death Penalty Act of 1996, amends section 501(b) of the Omnibus Crime Control and Safe Streets Act of 1968 by adding purpose area 26. This program provides funding for the (1) development and implementation of anti-terrorism training programs and (2) procurement of necessary equipment for State and local law enforcement agencies.

In 1997, BJA expects the Domestic Terrorism Program to expand the delivery of specialized multi-agency anti-terrorism preparedness training to State and local law enforcement and prosecution agencies. State and local law enforcement and prosecution agencies will receive training through resources such as the State and Local Anti-Terrorism Training Project, related research, law enforcement intelligence, operational issues development, and technical support activities.

This program enhances the services available to law enforcement agencies through:

1. Developing, refining, and expanding law enforcement domestic anti-terrorism training curricula;
2. Convening focus groups of law enforcement experts;
3. Developing "Train-the-Trainer" instructional materials and informational resources;
4. Providing specialized training to law enforcement executives, intelligence officers and prosecutors;
5. Maintaining a public resource domestic terrorism research component and resource center; and

6. Establishing a cadre of anti-terrorism preparedness, readiness and response experts to deliver specialized technical assistance.

PROGRAM CHANGE: The 1998 program request is \$2 million, which is the amount appropriated in 1997. The 1998 funding level will enable BJA to continue existing programs and/or expand programs that did not receive funding in 1997.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

A. Definitions of Terms or Explanations for Indicators:									
<ul style="list-style-type: none"> This highly visible, highly specialized training program is designed to prepare State and local law enforcement, prosecution and intelligence agency personnel to effectively manage domestic terrorism activities. Training focuses on providing law enforcement with the skills and abilities to identify, prevent and respond to domestic terrorism activities. Focus Groups, composed of law enforcement and terrorism experts, will provide for continuous program development, refinement, and expansion. This program is in great demand and is only limited by the annual appropriations process. OJP has established that it can achieve 100% of its mission and train as many law enforcement and prosecution personnel as funding allows. End Outcomes are cumulative. 									
B. Factors Affecting 1996 Program Performance: N/A									
C. Factors Affecting Selection of 1997 and 1998 Targets:									
<ul style="list-style-type: none"> 1997 is the first year of funding for this program. As such, it currently still in the development stage. Once the program is fully operational and evaluations are completed, it is likely performance indicators and targets will change. 									

OFFICE OF JUSTICE PROGRAMS
DEVELOPMENT OF COUNTERTERRORISM TECHNOLOGIES
PROGRAM PERFORMANCE INFORMATION

Mission: To identify and assess requirements for technologies to assist State and local law enforcement in the national program to combat terrorism and to develop those technologies.

General Goals:

- To develop a comprehensive assessment of requirements for technologies to assist State and local law enforcement, which represents more than 95% of all law enforcement personnel in the United States, in the national program to combat terrorism.
- To support the development of technologies identified to meet those requirements.
- To develop standards to promote the adequacy of products produced and to ensure that new technologies are compatible with larger national systems which now exist or are being established.
- To provide reliable and objective tests and evaluations of counterterrorism technologies which currently exist.
- To disseminate essential information for use by State and local law enforcement in making intelligent, informed acquisition decisions.

(Dollars in thousands)

Development of Counterterrorism Technologies		Amount
1997 Appropriation		\$10,000
1998 Base		10,000
1998 Request		10,000
	<i>Increase/Decrease</i>	...

BASE PROGRAM DESCRIPTION: On September 30, 1996, President Clinton signed the 1997 Appropriation Act provided \$10 million "for development of counterterrorism technologies to help State and local law enforcement combat terrorism, "as authorized by section 821 of the 1996 Terrorism Prevention Act." On November 12, 1996, President Clinton designated this \$10 million an emergency requirement, as required by the Appropriations Acts and these funds were made available for obligation. Section 821 of the 1996 Terrorism Prevention Act, PL 104-132, authorizes to be appropriated to the National Institute of Justice not more than \$10,000,000 for fiscal year 1997 to (1) develop technologies that can be used to combat terrorism, including technologies in the areas of (A) detection of weapons, explosives, chemicals, and persons; (B) tracking; surveillance; (D) vulnerability assessment; and (E) information technologies; (2) develop standards to ensure the adequacy of products produced and compatibility with relevant national systems; and (3) identify and assess requirements for technologies to assist State and local law enforcement in the national program to combat terrorism. The central intent of this program is to identify and assess requirements for technologies to assist State and local law enforcement in the national program to combat terrorism, to develop better, more affordable technologies to use in efforts against counterterrorism, to make it easier for law enforcement agencies to obtain information on what is currently available and where to go to obtain it, and to evaluate products and develop standards so State and local law enforcement agencies can make informed acquisition decisions based on objective and reliable information.

NIJ's plan for implementation of the Domestic Counterterrorism Program follows:

- Develop technologies and, where appropriate, to support or provide technical assistance to state and local law enforcement.

- Address stated Congressional priorities, and consult with Federal, State and local law enforcement agencies and counterterrorism organizations to determine priority technology development needs within these categories. Of particular significance will be those priorities already established by the Law Enforcement and Corrections Technology Advisory Council and its regional advisory councils, which are made up of law enforcement and corrections personnel from every state in the United States. Final funding decisions will attempt to maximize yield, avoid duplication, and develop the most appropriate technologies in the shortest possible time. To expedite the process, NIJ will first identify and commit funds to technology development proposals submitted in response to recent NIJ solicitations and already reviewed and approved by their appropriate Peer Review Panel that fall within the Congressional priority areas.
- Consult with federal partners and with counterterrorism technology organizations such as the Technology Support Working Group (TSWG) to expedite the development of those technologies already under development that could be modified or directly applied to State and local counterterrorism operations, thereby significantly leveraging NIJ funds. If sufficient counterterrorism technologies are identified through these two mechanisms, no new solicitation may be needed. If, however, technologies supported through identification of existing fundable proposals and federal interagency projects do not adequately address the Congressionally identified priorities, NIJ will issue a special solicitation for new proposals.
- Provide counterterrorism technical assistance to State and local law enforcement agencies through NIJ's existing technology centers.
- Develop standards to ensure the adequacy of products produced and compatibility with relevant national systems.
- Consult with State and local law enforcement agencies to identify those standards that are considered high priority requirements for agencies and directly support counterterrorism efforts (e.g. communications interoperability standards, chemical agent standards, electronic monitoring equipment standards, etc.). NIJ will then work with the NIJ funded Office of Law Enforcement Standards, located at the Department of Commerce's National Institute of Standards and Technology (NIST), to expand the existing law enforcement standards and testing program to include the selected counterterrorism technologies and equipment.
- Initiate testing of counterterrorism technologies, the results of which can be used as reliable foundations for purchasing decisions made by domestic law enforcement agencies and initiate careful evaluations of the constitutional and liability implications of each technology.

- Identify and assess requirements for technologies to assist State and local law enforcement in the national program to combat terrorism. Of particular interest is the examination of the relationship between State and local law enforcement and the Federal activities.

NIJ plans to commit \$6.5 million to the development of technologies in the areas of detection of weapons, explosives, chemicals and persons, tracking and surveillance, vulnerability assessment, and information technologies, and, where appropriate, to support technical assistance to state and local law enforcement. The first set of awards will be made by March 1, 1997, and the remainder will be made by June 1997.

In selecting technologies for funding, NIJ will address stated Congressional priorities, and will consult with Federal, State and local law enforcement agencies and counterterrorism organizations to determine priority technology development needs within these categories. Final funding decisions will attempt to maximize yield, avoid duplication, and develop the most appropriate technologies in the shortest possible time. To expedite the process, NIJ will first identify and commit funds to technology development proposals submitted in response to recent NIJ solicitations and have been reviewed and approved by their appropriate Peer Review Panel that fall within the Congressional priority areas.

NIJ will also consult with our federal partners and with counterterrorism technology organizations such as the Technology Support Working Group (TSWG) to expedite the development of those technologies already under development that could be modified or directly applied to State and local counterterrorism operations leveraging and committing NIJ funds. If sufficient counterterrorism technologies are identified through these two mechanisms, no new solicitation may be needed. If, however, technologies supported through identification of existing fundable proposals and federal interagency projects do not adequately address the Congressionally identified priorities, NIJ will issue a special solicitation for new proposals in March 1997. Funds committed through this process are expected to be obligated by June 1997.

NIJ anticipates that some level of counterterrorism technical assistance will be required by State and local law enforcement agencies throughout the fiscal year. To expedite this process, such technical assistance would be provided through NIJ's existing technology centers. The level of such funding will be determined by the end of February 1997 and will not exceed 10% of the \$6.5 million.

Mindful of Congressional priorities, NIJ will consult with State and local law enforcement agencies to identify those standards that are considered high priority requirements for agencies and directly support counterterrorism efforts (e.g. communications interoperability

standards, chemical agent standards, electronic monitoring equipment standards, etc.). NIJ will then work with the NIJ funded Office of Law Enforcement Standards, located at the Department of Commerce's National Institute of Standards and Technology (NIST), to expand the existing law enforcement standards and testing program to include the selected counterterrorism technologies and equipment. Selection of priority standards activities and negotiation of a modified interagency agreement with NIST for this work should be completed by March 1997. NIJ will, where appropriate, also conduct testing of selected technologies and equipment through its regional technology centers. Approximately \$3 million will be committed to this counterterrorism standards effort.

NIJ anticipates committing \$3 million to assess the technology needs of local law enforcement agencies in order to safely combat the threat of terrorism in their communities. Of particular interest is the examination of the relationship between State and local law enforcement and the Federal anti-terrorism activities. Under consideration are conducting surveys of agencies, conducting focus groups, and other expeditious means of determining State and local counterterrorism needs. This project will be completed by June 1997. Results of this effort will assist in designing the 1998 Domestic Counterterrorism program.

PROGRAM CHANGE: The 1998 funding request is \$10 million. This is the same level of funding requested in 1997.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: NU Domestic Counterterrorism									
MISSION: To support the development of technologies in the areas of detection of weapons, explosives, chemicals and persons, tracking and surveillance, vulnerability assessment, and information technologies, and, where appropriate, to support technical assistance to state and local law enforcement agencies

**OFFICE OF JUSTICE PROGRAMS
MANAGEMENT AND ADMINISTRATION
PROGRAM PERFORMANCE INFORMATION
GOVERNMENT PERFORMANCE AND RESULTS ACT REQUIREMENTS**

Mission: To administer OJP programs in the most effective and efficient manner possible.

General Goals:

1. To provide executive direction, control and coordination over the wide array of OJP programs.
2. To provide the full range of support services to the program and administrative offices of OJP.

OFFICE OF JUSTICE PROGRAMS
MANAGEMENT AND ADMINISTRATION
PROGRAM PERFORMANCE INFORMATION
(Dollars in thousands)

	Perm.	
	Pos.	FTE Amount
1997 Availability	386	\$30,529
1998 Base	386	33,952
1998 Estimate	411	35,867
<i>Increase/Decrease</i>	25	1,915

Management and Administration - Direct

The Office of Justice Programs (OJP) carries out policy coordination and general management responsibilities for the Bureau of Justice Assistance (BJA), Bureau of Justice Statistics (BJS), National Institute of Justice (NIJ), Office of Juvenile Justice and Delinquency Prevention (OJJDP), Office for Victims of Crime (OVC), the Crime Bill Offices, the Executive Office for Weed and Seed and the Violence Against Women Office. Since the functions and responsibilities of the five program bureaus and 5 offices are described in the justifications for those programs, they are not repeated here.

PROGRAM CHANGES:

	Pos.	FTE Amount
Management and Administration - Direct.....	25	13 \$1,915

A total program increase of 25 positions, and 13 FTE is requested for 1998.

National Institute of Justice: An increase of \$867,000, 11 positions and 6 FTE are requested for the National Institute of Justice in support of its program changes requested for 1998. All of the requested program changes are research programs, most of them highly complex, requiring intellectual work that goes well beyond the routine processes normally associated with awarding and monitoring grants. In addition, many NIJ program managers conduct related intramural research projects in their program area. Work covers the gamut of scientific disciplines including sociology, psychology, economics and econometrics, criminal justice, bio-medical sciences, chemistry, ballistics, electronics, engineering, and information technologies. Thus, the program work requires that program staff have a high level of scientific research training. Such scientific complexity of subject requires more time per grant to administer. Typical duties for staff managing the projects associated with these programs will include the following for each project or program area:

1. Developing and chairing or participating in research agenda planning workshops.
2. Developing research solicitations and field demonstrations in specialized social science and technology areas.
3. Reviewing research applications and chairing scientific peer review meetings to make recommendations for award. (Each program manager reviews approximately 30-50 applications, each about 30 single-spaced pages in length, exclusive of budgets and resumes) which generate 5-7 actual awards.
4. Monitoring and providing technical assistance for implementation of research designs, sampling and data analysis plans, and technology research field tests, and evaluations.
5. Providing guidance and technical assistance for the development of research and technology products related to each grant, including reviewing, commenting on and editing reports, co-authoring scientific reports and papers, and developing technology products from the conceptual stage to commercialization and market availability.
6. Developing scientific papers on research or technology findings for presentation at professional conferences and staying current with developments in the field.
7. Resolving scientific controversies with regard to project activities, findings and reports.

8. Developing and chairing research cluster conferences for discussing and resolving methodological problems.
9. Designing training for in-the-field use of research/ technology products.

Because of these required activities, NIJ's grant per manager workload should be a maximum of 17-20 active grants per monitor. The professional standard for technology research is 4 managers plus support personnel for every 30 projects or about 7 projects per manager. Grants are usually active for three years, so the average individual grant manager carries the maximum workload on a continuing basis. The request for 1998 is expected to generate a minimum of 150 new awards per year. Since 4 of the requested positions will be managerial or secretarial staff, the per project management workload for the first year will be at least 20 projects per new program manager, which is twice the standard. Based on NIJ's total request based on program changes, this workload will nearly triple by 2000 for many of these new staff.

ADAM: In 1998, eight positions and 4 FTE are requested: two site managers will be needed to manage 17 or 18 sites each with the workload scheduled to reach 25 sites per manager by 2000. Site managers will be responsible for implementing and maintaining the sampling design at all sites, for providing on-going training at the sites, and providing technical assistance for local research initiatives and special research projects added to the basic design such as the gun addendum NIJ requested in St. Louis and San Diego in 1995, and planning and eventual implementation of outreach sites in suburban and rural areas. A senior level manager is requested to provide direct supervision of the staff, managing the three federal contracts supporting federal administration of the sites, the urinalysis laboratory, and the data analysis and report development and dissemination activities for the program. An additional 2 intramural research analysts are requested to work with federal research partners to develop new research questions, assist NIJ staff and local researchers and policy makers in developing research addenda for analysis of particular drug trends, and assist local researchers with data analysis. One dissemination specialist is requested to prepare an annual report on drugs and crime, assist with quarterly reports and other interim reports and presentation of results and assist local researchers and policy makers in presenting results for publication. Also, one local initiative coordinator is requested to work with each of the 75 jurisdictions to build the capacity of local researchers to investigate specific research questions, assist local researchers in posing research questions and in analyzing and presenting data, and assist local leadership in identifying stakeholders. This request also includes one secretary.

Violence Against Women Research Program: NIJ is requesting 3 positions and 2 FTE in 1998 to conduct this program. These

staff will be responsible for longitudinal and secondary analysis projects and evaluations; for developing new measures and measurement instruments to determine the scope and nature of violence against women, and measuring interventions; and for a program of cost studies on the impact of violence against women on its victims and on society, and the cost benefits of prevention, treatment and control programs in criminal justice. Program managers must have skills in managing complex research projects requiring advanced skills in the social sciences, econometrics, and economics to perform research management duties as described above. One additional position will be required in 1999 to manage duties related to the development of practitioner-oriented reports and dissemination of research findings.

Office of Juvenile Justice and Delinquency Prevention: An increase of \$628,000, 10 positions/5 FTE are requested for the Office of Juvenile Justice and Delinquency Prevention for 1998.

These 10 positions will support the development, implementation and management of the \$75 million Local Youth Crime Intervention Program. Because these programs funds will be distributed on a formula basis 8 program specialist positions will be assigned to the Formula Grants Program and the Crime Intervention Grant Program Office. These positions serve as state representatives to State agencies. The program specialist administrators OJJDP's policies and programs and provides technical expertise in juvenile justice, planning, program development, implementation and evaluation in order to assist states and communities improve their juvenile justice systems. The increased funding provided for the Crime Intervention program would increase the grant award amounts currently going to States. The state assignment ratio will be reduced from approximately 7:1 to approximately 4:1, enabling the state representatives to be more proactive, allowing them to provide technical assistance to States and local communities to sufficiently monitor both the programmatic and fiscal aspects of both the new and existing formula program. A key to success of State utilization and sub-awarding of increased funding is the development and provision of an effective evaluation component. The increased level of attention the state representatives will be able to provide to the states will assist each state in developing effective evaluation strategies thus allowing for identification of "what works."

One program analyst position will provide data and information from management information, statistical systems, and other sources to identify actual and potential problem areas and trends in the juvenile justice formula grant program. Users will be provided access to data and information in automated formats that are needed to determine the overall impact the formula grant programs has on specific aspects of the juvenile justice system, as well as the effectiveness of individual programs. To support this objective, this additional position would also identify specific information and data required to evaluate the potential and/or actual effectiveness of OJJDP funded programs, which would also assist in identifying programs that "work" and activities for dissemination to the juvenile justice field.

The remaining clerical position will be assigned to the Formula Grant/Crime Intervention Office to assist in the increased workload associated with the additional demands and activities of the Local Youth Crime Intervention Program.

Office of Justice Programs: An increase of \$420,000, 4 positions and 2 FTE is requested to comply with the new electronic FOIA requirements established by the Electronic Freedom of Information Act Amendments of 1996.

Management and Administration - Crime Act

	Perm.	FTE	Amount
1997 Availability	309	309	\$32,425
1998 Base	309	309	32,425
1998 Estimate	369	369	39,911
<i>Increase/Decrease</i>	60	60	7,486

Crime Act Programs: Crime Act administrative funds will be reimbursed to the Justice Assistance account for support services, but for presentation purposes are included and justified in the Justice Assistance account.

An increase of \$7,486,000 is requested to fund an additional 60 positions/60 FTE. This increase is needed to provide not only appropriate technical grant making support, but also to allow strict and attentive financial monitoring and application of federal accounting procedures to protect the taxpayers' investment and to provide one-on-one assistance to grantees and grant applicants when necessary. Since the 1995 implementation of the 1994 Crime Act programs, the level of program activity has grown from \$740 million to \$2.2 billion in 1998. The size, complexity and conceptual novelty of these programs demands increasing levels of support to successfully administer. These 60 positions/FTE's are anticipated to successfully support the approximately \$2.2 billion of Crime Act programs in 1998.

STATUS OF CONGRESSIONALLY REQUESTED STUDIES, REPORTS AND EVALUATIONS

JUSTICE ASSISTANCE

1. Section 102(b) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires the Assistant Attorney General to submit an annual report to the President and Congress by March 31 of each year. The 1996 Report is expected to be submitted in April 1997.

NOTE: Section 810 of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, also requires the Assistant Attorney General, the Directors of the Bureau of Justice Assistance, the Bureau of Justice Statistics, and the National Institute of Justice to submit to the President and the Speaker of the House of Representatives and the President of the Senate by April 1 of each year, a report on their activities from the preceding fiscal year. The submission of the Section 102(b) report satisfies the reporting requirement under Section 810.

2. Section 520(c) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires the Director of the National Institute of Justice to annually report to the President, the Attorney General, and the Congress on the nature and findings of the evaluation and research and development activities funded under Sections 501(c), 506 and 511. The Institute will report on its program to evaluate anti-drug programs and will report on anti-drug research and development projects initiated since the passage of the Anti Drug Abuse Act of 1988. The 1996 Report is scheduled for completion in April 1997.

3. Section 66911 of the Justice Assistance Act of 1984 requires the Attorney General to submit to the President and Congress, by April 1 of each year, a report describing Federal law enforcement emergency assistance provided during the calendar year preceding the date the report is made. A Report on the 1996 activities of the Emergency Assistance Program is due on April 1, 1997 and it is expected to be submitted on time.

VIOLENT CRIME REDUCTION PROGRAMS

1. Section 40291 of the Violent Crime Control and Law Enforcement Act (VCCLEA) of 1994 requires the Attorney General to submit to the Committee on the Judiciary of the House and Senate a report, no later than 1 year after September 13, 1994, describing the findings made on a Violence Against Women Research Agenda. This Report was submitted to Congress on April 30, 1996.

2. Section 40292 of the VCCLEA of 1994, requires the Attorney General to submit to the Committee on the Judiciary of the House and Senate a report, no later than 1 year after September 13, 1994, describing the findings of the State Databases Study required under this subsection. A report on State Domestic and Sexual Violence Data collection has been submitted to Congress which states that nearly two thirds of the states have centralized data bases on these crimes. The study identifies the need to address the states without databases and

the following two issues: The variation in definitions of these crimes across states makes it difficult to compare, in aggregate, data at a national level; and there is a need to include data other than arrest data from other parts of the criminal justice system. These data also need to be linked to health and social service indicators, including child protective services. This Report was delivered to the Congress in March 1996.

3. Section 40509 of the VCCLEA of 1994, requires the Attorney General, no later than one year after enactment of the VCCLEA, to complete a study on the problems of recordkeeping criminal complaints involving domestic violence. The study should focus on (1) efforts that have been made by the Department of Justice, including the Federal Bureau of Investigation, to collect statistics on domestic violence, and (2) the feasibility of requiring that the relationship between an offender and victim be reported in Federal records of crimes of aggravated assault, rape, and other violent crimes. Furthermore, the Attorney General must also submit a report and recommendations based on the study to Congress. This Report was submitted to Congress on May 14, 1996.
4. Section 40507 of the VCCLEA of 1994, requires the Attorney General and the Secretary of Health and Human Services to submit to the House Committee on Energy and Commerce, the Senate Committee on Labor and Human Resources, and the Committees on the Judiciary of the House and Senate, no less than 1 year after September 13, 1994, a report on the medical and psychological basis of "battered women's syndrome" on the extent to which evidence of the syndrome has been considered in criminal trials. This Report was submitted to Congress on May 15, 1996.
5. Section 210303 of the VCCLEA of 1994, requires the Director of the National Institute of Justice (NIJ), no later than 1 year after September 13, 1994, to certify to the Committees of the Judiciary of the House and Senate that: (A) the Institute has entered into a contract with, or made a grant to, an appropriate entity for establishing, or has taken other appropriate action to ensure that there is established, no later than 2 years after September 13, 1994, a blind external proficiency testing program for DNA analyses, which shall be available to public and private laboratories performing forensic DNA analyses; (B) a blind external proficiency testing program for DNA analyses is already readily available to public and private laboratories performing forensic DNA analyses; or (C) it is not feasible to have blind external testing for DNA forensic analyses. On May 15, NIJ awarded a grant to the University of Illinois at Chicago to conduct a review of external DNA proficiency testing program in public and private DNA laboratories.
6. Section 40506(b) of the VCCLEA of 1994, requires the Attorney General, in consultation with the Secretary of Education, to provide a national baseline study to examine the scope of the problem of campus sexual assaults and the effectiveness of institutional and legal policies in addressing such crimes and protecting victims. The report is to be based on the study required by subsection (a) of this section and data collected under the Student Right-To-Know and Campus Security Act (20 U.S.C. 1001 note, P.L. 101-542). On December 11, 1996, the BIS published a new study of campus law enforcement agencies, which examined the characteristics of these agencies in schools with 2,500 or more full-time students and obtained UCR-compatible crime counts for each campus. In January 1997, the National Center for Education Statistics plans to release an administrative survey on crime and security at 1,543 colleges and universities. A final report will be released by the Secretary of Education.

7. Section 40610 of the VCCLEA of 1984, requires the Attorney General to submit to Congress an annual report, beginning one year after September 13, 1994, that provides information concerning the incidence of stalking and domestic violence, and evaluates the effectiveness of State anti-stalking efforts and legislation. NJ submitted the 1996 Report to Congress on May 14, 1996. The 1997 Report, which is being developed by the Violence Against Women Grants Office, is expected to be submitted to Congress in March 1997.

JUVENILE JUSTICE PROGRAMS

1. Section 207 of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires the Administrator of the Office of Juvenile Justice and Delinquency Prevention to submit an annual report to the President and Congress within 180 days after the end of each fiscal year. The report must contain: (1) a detailed summary and analysis of juvenile custody data, including offender type, offense, race, gender, age, facility type, death rate information and educational status; (2) a description of part A funded activities; (3) a description of each State's compliance with Section 223 and the State plan; (4) a summary of each part C or part D funded program or activity; evaluation information and an assessment of replication potential; and (5) a description of exemplary delinquency prevention programs funded under title II. Included in OJJDP's Annual Report is the report to the President as required by Section 404(a)(5) of the Missing Children's Assistance Act, as amended. Both of these requirements for 1996 are due March 31, 1997, and are expected to be submitted by June 30, 1997.
2. Section 248(a)(6) of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires that not later than 180 days after enactment of the 1992 amendments (November 4, 1992), the Administrator shall begin to conduct a study on the incidence, nature and causes of violence committed by or against juveniles in urban and rural areas. The study is to be completed and a report submitted to Congress discussing and summarizing the results, within three years (by November 4, 1995).
OJJDP awarded four grants to study the incidence, nature and causes of violence committed by or against juveniles in urban and rural areas. The first two studies (Wisconsin and South Carolina) were funded with 1993 funds. The South Carolina study has been given further funding to develop violence prevention resources for schools, parents, and communities in their target areas. Data analyses will also be performed to study community factors affecting rural violence and juvenile homicide, and results from that analyses will be discussed at a later date. The second two studies (Washington, D.C. and Los Angeles, CA) were competitively awarded with 1994 funds. Because of the nature of the competitive award process, these studies were delayed. The Los Angeles Violence Study will be continued in 1997 to implement the research design fully.
OJJDP has a draft interim report on the four projects that will be submitted in March 1997. However, funding the projects for an additional year will delay the production of the final report until December 1998.

3. Section 248(a)(7) of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires that not later than one year after the date of enactment of this subsection (November 4, 1993), the Administrator shall submit a report to Congress on hate crimes, including characteristics of juveniles who commit such crimes, the crimes themselves and their victims.
OJJDP's response to the Congressional mandate for a report on juvenile involvement in hate and bias crimes was delayed largely because of the competitive award process. On September 30, 1993, OJJDP awarded the West Virginia University a grant to complete an assessment of the data available and the nature and extent of juvenile involvement in hate and bias crimes. The draft reports from this study were submitted to OJJDP in the Fall of 1995. This Report was submitted to Congress in July 1996.
4. Section 288H of the United States Code requires the Administrator of the Office of Juvenile Justice Delinquency and Prevention (OJJDP) to submit to Congress, no later than 120 after the completion of the first cycle of Mentoring Grants, a report regarding the success and effectiveness of the grant program in reducing juvenile delinquency and gang participation, improving academic performance, and reducing the dropout rate. OJJDP awarded 41, 3 year grants that end in June 1998. The Administrator's report is expected to be submitted by October 1998.

STATE AND LOCAL LAW ENFORCEMENT ASSISTANCE

1. Section 516(c)(2)(A) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires the Director of the Bureau of Justice Assistance, no later than 180 days after funds are appropriated, to submit to the President and Congress a report describing rules that were issued to carry out Chapter B Correctional Options Grants. No funds were appropriated for this program in 1996 and no report will be filed.
2. Section 522(b) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires the Director of the Bureau of Justice Assistance, no later than 180 days after the end of each fiscal year, to submit to Congress a report that includes with respect to each State (1) the aggregate amount of grants made under subpart 1 and subpart 2 to such State for such fiscal year; (2) the amount of such grants awarded for each of purposes specified in subpart 1; (3) a summary of the information provided in compliance with paragraphs (1) and (2) of subsection (a); (4) an explanation of how Federal funds provided under this part have been coordinated with Federal funds provided to States for drug abuse education, prevention, treatment, and research activities; and (3) evaluation results of programs and projects and State strategy implementation. The 1996 Annual Report is expected to be submitted in July 1997.
3. Section 1406(b) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, requires that the Director of the Bureau of Justice Assistance, no later than 90 days after the end of each fiscal year for which grants are made, to submit to Congress a report that includes, with respect to each State, (1) the aggregate amount of grants made under this title to each State for the fiscal year, and (2) a summary of the information provided in compliance with subsection (a)(1). Only \$50,000 was appropriated for this program in 1996.

As a result, BIA conducted a training conference for all 56 States and territories on program implementation. In 1997, this program was appropriated \$550,000 and expects to report detailed grant information to the Congress by September 1998.

CRIME VICTIMS FUND

1. Section 1407(g) of the Victims of Crime Act of 1984, as amended, requires that the Director of the Office for Victims of Crime shall on December 31, 1990, and on June 30 every two years thereafter, report to the President and to the Congress on the revenue derived from each source described in section 1402 and on the effectiveness of the activities supported under this chapter. The Director may include in such report recommendations for legislation to improve this chapter. The next report is due June 1998 and is expected to be submitted on time.

(Dollars in Thousands)

Transfers to and from other accounts.

1 Transfer in the estimates from the DOJ - General Administration to NJ for the Drug Testing Initiative Program.....

Total transfers.....

Increases

1. 1998 pay raise.....

This request provides for the proposed 2.8 percent pay raise to be effective in January 1998 and is consistent with Administration policy included in the 1998 President's budget request. This increase includes locality pay adjustments as well as the general pay raise. The amount requested, \$565,000 represents the pay amounts for three-quarters of the fiscal year plus appropriate benefits (\$430,000 for pay and \$135,000 benefits = \$565,000)

2. Annualization of 1997 pay raise.....

This pay annualization represents first quarter amounts (October through December) of the 1997 pay increase of 3.0 percent. This increase includes locality pay adjustments as well as the general pay raise. The amount requested \$187,000 represents the pay amounts for three-quarters of the year (\$144,000 for compensation and \$43,000 for benefits).

4 Within-grade increases.....

This request provides for the expected increase in costs of within-grade increases. This increase is based on an accurate, dynamic model of the Department's employee population which includes numerous factors such as anticipated pay raises, adjustments to include three-year attrition/separation rates, and career ladder series to reflect promotion policy for each organization. The request includes \$304,000 for pay and \$91,000 for benefits.

5. Annualization of prior year Juvenile Justice positions	---	11	922
This provides for the annualization of 22 positions approved in prior years for the Office of Juvenile Justice and Delinquency Prevention. This request includes nonrecurring costs for one-time items associated with the increased positions.			
	Approved	Annualization	
	Increases	Required	
Annual salary rate of 22 approved positions.....	1,390,000		
Less lapse (50%).....	695,000		695,000
Net Compensation.....	695,000		
Associated employee benefits.....	277,000		227,000
Total costs subject to annualization.....	972,000		922,000
6. Accident compensation.....	---	---	26
This increase reflects the billing provided by the Department of Labor for the actual costs in 1998 of employees' accident compensation, which will be billed in 1999. The 1998 increased cost will be \$26,000.			
7. General Services Administration (GSA) rent.....	---	---	1,104
GSA will continue to charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. The requested increase of \$1,104,000 is required to meet our commitment to GSA. The costs associated with GSA rent were derived through the use of the automated system, which uses the latest inventory data and rates frozen at 1997 levels.			
8. Correspondence Management System.....	---	---	42
An increase of \$42,000 is required in order to fund the on-going costs associated with the Attorney General's Correspondence Management System. This new system, which provides an extensive tracking capability, the ability for components to access and transfer information electronically, improved recordkeeping, and improved reporting capability.

9	Investigation/Rainvestigation	---	---	2
	Exec Order 10450 "Security Requirements for Govt Employees" requires that applicants of each civilian officer or employee in an any dept or agency of the Govt shall be made subject to investigation. Addl funding is required to cover the costs of addl contractor support needed to ensure timely compliance with this Exec Order. It is critical to accommodate the Dept's security requirements by ensuring investigations & investigations are timely initiated on newly apptd civilian officers & employees Department-wide Audited Financial Statement	---	2	---
10	Statement	---	---	---
	An increase of 2 reimbursable FTE to be funded by the Working Capital Fund in-kind earnings is requested to cover the necessary expenses for the preparation of the Department-wide audited financial statement required by the Government Management Reform Act of 1994.	---	---	600
11	General pricing level adjustments	---	---	---
	This request applies OMB pricing guidance to selected expense categories. The increased costs identified result from applying a factor of 2.8 percent against those subobject classes where the prices that the Government pays are established through the market system, instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, printing costs, transportation costs, and utilities.	---	13	3,843

Office of Justice Programs
Violent Crime Reduction Programs, State and Local Law Enforcement Assistance
Summary Statement
Fiscal Year 1998

The 1994 Violent Crime Control and Law Enforcement Act (VCCLEA) sent a clear, strong message about the Nation's law enforcement strategy. This Act provides a balance of enforcement, punishment and prevention programs and tough new sanctions in Federal law. The Violent Crime Reduction Trust Fund (VCRTF), funded under the Federal Workforce Restructuring Act of 1994, provides the resources necessary to support the programs authorized by the 1994 Crime Act.

In 1998, OJP requests that \$2.153 billion be made available from VCRTF resources to assist States and localities in their efforts to continue to: control and prevent violent crime and drug use; manage the special problems posed by increasing incidents of youth violence --focusing on community-based initiatives and post-incarceration reintegration of juvenile offenders; expand prison space by building new prisons and jails and renovating others; combat violence against women by providing victim services; confront domestic violence through strong arrest-oriented programs and training in dealing with domestic violence situations and victims of such violence; update law enforcement technologies to maintain the integrity of criminal justice data and to make these resources readily available at the State, local and national levels, to strengthen the ability of State and local crime labs to conduct DNA testing; and expand the use of drug courts to "break the cycle of substance abuse and crime" by providing continuing judicial supervision and coerced abstinence and treatment to non-violent offenders.

Office of Justice Programs
Violent Crime Reduction Programs, State and Local Law Enforcement Assistance
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Violent Crime Reduction Programs,
State and Local Law Enforcement Assistance

For assistance (including amounts for administrative costs for management and administration, which amounts shall be transferred to and merged with the "Justice Assistance" account) authorized by the Violent Crime Control and Law Enforcement Act of 1994 (Public Law 103-322) as amended ("the 1994 Act"); the Omnibus Crime Control and Safe Streets Act of 1968, as amended ("the 1968 Act"); and the Victims of Child Abuse Act of 1990, as amended ("the 1990 Act"); [\$2,036,150,000], to remain available until expended, which shall be derived from the Violent Crime Reduction Trust Fund; [of which \$523,000,000 shall be Local Law Enforcement Block Grants, pursuant to H.R. 728 as passed by the House of Representatives on February 14, 1995, except that for purposes of this Act, the Commonwealth of Puerto Rico shall be considered a "unit of local government" as well as a "State", for the purposes set forth in paragraphs (A), (B), (D), (F), and (I) of section 101(a)(2) of H.R. 728 and for establishing crime prevention programs involving cooperation between community residents and law enforcement personnel in order to control, detect, or investigate crime or the prosecution of criminals: Provided, That no funds provided under this heading may be used as matching funds for any other Federal grant program: Provided further, That \$20,000,000 of this amount shall be for Boys and Girls Clubs in public housing facilities and other areas in cooperation with State and local law

\$2,152,855,000

enforcement: Provided further, That funds may also be used to defray the costs of indemnification insurance for law enforcement officers;] of which (\$50,000,000) ~~^~~ shall be for grants to upgrade criminal records, as authorized by section 106(b) of the Brady Handgun Violence Prevention Act of 1993, as amended, and section 4(b) of the National Child Protection Act of 1993; of which (\$199,000,000) shall be available as authorized by section 1001 of title I of the 1968 Act; to carry out the provisions of subpart 1, part E of title I of the 1968 Act, notwithstanding section 511 of said Act, ~~^~~ for the Edward Byrne Memorial State and Local Law Enforcement Assistance Programs; of which (\$330,000,000) shall be for the State Criminal Alien Assistance Program, as authorized by section 242(j) of the Immigration and Nationality Act, as amended; of which (\$670,000,000) shall be for the Violent Offender Incarceration and Truth in Sentencing Incentive Grants pursuant to subtitle A of title II of the 1994 Act, of which (\$170,000,000) ~~^~~ shall be available for payments to States for incarceration of criminal aliens, and of which (\$12,500,000) ~~^~~ shall be available for the Cooperative Agreement Program (c): Provided further, That funds made available for Violent Offender Incarceration and Truth in Sentencing Incentive Grants to the State of California may, at the discretion of the recipient, be used for payments for the incarceration of criminal aliens: Provided further, That beginning in fiscal year 1999, and thereafter, no funds shall be available to make grants to a State pursuant to section 20103 or section 20104 of the Violent Crime Control and Law Enforcement Act of 1994 unless no later than September 1, 1998, such a State has implemented a program of controlled substance testing and intervention for appropriate categories of convicted offenders during periods of incarceration and criminal justice supervision, with sanctions including denial or revocation of release for positive controlled substance tests, consistent with guidelines issued by the

BYRNE LAW ENFORCEMENT ASSISTANCE

MISSION: To assist State and local units of government to control and prevent drugs and violent crime and to improve the functioning of the criminal justice system by assisting States develop and implement innovative alternatives to traditional modes of incarceration.

GENERAL GOALS:

1. Award grants to States for use by States and local units of government for crime prevention/control and system improvement programs.
2. Provide States with guidance on administrative issues and requirements.
3. Provide States and local criminal justice agencies with state-of-the-art information on effective programs, practices, and techniques.
4. Obtain information from States on effective programs and to document "what works" in reducing crime and improving the criminal justice system.
5. Provide States and subgrantees with training and technical assistance on administrative and program issues.
6. Encourage States to address National priorities.
7. Monitor formula grant activities for compliance with requirements and the effective implementation of the statewide strategy.
8. Develop and test the effectiveness of new programs and practices and to control and prevent drug use, crime and violence and improve the functioning of the criminal justice system at the State and local levels.

9. Provide training and technical assistance and to improve and enhance the capacity of State and local agencies and community members to engage in effective drug/ crime and violence control/prevention activities.
10. Encourage and facilitate coordination and cooperation among criminal justice agencies, across jurisdictions, between Federal, State, and local agencies; across disciplines; and between the criminal justice system and the community.
11. Assess the impact of program activities on drug and crime problems and the criminal justice system.
12. Develop alternatives that reduce reliance on incarceration and to relieve overcrowding in correctional institutions.

Edward Byrne Formula Grants:

	Amount
1997 Appropriation	\$199,000
1998 Base	199,000
1998 Request	\$05,000
<i>Increased/Decreased</i>	<i>+ 306,000</i>

BASE PROGRAM DESCRIPTION: The Edward Byrne Memorial State and Local Law Enforcement Assistance Formula Grant Program, authorized by the Anti-Drug Abuse Act of 1988, assists States and units of local government in carrying out specific programs which offer high probabilities of improving the functioning of the criminal justice system, with special emphasis on nationwide and multi-level drug control strategies and violent crime prevention. Programs and projects are developed to assist multi-jurisdictional and multi-state efforts to control drugs and crime and to support National priorities. The Anti-Drug Abuse Act of 1988, as amended, authorizes programs in 26 purpose areas to improve the criminal justice system.

Fifty States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands are eligible to receive a formula grant award. A percentage of each State's formula award must be used for projects at the local level, based on the proportion of local criminal justice expenditures to total State and local criminal justice expenditures. States, in consultation with local officials, develop statewide drug and violent crime strategies and funding priorities to address their drug and violent crime problems and to improve the functioning of their criminal justice systems while supporting National priorities and objectives.

The State and Local Law Enforcement Assistance narrative contains detailed 1995 and 1996 Program highlights.

PROGRAM CHANGE: The 1998 request for the Byrne Formula Grants Program is \$505 million and is entirely financed by the Violent Crime Reduction Trust Fund (VCRIF). This request, which is \$5 million above the 1997 appropriation, will maintain current program activities as well as increase the funding available to States for the drug testing from \$25 million to \$30 million.

Edward Byrne Discretionary Grants	
1997 Appropriation	Amount
1998 Base	\$ 0
1998 Request	0
<i>Increase/Decrease</i>	75,000
	75,000

BASE PROGRAM DESCRIPTION: The Edward Byrne Memorial State and Local Law Enforcement Assistance Program, authorized by the Anti-Drug Abuse Act of 1988, assists States and units of local government in carrying out specific programs which offer high probabilities of improving the functioning of the criminal justice system with special emphasis on nationwide and multi-level drug control strategies. The Anti-Drug Abuse Act of 1988, as amended, authorizes programs in 26 purpose areas to control drugs and improve the criminal justice system.

The Bureau of Justice Assistance (BJA) administers the Byrne Discretionary Grant Program and provides leadership and guidance on crime and violence prevention and control and criminal justice system improvement at the State and local levels. BJA is authorized by Congress to make awards to public and private agencies and organizations for National scope and multi-state programs, demonstration programs, training, and technical assistance to assist States and local jurisdictions. National scope programs provide a service or product of benefit throughout the country or across multiple States or address issues of national concern. Demonstration programs develop, test, evaluate, and document new programs and practices. Training activities provide State and local criminal justice practitioners and others with state-of-the-art information on effective programs and practices. Technical assistance provides support to sites participating in demonstration programs and is also available to assist individual jurisdictions implement programs or practices and/or address specific issues.

The State and Local Law Enforcement Assistance narrative contains detailed 1995 and 1996 Program highlights.

Comprehensive Approaches: In 1998, BJA will continue to assist local communities and neighborhoods with the development and implementation of comprehensive approaches to problems related to drugs, crime, and violence at the community and neighborhood levels. A comprehensive approach requires law enforcement and other governmental agencies to work in partnership with community members and organizations to address crime, as well as the factors that increase the risk of individuals becoming involved in problem behavior.

Violence Prevention: Programs to reduce and prevent violence will continue to be a high priority in 1998, including the continuation and expansion of programs to control and reduce illegal firearms activity, homicides, and gang-related crimes.

Community Partnership and Prevention: Crime and violence are only a symptom of broader problems which plague our communities. Crime cannot be stopped by law enforcement without the active participation of the community and other public and private agencies. In 1998, BJA will continue to expand and enhance community mobilization efforts by assisting local communities and law enforcement agencies in actively engaging resident and community groups in taking back their neighborhoods, one neighborhood at a time, from drug dealers, gangs, and other criminals. This program complements efforts to hire additional police officers and expand community policing. It is designed to encourage and prepare local communities to embrace community crime prevention, community mobilization, community revitalization, and neighborhood level problem solving.

Improve the Functioning of the Criminal Justice System: In 1998, BJA will continue to identify, develop, and test programs, policies, procedures, and standards of operations to improve the effectiveness and efficiency of the criminal justice system at the State and local levels. Programs will continue to examine law enforcement activities, the adjudicatory process, and corrections functions in an effort to help State and local agencies respond to emerging problems, identify ways to target limited resources to the most serious crime/offenders where they will have the greatest impact, and take advantage of new technologies and best practices.

Training and Technical Assistance: Efforts to identify "what works" is of limited value unless that information is widely disseminated and local practitioners are given assistance in replicating these innovations. In 1998, BJA will continue to expand training and technical assistance to State and local criminal justice practitioners, other government officials, service providers, and community organizations and residents. Training and technical assistance will share information and lessons learned through demonstration programs which are developed in response to emerging problems at the State and local levels.

Evaluation: In order to increase the efficiency of programs and determine "what works," BJA will work with the National Institute of Justice (NIJ) to conduct evaluations of selected programs. The NIJ has a statutory responsibility for the evaluation of BJA's programs. A portion of the funds allocated for the programs described above may be reimbursed to NIJ to support program evaluation efforts.

PROGRAM CHANGE: Unlike the 1997 direct appropriation of \$60 million from the State and Local Law Enforcement account, the 1998 funding request of \$75 million for the Byrne Discretionary Grant Program is entirely financed under the YCRTE. Of the \$15 million program increase, \$10 million will bring BJA's unearmarked funds back to pre-1996 and 1997 levels. During these 2 years, BJA's ability to carry out its primary mission of partnering with units of local, State, and tribal governments and National organizations to demonstrate and promote the replication of effective, innovative crime control and violence prevention programs was reduced. The remaining \$5 million is for the evaluation of drug testing Initiatives.

LOCAL LAW ENFORCEMENT BLOCK GRANTS

MISSION: To make funds available to units of local governments for the purpose of reducing crime and improving public safety.

GENERAL GOALS:

1. Hire, train, and employ on a continuing basis, new, additional law enforcement officers and necessary support personnel.
2. Pay overtime to presently employed law enforcement officers and necessary support personnel.
3. Procure equipment, technology and other material directly related to basic law enforcement functions.
4. Enhance security measures in and around schools, and in and around any other facility or location which is considered by the unit of local government to have a special risk for incidents of crime.
5. Establish or support Drug Courts.
6. Enhance the adjudication process of cases involving offenders, including the adjudication process of cases involving violent juvenile offenders.
7. Establish a multi-jurisdictional task force, particularly in rural areas, composed of law enforcement officials representing units of local government, that work with Federal law enforcement officials to prevent and control crime.
8. Establish crime prevention program involving cooperation between community residents and law enforcement personnel in order to control, detect or investigate crime or the prosecution of criminals.
9. Pay for costs of indemnification insurance for law enforcement officers.

Local Law Enforcement Block Grants	Amount
1997 Appropriation	\$ 523,000
1998 Base	523,000
1998 Request	<u>0</u>
<i>Increase/ Decrease</i>	<i>- 523,000</i>

BASE PROGRAM DESCRIPTION: The Local Law Enforcement Block Grant Program (LLEBGP), administered by the Bureau of Justice Assistance (BJA) and authorized by the 1996 Appropriations Act, provides funds to units of local governments for purposes of reducing crime and improving public safety. Funding under this program is available to qualifying units of local government. States for their award to units of local governments which did not qualify for direct awards, and for State law enforcement agencies providing law enforcement services to units of local government.

In 1996, Congress appropriated \$503 million for this program and BJA subsequently made approximately 2,700 State and local grant awards. In 1997, although no program funding was requested, the Congress provided \$523 million to continue LLEBGP program activities. With the available funding, BJA expects to make approximately 2,900 grants.

PROGRAM CHANGE: There are no continuation funds requested for this program in 1998.

CRIMINAL RECORDS UPGRADE PROGRAM

MISSION: To enhance the quality, completeness, and accessibility of the nation's criminal history record systems.

GENERAL GOALS: Assist States in improving the level of criminal history record automation, accuracy, and completeness, and to transmit records to the national system.

Criminal Records Upgrade:	Amount
1997 Appropriation	\$50,000
1998 Base	50,000
1998 Request	\$5,000
Increase/ Decrease	- 5,000

BASE PROGRAM DESCRIPTION: This program implements the grant provisions of the Brady Handgun Violence Prevention Act and the National Child Protection Act of 1991, and those provisions of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, and Section 210603 of the Violent Crime Control and Law Enforcement Act of 1994 (VCLLEA), which pertain to the establishment, maintenance, or use of criminal history records and criminal record systems.

The goal of the National Criminal History Improvement Program (NCHIP) is to improve the quality of the nation's criminal history records and to support the timely development of the capability to perform adequate criminal background checks. The national system will permit the immediate identification of persons who are prohibited from purchasing firearms, are subject to domestic violence protective orders, or

are ineligible to hold positions of responsibility involving children, the elderly, or the disabled. The development of complete and accurate criminal records, that are immediately available on an interstate basis, is critical to support law enforcement efforts to make determinations regarding pretrial release, career criminal charging, sentencing options, and correctional assignments. Background checks for national security and related purposes are also only as effective as the quality of the records on which they are based.

PROGRAM CHANGE: In 1998, \$45 million is requested for continuation of the NCIIIP, which implements Section 106(b) of the Brady Handgun Violence Prevention Act, Section 4(b) of the National Child Protection Act of 1993 and Section 210603 of the VCCL:EA. Together the acts authorized \$220 million, \$200 million of which represent VCCL:EA resources. Of this, \$100 million was appropriated to implement the Brady Act in 1995; \$25 million was appropriated in 1996 and \$30 million is appropriated in 1997 for implementation of both the Brady and Child Protection Acts. The 1998 request of \$45 million represents the balance of what is available, and needed, for this program.

Of the \$100 million in 1995, \$6 million was provided to the Federal Bureau of Investigation (FBI) for startup tasks related to the establishment of the National Instant Criminal Background Check System (NICS) as required by the Brady Act. With approval of the Department of Justice, the nearly identical goals of the two Acts were merged into a single program initiative to insure uniformity in all grant-funded efforts to improve criminal history records nationwide.

Under the 1995 NCHIP program, approximately \$80 million in direct awards were made to every State. This includes approximately \$76 million to assist States in improving the quality and accessibility of criminal history records and the development of procedures to identify felons who attempt to purchase firearms.

In addition, the Brady Act also requires that the presale check be made against records of the other categories of persons prohibited from purchasing firearms including: fugitives, illegal aliens, persons under mental commitment, drug abusers, persons dishonorably discharged from the Armed Forces, citizenship renunciators, persons subject to a civil restraining order arising out of domestic violence, and persons convicted of domestic violence misdemeanors. In 1995, nearly \$4 million in direct awards were provided to 18 States to initiate pilot efforts to collect and access data in these categories.

The 1996 appropriation was not available until April 1996. The 1996 program announcement was published in May 1996. In contrast to the 1995 appropriation, the 1996 appropriation--and all years thereafter--implements both the Brady Act and the National Child Protection Act. Starting in 1996, NCHIP funds were required to support not only criminal record improvement, but also the functions necessary to enable States to identify persons ineligible to hold positions of responsibility involving children, the elderly, and the disabled. By the close of 1996, States received a total \$33 million in direct awards. This funding enabled States to continue upgrading criminal record systems to ensure the availability of complete and accurate records of felony convictions and to identify persons convicted of crimes involving

domestic violence, crimes against children, the elderly, and the disabled, and persons subject to protective orders involving domestic violence.

The 1997 NCHIP program announcement will be issued in the Spring 1997. Awards will be made in the Summer/Fall 1997. Section 922 of the Federal Gun Control Act, amended on September 30, 1996, prohibits the sale of firearms to persons convicted of misdemeanors involving domestic violence. To implement this new requirement, 1997 NCHIP funds will also be available to States to collect and automate misdemeanor information and to identify those misdemeanors which involve domestic violence.

The 1998 request of \$45 million equals the remainder of funds authorized under the Brady and Child Protection Acts and the VCCLEA. Full funding at the authorized level is necessary to ensure that program goals are achieved within the required period for implementation of the National Instant Criminal Background Check System (NICS). The Brady Act requires that NICS become operational in November 1998. After this date, determinations on presale firearm checks are dependant on the immediate availability of complete State records to be exchanged through the national system. Because 1998 is the last funding year that final efforts can be made to ensure State record systems are capable to supply the necessary information through the interstate NICS system, 1998 funds will be focused on critical remaining areas requiring technical and operational support as identified by the States and BJS. Failure to fully support the final phase of record development before implementation of NICS will result in potential reliance on inaccurate records which may lead to illegal sales or erroneous denials to eligible purchasers.

The remaining authorized \$45 million is required to:

- Enable States to expand the development of Automated Fingerprint Identification Systems (AFIS) which permit the immediate identification of record subjects. Linkage of State AFIS with the FBI's national AFIS, in particular, will permit instant access to positive identification which facilitates records checks and ensures the accuracy of subjects and data provided. Use of NCHIP funds to support expanded livecan capability also permits the local identification of subjects and, potentially, persons making presale firearm inquiries.
- Facilitate implementation efforts to develop procedures to access data on non-felon categories of prohibited purchasers including drug abusers, persons committed to mental institutions, illegal aliens, persons subject to restraining orders, and persons convicted of domestic violence misdemeanors. Studies associated with these pilot efforts, begun in 1996, indicate that substantial work remains to be done in these important areas.
- Ensure States meet the requirements of the Child Protection Act, including activities such as identifying and flagging records involving child and elderly abuse, collecting data on civil restraining orders, supporting participation in the FBI's national file on protective

orders, and deferring costs associated with background checks on volunteers. Although the Child Protection Act does not mandate States enact legislation requiring background checks, an increasing number of States are putting such requirements into effect to ensure that ineligible persons are not given responsibility involving children, the elderly, or the disabled.

- Support both a national survey and an in-depth analysis of improvement in criminal justice processing resulting from increased access to complete criminal records. This survey updates those conducted in 1993 and 1996 and will permit the measurement of State progress and identifies the remaining areas to be addressed. The study will initiate a continuing program of research into utilization of improved records and focuses on the specific criminal justice benefits arising in each component of the justice system.
- Assist States in meeting new requirements of the Federal Gun Control Act by supporting efforts to collect and automate misdemeanor records and to identify misdemeanors involving domestic violence.

CORRECTIONAL FACILITIES GRANTS

MISSION: To enhance the capability of States to confine violent offenders in secure facilities and ensure that violent offenders remain incarcerated for substantial periods of time through the implementation of truth-in-sentencing laws.

GENERAL GOALS:

1. Provide assistance to States to build or expand correctional facilities to increase the bed capacity for the confinement of violent offenders.
2. Promote the implementation of truth-in-sentencing laws that ensure that violent offenders serve a substantial portion of the sentences imposed.

Correctional Facilities Grants:

Increase/ Decrease	710,500
	+ 40,500

BASE PROGRAM DESCRIPTION: The Violent Offender Incarceration and Truth in Sentencing Incentive Grant Program is authorized by Subtitle A of Title II of the VCCLEA, as amended. Subtitle A authorizes formula grants to States, and States organized as

multi-state compacts, to construct or expand correctional facilities for violent offenders or facilities for the confinement of nonviolent offenders and criminal aliens in order to free secure prison space for violent offenders. Funds can also be used to build or expand local jails. A small discretionary grant program provides grants to Indian tribes to construct jails on tribal lands.

The Violent Offender Incarceration Program receives half (50%) the total available for formula grants and distributes these funds using a three tiered formula. To receive funding under tier 1, a State must provide assurance that it has implemented, or will implement policies programs and laws to get tough on violent offenders. To qualify for funds under tiers 2 and 3, a State must provide data which demonstrate tougher treatment of violent offenders. The Truth In Sentencing Incentive Grant Program receives the other half of the funds and provides awards to States which have enacted truth in sentencing laws, or to an indeterminate State that has sentencing and release guidelines or policies that require violent offenders to serve at least 85 percent of their prison sentence.

The 1996 appropriation of \$617.5 million, enacted on April 26, 1996, included two set-asides: (1) \$200 million for the State Criminal Alien Assistance Program (SCAAP) to reimburse State and local jurisdictions for holding criminal aliens and (2) \$12.5 million for the Cooperative Agreement Program (CAP) for the improvement of State and local correctional facilities that hold Federal prisoners. These funds, totaling \$212.5 million were transferred to the Bureau of Justice Assistance (BJA) and the U.S. Marshals Service for distribution. In 1996, awards totaling \$1,215,000 were made to two Indian tribes to assist them in developing tribal correctional facilities for juvenile offenders. The tribes were selected because a large proportion of the youth in Federal corrections facilities are from these tribes. Approximately \$319 million was available for distribution to qualified States as Violent Offender Incarceration and Truth-in-Sentencing Incentive grants. All States applied for and received a Violent Offender Incarceration tier 1 formula award. Each State, the District of Columbia, and Puerto Rico received an award of \$1,248,453. The four remaining territories received \$83,230. Most States and territories (52) received tier 2 awards ranging in from \$6,180 (American Samoa) to \$16,376,762 (California). Tier 3 awards were provided to 31 States and territories; award amounts were approximately \$880,000. Twenty-five States received Truth-in-Sentencing incentive awards, with amounts ranging from \$71,433 (North Dakota) to \$42,856,511 (California).

In 1997, a total of \$670 million is available for this program to help States increase secure space to incarcerate violent offenders and accommodate the rapidly growing prison population. Of the amount available, \$170 million is for SCAAP and \$12.5 million for CAP. Applications for Violent Offender Incarceration tier 1 grants are due in February 1997. Applications for tiers 2 and 3 and for Truth-in-Sentencing grants are due July 1, 1997. The July 1997 deadline allows States which did not qualify for 1996 funds time to enact Truth-in-Sentencing legislation or to provide additional data needed to qualify for funds in 1997. Two new requirements, added to the program during the 1997 appropriation process, require States to have drug testing programs and to report inmate deaths. In accordance with the statute, the Attorney General issued Drug Testing Guidelines in December 1996. New requirements related to inmate death reporting are included in the 1997 Program Guidance and Application Kit.

PROGRAM CHANGE: The 1998 request of \$710.5 million is \$40.5 million greater than the 1997 appropriation, but less than one-third of the \$2.527 billion authorized by Section 20108 of the VCCLEA, as amended by General Provision section 114, of the 1996 Appropriations Act, and provides continued support for SCAAP (\$150 million) and CAP (\$35 million). The additional \$40.5 million in funding will assist States to increase secure space to incarcerate violent offenders. Current prison populations are growing at a rate of more than 1,700 beds per week. These figures will increase as the impact of implementing tougher sentencing laws and practices required by the Violent Offender Incarceration and Truth-in-Sentencing Incentive Grant Program begin to be felt. Over the next 5-10 years, the need for additional space will escalate as the actual time served by violent offenders increases from the current average in all States of approximately 45 percent to at least 85 percent of the sentence imposed in participating States. At an average cost of approximately \$34,000 per prison bed, the 1998 request represents almost 9,000 beds.

DRUG COURTS GRANTS

MISSION: To improve public safety and reduce criminal recidivism through support of drug court programs that intensively supervise drug treatment for drug addicted, non-violent offenders.

GENERAL GOALS: Provide financial and technical assistance for States, State courts, units of local government, local courts and Indian tribal governments to develop and implement treatment drug courts that employ the coercive power of the courts to subject non-violent offenders to an integrated mix of treatment, substance abuse testing, incentives, and sanctions to break the cycle of substance abuse and crime.

Drug Courts Program		Amount
1997 Appropriation		\$ 30,000
1998 Base		30,000
1998 Request		<u>75,000</u>
	<i>Increase/ Decrease</i>	<i>+ 45,000</i>

BASE PROGRAM DESCRIPTION: As enacted by section 50001 of the VCCLEA, the Drug Courts program provides financial and technical assistance for States, State courts, units of local government, local courts and Indian tribal governments to develop and implement treatment drug courts that employ the coercive power of the courts to subject non-violent offenders to an integrated mix of treatment, substance abuse testing, incentives, sanctions and services to break the cycle of substance abuse and crime. In November 1994, the Office of Justice Programs (OJP) established a new Drug Courts Program Office to administer this program and to oversee the Drug Court Clearinghouse established by the Bureau of Justice Assistance (BJA). Guidelines were produced through a coordinated effort of OJP and its component offices and bureaus, and the Department of Health and Human Services.

In 1995, a total of 130 applications were received from 41 States, Puerto Rico, and the District of Columbia. By the Fall 1995, the Attorney General announced 52 planning grants, 5 implementation grants and 8 enhancement grants. In addition, 5 training and technical assistance workshops were provided to the 52 planning grantees.

In March and April 1996, a new technical assistance strategy was implemented, the Mentor Drug Court Network. Through this program, the staff of seven existing drug courts serve as mentors for staff in other jurisdictions where drug courts are being planned. Initial training programs were held at each of the seven drug courts for Drug Court Program Office planning grantees. This strategy continues to be an effective tool for helping courts learn from and assist each other.

Current plans for expanding and maintaining the Mentor Drug Court Program include providing logistical support to the seven mentor courts such as helping to set-up: (1) visits from other jurisdictions who call for help; (2) an "800" number referral system to the mentor courts; (3) cross training for the drug court practitioners in the mentor courts so they become familiar with mentor courts other than their own; and (4) seven to ten site visits to other mentor courts for groups interested in developing a drug court in their jurisdiction.

Other 1997 national technical assistance and training efforts will focus on building program evaluation and information system development for drug courts.

On May 9, 1996 the Attorney General announced the award of 9 new drug court implementation grants and 7 new enhancement grants. These were originally 1995 applications which qualified but did not receive monies due to fiscal constraints. A program guideline soliciting new applications for additional 1996 planning, implementation and enhancement grants was distributed on October 1, 1996.

For 1997, the Drug Courts Program Office was appropriated \$30 million. Upon receiving this appropriation, a Notice was sent to everyone receiving the October 1, 1996 guideline and application kit stating that a substantial portion of the 1997 appropriation would be committed to the applications received by the deadline and be based on the merit of the applications. The Drug Courts Program office received a total of 277 applications from 42 States, Guam, Puerto Rico and the District of Columbia. The applications are currently out for peer review and award decisions are expected by March 1997.

PROGRAM CHANGE: The 1998 request of \$75 million is \$45 million greater than the 1997 appropriation and allows for significant program growth and development. This request is, however, less than half of the \$200 million authorized under section 1001(a)(20) of the 1968 Act for this program.

**VIOLENCE AGAINST WOMEN ACT PROGRAM:
LAW ENFORCEMENT AND PROSECUTION GRANTS**

MISSION: To develop and strengthen effective coordinated and integrated law enforcement and prosecution strategies and related victim services in cases involving violent crimes against women

GENERAL GOALS:

- 1 Expand the formula grant program established in 1995 to promote the apprehension, prosecution, and adjudication of persons committing violent crimes against women.
- 2 Encourage States and localities to restructure the criminal justice response to violent crimes against women
- 3 Develop a comprehensive set of strategies in response to violent crimes against women that draw on the experiences of all of the key components of the criminal justice system, including the advocacy community

Law Enforcement and Prosecution Grants:

	Amount
1997 Appropriation	\$ 145,000
1998 Base	145,000
1998 Request	160,000
<i>Increase/Decrease</i>	<i>+ 15,000</i>

BASE PROGRAM DESCRIPTION: This program implements Section 4121, "Grants to Combat Violent Crimes Against Women," of the VCCLEA, codified at Sections 2001-6 (42 U.S.C. § 3796gg to gg-5) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended.

This program provides formula grants to States, units of local government, and tribal governments to develop proactive, coordinated, and integrated strategies to respond to violent crimes against women. The legislation mandates that four percent of funding be available for discretionary grants for Indian tribal governments for the same purpose. The development of coordinated and integrated strategies requires collaboration among police, prosecutors, the courts, and victim services providers. Examples of innovative approaches that can be supported with grant funds include:

- (1) Comprehensive training programs to change attitudes that traditionally have prevented the criminal justice system from responding adequately to violent crimes against women;
- (2) Specialized units within police departments and prosecutors' offices, or specialized multi-disciplinary units devoted exclusively to handling domestic violence and/or sexual assault cases;
- (3) Sexual trauma units in emergency rooms where forensic examinations, victim counseling, and victim advocacy are equally available;
- (4) Strategies to maximize resources by establishing regional approaches, such as the registration and enforcement of protective orders across jurisdictional lines;
- (5) Protocols to achieve better coordination between civil and criminal courts in cases involving violence against women; and
- (6) Victim services that address the special needs of women from minority and ethnic communities, women with disabilities, and non-English-speaking women.

In 1995, the Violence Against Women Grants Office initiated the first stage of a multi-year effort to enhance the criminal justice system response to violence against women by awarding grants of \$426,364 to 56 States and territories. Every State and territory complied with the requirement to limit the out-of-pocket costs for forensic medical exams and court procedures for victims of domestic and sexual abuse. In addition, 1995 funding supported 14 grants totaling \$1,021,594 to tribal governments to improve the tribal justice system response to violence against Indian women.

In 1996, each State and territory received two levels of funding. First, each received a base award of \$500,000. Then, each received an additional award based on population. The 1996 funding also supported \$4 Indian tribal government grants totaling \$4,536,000, and supplements to 14 of the 1995 tribal grantees totaling \$126,000.

In 1997, each State and territory received a \$500,000 base award, plus additional funds based on population.

PROGRAM CHANGE: The request for \$160 million represents the total amount authorized by section 1001(a)(18) of the 1968 Act for this program in 1998. The increase of \$15 million over the 1997 appropriation will allow States to significantly enhance efforts to respond to violent crimes committed against women and further expand access to services to previously underserved Indian and other minority populations.

**VIOLENCE AGAINST WOMEN ACT PROGRAM:
GRANTS TO ENCOURAGE ARREST POLICIES**

MISSION: To strengthen the criminal justice system's response to domestic violence and ensure that domestic violence is treated as a serious violation of criminal law.

GENERAL GOALS:

1. Encourage States, units of local government, and Indian tribal governments to implement mandatory arrest or pro-arrest programs and policies in response to domestic violence incidents, including mandatory arrest programs and policies for violations of protection orders.
2. Continue to enhance the capability of all components of the criminal justice system to respond consistently and in a coordinated and integrated manner to cases involving domestic violence

Grants to Encourage Arrest Policies:	Amount
1997 Appropriation	\$33,000
1998 Base	33,000
1998 Request	59,000
<i>Increase/ Decrease</i>	<i>+26,000</i>

BASE PROGRAM DESCRIPTION: This program implements Section 40231, "Encouraging Arrest Policies," of the VCCL&A, codified at Sections 2101-5 (42 U.S.C. § 3796hh to hhM) of the Omnibus Crime Control and Safe Streets Act of 1968, as amended. This program awards discretionary grants to States, units of local government, and Indian tribal governments to: (1) implement mandatory arrest or pro-arrest programs and policies in police departments, including mandatory arrest programs and policies for protection order violations; (2) provide training to improve police tracking of cases involving domestic violence; (3) centralize and coordinate police enforcement, prosecution, and/or judicial responsibility for domestic violence cases; (4) coordinate computer tracking systems to ensure communication among police, prosecutors, and criminal and family courts; (5) strengthen legal advocacy service programs for domestic violence victims; and (6) educate judges in criminal and other courts about domestic violence to improve judicial handling of such cases.

This program requires States to demonstrate that their laws, policies, and/or practices discourage dual arrests of the offender and victim; prohibits the issuance of mutual protection orders (except in cases in which both parties file a claim and the court finds that they both acted primarily as aggressors and that neither acted primarily in self-defense); and does not require that the abused person bear the costs

associated with filing criminal charges or service of such charges on the abuser, or issuance or service of a warrant, protection order, or witness subpoena.

For 1996 and 1997, a total of approximately \$60.2 million was available for this discretionary grant program. Of this amount, 122 grants totaling \$46.6 million have been awarded.

PROGRAM CHANGE: The request of \$59 million represents the total amount authorized for this program under the VCCLEA for 1998. It is \$26 million over the 1997 appropriation and permits the implementation of mandatory or pro-arrest policies in additional jurisdictions across the country.

VIOLENCE AGAINST WOMEN ACT PROGRAM: RURAL DOMESTIC VIOLENCE AND CHILD ABUSE ENFORCEMENT ASSISTANCE

MISSION: To enhance the capability of States, Indian tribal governments, local governments, and public and private entities in rural areas to respond in a coordinated and integrated manner to incidents of domestic violence and child abuse.

GENERAL GOALS: Enhance cooperation among all components of the criminal justice system in responding to incidents of domestic violence and child abuse/victimization in rural jurisdictions.

Rural Domestic Violence and Child Abuse Enforcement:	
1997 Appropriation	Amount
1998 Base	\$ 8,000
1998 Request	8,000
<i>Increase/Decrease</i>	13,000
	+7,000

BASE PROGRAM DESCRIPTION: This program implements Section 40295, "Rural Domestic Violence and Child Abuse Enforcement Assistance," of the VCCLEA, codified at Section 40295 (42 U.S.C. § 13971) of the VCCLEA. It provides discretionary grants to States, Indian tribal governments, local governments in rural States, and public and/or private entities in rural States to establish and expand cooperative efforts and projects among law enforcement officers, prosecutors, victim advocacy groups, and other related parties or entities to investigate and prosecute incidents of domestic violence and child abuse; provide treatment and counseling to domestic violence and child abuse victims; and work with their respective community organizations to develop education and prevention strategies to address domestic violence and child abuse/victimization.

In 1996, 20 grants totaling \$5.6 million were awarded to 7 States, 4 tribal governments, 4 units of local government in rural States, and 5 public/private entities in rural States.

PROGRAM CHANGE: The 1998 request for \$15 million represents the total amount authorized for this program under section 40295(c) of the VCCLEA. The increase of \$7 million over the 1997 appropriation will provide enhanced access to services in additional rural jurisdictions across the country.

VIOLENCE AGAINST WOMEN ACT PROGRAM: TRAINING PROGRAMS

MISSION: To enhance the capacity of probation and parole officers and other personnel who work with released sex offenders to better manage this difficult offender population and help ensure public safety.

GENERAL GOALS: Continue to provide training for probation and parole officers and other personnel who work with released sex offenders.

Training Programs:

	Amount
1997 Appropriation	\$ 1,000
1998 Base	1,000
1998 Request	2,000
<i>Increase/Decrease</i>	<i>+1,000</i>

2120

BASE PROGRAM DESCRIPTION: This program implements Section 40152, "Training Programs," of the VCCLEA, codified at Section 40152 (42 U.S.C. § 13941) of the VCCLEA. It establishes criteria and develops training programs to assist probation and parole officers and other personnel who work with released sex offenders in the areas of case management, supervision, and relapse prevention.

In November 1996, a summit of 180 experts, from several disciplines within the criminal justice field, convened in Washington, D.C. The purpose of this summit was to launch discussions and gather ideas on how to best provide training under this program.

PROGRAM CHANGE: This request is \$1 million above the 1997 appropriation and allows a larger number of probation and parole officers to receive training on better managing released sex offenders in the community --an issue of intense interest to and great need in communities across the country.

**NATIONAL STALKER AND DOMESTIC VIOLENCE REDUCTION
State Stalking and Domestic Violence Data**

MISSION: To develop and improve the processes for identifying, classifying, collecting, and entering data regarding stalking and domestic violence into local, State, and national crime information databases.

GENERAL GOALS: Assist States in their efforts to collect data on stalking and domestic violence and to make such information available through the national criminal history record network.

State Stalking & Domestic Violence Data:	
1997 Appropriation	Amount
1998 Base	\$1,750
1998 Request	1,750
<i>Increase/Decrease</i>	<i>2,750</i>
	<i>+1,000</i>

BASE PROGRAM DESCRIPTION: The program implements provisions of Section 40602 of the VC/CLEA, which authorizes a program to assist States in identifying, classifying, collecting, and transmitting data on warrants, arrests, convictions, and protection orders relating to stalking and domestic violence, and making such information available through the national criminal history record network. In 1996, \$1.5 million was appropriated to implement the stalking and domestic violence component of the Bureau of Justice Statistics National Criminal History Improvement Program (NCHIP). In 1997, \$1.75 million is available to continue implementation of this provision. The NCHIP grant program awards grants to all States and eligible U.S. territories to upgrade the quality and availability of criminal history records for both criminal and noncriminal justice purposes.

Beginning in 1996, the NCHIP program was expanded to assist States to collect, flag, and make available, records of arrests, warrants, convictions and protective orders relating to stalking and domestic violence. The National Stalking and Domestic Violence Reduction Program provides States with the resources to upgrade less adequate on-line information about stalkers and others who have committed domestic violence, and increase information-sharing between States. The data files funded by this program are not statistical or research databases, but are automated systems accessed by law enforcement agencies for crime fighting purposes.

Recognizing the importance of these issues, and pursuant to OJP's commitment to Congress, BJS advised that States submitting early applications under this program could receive 1997 funding by December 1. As a result, 7 States applied and received grants by this date. By the close of the fiscal year, all remaining States will receive funds from this component of the NCHIP program as part of its regular 1997 NCHIP award. Increased State involvement is critical to ensuring that this data is available to respond to inquiries within the State.

regionally, and on a national basis. Furthermore, States will receive assistance in developing procedures for identification of current protective orders and full faith and credit enforcement of out of State orders. All of these efforts are necessary to fully achieve the goals of the Violence Against Women Act, implemented by these provisions.

PROGRAM CHANGE: The 1998 request of \$2.75 million equals the amount authorized for this program under section 40603 of the VCCLEA. The \$1 million increase over the 1997 appropriation allows for modest program expansion. Specifically, 1998 funds will be used to ensure that arrests and less-than-felony convictions data, based on stalking and domestic violence, are entered into State and local databases and made available for both law enforcement and authorized non-criminal justice consideration. In light of the Brady Act, previous efforts focused on the collection of data on stalking and domestic violence protective orders, felony convictions and arrest warrants. During 1997, BJS reviews will identify residual procedural, technical, and policy issues, to assist States to implement procedures and techniques for exchange of data within and between States.

STATE CRIMINAL ALIEN ASSISTANCE PROGRAM

MISSION: To provide Federal assistance to States and local units of government for the costs of incarcerating illegal aliens convicted of felony offenses and to expedite the transfer of custody for certain deportable aliens.

GENERAL GOALS:

- 1. Reimburse States and local governments for the costs of incarcerating illegal criminal aliens convicted of a felony.
- 2. Better identify criminal aliens who are in the country illegally.
- 3. Expedite the process of transferring illegal aliens from State and local correctional institutions to Federal custody in preparation for deportation.

State Criminal Alien Assistance Program:		Amount
1997 Appropriation		\$ 330,000
1998 Base		330,000
1998 Request		350,000
	Increase/ Decrease	+ 20,000

BASE PROGRAM DESCRIPTION: The State Criminal Alien Assistance Program (SCAAP), authorized by section 20301 of the Violent Crime and Law Enforcement Act of 1994, as amended, is administered by the Bureau of Justice Assistance (BJA). Under this program, BJA processes applications and makes awards to States and local governments to reimburse them for the costs of incarcerating illegal criminal aliens. Verification of the immigration status of inmates claimed is done solely by the Immigration and Naturalization Service (INS), with results of this verification being reported to BJA and the applicants. At the discretion of the Attorney General, certain types of deportable aliens (especially aggravated felons) may be taken into Federal custody pending deportation in lieu of reimbursement.

Awards are based on verified counts made by State and local correctional institutions of illegal aliens convicted of felony offenses and based on average inmate costs. The final awards represent partial reimbursement of total costs claimed for verified illegal criminal alien inmates, to the level allowed by the appropriation for the fiscal year (minus some administrative costs, as provided for in the legislation). In 1996, final SCAAP awards were made on December 5, 1996, following the review and verification of both the alien status of inmates identified by the INS and cost information provided by applicants. Forty-nine States, the District of Columbia, 3 territories, and 94 local jurisdictions received awards varying from \$225.00 (Murry, Oklahoma) to \$252,260,225 (State of California). In 1996, reimbursements totaling approximately \$495 million were provided for over 40,000 inmate equivalent years. This represents a payout to each applicant of approximately 60 cents on every dollar claimed. In 1997, a total of \$500 million is available for SCAAP; \$350 million directly funded under section 20301 of the VCCLEA and another \$150 million available as a set-aside under the Correctional Facilities Grant Program.

PROGRAM CHANGE: The budget request of \$350 million equals the total amount authorized for this program under the VCCLEA in 1998 and represents a \$20 million increase over the 1997 appropriation. This funding request, combined with the \$150 million earmarked under the State Correctional Grants Program, provides a total of \$500 million for SCAAP in 1998, the same as in 1996 and 1997.

RESIDENTIAL SUBSTANCE ABUSE TREATMENT FOR STATE PRISONERS PROGRAM

MISSION: To enhance the capability of States and units of local government to provide residential substance abuse treatment for incarcerated inmates.

GENERAL GOALS: Provide financial and technical assistance, through the Residential Substance Abuse Treatment for State Prisoners Program (RSAT), to assist States and units of local government in developing and implementing residential substance abuse treatment programs within State and local correctional and detention facilities in which inmates are incarcerated for a period of time sufficient to permit substance abuse treatment.

State Prison Drug Treatment Program:	
1997 Appropriation	Amount
1998 Base	\$30,000
1998 Request	30,000
	62,000
	+ 33,000
	Increase/Decrease

BASE PROGRAM DESCRIPTION: This program is authorized by section 32101 of Title II of the VCCLEA and provides formula grants to States, for use by States and local governments to develop and implement residential substance abuse treatment programs within State and local correctional and detention facilities in which inmates are incarcerated for sufficient time to permit substance abuse treatment. States are required to give preference to projects which provide aftercare services, which coordinate the correctional facility treatment program with other human services and rehabilitation programs, such as educational and job training programs, parole supervision programs, halfway house programs, and participation in self-help and peer group programs, that may aid in rehabilitation of individuals in the substance abuse treatment programs. States must also agree to implement or continue to require urinalysis and/or other proven reliable forms of drug and alcohol testing of individuals assigned to residential substance abuse treatment programs in correctional facilities.

Studies and statistics referenced in the 1995 National Drug Control Strategy show that "the fastest and most cost-effective way to reduce the demand for illicit drugs is to treat chronic, hardcore drug users. They consume the most drugs, commit the most crimes, and burden the health care system to the greatest extent. Without treatment, chronic hardcore users continue to use drugs and engage in criminal activity...." Recent research and evaluations show consistent reductions in recidivism rates for offenders completing treatment programs. Successful outcomes are tied to length of time in treatment (at least 6 months) and provision of continued treatment in the community after release. Programs that address the myriad problems associated with the lifestyle of drug use and addiction are the most effective. If the requested resources are used to implement such programs, approximately 15,000 of the offenders can be expected not to be reincarcerated for another crime. Research shows that if these resources are focused on high rate addict-felons, these successful offenders can be expected to commit approximately 375,000 fewer robberies, 637,000 fewer burglaries and engage in approximately 30 million fewer drug transactions per year after release from the program than if they had not been treated and continued their life of crime. In 1996, awards were made to all eligible States, except Wyoming, which did not apply, territories and the District of Columbia. The 1997 applications are due by January 31, 1997, and awards are expected to be made within 30 days.

PROGRAM CHANGE: The 1998 budget request of \$63 million equals the total amount authorized for this program under the VCCLEA and is \$33 million above the 1997 appropriation. It is conservatively estimated that at least 70 percent of the 1.4 million inmates in State prisons and local jails use drugs. Yet, only about 11 percent of prison inmates, and a smaller percentage of jail inmates, participate

in drug treatment programs. Assuming an average cost of \$2,750 for an average stay in the program of nine months (programs are statutorily required to be 6-12 months in length), approximately 22,000 inmates could be treated in 1998.

COURT APPOINTED SPECIAL ADVOCATES

MISSION: To provide for a Court Appointed Special Advocate (CASA) to every victim of child abuse or neglect in the U.S. that needs such an advocate.

GENERAL GOALS:

1. Provide technical assistance, information, and support to Court Appointed Special Advocate (CASA) programs, as well as information and assistance to communities developing new programs, and provide support to existing and developing State organizations on issues such as the development of goals and objectives, State legislation, and State standards to strengthen local programs.
2. Promote and enhance effective, well-managed programs providing volunteer representation of children, by frequently reviewing, updating, and revising National Court Appointed Special Advocate Association Program Standards and Recommended Management Practices; to assure that CASAGAL (Guardian Ad-Litem) programs have available the best, most current information on excellence in CASA programs in order to develop tools for use in assessing program quality; and to maintain a resource library for program reference.

Court Appointed Special Advocates:	
1997 Appropriation	Amount
1998 Base	\$ 6,000
1998 Request	6,000
<i>Increase/Decrease</i>	7,000
	+1,000

BASE PROGRAM DESCRIPTION: The National Court Appointed Special Advocate program is authorized by Section 215 of the Victims of Child Abuse Act of 1992, 42 U.S.C. 13011, and Section 261(a)(3) of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, 42 U.S.C. 5663. The program is administered by the Office of Juvenile Justice and Delinquency Prevention (OJJDP). Beginning in 1996, the CASA program was funded under the Violent Crime Reduction Programs appropriation. This project recognizes the need for technical assistance in program development and public relations, so that CASA programs can effectively complement the services provided to children and their families through the existing juvenile court and social service delivery systems. To advance the

program services/growth objectives of this project, the National Court Appointed Special Advocate Association (NCASAA) provides ongoing direct consultation and referral to CASA programs and other resources. A "1-800" telephone line successfully facilitates technical assistance and personal consultation between program members and national professional staff. NCASAA continues to encourage the development of unified, strong organizations at the State level for the purpose of support for new programs, communication among existing programs, training, development of standards for program quality and consistency, and advocacy with their State legislatures.

Since 1977, the number of CASA programs has increased from 1 to over 640 in 1996. The 1997 award will lead to further growth of the nationwide CASA Program. Training and technical assistance provided by the OJJDP award ensures that additional CASA volunteers will be available to serve more children, families and court systems.

PROGRAM CHANGE: The request of \$7 million represents the total 1998 amount authorized under section 218(a) of the Victims of Child Abuse Act of 1990, as amended by the 1994 Crime Act. It is \$1 million over the 1997 appropriation and allows for modest program expansion.

CHILD ABUSE TRAINING PROGRAMS FOR JUDICIAL PERSONNEL AND PRACTITIONERS

MISSION: To develop, refine and implement model training and technical assistance programs to improve the juvenile and family courts' handling of abuse and neglect cases and the design of model programs to improve State court systems.

GENERAL GOALS: Develop resource guidelines for the juvenile and family courts' handling of abuse and neglect cases and a comprehensive training curriculum designed to improve the judicial system's handling of abuse and neglect cases and to develop a technical assistance package that will allow for the transfer of preferred practice and resource guidelines to other juvenile court jurisdictions to improve the effectiveness of processing child abuse and neglect cases.

Training for Judicial Personnel:	
1997 Appropriation	Amount
1998 Base	\$ 1,000
1998 Request	1,000
<i>Increase/ Decrease</i>	2,000
	+ 1,000

BASE PROGRAM DESCRIPTION: The Judicial Child Abuse Training program is authorized by Section 223(a) of the Victims of Child Abuse Act of 1990, P.L. 101-647, as amended and is administered by the Office of Juvenile Justice and Delinquency Prevention (OJJDP). This program provides for a grant to the National Council of Juvenile and Family Court Judges to develop model technical

assistance and training programs to improve the court system's handling of child abuse and neglect cases. In 1996, this program was appropriated \$750,000 under the Violent Crime Reduction Programs appropriation; in 1997, \$1 million is available. Under this program, the Resource Guidelines: Improving Court Practice in Child Abuse and Neglect Cases, a comprehensive set of elements essential to properly conduct hearings, will be disseminated to the Nation's juvenile and family courts to help them in their efforts to offset a fundamental lack of resources and other institutional barriers to conducting careful and complete hearings and issuing subsequent court determinations. Resource Guidelines address the who, what, why, when, and how of each court proceeding and will describe what each hearing should cover, who should be present, and how much time should be allowed for the hearing. The guidelines include recommendations applicable to all courts, followed by specific standards applicable to urban courts and specific standards applicable to rural courts. The Resource Guidelines also include practical suggestions on how to improve efficiency, streamline court proceedings, and marshal additional resources. Training in these matters will continue to be provided to judges and other professionals involved in decision-making regarding abused and neglected children. Critical training units will be identified and core curricula will be devised for application to interdisciplinary assistance to the 9 model courts will be provided to help with court administrative reform efforts. Included in this technology transfer effort will be means to measure a court's performance in improving practice.

PROGRAM CHANGE: The request for \$2 million represents the total 1998 amount authorized for the program in 1998 under section 224 (a) of the Victims of Child Abuse Act of 1990, as amended by the 1994 Crime Act. The \$1 million increase over the 1997 appropriation will allow for modest program expansion.

GRANTS FOR CLOSED-CIRCUIT TELEVISION OF TESTIMONY

MISSION: To reduce the trauma related to testifying at a hearing and/or trial by children who are victims of abuse.

GENERAL GOALS:

1. Encourage States to pass laws which encourage the use of closed-circuit televising and video taping of testimony of children in criminal proceedings for the violation of laws relating to child abuse.
2. Assist courts in establishing procedures and programs for televised testimony in cases where the judge determines that a child witness will be traumatized by the presence of the defendant.

Televised Testimony:	
1997 Appropriation	Amount
1998 Base	\$ 550
1998 Request	550
<i>Increase/Decrease</i>	<u>1,000</u>
	<i>+ 450</i>

BASE PROGRAM DESCRIPTION: The Omnibus Crime Control and Safe Streets Act of 1968, as amended by the Crime Control Act of 1990, created Part N--Grants for Closed-Circuit Televising of Testimony of Children Who are Victims of Abuse. The Director of the Bureau of Justice Assistance (BJA) is authorized to make grants to provide equipment and personnel training for the closed circuit televising and video taping of the testimony of children in criminal proceedings for the violation of laws relating to the abuse of children.

This program was originally established as a formula grant program, with each participating State receiving a base award of \$50,000; the remaining balance was distributed to participating States on the basis of population. Funding was appropriated for the first and only time in 1992. In 1993, awards totaling the \$1 million 1992 appropriation were made to 26 States. This funding was insufficient and failed to cover the base award amount for participating States. Therefore, each participating State received a smaller award of \$38,462 as seed money to encourage the use of closed-circuit televised testimony from child abuse victims in State and local courts. Awards were made only to States which had laws permitting the use of closed-circuit or videotaped testimony from child witnesses in criminal child abuse proceedings. To date, results have been limited in many of the States which received awards because of the very small amounts of funds available to each State under this Formula Grant Program. Some States developed training programs and worked with local prosecutors or court personnel to develop training initiatives. Additionally, States used this funding primarily to purchase equipment and to develop and provide training to prosecutors and court personnel. For example, Wisconsin reported that this initiative resulted in the development of 9 multi-disciplinary investigative teams and the training of over 50 individuals from 14 agencies in the techniques for developing and maintaining effective teams and the effective use of closed circuit/videotape technology in the jurisdictions to implement or expand their program.

Section 40156 of the 1994 Crime Act modified this program, converting it from a formula grant program to a discretionary grant program.

PROGRAM CHANGE: In 1998, the total authorized amount of \$1 million is requested for discretionary grants for televised testimony as authorized by section 1001(a)(7) of the 1968 Act, as amended. The \$450,000 increase over the 1997 appropriation will enhance and expand existing programs and/or to fund new projects. The effectiveness of these projects will be assessed, successes documented, and findings shared with other jurisdictions.

VIOLENT YOUTH COURT PROGRAM

MISSION: To develop initiatives for use by the courts and court-related entities, such as probation and parole offices and victim/witness centers, to enhance and expedite the handling of youth violence cases.

GENERAL GOAL: Provide financial and technical assistance to the courts and court-related entities to develop and implement programs that focus on violent youth offenders within the court system. This will include the development of juvenile drug and/or gun courts.

Violent Youth Court Program:	
1997 Appropriation	Amount
1998 Base	\$ 0
1998 Request	0
<i>Increase/ Decrease</i>	\$0,000
	+50,000

BASE PROGRAM DESCRIPTION: Section 210602 of the VCCLCA authorizes this program, which will provide funding for specialized, court based activities focusing on how to more effectively address serious and violent youth offenders as they move through the justice system. New innovations, such as juvenile drug and juvenile gun courts, will be included in this program.

PROGRAM CHANGE: The 1998 request for this new program is \$50 million.

ASSISTANCE FOR DELINQUENT AND AT-RISK YOUTH

MISSION: To provide funds for the development and operation of residential services (boarding schools) for at-risk youth.

GENERAL GOALS: Provide funds to public and private non-profit organizations to support the development and operation of projects that provide residential services to youth between the ages of 11 and 19 who have dropped out of school, had contact with the juvenile justice system, or are at risk for doing either or both.

Assistance for Delinquent and At-risk Youth	
1997 Appropriation	Amount
1998 Base	\$ 0
1998 Request	8,000
<i>Increase/ Decrease</i>	+8,000

BASE PROGRAM DESCRIPTION: This program, authorized by section 30701 of the VCCEA, provides funding for public and private non-profit agencies providing residential services to at-risk youth. To qualify for funding, residential programs must be designed to improve the academic performance, vocational skills, self-esteem and responsible decision making abilities of the youth they serve.

In addition, applicants must explain how their programs will meet applicable State and local safety requirements for facilities and provide academic instruction in accordance with State, Indian tribal government, or local educational standards as well as explain specific measurable outcomes for the youth to be served and an analysis of how the program will prevent delinquency.

PROGRAM CHANGE: The 1998 request for \$8 million will allow implementation of this program, which will focus on prevention of future criminal activity by juveniles.

MISSING ALZHEIMER'S DISEASE PATIENT ALERT PROGRAM

MISSION: To establish a national Missing Alzheimer's Disease Patient Alert Program to protect and locate missing patients with Alzheimer's disease and related dementias.

GENERAL GOALS: Award a grant to a national voluntary organization that has a direct link to patients, and families of patients, with Alzheimer's disease and related dementia, to assist in paying for the costs of planning, designing, establishing and operating a national Missing Alzheimer's Disease patient Alert Program.

Missing Alzheimer Patients:	Amount
1997 Appropriation	\$ 900
1998 Base	900
1998 Request	<u>900</u>
<i>Increase/ Decrease</i>	<i>0</i>

BASE PROGRAM DESCRIPTION: This program, authorized by section 240001 of the VCCEA, provides grants to address materials development, outreach, and training of local law enforcement, public safety, and emergency health personnel in identifying and handling lost Alzheimer's patients.

As of December 1996, this program had 24,558 registrants. Of those individuals registered, who were reported missing, approximately 96.7% were recovered. The SAFE RETURN Hotline functions every day of the year, 24 hours a day. During one quarter in 1996, AT&T reported that the Hotline received a total of 2,028 calls (an average of 26 calls a day).

PROGRAM CHANGE: The 1998 request for \$900,000 equals the 1997 appropriation.

DNA IDENTIFICATION - STATE GRANTS

MISSION: To improve the quality and availability of DNA Analysis for law enforcement identification purposes.

GENERAL GOALS:

1. Develop or establish forensic DNA testing capabilities in State and local forensic laboratories which do not currently conduct DNA testing.
2. Improve or expand forensic DNA testing in State and local forensic laboratories already conducting DNA testing.
3. Insure that DNA testing meets national standards for DNA quality assurance and proficiency testing.
4. Facilitate implementation of State laws requiring establishment of State databases of DNA records of convicted offenders (as defined by State law).
5. Foster cooperation and mutual assistance among forensic DNA laboratories within and between States that are seeking to match and exchange DNA identification records for law enforcement purposes via the FBI's combined DNA Index System (CODIS). The CODIS database is designed to allow quick searches at the State, region, and national levels. Establishment of State databases are not only complementary, but essential to fully implement CODIS.
6. Provide the greatest overall improvement to the nation's forensic DNA testing capabilities recognizing current and projected requirements for DNA testing, and current technology and foreseeable trends.

DNA Identification Grants:	Amount
1997 Appropriation	\$ 3,000
1998 Base	3,000
1998 Request	15,000
<i>Increase/ Decrease</i>	<i>+ 12,000</i>

BASE PROGRAM DESCRIPTION: The Forensic DNA Laboratory Program is authorized by section 210301 of the VCCLEA. The Attorney General assigned responsibility for carrying out the DNA Identification Grants requirements of the Act to the National Institute of Justice (NIJ). The purpose of this program is to increase, to the greatest extent possible, both the capabilities and capacity of State and local forensic laboratories in the United States to conduct state-of-the-art-DNA testing to support investigation and prosecution of violent crime.

This program allows access by State and local law enforcement agencies to advanced DNA testing technologies that are both accurate and economical in identifying and developing strong cases against suspects. In addition, these funds will help to develop and establish forensic DNA testing capabilities in States and local forensic labs that currently do not conduct DNA testing. Together, these initiatives serve the Federal, State and local criminal justice systems by providing state-of-the-art technologies to combat crime.

In 1996, NIJ was appropriated \$1 million for this program. The FBI also made \$8 million available to NIJ for this purpose. In consultation with the FBI/NIJ DNA Working Group, NIJ issued a \$9 million program solicitation. Of the 45 applications received, NIJ awarded a total of 37 grants, including a grant to address the development of a blind test protocol for DNA laboratories.

Although NIJ has \$3 million available for this program in 1997, FBI funds are not available. The 1997 DNA Laboratory Program solicitation was issued in September 1996 and 62 applications were received by the December 20 deadline. As a result of NIJ's reduced DNA program funding, available resources can only provide awards to one-third of the laboratories and award amounts are estimated to represent less than 10% of the amounts requested.

PROGRAM CHANGE: The request for \$15 million is \$12 million above the 1997 appropriation. These additional funds are needed to provide a useful level of funding to States to achieve comparable, state-of-the-art DNA capabilities that not only enhance their immediate law enforcement efforts, but allow them to use the FBI's National CODIS, when it is on-line.

TUBERCULOSIS TREATMENT IN CORRECTIONAL INSTITUTIONS

MISSION: To assist in establishing and operating programs for the prevention, diagnosis, treatment and follow-up care of tuberculosis among inmates of correctional institutions.

GENERAL GOALS: Make grants to State, Indian tribal and local correction authorities and public health authorities, for up to 50 percent of the total cost, to assist in establishing and operating programs for the prevention, diagnosis, treatment and follow-up care of tuberculosis among inmates of correctional institutions.

TB Treatment in Correctional Facilities:

	Amount
1997 Appropriation	\$ 0
1998 Base	0
1998 Request	1,000
<i>Increase/Decrease</i>	<i>+1,000</i>

BASE PROGRAM DESCRIPTION: This program, authorized by Section 32201 of the VCCLCA, authorizes the Attorney General to make grants to State, Indian tribal and local correction authorities and public health authorities, for up to 50 percent of the total cost, to assist in establishing and operating programs for the prevention, diagnosis, treatment and follow-up care of tuberculosis among inmates of correctional institutions.

In 1996, \$200,000 was made available for this program. The Corrections Program Office and BJA are currently working with health care foundations to leverage additional funds to award planning grants to State and local corrections and public health agencies.

PROGRAM CHANGE: The 1998 request of \$1 million represents the total amount authorized for this program under section 32201 (3) of the VCCLCA.

LAW ENFORCEMENT FAMILY SUPPORT PROGRAM

MISSION: To assist federal, State, and local law enforcement agencies in developing and implementing policies and programs to reduce stress and provide appropriate support services for law enforcement officers and their families through research, training, technical assistance, and financial support.

GENERAL GOALS:

1. Establish guidelines and oversee the implementation of family-friendly policies within law enforcement-related offices and divisions of the Department of Justice.
2. Study the effects of stress on law enforcement personnel and family well-being and disseminate the findings of such studies to federal, State, and local law enforcement agencies, related organizations, and other interested parties.
3. Identify and evaluate model programs that provide support services to law enforcement personnel and families.

4. Provide technical assistance and training programs related to stress reduction and family support to State and local law enforcement agencies.
5. Collect and disseminate information regarding family support, stress reduction, and psychological services to Federal, State and local law enforcement agencies, law enforcement organizations, and other interested entities.
6. Determine issues to be researched by the Department of Justice.
7. Administer the authorized grant program to support provision of one or more of the following services: counseling for law enforcement family members, child care on a 24-hour basis, marital and adolescent support groups, stress reduction programs, and stress education for law enforcement recruits and their families.

Law Enforcement Family Support	Amount
1997 Appropriation	\$ 1,000
1998 Base	1,000
1998 Request	2,205
<i>Increase/ Decrease</i>	<i>+ 1,205</i>

BASE PROGRAM DESCRIPTION: Section 210210 of the VCCEA authorizes the Law Enforcement Family Support Program and directs the Attorney General to (1) establish and implement family friendly policies within law enforcement related offices of the Department of Justice and (2) support research, program development, and evaluation; training, technical assistance, and support programs; and information dissemination concerning family support, stress reduction, and psychological services to Federal, State, and local law enforcement agencies and related organizations. In 1995, responsibility for developing a guide for research and program development was assigned by the Associate Attorney General to NJ. In response, using its own funds, NJ commissioned a review and analysis of State and local assistance, stress reduction and support services available to law enforcement officers and their families. With respect to DOJ policies, NJ contacted and met with representatives of Office of Information Policy and Justice Management Division; those two Offices are coordinating the Department policy planning.

During 1996 the commissioned report was completed for publication. When 1996 appropriations became available, a solicitation was developed and issued, calling for proposals to be submitted by August 6, 1996, so that grants could be awarded by September 30, 1996.

The Crime Act authorized \$2.5 million in 1996 for a State and local grant program with a 10% set-aside for research. The 1996 appropriation provided \$1 million; of this sum, \$900,000 supported the State and local grant program and \$100,000 was allocated for research. The law specifies that grants may be made to State and local law enforcement agencies or to organizations representing State or local law enforcement personnel; given the funding level, the focus is on demonstration and training/technical assistance efforts in order to reach the greatest number of agencies. The legislation limits awards to law enforcement agencies to \$100,000/year and awards to organizations representing law enforcement personnel to \$250,000/year. The 1996 program priorities included:

- Training and technical assistance workshops to help agencies with established programs for officers expand services to law enforcement family members.
- Coordinating training workshops supported under this program with established law enforcement training academies to facilitate institutionalization of training in this topic area.
- Selected demonstrations to expand existing programs and support one or more of the services listed in Section 2303 of the Act. In 1996, proposals for research were sought in a special section of the NJ Police Research and Evaluation Solicitation. Eight demonstration programs and one evaluation project were supported with available funds.

In 1997, \$1 million, with a 10% set aside for research, is available. The program priority will build on the 1996 demonstration of different service delivery models -- e.g., in-house programs, regional service and referral networks, contracted services, etc. Efforts will continue to link these program innovators with NJ's Locally Initiated Research Partnerships program. Program funds will support continued training and technical assistance, with an emphasis on training trainers and program managers to extend the impact of the funds. Training content will focus on the law enforcement family and the development and operation of service networks for smaller agencies. A dual research focus, to be supported by \$100,000 is planned: 1) evaluation for stress reduction programs, and 2) the initiation of rigorous research on the nature and extent of spousal or family violence in law enforcement families, with the long range goal of developing appropriate interventions. A more informed understanding of the issue of violence within law enforcement families is essential for the health of both our law enforcement families and the broader community.

PROGRAM CHANGE: The 1998 request for \$2.2 million is \$1.2 above the 1997 appropriation and provides funds for continuing and expanding the 1997 program.

MOTOR VEHICLE THEFT PREVENTION

MISSION: To reduce auto thefts committed primarily by professional auto thieves.

GENERAL GOALS: Create a cooperative partnership between car owners and State and local law enforcement to reduce car theft committed primarily by professional auto thieves and to facilitate the recovery of stolen vehicles.

Motor Vehicle Theft Prevention:	
1997 Appropriation	Amount
1998 Base	\$ 750
1998 Request	750
	1,000
	+ 250
	<i>Increase/Decrease</i>

BASE PROGRAM DESCRIPTION: Title XXII, Motor Vehicle Theft Prevention, section 220002 of the VCCLEA (Public Law 103-322) requires the Attorney General to develop a national, voluntary motor vehicle theft prevention program whereby participating vehicle owners would affix a highly visible decal or customized license plate to their vehicle(s) which authorize State and local law enforcement officers to stop the vehicles without probable cause and verify the identity of the driver. Under the program, police may stop or check a vehicle that is being operated under abnormal circumstances on behalf of the owner as indicated by the decal. Examples for which police might stop a vehicle include, but are not limited to: driving late at night or driving or transporting a vehicle across an international land border or into a port. The Bureau of Justice Assistance (BJA) administers this program.

During 1996, BJA made awards to the States of Arizona, New Mexico, and Texas under its new Motor Vehicle Theft Prevention Program "Watch Your Car." Arizona and New Mexico are initiating new programs while Texas is converting its existing Help End Auto Theft (HEAT) program to "Watch Your Car." The Federal Register's publication of the final rule in August 1996, prompted numerous national newswriters and publications to publicize this Program which, in turn, created numerous telephone inquiries from State and local police departments, automobile insurance underwriters, and automobile dealers nationwide all of whom expressed significant interest in participating in this Program.

The 1997 request for proposals for this competitive discretionary grant program will be published and available by February 1997. With this Program's current appropriation of \$750,000, BJA will tentatively make 4 new start-up grants and 3 conversion grants of existing statewide programs. In addition, BJA will host a national motor vehicle theft prevention conference during Spring 1997.

PROGRAM CHANGE: The 1998 request of \$1 million represents an increase of \$250,000 over the 1997 appropriations. This funding increase will provide funds for the continuation and/or expansion of current program activities.

TELEMARKETING FRAUD AGAINST SENIOR CITIZENS

MISSION: To reduce the incidence of scams perpetrated against senior citizens

GENERAL GOALS: Make grants to States, to State and local law enforcement agencies and senior citizen advocacy organizations aimed at decreasing the incidence of fraud perpetrated against senior citizens

Enhanced Penalties for Telemarketing Fraud:	
1997 Appropriation	Amount
1998 Base	\$ 2,000
1998 Request	2,000
<i>Increase/ Decrease</i>	<i>0</i>

BASE PROGRAM DESCRIPTION: This program, authorized by Section 250005 of the VCCLEA, provides grant funding for State and local law enforcement agencies and senior citizen advocacy organizations for public awareness and prevention initiatives, such as seminars and training targeted at fraud against senior citizens.

In 1997, the Bureau of Justice Assistance (BJA) anticipates that the National White Collar Crime Center will address the following major challenges to the investigative efforts of State and local agencies in addressing telemarketing fraud:

1. Establishment of a working group to begin the task of assessing current and future problems, identifying and sharing potential solutions, and filling the voids in support services to State and local agencies and task forces
2. Development of strategies for improving the complaint management process, including methods of improving information sharing and data collection among all State agencies dealing with telemarketing fraud
3. Examination and recommendation of solutions to the problems exacerbated by the use of the Internet to promote telemarketing scams, including solutions dealing with Internet technology and jurisdictional issues of the "virtual marketplace."

PROGRAM CHANGE: The request of \$2 million represents the total amount authorized for this program in 1998 and is the same as the 1997 appropriation.

**PRESIDENTIAL SUMMIT ON VIOLENCE
AND NATIONAL COMMISSION ON CRIME PREVENTION AND CONTROL**

MISSION: To develop a proposal for preventing and controlling violence and crime in the United States and to estimate the costs for implementing such a proposal.

GENERAL GOALS: Convene the Presidential Summit and to establish the Commission with the goal of providing a proposal for preventing and controlling violence and crime in the United States and to estimate the costs for implementing such a proposal.

Presidential Summit:	Amount
1997 Appropriation	\$ 0
1998 Base	0
1998 Request	-500
Increase/ Decrease	+500

BASE PROGRAM DESCRIPTION: These two initiatives are authorized in 1996 by Sections 270001 through 270009 of the VCCLEA. The Summit will be convened to create an agenda for the Commission. Once established, the Commission will develop a proposal for preventing and controlling violence and crime in the U.S. and estimate the costs for implementing such a proposal. These initiatives are organized and administered by the Office of Policy Development.

PROGRAM CHANGE: Funds were not provided in 1996 or 1997, therefore 1998 funds are requested.

					80	80	80	80	80
					99	100	100	99	99
					50	40	45	40	40

A. Definitions of Terms or Explanations for Indicators:
<p>F5 Beginning in 1994, States in compliance with HIV requirements receive supplemental awards (funded with dollars not distributed to States who did not comply with HIV requirements). No additional application is necessary.</p> <p>F6 Includes projects co-sponsored by U.S. Attorney.</p> <p>F13,14 CNMI and American Samoa are exempt from the INS requirement.</p> <p>F20 Multi jurisdictional task forces should be generating fewer arrests over time due to the re-focusing of these programs on higher-level offenders, as well as the specialized injury care of many of the newer efforts.</p> <p>F23 The purpose of the Criminal Justice Records Improvement (CJRI) Program is to move States to the goals listed, the underlying premise being that no State's records could meet the tests of currency, accuracy, and completeness at the 95% rate until after 1998.</p>
B. Factors Affecting 1996 Program Performance.
<p>F In 1996, this program received funds from two sources. The actual amount appropriated reflects total funding available: \$328M appropriated under the State and Local Law Enforcement Assistance account, plus \$141M appropriated under the Violent Crime Reduction Programs account.</p> <p>F1 Rescheduling of two regional meetings resulted in smaller numbers than anticipated.</p> <p>F2, 4, 5 Larger number of applications and awards was due to budget impasse; partial awards were made to some states prior to final appropriation.</p> <p>F19, 20, 22 These outcome indicators are not aggregated at the national level; numbers are estimates based on reports submitted by state grantee agencies.</p>
C. Factors Affecting Selection of 1997 and 1998 Targets.
<p>F19 In 1997 this program received funds from two sources. The target amount appropriated reflects total funding available: \$301M appropriated under the State and Local Law Enforcement Assistance account, plus \$199M appropriated under the Violent Crime Reduction Programs account.</p> <p>F20 In 1998, it is proposed that the entire \$505M request be provided for under the Violent Crime Reduction Program account.</p> <p>F21 Increasing measures by States utilizing CJRI set-aside and other State and Federal funds for criminal history records improvement should rapidly increase the number of States in compliance with both CJRI goals and INS phase II compliance. As more States project realistic dates for meeting CJRI goals expressed in the legislation, BJA will initiate more detailed performance indicators.</p> <p>F22 Legal and policy interpretations concerning program requirements and changes in National priorities may lead to expansion or contraction of the end outcome indicators used. In addition, future factors should emerge.</p>

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Edward Byrne Memorial State and Local Law Enforcement Assistance Discretionary Grant Program									
MISSION: To make awards to public and private agencies and organizations for national scope and multi-state programs, demonstration programs, training, and technical assistance to state, local, and federal jurisdictions in improving the functioning of the criminal justice system with special emphasis on nationwide and multi-level drug control strategies.									
PERFORMANCE INDICATOR INFORMATION				PERFORMANCE TARGETS & ACTUAL RESULTS

	15. Average number of staff hours per grant devoted to monitoring	30	50	50	50	60	60	60	60
A. Definitions of Terms or Explanations for Indicators: N/A									
B. Factors Affecting 1996 Program Performance:									
<ul style="list-style-type: none"> Congressional earmarks reduced the number of competitive programs to last year reviews were required. End outcome for the Discretionary Grant Program, such as program models of training curricula, may take several years to develop. Therefore, the number per year will vary. The number of practitioners will vary from year to year depending on the funds allocated for training and the type of training conducted. 									

C. Factors Affecting Selection of 1997 and 1998 Targets.	
o	The number of applications received and the number of awards are expected to increase in 1997 and 1998 because of a new BJA policy which will provide a decreasing Federal share for continuation awards.
o	The average number of staff hours per grant award is expected to decrease and the average number of staff hours devoted to monitoring is expected to increase as BJA automates the grant award process, enabling staff resources to be devoted to program monitoring and technical assistance.
o	End outcomes for the Discretionary Grant Program such as program models or training curricula may take several years to develop. Therefore, the number per year will vary.
o	The number of practitioners trained will vary from year to year depending on the funds allocated from training and the type of training conducted.

3

A. Definitions of Terms or Explanations for Indicators: N/A
B. Factors Affecting 1996 Program Performance.
<p>Because this program was new in 1996. To date, no real program experience is yet available.</p> <ul style="list-style-type: none"> * End outcomes reflect local decision making process which is still underway ** Actual figures will be provided by grantees semi-annually, starting in 1997. *** This information is not yet available. Because 1996 appropriations were not available until April, grants were not awarded until 09/30/96, and no monitoring activities took place.
C. Factors Affecting Selection of 1997 and 1998 Targets
While no funds were requested by the Department, Congress provided \$23 million in 1997. No continuation funding is requested in 1998.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Criminal Records Upgrade Program						
MISSION: To enhance the quality, completeness, and accessibility of the nation's criminal history record system						
PERFORMANCE INDICATOR INFORMATION		PERFORMANCE TARGETS AND RESULTS				
Type of Indicator	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target
Input	1. Appropriations	\$100M	\$25M	\$25M	\$50M	\$45M
Output/Activity	2. Intergovernmental coordination conferences to provide training and Federal/state interface regarding development of the national criminal history record system	1	2	2	2	2
	3. National status reviews completed and results published	1	1	1	2	2
	4. Technical assistance provided: - seminars/workshops - on-site visits	1	2	2	2	7
	5. Surveys conducted to identify the procedures states use in implementing the Brady Act	3	8	10	10	10
	6. Awards made to assist states	N/A	40	50	50	50
	7. Monitoring activities conducted	50	30	49	50	50
	8. Reports on the impact of prelate background check implementation	N/A	30	30	40	40
	9. Number of states in Interstate Identification Index (III)	N/A	1	1	1	1
End Outcome	10. % of states using automated fingerprint technology	30	35	31	40	44
	11. % of recent state records which are automated	N/A	60%	60%	80%	90%
	12. Number of States that have initiated audit programs	75%	80%	80%	85%	88%
	13. % of records available through the national check system	N/A	N/A	26	32	36
		N/A	N/A	33%	35%	38%
A. Definitions of Terms or Explanations for Indicators: The Interstate Identification Index (III) allows states access to other states' criminal history record system.						
B. Factors Affecting 1996 Program Performance: National Criminal History Improvement Program: In 1995, 44 states were awarded NCHIP grants under this program. As of March 1996, all 50 states and the District of Columbia have received NCHIP grants. During the fiscal year, based on an examination of technical assistance needs, it was determined that technical assistance in the form of on-site visits was more effective than conducting a seminar or workshop in providing direct support to address the specific issues raised by particular states. By 1996, 48 states and the District of Columbia received second year NCHIP funding.						
C. Factors Affecting Selection of 1997 and 1998 Targets: Factors affecting program performance include: (1) amount of Federal funds appropriated; (2) amount of state funds appropriated for these activities; (3) status of available technology; (4) FBI program development; and (5) legislative changes.						

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Violent Offender Incarceration and Truth-In-Sentencing Incentive Grants						
MISSION: To enhance the capability of states to confine violent offenders in secure facilities and ensure that violent offenders remain incarcerated for substantial periods of time through the implementation of truth-in-sentencing laws.						
PERFORMANCE INDICATOR INFORMATION		PERFORMANCE TARGETS AND ACTUAL RESULTS

End Outcomes	11. Average percent of persons convicted of part 1 violent offenses in State courts who were sentenced to prison 12. Number of states that are implementing truth-in-sentencing laws 13. Average percent of total sentences served by part 1 violent offenders 14. Proportion of technical assistance and training recipients who reported in follow up surveys that they implemented changes in policy or practices as a result of the assistance.	N/A N/A N/A N/A	25% 24 55% N/A	*** 24 *** N/A	28% 30 58% 30%	32% 35 63% 35%
Productivity/ Efficiency	15. Workyears required to implement grant program	9 FTE	18.5 FTE	17.5 FTE	17.5 FTE	17.5FTE
A. Definitions of Terms or Explanations for Indicators						
Part 1 Violent Crime: murder and non-negligent manslaughter, forcible rape, robbery, and aggravated assault as reported to the FBI for purposes of the "Uniform Crime Reports."						

<p>B. Factors Affecting 1996 Program Performance:</p> <ul style="list-style-type: none"> * In 1995, funds for this program were discretionary, and limited to boot camp planning, renovation and construction. In 1996, approximately 200 beds were completed. Because a boot camp is a correctional facility, many of the grantees had problems locating a site that was acceptable to the surrounding community. Architectural planning and design, environmental work to comply with National Environmental Protection Act Requirements, and other preconstruction work must be completed before a construction or renovation project can be implemented. Several projects completed these requirements in 1996 and are ready to begin construction in 1997. Most of the boot camp beds are expected to open in 1997. ** Because the 1996 appropriation was not enacted until April 1996, only tier 1 Violent Offender Incarceration grants were awarded in 1996. Awards for tiers 2 and 3 were made during the first quarter of fiscal year 1997. *** Updated data for end outcome measures will be provided as soon as the information becomes available from the Bureau of Justice Statistics. 	<p>C. Factors Affecting Selection of 1997 and 1998 Targets:</p> <ul style="list-style-type: none"> **** Because of the time needed to construct new prison and jail beds, few new beds are expected to be brought on line in 1997. Because many States do not receive sufficient funding to complete a construction project in any one year, States must complete construction projects on an award-by award basis. <p>There is a significant delay in obtaining data for the outcome measures, since the data collection analysis is a time consuming and costly effort. The estimate of the percent of persons convicted of part 1 violent offenses, and who are sentenced to prison, is based on 1992 data provided by the Bureau of Statistics. The estimated increase in the proportion of sentence served cannot be measured until offenders sentenced under new truth-in-sentencing laws have served their sentence and are released. Because this program deals with violent offenders, it may be many years before the results of program implementation can be fully measured.</p> <p>In 1997, the Corrections Program Office will begin to conduct follow up surveys of recipients of site-specific technical assistance as well as participants in the technical assistance conferences and workshops and training. 4-6 months after the event, to assess the number that have changed policies and practices. Because this has not been done in the past, the estimate may need to be adjusted as this procedure is implemented.</p> <p>The performance indicators and target levels are likely to change as the program develops history.</p>
--	---

PERFORMANCE MEASUREMENT TABLE, PRESENTED BY DECISION UNIT

DECISION UNIT: Drug Courts Program									
MISSION To provide financial and technical assistance for state, state courts, units of local government, local courts, and Indian tribal governments to develop and implement treatment drug courts that employ the coercive power of courts to subject non-violent offenders to an integrated mix of treatment, substance abuse testing, incentives, and sanctions to break the cycle of substance abuse and crime.									
PERFORMANCE INDICATOR INFORMATION

A. Definitions of Terms or Explanations for Indicators: N/A									

B. Factors Affecting 1996 Program Performance.	
•	In 1996, this program received \$15M from the Local Law Enforcement Block Grant Program under reprogramming rules.
••	Due to the delay in receiving 1996 funding and fiscal time constraints, DCPD used the surplus of eligible 1995 applications (those which did not receive 1995 funding) and awarded \$3.5 million in grants. The balance of the 1996 funds will be awarded in 1997.
•••	Information exchange is ongoing with Health and Human Services, State Justice Institute, United States Administrative Office of the Courts, the General Accounting Office, the Office of National Drug Control Policy.
••••	The communities where drug courts will be established, as a result of the 1995 grant program, include the five jurisdictions that received implementation grants for non-violent offenders. Most drug court graduations do not occur until 12-18 months after entry into the drug court program. Numbers of offenders in the program depend upon program criteria and treatment capacity. The drug court appropriation was reduced by rescission action and, therefore, the number of new drug courts that could be funded was reduced.
C. Factors Affecting Selection of 1997 and 1998 Targets.	
The amount of money actually appropriated will affect the targets. Targets for 1998 are based on a funding request of \$15M.	

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: VAWA: Law Enforcement and Prosecution Grants									
MISSION: To develop and strengthen effective coordinated and integrated law enforcement and prosecution strategies and related victim services in cases involving violent crimes against women.									
Type of Indicator	PERFORMANCE INDICATOR INFORMATION			PERFORMANCE TARGETS AND ACTUAL RESULTS					
	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target			
Input	1. Total formula grants to eligible States 2. Total discretionary grants to Indian tribes a/	\$23M \$1M	\$124.8M \$5.2M	\$124.8M \$5.2M	\$139.2M \$5.8M	\$155.6M \$6.4M

Intermediate Outcome	7. Grantee level of satisfaction with VAWOO: Program Content..... Program Coordination..... Application Ltr..... Publications..... Conferences..... Training & Technical Assistance..... 8. # of States that fully achieved goals of implementation phase 9. # of services available to previously underserved Indian women ^{b/} 10. # of Indian grantees that developed or revised tribal codes relating to violence against women 11. # of Indian tribes that developed a computerized database to track domestic violence calls and violations of protective orders	N/A N/A N/A N/A N/A N/A 56 14 14 13	N/A N/A N/A N/A N/A N/A 56 45 25 16	N/A N/A N/A N/A N/A N/A 56 45 29 17	65% 65% 65% 65% 65% 65% 56 45 25 16	75% 75% 75% 75% 75% 75% 56 70 35 30			
End Outcome	12. Number of States that report a decrease in violent crime against women as a result of this program. 13. Number of States that launched coordinated criminal justice approaches to address violent crimes against women 14. Number of Indian tribal governments that launched coordinated tribal justice approaches to address violent crimes against women	N/A 56 14	N/A 56 65	N/A 56 52	0 56 65	0 56 65			
Productivity/Efficiency	15. Workyears required to implement grant program 16. Annual cost per working year	9 FTE N/A	11 FTE N/A	11 FTE 10.8M	11 FTE \$0.0M	12 FTE \$0.0M			

A. Definitions of Terms or Explanations for Indicators:	
a/	Indian discretionary grants equal 4% of the total funding available for formula grants.
b/	In the absence of reliable statistics on services within the Indian community available, the universe of tribal government grants is being used as the baseline.
c/	In the long term, this cost outcome figure is expected to decrease. However, as women are encouraged to report domestic violence, it is anticipated interim figures will increase before dropping.
B. Factors Affecting 1996 Program Performance:	
c/	The identification of an appropriate site for the third workshop took longer than anticipated. The remaining technical assistance workshop will be held in April 1997.
d/	The timing of awards to Indian tribes precluded the delivery of the planned 1996 technical assistance workshops. As a result, eight regional workshops were offered during the first quarter of fiscal year 1997.
e/	The 1996 national conference was cancelled after it was determined that smaller regional training programs were more beneficial than a single national conference. The only conference actually held in 1996 was the original conference that was scheduled to be held during 1995, but was delayed until November 1996 due to the timing of the 1995 awards.
C. Factors Affecting Selection of 1997 and 1998 Targets:	
The targets provided are based on the program design implemented in 1995 and 1996. However, this program may change as actual 1995 and 1996 program results are received. Targets for succeeding years may also change as this program evolves.	

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: VAWA: Grants to Encourage Arrest Policies									
MISSION: To strengthen the criminal justice system's response to domestic violence and ensure that domestic violence is treated as a serious violation of criminal law.									
PERFORMANCE INDICATOR INFORMATION									
Type of Indicator	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target			
Input	1. Appropriations	N/A	\$284	\$284	\$334	\$394			
Output/Activity	2. Number of dissemination site tech. assist. workshops for grantees	N/A	8	0	8	12			
	3. Number of national tech. assist. conferences for grantees	N/A	1	0	1	1

End Outcome	4. Number of probation and parole officers that participate in training.	N/A	320	0	320	480			
	5. Number of jurisdictions that implement new policies and procedures to supervise and manage cases involving released sex offenders as a result of the training.	N/A	100	0	100	200			
Productivity/Efficiency	6. Work years required to implement grant program	N/A	.75 FTE	.75 FTE	.75 FTE	.75 FTE			
	7. Average grant processing time	N/A	N/A	N/A	30 days	30 days			
A. Definitions of Terms or Explanations for Indicators: NA									
B. Factors Affecting 1996 Program Performance • No grants were awarded in 1996. However, OJP convened a summit of experts to develop and discuss the content of this training program by identifying key concerns of the field and issues to be addressed. A grant to support the training program will be awarded in 1997.									
C. Factors Affecting Selection of 1997 and 1998 Targets. To date, only preliminary work on the design of this training program is complete. Once this program is fully operational, target levels of performance in succeeding years are likely to change.									

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: National Stalker and Domestic Violence Reduction Programs: State Stalking and Domestic Violence Data						
MISSION: To develop and improve the processes for identifying, classifying, collecting, and entering data regarding stalking and domestic violence into local, state, and national crime information databases.						
PERFORMANCE INDICATOR INFORMATION			PERFORMANCE TARGETS AND ACTUAL RESULTS			
Type of Indicator	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target
Input	1. Appropriation	N/A	\$1.5M	\$1.5M	\$1.75M	\$2.75M
Output/Activity	Develop definitions and classifications for collecting and maintaining data on stalking and domestic violence. 2. Award grants to develop definitions and pilot test data collection -- applies to 1996 only 3. Prepare preliminary report on recommendations and estimate for outside review Support state efforts to collect and exchange data on stalking and domestic violence: 4. Number of awards to states 5. Number of states provided with technical assistance to assist in providing stalking and domestic violence data	N/A N/A N/A N/A	1 N/A N/A N/A	1 N/A N/A N/A	N/A Results Achieved 8 7	N/A N/A 15 10
End Outcome	6. New definitions promulgated 7. Number of States initiating or enhancing data collection efforts on domestic violence and stalking information 8. Number of States initiating or enhancing the collection of protection order files	N/A N/A N/A	N/A N/A N/A	N/A N/A N/A	Results Achieved 50 12	N/A 50 18
A. Definitions of Terms or Explanations for Indicators: N/A						
B. Factors Affecting 1996 Program Performance:						
A survey will be conducted during the first quarter of 1997 to identify the number of states that collected data in 1996. Survey findings will be available by the second quarter. This chart will be updated at that time to reflect actual program experience.						
C. Factors Affecting Selection of 1997 and 1998 Targets						
(1) Amount of Federal funds appropriated; (2) Amount of state funds appropriated for this activity; (3) Status of available technology; (4) FBI program development; and (5) Legislative changes.						

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: State Criminal Alien Assistance Program									
MISSION: To provide Federal assistance to states and local units of government for the costs of incarcerating undocumented aliens and to expedite the transfer of custody for certain deportable aliens.									
PERFORMANCE INDICATOR INFORMATION				PERFORMANCE TARGETS & ACTUAL RESULTS					
Type of Indicator	Performance Indicators	1995 Actual	1996		1997 Target	1998			
			Target	Actual					
Input	1. Appropriations 2. Number of applications received	\$130M 45	\$300M 400	\$300M* 148**	\$300M*** 1,500	\$300M*** 1,500			
Output/Activity	3. Number of applications reviewed 4. Number of awards made	45 45	400 400	148 146	1,500 1,500	1,500 1,500			
End Outcomes	5. Number of illegal Criminal aliens for which reimbursement is made 6. Number of illegal alien claims that require on-site verification by INS 7. Number of illegal criminal aliens transferred immediately upon conviction to Federal correctional institutions eliminating the need for reimbursement payments 8. Average payout per dollar of claim for reimbursable inmates	37,679 N/A N/A 16 cents	40,000 N/A N/A 50 cents	40,632 N/A N/A 60 cents	45,000 N/A N/A 50 cents	45,000 N/A N/A 50 cents			
Productivity/Efficiency	9. Percent of total illegal incarcerated criminal aliens for which reimbursement is made and for which on-site verifications were required	N/A	N/A	N/A	N/A	N/A N/A			
A. Definitions of Terms or Explanations for Indicators.									
Indicators 6 and 9 are measures of INS performance and indicator 7 is a measure of INS and BOP performance.									
B. Factors Affecting 1996 Program Performance.									
* Actual 1996 appropriations reflect: \$300M in direct SCAAP appropriations, plus a \$200M earmark from Correctional Grants. ** Because local jails do not house aliens who are sentenced federal, fewer applied than expected. *** Prior to 1994, the number of applications was based on a SCAAP program limited to States. Beginning in 1996, local jurisdictions are eligible for reimbursement. - INS personnel are uniquely qualified to determine the legal status of aliens. Due to INS personnel resource constraints, to date, neither on-site verification nor transfer of custody are options.									
C. Factors Affecting Selection of 1997 and 1998 Targets.									
*** 1997 target appropriations reflect: \$300M in direct SCAAP appropriations, plus a \$170M earmark from Correctional Grants. *** 1998 target appropriations reflect: \$300M in direct SCAAP appropriations, plus a \$150M earmark from Correctional Grants. - The targets for 1997 and 1998 assume 65-75% of States and counties with populations of 100,000 or more will apply for reimbursement due to changes in the law. - It is unknown whether INS resources will be available for conducting on-site verification as a basis for reimbursement under SCAAP in 1997 and 1998.									

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Residential Substance Abuse Treatment for State Prisoners Program									
MISSION: To enhance the capability of States and units of local government to provide residential abuse treatment for incarcerated inmates.									
PERFORMANCE INDICATOR INFORMATION									
Type of Indicator	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target	PERFORMANCE TARGETS AND ACTUAL RESULTS		
Input	1. Appropriation 2. Number of applications received	N/A	N/A	\$27M	\$55	\$55	\$30M	\$63M	\$6
Output/Activity	3. Number of applications reviewed 4. Number of awards made 5. Number of technical assistance workshops and national technical assistance conferences conducted for state grantees	N/A	N/A	\$55	\$55	\$55	\$55	\$55	\$55
Intermediate Outcome	6. Number of residential substance abuse treatment programs initiated or expanded in State and local correctional facilities 7. Number of offenders treated for substance abuse 8. Number of State and local policymakers and correctional and treatment practitioners who receive technical assistance and training	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
End Outcome	9. Percentage of offenders who remain drug free when returned to the community 10. Percentage of offenders who do not become recidivists 11. Percentage of technical assistance and training recipients who report in follow up surveys that they implemented changes in policy or practices as a result of the assistance	N/A	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Productivity/Efficiency	12. Workyears required to implement grant program	N/A	N/A	1.3 FTE	1.5 FTE	2.0 FTE	2.0 FTE	2.0 FTE	2.0 FTE
<p>A. Definitions of Terms or Explanations for Indicators: Recidivism is defined as reconviction for a crime committed after release from the treatment program.</p> <p>B. Factors Affecting 1996 Program Performance: This program was not authorized until 1996. Since the 1996 appropriation was not enacted until April 1996, awards were not made until September 1996. Therefore, no offenders were treated under this program in 1996.</p>									

<p><u>C. Factors Affecting Selection of 1997 and 1998 Targets:</u></p>	<p>Full program implementation by the States is not expected until mid to late 1997, as many will initiate a competitive process to make awards. Because offenders must participate in the residential treatment program for 6 - 12 months, data on recidivism and drug use after release will not be available until 1998. Additionally, some states or programs may have difficulty establishing mechanisms to track drug use and recidivism among program participants during a follow-up period in the community.</p> <p>In 1997, the Corrections Program Office will begin conducting follow up surveys of recipients of job-specific technical assistance as well as those who participate in training and technical assistance conferences and workshops, 4 - 6 months after the event, to assess the number that have changed policies and practices. Because this has not been done in the past, the estimate may need to be adjusted as this procedure is implemented.</p> <p>Since this is a new program, target performance levels are rough estimates and may need to be revised as the program is implemented.</p>

A. Definitions of Terms or Explanations for Indicators: N/A							
B. Factors Affecting 1996 Program Performance: N/A							
C. Factors Affecting Selection of 1997 and 1998 Targets							
Prior to 1996, this program was not funded. Therefore, indicators and measurements may change once the program is fully implemented.							

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DIVISION UNIT

DIVISION UNIT: Missing Alzheimer's Disease Patients Alert Program							
MISSION: To establish a national Missing Alzheimer's Disease Patient Alert Program to protect and locate missing patients with Alzheimer's disease and related dementias.							
Type of Indicator	PERFORMANCE INDICATOR INFORMATION			PERFORMANCE TARGETS AND ACTUAL RESULTS			
	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target	
Input	1. Appropriation	\$750,000	\$900,000	\$900,000	\$900,000	\$900,000	
	2. Applications received and grants awarded	1	1	1	1	1	
Output/Activity	3. Disseminate information on Safe Return Program	154,000	175,000	160,000	190,000	190,000	
Intermediate Outcome	4. Number of monitoring site visits	1	1	1	1	1	
	5. Number of Safe Return related calls	4,565	4,000	4,725	4,225	4,225	
End Outcome	6. Number of Safe Return Registrars	18,077	13,000	24,558	25,000	25,000	
	7. Missing Alzheimer Persons recovered	186	175	278	290	290	
Productivity/Efficiency	8. Average staff hours on grant activity	.15 FTE	.15 FTE	.15 FTE	.15 FTE	.15 FTE	
A. Definitions of Terms or Explanations for Indicators.							
The Safe Return Program is a national computerized registry containing information on Alzheimer patients and the caregivers and agencies in contact when these individuals are reported missing. This program administers a 24 hour a day toll free telephone service to report missing Alzheimer patients. Once an individual is registered with the nation center, they receive a unique identification number which is to be worn on clothing labels, wallet cards, or on mail envelopes.							
B. Future Affecting 1996 Program Performance: N/A							
C. Future Affecting Selection of 1997 and 1998 Targets: N/A							

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: DNA Identification State Grants									
MISSION: To improve the quality and availability of DNA Analysis for law enforcement identification purposes									
PERFORMANCE INDICATOR INFORMATION				PERFORMANCE TARGETS & ACTUAL RESULTS					
Type of Indicator	Performance Indicators			1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target	
Input	1. Dollars received for DNA Identification Grants			N/A	\$1M	\$1M*	\$3M	\$15M	
	2. Number of DNA kits applying for new improvement funding.			N/A	50	45	75	75	
Output/Activity	3. Number of DNA kits selected for: New improvement funding Continued improvement funding (3-year grants)			N/A	37	0**	20	30	
	4. Percent increase in number of suspects identified using state databases.			N/A	N/A	N/A	37	37	
Intermediate Outcome	5. Number of states where database development is needed.			N/A	11	N/A	50%	50%	
	6. Number of states with fully operational DNA databases.			N/A	11	11	10	0	
End Outcome				N/A	N/A	N/A	40	50	
A. Definitions of Terms or Explanations for Indicators: N/A									
B. Factors Affecting 1996 Program P. Performance:									
* In addition to the \$1M appropriation, the FBI provided \$2M in additional funding for this program.									
** Because 1996 appropriations were not available until April, 1996 awards were delayed. As a result, by the end of December 1996, 37 grants were awarded.									
C. Factors Affecting Selection of 1997 and 1998 Targets: N/A									

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Tuberculosis Treatment in Correctional Facilities						
MISSION: To develop guidelines and make grants to assist State, tribal, and local corrections and public health authorities to prevent, diagnose, and treat tuberculosis among inmates in correctional institutions.						
PERFORMANCE INDICATOR INFORMATION		PERFORMANCE TARGETS AND ACTUAL RESULTS				
Type of Indicator	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target
Input	1. Appropriation	N/A	N/A	\$200,000	\$0	\$1M
Output/Activity	2. Number of applications received	N/A	N/A	N/A	4	10
	3. Number of grant applications reviewed	N/A	N/A	N/A	4	10
	4. Number of grant awards made	N/A	N/A	N/A	4	8
Intermediate Outcome	5. Number of State and local policymakers and correctional and public health practitioners who participate in grant sponsored planning efforts	N/A	N/A	N/A	120	120
End Outcome	6. Number of State or local correctional agencies which initiate or enhance TB prevention, diagnosis, or treatment programs following participation in grant sponsored planning efforts	N/A	N/A	N/A	10	20
Productivity/Efficiency	7. Work years required to implement grant program	N/A	N/A	N/A	2 FTE	3 FTE
A. Definitions of Terms or Explanations for Indicators:						
N/A						
B. Factors Affecting 1995 Program Performance:						
The program was not authorized until 1996 and was later transferred to the Corrections Program Office.						
C. Factors Affecting Selection of 1997 and 1998 Targets:						
The program is scheduled for implementation in 1997 and will support planning efforts in selected States. It is anticipated that 1998 funds would be used to expand planning efforts to additional States and provide some funding for implementation.						

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Law Enforcement Family Support							
MISSION: To assist federal, state, and local law enforcement agencies in developing and implementing policies and programs to reduce stress and provide appropriate support services for law enforcement officers and their families through research, training, technical assistance, and financial support.							
PERFORMANCE INDICATOR INFORMATION				PERFORMANCE TARGETS & ACTUAL RESULTS			
Type of Indicator	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target	
Input	1. Appropriation 2. Number of applications for research on stress and stress reduction for law enforcement officers and their families. 3. Number of applications for demonstration programs and training programs.	N/A N/A N/A	\$1M 5 25	\$1M 7 51	\$1M 20 100	\$2.2M 30 100	
Output/Activity	4. Number of awards for research. 5. Number of awards for demonstration and training programs.	N/A N/A	1 7	1 8	2 16	2 16	
Intermediate Outcomes	6. Number of new employee assistance programs established. 7. Number of managers trained to establish and operate or expand stress reduction and family support programs.	N/A N/A	8 •	8 •	16 150	32 150	
End Outcomes	8. Number of Federally initiated programs where states have taken over funding.	N/A	•	•	•	24	
A. Definitions of Terms or Explanations for Indicators: N/A							
B. Factors Affecting 1996 Program Performance.							
• Since the 1996 appropriation was not available until April, grant awards were delayed until September. As a result, no measurements will be available for these outcomes until later in 1997.							
C. Factors Affecting Subsection of 1997 and 1998 Targets.							
• The 1997 and 1998 targets reflect those programs initiated in 1996 and/or 1997. Actual and outcomes for 1997 and/or 1998 may also be delayed.							

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Motor Vehicle Theft Prevention Program									
MISSION: To create a cooperative partnership between car owners and state and local law enforcement to reduce car theft committed primarily by professional auto thieves and to facilitate the recovery of stolen vehicles.									
Type of Indicator	PERFORMANCE INDICATOR INFORMATION		PERFORMANCE TARGETS AND ACTUAL RESULTS						
	Performance Indicators	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target			
Input	1. Appropriation 2. Finalization of support agreement 3. Number of training programs conducted	\$0 1 N/A	\$500,000 1 5	\$500,000 1 5	\$750,000 1 10	\$1M 1 15			
Output/Activity	4. Number of agreements implemented 5. Number of conferences held on auto theft prevention	1 N/A	3 N/A	3 N/A	5 N/A	10 1			
Intermediate Outcome	6. Number of states implementing program 7. Number of decals issued as a result of program 8. Percent of registered vehicles participating in program 9. Number of jurisdictions inquiring about program 10. Percent attendees that rate the State Auto Theft Prevention Conference as good or excellent	N/A N/A N/A N/A N/A	3 N/A N/A 10 N/A	3 N/A N/A 10 N/A	5 TBD TBD 50 70%	10 TBD TBD 50 80%			
End Outcome	11. Number of police departments involved 12. Number of police stops resulting from program	N/A N/A	N/A N/A	N/A N/A	5 TBD	10 TBD			
Productivity/Efficiency	13. Use of technology to administer and promote program	N/A	Internet	None	Internet	Internet			
A. Definitions of Terms or Explanations for Indicators: N/A									
B. Factors Affecting 1996 Program Performance:									
<ul style="list-style-type: none">• Availability of funding late in fiscal year 1996 and need to design and implement National program strategy delayed 1996 efforts. It is expected that 5 training programs (funded with 1996 appropriations) will be held in 1997.• Due to the lateness of 1996 appropriations, this information will not be available until 1997.									

C. Factors Affecting Selection of 1997 and 1998 Targets.

o Unknown at this time are what problems or impediments will be encountered as the program moves forward. Since it is a voluntary program, significant effort will be required to make state and local agencies aware of the program and its potential benefits to their jurisdictions; however, expansion of state programs with MVTP Program funding will offer the opportunity to assess program effectiveness and identify innovative public-private partnerships. The impact of the 1996 awards to Arizona, New Mexico and Texas may affect program performance. BIA will consider expanding the Southwest border initiative and the use of Texas as a demonstration site or model project since it is one of the more advanced states in this field. Targets will be estimated when 1996 actual data is available. During 1997 BIA will provide start-up grants to states without sister programs (three to four states at \$150,000 each) and conversion grants to states with existing programs (two to three states at up to \$25,000 each) to convert to the national program.

o The ultimate goal of reducing into debt cannot be measured until several years of program experience can be analyzed.

*** BIA has yet to determine the practicality of tracking this indicator. However, BIA will work with the implementing states to determine the extent that this may be practical.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Telemarketing Fraud Against Senior Citizens							
MISSION: To reduce the incidence of telemarketing scams perpetrated against senior citizens.

Weed and Seed Program Fund

Summary Statement

Fiscal Year 1998

For 1998, \$28,500,000 is requested for the Executive Office for Weed and Seed. These funds will be derived from Byrne discretionary funds requested under the Violent Crime Reduction Program appropriation.

Office of Justice Programs
Weed and Seed Program Fund
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates included proposed changes in the appropriation language listed and explained below. New language is underscored and deleted material is enclosed in brackets.

Weed and Seed Program Fund

For necessary expenses, including salaries and related expenses of the Executive Office for Weed and Seed, to implement "Weed and Seed" program activities, \$28,500,000, which shall be derived from discretionary grants provided under the Edward Byrne Memorial State and Local Law Enforcement Assistance Programs, to remain available until expended for intergovernmental agreements, including grants, cooperative agreements, and contracts, with State and local law enforcement agencies engaged in the investigation and prosecution of violent crimes and drug offenses in "Weed and Seed" designated communities, and for either reimbursements or transfers to appropriation accounts of the Department of Justice and other Federal agencies which shall be specified by the Attorney General to execute the "Weed and Seed" program strategy: Provided, That funds designated by Congress through language for other Department of Justice appropriation accounts for "Weed and Seed" program activities shall be managed and executed by the Attorney General through the Executive Office for Weed and Seed: Provided further, That the Attorney General may direct the use of other Department of Justice funds and personnel in support of "Weed and Seed" program activities only after the Attorney General notifies the Committees on Appropriations of the House of Representatives and the Senate in accordance with section 605 of this Act.

(Department of Justice and Related Agencies Appropriations Act, 1997.)

**Office of Justice Programs
Weed and Seed Program**

Mission: To provide grant funding to communities to help develop and implement comprehensive strategies to "weed out" violent crime, drug and gun trafficking, and gang activity and "seed" the neighborhood with programs that achieve and maintain crime prevention and economic revitalization.

General Goals:

1. Encourage the development and implementation of the Weed and Seed strategy in communities by funding geographically diverse projects in large, medium, and small sized communities.
2. Maximize available resources by coordinating Weed and Seed strategies with other Federal, State, local and private sector, law enforcement and social service agencies efforts to promote safe and secure neighborhoods.

Weed and Seed Program:	Amounts
1997 Estimated Reimbursement	\$28,500
1998 Estimated Reimbursement	28,500
Increase/Decrease	0

BASE PROGRAM DESCRIPTION: The "Weed and Seed" program provides funding assistance to communities, including assistance for the investigation and prosecution of violent crimes and drug offenses in "Weed and Seed" designated communities. These grants provide communities with funds to concentrate their efforts on "weeding out" violent crime, drug trafficking, and drug-related crime from targeted high-crime neighborhoods, and "seeding" those areas with human services and neighborhood restoration activities. To maximize available resources, "Weed and Seed" grants are often integrated with other Federal, State, local, and private sector funds. In a spirit of cooperation, agencies set out to accomplish the long range goal of revitalizing neighborhoods so citizens may live, pursue opportunity, and raise their families in a crime-free environment.

The mission of "Weed and Seed" was established by P.L. 102-395, the Department of Justice and Related Agencies Appropriations Act of 1993, and by the end of that year, a total of 21 "Weed and Seed" sites were operating nationwide. By 1994, the total number of funded "Weed and Seed" demonstration sites was 36. In 1995, continuation funding of \$750,000 each (of which \$500,000 was funded by grants and \$250,000 by the Asset Forfeiture Fund) was provided to the 36 demonstration sites, and a small award of \$35,000 (all in grants) was provided to officially recognized sites to help sustain their efforts. In 1996, the 15 sites initiated in 1994 received their third year of full funding (at \$750,000 each), while the initial 21 sites received a lower level of funding (\$300,000 each, of which \$200,000 was from grants and \$100,000 from the Asset Forfeiture Fund) in order to assist their transition to funding from other sources. Also in 1996, 50 new sites were brought on at a lower funding level (\$85,000 to \$250,000 each) reflecting a program decision to spread available resources over the number of sites implementing the strategy. Two Indian country pilot sites were offered 1996 funding as well (\$300,000 each), making the total number of sites allocated to receive 1996 funds 88. The Executive Office for Weed and Seed (EOWS) plans to increase the number of sites during 1997 and 1998, within available funds.

The "Weed and Seed" strategy is made up of four basic elements:

1. Coordinated law enforcement efforts to "weed out" violent crime in targeted neighborhoods.
2. Community Oriented Policing, which operates in support of intensive law enforcement suppression activities and provides a "bridge" to programs aimed at prevention, intervention and treatment, and neighborhood reclamation and revitalization.
3. Increased availability of human services in demonstration neighborhoods -- such as drug and crime prevention programs, educational opportunities, drug treatment, family services and recreational activities -- to create a crime-free environment.
4. Expanded opportunities and economic development for residents to revitalize distressed neighborhoods.

Safe Havens

A core requirement for all Weed and Seed site cities is the operation of a Safe Haven program. This program was developed through a collaborative effort among the EOWS, the Bureau of Justice Assistance (BJA) and the Departments of Education (DoE) and Housing and Urban Development (HUD). The program brings together education, community services, law enforcement, health, and recreation to provide alternative and support activities for high-risk youth and other residents of "Weed and Seed" target communities. With 1993 funds, a grant award was made to Cities-in-Schools to implement the Safe Haven program. In 1994, EOWS and BJA jointly funded grant awards of \$50,000 each to 20 sites to continue support for Safe Haven coordination and management activities. Since 1995, sites have been expected to fund Safe Havens out of the core grant and/or leveraged resources.

New Initiatives

Several new initiatives were launched in 1996 and will be continued in 1997:

Community Justice Initiative

The community justice initiative will provide funding, training, and technical assistance to enable several sites to develop a continuum of community justice programs that reflect this new paradigm for the criminal justice system. The community justice paradigm emphasizes the pursuit of the common good of the community by means of proactive crime prevention and collaboration. Building on initial efforts, this funding will allow the sites selected to implement a program that combines community policing, community prosecution, community court, community probation/corrections, and related services.

Gun Abatement Initiative

This initiative seeks to reduce crime and violence involving guns in Weed and Seed sites. This initiative will build on the Kansas City Weed and Seed experience and the innovative program currently underway in Washington, D.C.--"Operation CeaseFire." The program provides for police officers in targeted areas to focus exclusively on the seizure of illegal firearms. These officers will be specially trained by the U.S. Attorney's Office in innovative and appropriate law enforcement techniques that meet any constitutional challenge. Additionally, the Bureau of Alcohol, Tobacco and Firearms (ATF) will provide assistance in tracing seized firearms. The program works with a "firearms prosecutor" whose sole responsibility is to coordinate the investigation and prosecution of firearms related cases. Training is also provided in developing a comprehensive, multimedia educational effort to destroy the mystique of firearms.

Safe Kids Initiative

This new Weed and Seed/OJP initiative will integrate community-wide approaches to ameliorating child abuse and neglect and resulting fatalities. This comprehensive program has four major components: (1) system reform and accountability; (2) continuum of services to protect children and support families; (3) data collection and evaluation; and (4) prevention education. Because of the challenging nature of the program, applications were invited from jurisdictions that can demonstrate a readiness and commitment to undertake system reform, progress in assessing and addressing abuse and neglect, and the existing capacity to effect this major enterprise through a community-wide collaborative. Jurisdictions must also demonstrate the existence of policies and/or legislation that promote unified or family court approaches, encourage innovative reform of the child welfare system and strengthen coordination between and integration of the two systems. Applicants will also be required to match this grant with other new or reallocated public/private funding. Funded programs will be firmly centered within larger, already articulated plans or strategies developed by the applicant jurisdiction, building on other, community-based efforts.

Training and Technical Assistance

New Approach for 1996: A new, site-driven approach to training and technical assistance was implemented. Under this approach, sites select training and technical assistance from a variety of providers. Providers make presentations at regional conferences to assist sites in making their selections. Options include the following:

- o **Neighborhood Restoration:** This element provides assistance in the design and implementation of strategies for economic development, expansion of employment opportunities, and restoration of housing and the overall physical environment.

- o **Youth Crime Watch:** This element provides a structure and process to empower youth to prioritize school or community problems and find solutions; it confronts an array of antisocial behavior including drug use, crime, violence, gang, and auto theft.

- o **Community Mobilization:** This training and technical assistance program is a two-component activity consisting of organizing and mobilizing law-abiding residents in high crime neighborhoods in cooperation with the police, to nonviolently confront drug dealers through peaceful marches and vigils. The intent of this nonviolent intervention is to disrupt the drug dealers' activities, to solidify community opinion against them, and to force their illegal activities out of the neighborhoods.

Publications and Videotapes: In addition to the initial program implementation manual, for which distribution is ongoing, EOWS publishes a monthly newsletter announcing developments in "Weed and Seed" policy and the progress experienced at current "Weed and Seed" sites. The newsletter is distributed to "Weed and Seed" sites, as well as other interested Federal, State and local, and community leaders. EOWS has also developed a video library for use by those developing a "Weed and Seed" strategy.

National Conference: As in past years, EOWS plans to convene a national "Weed and Seed" conference. The purpose of the conference will be to share information about effective programs being implemented by the various sites in each of the four "Weed and Seed" strategy elements for existing, new, and officially recognized sites. The conference provides information on the types of training and technical assistance that are available; information on other Federal initiatives relevant to implementing a "Weed and Seed" strategy, such as Empowerment Zones, DOJ's Pulling America's Communities Together (PACT) and the BIA's Comprehensive Communities Program; and an opportunity for experienced pilot demonstration sites to share their experiences with newer and developing sites.

National Evaluation: In 1993, the National Institute of Justice (NIJ) initiated a process evaluation of the 19 pilot demonstration sites funded at that time. NIJ funded in 1994 a project to collect baseline data at eight sites for use in an impact evaluation. Both the 1993 and 1994 efforts are complete. In 1995, NIJ selected a new national impact evaluator whose efforts are underway. This national evaluation is a two year project which continued in 1996 and whose results are expected in 1997.

Local Evaluations: The 1994 and 1995 application guidelines for "Weed and Seed" grants required each applicant to identify baselines, milestones, and performance indicators for measuring the impact of its law enforcement, prevention/early intervention/treatment, community policing, and neighborhood restoration programs. Those guidelines also required fully funded sites to dedicate a minimum of \$37,500 out of the EOWS/BIA grant funds, and/or identify other funds to support a local evaluation. The grant awards included a special condition stating that OJP will approve the evaluation design prior to the expenditure of any evaluation funds. OJP assists sites by reviewing evaluation proposals. New sites funded at lower core levels are being encouraged (although not required to do an evaluation), but site monitoring and the Government Performance and Results Act reporting are required. Technical assistance is being provided to sites' local evaluation efforts.

National Performance Review Laboratory: A National Performance Review (NPR) Laboratory related to comprehensive anti-crime and social service delivery strategies was initiated in 1994. The purpose of the NPR lab is to develop and demonstrate an approach for enhancing the delivery of Federal support to troubled neighborhoods, for leveraging State, local, and private resources, and evaluating the effectiveness of community strategies in revitalizing neighborhoods. This lab complements the Empowerment Zone/Enterprise Community initiative. Five "Weed and Seed" sites - four funded and one unfunded - were selected for this lab. Three of those sites received additional funding in FY 1996; the other two will receive additional funding in FY 1997.

Selection Criteria

The selection criteria for participating in "Weed and Seed" activities focus on communities that have the following characteristics:

- o High or rapidly increasing incidence of violent crime;
- o Existing, workable community infrastructure;
- o Cooperative governmental partnerships, good cooperation between governmental and private civic and social service organizations;
- o Strong U.S. Attorney offices; and
- o History of innovative programming at the local level.

Official Recognition Process

Official recognition provides sites which independently adopt the "Weed and Seed" strategy and apply for recognition, with limited technical assistance, training, and preference in applying for certain Federal funding programs. In 1996, over 50 sites which received or applied for official recognition status were given the opportunity to apply for additional "Weed and Seed" funding to implement their strategies. In 1997, approximately 20 additional sites are expected to apply for official recognition.

In 1997, the Department has allocated approximately \$37.5 million in resources for "Weed and Seed" activities, of which, \$9 million will be provided by the Asset Forfeiture Fund (28 U.S.C. 524 (c)(1)(D)) to supplement local law enforcement activities at "Weed and Seed" sites. In 1998, the Asset Forfeiture Fund plans to provide \$9 million to the Weed and Seed Program but reduction to this funding level may be necessary if receipts do not materialize.

PROGRAM CHANGES: In 1998, no direct funding is requested for the Weed and Seed Program. Instead, \$28.5 million in funding for this program will be completely derived from the Byrne Discretionary Grant Program, which is fully funded through the Violent Crime Reduction Trust Fund. Likewise, the proposed 1998 appropriations language continues to allow reimbursements from other DOJ sources, including the Asset Forfeiture Fund.

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

DECISION UNIT: Executive Office of Weed and Seed Program									
MISSION: To provide grant funding to communities to help develop and implement comprehensive strategies to "weed out" violent crime, drug and gun trafficking, and gang activity and "seed" the neighborhood with programs that achieve and maintain crime prevention and economic revitalization

A. Definitions of Terms or Explanations for Indicators	
<p>Issue: The Executive Office for Weed and Seed is one of several funding sources for Weed and Seed projects. Within DOI, other sources have included the Executive Office for U.S. Attorneys, the Bureau of Justice Assistance Byrne Discretionary Grant Program, and Asset Forfeiture Funds (AFF) under 28 USC 524G(1)(D) (AFF provided approximately \$8 million in 1994 and \$9 million in 1995 and 1996. Similar amounts will be requested for 1997 and 1998; however dollars available are dependent on receipts). For 1996 through 1998 funds for the Executive Office for Weed and Seed are derived from Byrne Discretionary Grant program funds. The number of sites targeted for 1997 and 1998 reflects reliance on such other sources.</p> <p>Context: In 1995, 36 demonstration sites received approximately \$750,000 each of continuation funding for a 12-month period; officially recognized sites were not funded in 1997 and 1998, but in 1995 these sites received a one-time award of \$35,000 to help sustain their efforts. In 1996, the 15 sites initiated in 1994 received their third year of full funding (\$750,000 each), while the 21 sites initiated in 1991 to 1993 received a lower level of funding (\$300,000 each) in order to assist their transition to funding from other sources. Also in 1996, 50 sites which had received or applied for official recognition were offered supplemental funding at amounts lower than the previous demonstration level but higher than the officially recognized level (in the range of \$85,000 - \$250,000 each) reflecting a program decision to spread available resources over the number of sites implementing the strategy. A similar approach is planned for 1997 and 1998.</p> <p>Because of the delay in appropriations for 1996, site solicitation and award of 1996 funded grants was delayed and approximately one-half of grant awards planned for 1996 funds will occur in 1997, making the total number of sites using 1996 funds 88.</p> <p>Intermediate outcomes: Measures indicate customer/grantee satisfaction with various Weed and Seed program activities. This data will be collected by the program office via a customer survey.</p> <p>End outcomes: The Weed and Seed strategy requires sites to have the following two elements: <i>Community Policing Partners</i> - these are officers who walk a beat in the target neighborhood or ride bikes and serve as the bridge between law enforcement and social services; and <i>Soft Services</i> - which are multi-service centers where a variety of youth and adult services are co-located in a highly visible and accessible facility that is secure against crime and illegal drug activity.</p> <p>***Outcome measurements not yet available. Data collection started 10/1/96.</p> <p>N/A - Program-wide data are not available yet; collection of these data used in the CUPRA pilot project in 1996 and implemented program wide in 1997.</p>	
B. Factors Affecting FY 96 Program Performance	
A variety of factors may affect program performance other than phenomena within the control of the Federal government, for example: local capacity and commitment to implement the program, and societal trends of a regional or even national nature.	
C. Factors Affecting Selection of FY 97 and 98 Targets	
The same factors that may affect the 1996 program performance may also affect the 1997 and 1998 targets.

Justification of Proposed Changes in Appropriation Language**

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

State and Local Law Enforcement Assistance

[For grants, contracts, cooperative agreements, and other assistance authorized by part E of title 1 of the Omnibus Crime Control and Safe Streets Act of 1968, as amended, for State and Local Narcotics Control and Justice Assistance Improvements, notwithstanding the provisions of section 511 of said Act, \$361,000,000, to remain available until expended, as authorized by section 1001 of title I of said Act, as amended by Public Law 102-534 (106 Stat. 3524), of which \$60,000,000 shall be available to carry out the provisions of chapter A of subpart 2 of part E of title I of said Act, for discretionary grants under the Edward Byrne Memorial State and Local Law Enforcement Assistance Programs.]

(Department of Justice and Related Agencies Appropriations Act 1997)

Explanation of Changes:

1. Eliminates appropriations language under this account. In 1998, this program is appropriated under the Violent Crime Reduction Programs, State and Local Law Enforcement Assistance account.

**OFFICE OF JUSTICE PROGRAMS
STATE AND LOCAL LAW ENFORCEMENT
PROGRAM PERFORMANCE INFORMATION**

Mission: To assist State and local units of government to control and prevent drug and violent crime and to improve the functioning of the criminal justice system by helping States develop and implement innovative alternatives to traditional criminal justice operations.

Organizational Goals:

1. Award grants to States for the use by States and local units of government for crime prevention/control and system improvement programs.
2. Provide States with guidance on administrative issues and requirements.
3. Provide States and local criminal justice agencies with state-of-the-art information on effective programs, practices, and techniques.
4. Obtain information from the States on effective programs and document "what works" in reducing crime and improving the criminal justice system.
5. Provide the States and subgrantees with training and technical assistance on administrative and program issues.
6. Encourage States to address National priorities.
7. Monitor formula grant activities for compliance with requirements and the effective implementation of the statewide strategies.
8. Develop and test the effectiveness of new programs and practices to control and prevent drug use, crime and violence, and to improve the functioning of the criminal justice system at the State and local levels.

9. Provide training and technical assistance to improve and enhance the capacity of State and local agencies and community members to engage in effective drug/crime and violence control/prevention activities.
10. Encourage and facilitate coordination and cooperation among criminal justice agencies; across jurisdictions; among Federal, State, and local agencies; across disciplines; and between the criminal justice system and the community.
11. Assess the impact of program activities on drug and crime problems and the operations of the criminal justice system.
12. Develop alternatives that reduce reliance on incarceration and relieve overcrowding in correctional institutions.
13. Provide training to equip State and Local law enforcement officers with the skills and tools to effectively deal with and defuse the escalating problems associated with domestic terrorism.

1998 Request	<u>0</u>
Increase/Decrease	-\$301,000

BASE PROGRAM DESCRIPTION: The purpose of the Edward Byrne Memorial State and Local Law Enforcement Assistance Formula Grant Program, authorized by the Anti-Drug Abuse Act of 1988, as amended, is to assist States and units of local government in carrying out specific programs that offer a high probability of improving the functioning of the criminal justice system, with special emphasis on nationwide and multi-level drug control strategies and violent crime prevention. Programs and projects are developed to assist multijurisdictional and multi-state efforts to control drugs and crime and to support National priorities. The Anti-Drug Abuse Act of 1988, as amended, authorizes programs in 26 purpose areas to improve the criminal justice system.

The 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands are eligible to receive a formula grant award. A percentage of each State's formula award must be used for projects at the local level, based on the proportion of local criminal justice expenditures to total State and local criminal justice expenditures.

The States, in consultation with local officials, develop statewide drug and violent crime strategies and funding priorities to address their drug and violent crime problems and to improve the functioning of their criminal justice systems while supporting national priorities and objectives.

Program activities funded by the Byrne Formula Grants Program continue to emphasize drug prevention and control, and frequently include programs that address domestic or youth/gang violence and community-based efforts such as community policing, safe havens, and alternatives to traditional incarceration.

The emphasis on developing planning and evaluation capacities among the state agencies related to Byrne-funded programs has resulted in multi-year strategies and funding priorities as well as a growing body of well-documented programs, such as:

- **Community Policing in Chicago:** In five targeted police districts, fear of crime and robbery crimes showed reductions vis a vis control sites.
- **Yakima (Washington) Gang Prevention and Intervention Coalition:** Gang related crime is down materially, and gangs have been largely dissipated.
- **Drug Treatment Alternative to Prison (DTAP) in New York City:** In four New York City locations, it allows diversion into long-term residential treatment in lieu of prison. Retention in treatment rates for DTAP offenders is 1-1/2 times higher than for offenders referred by other sources into same treatment programs. Retention rates are generally indicative of longer term treatment for reducing prison crowding and costs.
- **Differentiated Case Management in York County, S.C.:** Use of tracking system to assign cases by degree of complexity led to reduction in case backlog (almost cut in half) and a nearly 50% increase in the number of cases disposed of annually.

In 1995, the States invested the largest percentage of funds awarded from this program -- approximately 41% or \$185 million -- to multi-jurisdictional drug and violent crime task forces and other law enforcement related projects. When analyzing the "performance output measures" reported by 43 States, we found that the return on the \$185 million investment totaled almost \$73 billion in seized cocaine, marijuana, and destroyed marijuana plants. In addition, more than 337,000 offenders were arrested and 75,000 firearms and weapons were seized and destroyed.

The Byrne Formula Grants Program experienced major workload increases in both 1995 and 1996. The 1995 increase was largely due to a new requirement to make supplemental HIV awards to those States, who in 1994 complied with the requirements of the HIV program. These supplemental awards were funded with the 10% penalty that was withheld from the States that were not in compliance with the mandatory HIV requirement in 1994. The workload increase in 1996 was the result of full year appropriations remaining unavailable until April 26, 1996. By law, BJA has 30 days after enactment of appropriations to issue application kits, and the States have 45 days after the receipt of these materials to submit an official application. To minimize the potential adverse impact of the 1996 appropriations situation on grantees, BJA and State grantees worked together, and as a result, a majority of the final state awards were made prior to the "official" deadline for final application.

Examples of other Program highlights include:

- All state administrative agencies were offered intensive training (through 2 and 3-day workshops), reaching over 180 state personnel.
- A nationwide analysis of resource needs and services gaps was produced from information provided in states' strategies, which will be used to inform national priorities for funding.
- A first time study has documented in a systematic way the extent to which projects initiated using Byrne program funds have become institutionalized. Seventy-three percent (73%) of all projects for which fiscal year 1991 was the last Byrne-funded year, that were expected to be continued by the State or local recipient after Byrne funding ceased, did in fact continue. A significant portion of these projects are operational or still providing benefits to the recipients as long as 4 years after Federal support ended. This is an indication of the success of Byrne in meeting its primary goal, which is to provide support to its constituency group of State and local criminal justice agencies, to allow them to initiate innovative projects that respond effectively to crime problems and improve the operations of the Nation's criminal justice system.

PROGRAM CHANGE: In 1997, a total of \$500 million is available to the Byrne Formula Grant Program. This \$500 million was appropriated under two accounts: \$301 million is directly funded under the State and Local Law Enforcement appropriation and the balance of \$199 million is funded under the Violent Crime Reduction Programs (VCRP) appropriation. In 1998, however, the entire \$505 million for this program is requested under the VCRP. A detailed discussion of this funding request may be found under the VCRP narrative section of the OIP budget.

1998 Base	60,000
1998 Request	<u>0</u>
Increase/Decrease	- \$ 60,000

BASE PROGRAM DESCRIPTION: The purpose of the Edward Byrne Memorial State and Local Law Enforcement Assistance Program, authorized by the Anti-Drug Abuse Act of 1988, as amended, is to assist States and units of local government in carrying out specific programs that offer a high probability of improving the functioning of the criminal justice system with special emphasis on nationwide and multi-level drug control strategies. The Anti-Drug Abuse Act of 1988, as amended, authorizes programs in 26 purpose areas to control drugs and improve the criminal justice system.

Through the Byrne Discretionary Grant Program, BJA provides leadership and guidance on crime and violence prevention and control and criminal justice system improvements at the State and local levels. BJA is authorized by Congress to make awards to public and private agencies and organizations for national scope and multi-state programs, demonstration programs, training, and technical assistance to assist States and local jurisdictions. National scope programs provide a service or product of benefit throughout the country or across multiple States or address issues of concern nationally. Demonstration programs are used to develop, test, evaluate, and document new programs and practices. Training is developed and provided to State and local criminal justice practitioners and others to provide them with state-of-the-art information on effective programs and practices. Technical assistance provides support to sites participating in demonstration programs or is available to help individual jurisdictions implement a program or practice or address a specific issue.

The 1995 Byrne Discretionary Grant Program funds were invested in several successful programs such as:

- ▶ **Drug Abuse Resistance (D.A.R.E.) Program.** Five regional D.A.R.E. Program training centers were supported with \$1.75 million. As a result, in 1995, approximately 23,000 law enforcement officers taught the D.A.R.E. Program to more than 8 million fifth grade students.

- ▶ **Comprehensive Communities Program.** BJA, in conjunction with OJJDP and the COPS Office, invested a total of \$32.6 million in reinforcing the Administration's commitment to reduce crime and violence by initiating comprehensive planning and improving intergovernmental relationships. Today, in 16 cities across the nation, these funds help support activities such as: Community Policing; Community Mobilization/Prevention; Nonviolent Dispute Resolution; Boys & Girls Clubs Demonstration; Comprehensive Gang Initiative; Community Prosecution, Community-Based Alternatives to Incarceration; and Drug Courts.
- ▶ **Comprehensive Homicide Initiative.** Funds were used to address the underlying causes of homicide, including gang violence, domestic violence, drug-related violence, and gun availability. The cities of Richmond, California, and Richmond, Virginia, were awarded funds to implement this initiative.
- ▶ Funds were also awarded for: TRIAD groups for the protection and safety of the aged against abuse, neglect, and fraud; Firearms Trafficking Program; and Tribal Strategies Against Violence.

In 1996, an additional \$6 million was provided to BJA from the Bureau of Prisons for the Church Arson Prevention Grant Program. This program is designed to enable units of county government in 13 states to participate in a National Arson Prevention Initiative initiated by the Administration. The participating counties were encouraged to work cooperatively where feasible to maximize the impact of these funds and to take advantage of mutual agreements between neighboring jurisdictions.

This 1996 program accomplished the following goals: (1) enhanced security measures in and around churches, including improved lighting, security systems, contracting for private security services or other activities which support or enhance church arson prevention; (2) hired part-time law enforcement officers to increase patrol and surveillance of churches and to work with the community to establish or expand neighborhood watch efforts focused on preventing church arson; and (3) paid overtime to presently employed law enforcement officers for the purpose of increasing the number of hours worked by such personnel resulting from increased patrol or surveillance of churches to prevent arson.

PROGRAM CHANGE: In 1997, \$60 million is appropriated under the State and Local Law Enforcement appropriation for this program. In 1998, \$75 million is requested for the Byrne Discretionary Grant Program under the VCRP appropriation. A detailed discussion of this funding request may be found under the VCRP narrative section of the OJP budget.

Office of Justice Programs
Juvenile Justice Programs
Summary Statement
Fiscal Year 1998

For 1998, the Office of Justice Programs (OJP) is requesting \$230,422,000 for the Juvenile Justice Programs account, of which \$5,722,000 will be transferred to Justice Assistance for management and administration. This request represents an increase of \$55,000,000 over the 1997 appropriation enacted and will maintain all but one program at the 1997 funding level. OJP proposes to eliminate funding for the Title V - Incentive Grants for Local Delinquency Prevention Program. Funds from this program, along with the requested increase, will allow for the establishment of a new Anti-Truancy, School Violence and Crime Intervention Program which will assist communities in reducing juvenile crime through the local development and implementation of crime intervention strategies.

Office of Justice Programs
 Juvenile Justice Programs
 Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates included proposed changes in the appropriation language listed and explained below. New language is underscored and deleted material is enclosed in brackets.

Juvenile Justice Programs

For grants, contracts, cooperative agreements, and other assistance authorized by the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, including salaries and expenses in connection therewith to be transferred to and merged with the appropriations for Justice Assistance, [\$170,000,000] to remain available until expended, as authorized by section 299 of part I of title II [and section 506 of title V of the Act], as amended by Public Law 102-586, of which (1) notwithstanding any other provision of law, [\$5,000,000] shall be available for expenses authorized by part A of title II of the Act, \$86,500,000 shall be available for expenses authorized by part B of title II of the Act, and \$29,500,000 shall be available for expenses authorized by part C of title II of the Act [Provided, That \$16,500,000 of the amounts provided for part B of title II of the Act, as amended, is for the purpose of providing additional formula grants under part B, for innovative local law enforcement and community policing programs, to States that provide assurances to the Administrator that the State has in effect (or will have in effect no later than 1 year after date of application) policies and programs, that ensure that juveniles are subject to accountability-based sanctions for every act for which they are adjudicated delinquent]; (2) \$12,000,000 shall be available for expenses authorized by sections 281 and 282 of part D of title II of the Act for prevention and treatment programs relating to juvenile \$225,922,000

gangs; (3) \$10,000,000 shall be available for expenses authorized by section 285 of part E of title II of the Act; (4) \$7,000,000 shall be available for expenses authorized by part G of title II of the Act for juvenile mentoring programs; and (5) ~~\$20,000,000 shall be available for expenses authorized by title V of the Act for incentive grants for local delinquency prevention programs: Provided, That upon the enactment of reauthorization legislation for Juvenile Justice Programs under the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, funding provided in this Act shall from that date be subject to the provisions of that legislation and any provisions in this Act that are inconsistent with that legislation shall no longer have effect).~~ ~~\$75,000,000 shall be available for the Anti-Traumacy, School Violence and Crime Intervention Program~~

In addition, for grants, contracts, cooperative agreements, and other assistance authorized by the Victims of Child Abuse Act of 1990, as amended, \$4,500,000 to remain available until expended, as authorized by sections 214B of the Act.

(Department of Justice and Related Agencies Appropriations Act, 1997.)

Explanation of Changes:

1. This is instructional language that is unnecessary for the operation of the program.
2. This change deletes Title V appropriation language and includes language for the new Anti-Traumacy, School Violence and Crime Intervention Program.

Program Performance Information
Government Performance and Results Act Requirements**

Mission: To implement a comprehensive strategy that aggressively addresses youth violence and focuses resources on programs which will result in the improvement of the operation of the juvenile justice system, development of a system of graduated sanctions for serious, violent, and chronic offenders, identification and intervention with first time offenders, and prevention of delinquency. OJJDP's Comprehensive Strategy for Serious, Violent, and Chronic Juvenile Offenders stresses the importance of using resources to maximize public safety, insure accountability, and provide treatment and rehabilitation services for juvenile offenders, as appropriate. Programs must provide a special focus on violence reduction, whether designed to target guns, gangs, and drugs, domestic violence and child abuse, school safety, conflict resolution, or other violence related issues. Such a comprehensive strategy must ensure safer communities by assisting State and local units of government, public and private agencies, organizations and institutions in the prevention, reduction, and treatment of juvenile violence and delinquency through demonstration and replication programs and improvement of the administration of juvenile justice through financial and technical support. It must also address juvenile victimization that leads to violent delinquency through improvement of the investigation and prosecution of child abuse and child exploitation, the development and implementation of multi-disciplinary child abuse investigation and prosecution programs, and through the establishment of regional and local children's advocacy centers.

Organizational Goals:

1. Develop, demonstrate, test, and disseminate programs and information on prevention, intervention, and treatment programs relating to serious and violent juvenile crime, illegal drug use, and improving the juvenile justice system.
2. Conduct research that can be applied to the development of programs for preventing and controlling juvenile delinquency, youth violence, and illegal drug use and improving the juvenile justice system.
3. Provide technical assistance and training to State and local governments, and other service providers, in the development and implementation of programs related to the prevention and control of juvenile delinquency through strengthening the juvenile justice system, public safety and law enforcement programs, delinquency prevention and early intervention programs and programs that address child abuse and improvement of Dependency Courts.

4. Disseminate information produced by research, development, and demonstration activities through training, technical assistance, and clearinghouse activities which can be utilized at the local and State levels to address the increased level of juvenile delinquency and violence they are experiencing.
5. Prevent and reduce juvenile participation in gang related delinquent activities by conducting research on issues related to juvenile gangs; demonstrating programs; evaluating the effectiveness of gang programs and activities; increasing public awareness by disseminating information; and providing technical assistance and financial support to effective gang related programs and activities.
6. Improve the quality of local and Federal child abuse prosecution and case handling by: assisting elected or appointed prosecutors in identifying and implementing improved policies, procedures, and management practices, by keeping State and Federal prosecutors abreast of the state-of-the-art of child abuse prosecution; by establishing children advocacy center programs to focus attention on the needs of child victims and non-offending family members and enhanced coordination and support among community agencies and professionals involved in the intervention, prevention, prosecution, and investigation systems that respond to child abuse cases.

1998 Estimate	145,200
<i>Increase/Decrease</i>	<i>(20,000)</i>

BASE PROGRAM DESCRIPTION: The Formula Grants Program provides funds to States on the basis of population under the age of 18. To receive its allocated funds, a State or Territory must submit a three-year comprehensive plan that meets statutory criteria and demonstrates compliance with JJDPA Act core requirements. Funds may be expended for innovative programs to aggressively address the prevention of youth crime, provide system-based programs for juveniles who commit serious and violent crimes, divert appropriate juveniles from the system, and provide community-based programs and services for juvenile offenders and their families. In 1996, 56 States and Territories participated in the Formula Grants program. Under the 1992 amendments to the JJDPA Act, beginning in 1994, States must demonstrate compliance with the deinstitutionalization, separation, jail removal, and minority over-representation requirements in order to qualify for their full formula grant program allocation. Failure to comply with these requirements results in a 25 percent reduction in a State's allocation for each such failure.

The National Institute for Juvenile Justice and Delinquency Prevention (NIJDDP), within the Office of Juvenile Justice and Delinquency Prevention (OJJDP), conducts research, evaluation and program development activities to increase understanding of the risk factors for delinquency and the effects of juvenile justice policies. This information is applied to the development of promising program models, including joint initiatives with the Special Emphasis program, OJP bureaus and other Federal Agencies. The NIJDDP also serves as an information collection and dissemination center for the Office. Information on statistics and trends regarding juvenile delinquency, promising programs, and innovative juvenile justice policies and procedures are disseminated to communities through clearinghouse, training, and technical assistance activities in a manner which allows them to adopt the approaches and strategies which will work best to meet their needs.

New program development efforts funded by OJJDP's Special Emphasis Program address a wide range of national juvenile justice issues by developing and testing prototypes and demonstrating effective programs. Program information generated through the development process is disseminated to the field. Competitive awards are made to support comprehensive planning and program development in areas impacting serious and violent juvenile offenders as well as high risk youth. The design and implementation of these new efforts are coordinated with NJJDP and disseminated to Formula Grants Program fund recipients.

OJJDP, through the Coordinating Council on Juvenile Justice and Delinquency Prevention, coordinates and concentrates Federal resources on the problem of delinquency and improvement of the juvenile justice system. This includes the development of Federal youth policy and joint programs to target high risk youth.

Through the Mentoring Program three-year grants are made to local agencies for programs designed to link at-risk youth with responsible adult role models who can provide guidance, promote personal and social responsibility, increase educational participation, discourage use of illegal drugs, violence, weapon use, and other criminal activity, discourage gang involvement, and encourage participation in community service and activities.

In 1996 and 1997, Incentive Grants for Local Delinquency Prevention Programs were awarded under Title V, through State advisory groups, to units of general local government for a broad range of delinquency prevention programs and activities which benefited youth who had contact with or were likely to have contact with the juvenile justice system. Services to children, youth and families included recreation, tutoring and remedial education, work skills, health and mental health, alcohol and substance abuse prevention, leadership development, and accountability. Priority was given to localities that coordinated and collaborated in provision of services, involved the private nonprofit and business sectors, and developed or enhanced a Statewide subsidy or other funding program to local governments that were dedicated to early intervention and delinquency prevention.

The State Challenge Activities Program authorizes the Administrator to award grants to States participating in the Formula Grants program, in the amount of 10 percent of the State's Formula Grant allocation, for each of the challenge activities that the State agrees to undertake. There are 10 challenge activities:

1. basic health, mental health and education services for youth in the juvenile justice system;
2. access to counsel for youth in the juvenile justice system;
3. programs and criteria to increase use of community-based alternatives through objective detention and correction placement criteria;
4. establishing secure community-based corrections options for violent juvenile offenders as an alternative to training schools;

5. policies to prohibit gender bias and provide female youth with a full range of system services;
6. establishment of a State ombudsman office for complaints related to out-of-home care of juveniles;
7. appropriate removal of status offenders from juvenile court jurisdiction;
8. alternatives to school suspension and expulsion;
9. comprehensive aftercare service programs; and
10. establish a State administrative structure to coordinate program and fiscal policies for youth with emotional and behavioral problems and a Statewide case review system.

According to FBI statistics described in OJJDP's National Report on Juvenile Violence and Victimization, most violent crimes committed by juveniles take place at the end of the school day, a time when fewer opportunities for constructive activities are available. OJJDP funds after school activities at Boys and Girls Clubs. These Clubs provide young people with an attractive alternative to drug use, drug dealing, violence, and crime. OJJDP also funded programs to enhance and expand Boys and Girls Clubs in public housing to prevent youth from being involved with gangs or to intervene with those that are in the early stages of gang involvement. Boys and Girls Clubs have reached out to 6,000 youth at risk of gang involvement in 93 sites. A study by Portland University showed that 90% of these potential gang members have maintained regular contact with the club, with 48% improving their school behavior and over one-third improved their grades while an additional one-third improved their school attendance. According to a Columbia University outcome study, the OJJDP-funded Boys and Girls Clubs in public housing programs reduced the juvenile crime rate by 13%, increased rates of school attendance, and improved academic performance.

OJJDP works in school settings to address children's risk of educational failure. OJJDP funds and manages the Cities in Schools (CIS) dropout prevention program. There is a clear correlation between truancy, school failure, and school drop out and later adult criminal behavior. Through CIS and other OJJDP-supported programs, OJJDP is reducing the likelihood that these youth will become adult criminals. A 1995 Urban Institute process and impact evaluation report on the CIS program found that both attendance and academic performance of CIS students with serious problems improved and was at significantly higher levels than similar students who did not participate in the program. Seventy percent of students whose grade point averages were previously unsatisfactory improved their GPA in the first year in which they participated in the program. Because of its effectiveness, CIS has been replicated across the country and now operates in 295 communities in 28 states involving 1,025 sites serving 216,208 youth.

With Formula Grants Program funds, OJJDP initiated the Bethesda Day Treatment Program in West Milton, Pennsylvania. Discretionary funds have supported its expansion to new sites in Pennsylvania and across the country. Today the program is funded through county service contracts. This model program works intensively with court referred, nonviolent juvenile offenders

to overcome drug and alcohol problems, improve their educational skills, and change delinquent behavior patterns to reduce delinquency. Because this intensive treatment program addresses personal, family, social, and economic problems in a juvenile delinquent's life, and because it emphasizes integration into mainstream educational and employment activities while providing consequences for misconduct through restitution, the Bethesda Day Treatment program has shown excellent results. A recent study found that youth involved in the program had only a 10.4% recidivism rate -- significantly less than state and national norms. Within a cohort of 48 juveniles discharged from the treatment program, there were only five cases of recidivism within the first 12 months of discharge.

The Illinois juvenile court model for interagency information sharing, enacted in 1992, supports law enforcement, States attorneys, probation departments, juvenile courts, social service providers, and schools in the early identification and treatment of habitual juvenile offenders. This 1992 amendment to the Illinois Juvenile Court Act of 1987 authorizes an interagency committee to gather and disseminate comprehensive data to agencies in the juvenile justice system to produce more informed system decisions. This is being accomplished in part, through the establishment of a Statewide Serious Habitual Offender Comprehensive Action Program (SHOCAP) developed by OJJDP.

OJJDP has provided funding to develop, implement and evaluate community-wide gang prevention, intervention, and suppression programs; juvenile bootcamps; and intensive aftercare sites. Similar efforts are underway on OJJDP's mentoring, SafeFutures, Title V Prevention, and Pathways to Success programs. As information becomes available, OJJDP produces reports that are disseminated across the country on approaches and programs that work. These publications are distributed through OJJDP's Juvenile Justice Clearinghouse at a rate of nearly half a million copies per year. The Clearinghouse shares OJJDP publications and information through exhibits and other means with approximately 75,000 individuals attending major national, State, and local juvenile justice youth-service conferences each year. OJJDP also uses the latest technology to extend its outreach through such means as an electronic newsletter; JUVJUST, an Internet list server which currently has more than 900 subscribers; a home page on the World Wide Web which in April 1996 was accessed 2,700 times; and a series of satellite teleconferences on major topics of interest to the field. A recent conflict resolution teleconference linked over 485 sites and reached an estimated audience of more than 10,000 individuals.

In 1992, the OJJDP established the Gould-Wysinger Awards. The awards recognize federally funded youth service programs and projects that advance the objectives of the JJDPA of 1974, as amended, and promote a standard of excellence for program development and implementation in juvenile justice and delinquency prevention. The following programs, funded with Formula Grant funds, were the most recent designated winners:

Arlington County Juvenile Sex Offender Program (Arlington, Virginia) - The Program is a comprehensive treatment approach involving the adolescent offender, the offender's family, and significant systems within the community. The program intervenes with young offenders to reduce the likelihood that their behavior will escalate into more serious, violent sexual deviance. Program staff are intensively trained by national experts in sex offender treatment and sex offender case management. A recent evaluation of this program demonstrated that 91 percent of juveniles who participated did not reoffend.

The BRIDGE (Atlanta, Georgia) - The BRIDGE is an intermediate-level, residential psychiatric treatment program in a depressed Atlanta neighborhood recently designated a Federal Empowerment Zone. The BRIDGE serves troubled adolescents with a history of physical and sexual abuse. Nearly all BRIDGE youth are involved with the juvenile justice system and are placed in the program as an alternative to incarceration. This coeducational program is one of Georgia's few resources for adolescent female offenders with mental health issues. It provides comprehensive treatment for youth involved with or at risk of substance abuse, gangs, physical and sexual abuse, sexually transmitted diseases, and HIV infection. The BRIDGE also offers a comprehensive alternative school and an extensive aftercare program. OJJDP recently awarded a \$100,000 Challenge Grant for its continuation.

Utah Community Service and Restitution Program (Salt Lake City, Utah) - The Program began in May 1986 and has shown growth both in the percentage of restitution collected for victims of juvenile crime and in the number of community service hours completed. In 1995 the program collected \$1,108,103 in restitution and logged 502,400 hours of community service. The program demonstrated that juveniles who take responsibility for their actions by paying restitution, performing community service hours, or doing both are less likely to reoffend than are juveniles without sanctions.

PROGRAM CHANGE: A decrease of \$20 million is requested from the Title V program, Incentive Grants for Local Delinquency Prevention, to be used to support the new Anti-Truancy, School Violence and Crime Intervention Program within the Juvenile Justice Program.

Victims of Child Abuse Act:	Amount
1997 Appropriation Anticipated	\$4,500
1998 Base	4,500
1998 Estimate	<u>4,500</u>
<i>Increase/Decrease</i>	<i>0</i>

BASE PROGRAM DESCRIPTION: In 1992, amendments to the Victims of Child Abuse Act of 1990, P.L. 101-647, changed the administering agency for the Investigation and Prosecution of Child Abuse Program from the Office for Victims of Crime (OVC) to the Office of Juvenile Justice and Delinquency Prevention (OJJDP). Since 1993, of the total appropriation, Congress has made \$1.5 million available annually for a grant to the American Prosecutor Research Institute's (APRI) National Center for the Prosecution of Child Abuse (Center). For 1997, the base funding level of \$1.5 million is being requested. The APRI Center provides publication services, training, and technical assistance to prosecutors and other professionals involved in the prosecution of child abuse at the State, local and Federal levels. The Center's staff attends conferences and workshops throughout the country to train in techniques for the effective prosecution of child abuse. In addition, APRI's Center serves as an information clearinghouse for prosecutors, social workers, therapists, law enforcement, and clinicians involved in the prosecution of child abuse.

In 1995, \$500,000 was provided for Regional Children's Advocacy Centers and \$2 million was provided for Local Advocacy Centers, an increase of \$1 million over 1994. In 1996 and 1997, the same level of funding was provided to the regional and local advocacy centers as was provided in 1995. Congress also provided \$500,000 for the National Network of Children's Advocacy Centers. These Centers had previously been funded within the Title II - Juvenile Justice and Delinquency Prevention-activity. Continuation funding at the 1997 level is recommended for the Children's Advocacy Centers Program in 1998.

Juvenile Justice Programs
Justification of Program and Performance
(Dollars in thousands)**

ANTI-TRUANCY, SCHOOL VIOLENCE AND CRIME INTERVENTION PROGRAM

Mission: To provide funds to assist communities in reducing juvenile crime through the local development and implementation of crime intervention strategies.

General goal: To provide grants to local communities to support juvenile crime intervention activities designed to address anti-truancy, school violence and future crime and delinquency by contributing to positive youth development, and to respond to state identified needs and locally developed comprehensive plans addressing youth who have had, or are at high risk of having, contact with the juvenile justice system.

Anti-Truancy, School Violence and Crime Intervention Program		Amounts
1997 Request		--
1998 Base		--
1998 Estimate		\$75,000
	<i>Increase/Decrease</i>	\$75,000

BASE PROGRAM DESCRIPTION: These funds would enable local communities to attack truancy, school violence and juvenile crime. The funds, distributed through the States, would support communities in being actively involved in the identification of their local problems, determination of needs to be addressed, and the development and implementation of locally determined solutions to the juvenile crime they are experiencing. The range of activities that these funds will support, among other activities, includes: truancy and dropout prevention programs, after school programs, curfew enforcement efforts, mentoring, violence reduction strategies such as dispute resolution training, day treatment and intensive supervision services, job skills training, alcohol and substance abuse prevention services, leadership development training, accountability and responsibility education, parent accountability and family strengthening interventions, restitution and community services activities, and teen courts and other community level juvenile crime intervention efforts involving youth. Schools and other community-based locations would be settings where these activities could be administered and carried out.

PROGRAM CHANGE: In 1998, the \$20 million Title V prevention program is eliminated and this new program will be established at the \$75 million level to support local juvenile crime intervention programs and strategies. This new funding will expand critically needed intervention services to high-risk youth and enable more communities to acquire funding for such activities and programs.

PERFORMANCE MEASUREMENT TABLE PRESENTED BY DECISION UNIT

DECISION UNIT: Juvenile Justice Program									
MISSION: To implement a comprehensive strategy that aggressively addresses youth violence and focuses resources on programs which will result in the improvement of the operation of the juvenile justice system, development of a system of graduated sanctions for serious, violent, and chronic offenders, identification and intervention with first time offenders, and prevention of delinquency. OJJDP's Comprehensive Strategy for Serious, Violent, and Chronic Juvenile Offenders stresses the importance of using resources to maximize public safety, ensure accountability, and provide treatment and rehabilitation services for juvenile offenders, as appropriate. Programs must provide a special focus on violence reduction, whether designed to target gangs, gangs, and drugs, domestic violence and child abuse, school safety, conflict resolution, or other violence related issues. Such a comprehensive strategy must ensure after consultation by assisting State and local units of government, public and private agencies, organizations and institutions in the prevention, reduction, and treatment of juvenile violence and delinquency through demonstration and replication programs and improvement of the administration of juvenile justice through financial and technical support. It must also address juvenile victimization that leads to violent delinquency through improvement of the investigation and prosecution of child abuse and child exploitation, the development and implementation of multi-disciplinary child abuse investigation and prosecution programs, and through the establishment of regional and local children's advocacy centers.

A. Definitions of Terms or Explanations for Indicators:					
JJDP Act: Juvenile Justice and Delinquency Prevention Act, as amended in 1992 Section 223(a)(12): deinstitutionalization of status offenders - i.e., young people who commit an offense that would not be punishable for an adult. Section 223(a)(13): separation of juveniles and adults in secure facilities; Section 223(a)(14): removal of juveniles from adult jails and lockups; Section 223(a)(23): elimination of disproportionate minority confinement, in jurisdictions where it exists. (7,8,9,14,18,19) - include VOCA programs. (6) - More requests for technical assistance/training are "received" than resources are available for "response" (10). (10) - Information drawn from research and practice are "packaged" and disseminated in discrete program areas as an efficient/cost effective approach to delivery of technical assistance. (19) - "practitioners" includes trainers who will in turn train other practitioners, thus multiplying skills and knowledge development.					
B. Factors Affecting 1996 Program Performance.					
N/A					
C. Factors Affecting Selection of 1997 and 1998 Targets.					
Changing trends in the States may affect States' compliance. Availability of OJJDP funds may affect number of training and technical assistance events, program awards and overall capability to meet legislative requirements of the JJDP Act.					

Narrative Performance Indicators: According to FBI statistics described in OJJDP's National Report on Juvenile Violence and Victimization, most violent crimes committed by juveniles take place at the end of the school day, a time when fewer opportunities for constructive activities are available. OJJDP funds after school activities at Boys and Girls Clubs. These Clubs provide young people with an attractive alternative to drug use, drug dealing, violence, and crime. OJJDP also funded programs to enhance and expand Boys and Girls Clubs in public housing to prevent youth from being involved with gangs or to intervene with those that are in the early stages of gang involvement. Boys and Girls Clubs have reached out to 6,000 youth at risk of gang involvement in 93 sites. A study by Portland University showed that 90% of these potential gang members have maintained regular contact with the club, with 48% improving their school behavior and over one-third improved their grades while an additional one-third improved their school attendance. According to a Columbia University outcome study, the OJJDP-funded Boys and Girls Clubs in public housing programs reduced the juvenile crime rate by 15%, increased rates of school attendance, and improved academic performance.

OJJDP works in school settings to address children's risk of educational failure. OJJDP funds and manages the Cities in Schools (CIS) dropout prevention program. There is a clear correlation between truancy, school failure, and school drop out and later adult criminal behavior. Through CIS and other OJJDP-supported programs, OJJDP is reducing the likelihood that these youth will become adult criminals. A 1995 Urban Institute process and impact evaluation report on the CIS program found that both attendance and academic performance of CIS students with serious problems improved and was at significantly higher levels than similar students who did not participate in the program. Seventy percent of students whose grade point averages were previously unsatisfactory improved their GPA in the first year in which they participated in the program. Because of its effectiveness, CIS has been replicated across the country and now operates in 295 communities in 28 states involving 1,025 sites serving 216,208 youth.

With Formula Grants Program funds, OJJDP initiated the Bethesda Day Treatment Program in West Milton, Pennsylvania. Discretionary funds have supported its expansion to new sites in Pennsylvania and across the country. Today the program is funded through county service contracts. This model program works interactively with court referred, nonviolent juvenile offenders to overcome drug and alcohol problems, improve their educational skills, and change delinquent behavior patterns to reduce delinquency. Because this intensive treatment program addresses personal, family, social, and economic problems in a juvenile delinquent's life, and because it emphasizes integration into mainstream educational and employment activities while providing consequences for misconduct through restitution, the Bethesda Day Treatment program has shown excellent results. A recent study found that youth involved in the program had only a 10.4% recidivism rate -- significantly less than state and national norms. Within a cohort of 48 juveniles discharged from the treatment program, there were only five cases of recidivism within the first 12 months of discharge.

The Illinois juvenile court model for interagency information sharing, enacted in 1992, supports law enforcement, States attorneys, probation departments, juvenile courts, social service providers, and schools in the early identification and treatment of habitual juvenile offenders. This 1992 amendment to the Illinois Juvenile Court Act of 1987 authorizes an interagency committee to gather and disseminate comprehensive data to agencies in the juvenile justice system to produce more informed system decisions. This is being accomplished in part, through the establishment of a Statewide Serious Habitual Offender Comprehensive Action Program (SHOCAP) developed by OJJDP.

OJJDP has provided funding to develop, implement and evaluate community-wide gang prevention, intervention, and suppression programs; juvenile bootcamps; and intensive aftercare sites. Similar efforts are underway on OJJDP's mentoring, Safe Futures, Title V Prevention, and Pathways to Success programs. As information becomes available, OJJDP produces reports that are disseminated across the country on approaches and programs that work. These publications are distributed through OJJDP's Juvenile Justice Clearinghouse at a rate of nearly half a million copies per year. The Clearinghouse shares OJJDP publications and information through exhibits and other means with approximately 75,000 individuals attending major national, State, and local juvenile justice youth-service conferences each year. OJJDP also uses the latest technology to extend its outreach through such means as an electronic newsletter, JUVJUST, an Internet list server which currently has more than 900 subscribers; a home page on the World Wide Web which in April 1996 was accessed 2,700 times; and a series of satellite teleconferences on major topics of interest to the field. A recent conflict resolution teleconference linked over 485 sites and reached an estimated audience of more than 10,000 individuals.

In 1992, the OJJDP established the Gould Wyringer Awards. The awards recognize federally funded youth service programs and projects that advance the objectives of the JJDPA Act of 1974, as amended, and promote a standard of excellence for program development and implementation in juvenile justice and delinquency prevention. The following programs, funded with Formula Grant funds, were the most recent designated winners:

The BRIDGE (Atlanta, Georgia) - The BRIDGE is an intermediate-level, residential psychiatric treatment program in a depressed Atlanta neighborhood recently designated a Federal Empowerment Zone. The BRIDGE serves troubled adolescents with a history of physical and sexual abuse. Nearly all BRIDGE youth are involved with the juvenile justice system and are placed in the program as an alternative to incarceration. This educational program is one of Georgia's few resources for adolescent female offenders with mental health issues. It provides comprehensive treatment for youth involved with or at risk of substance abuse, gangs, physical and sexual abuse, sexually transmitted diseases, and HIV infection. The BRIDGE also offers a comprehensive alternative school and an extensive aftercare program. OJJDP recently awarded a \$100,000 Challenge Grant for its continuation.

Utah Community Service and Restitution Program (Salt Lake City, Utah) - The Program began in May 1986 and has shown growth both in the percentage of restitution collected for victims of juvenile crime and in the number of community service hours completed. In 1995 the program collected \$1,108,103 in restitution and logged 502,400 hours of community service. The program demonstrated that juveniles who take responsibility for their actions by paying restitution, performing community service hours, or doing both are less likely to reoffend than are juveniles without sanctions.

Office of Justice Programs
Public Safety Officers' Benefits
Summary Statement
Fiscal Year 1998

For 1998, the Office of Justice Programs is requesting a total of \$35,267,000 for the Public Safety Officers' Benefits (PSOB) Program. The includes a \$2,000,000 increase over 1997 to fund the newly authorized Education Assistance Benefits program, as well as \$2,264,000 for disability benefits and \$31,003,000 for death payments.

Office of Justice Programs
Public Safety Officers' Benefits
Justification of Proposed Changes in Appropriation Language

The 1998 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Public Safety Officers Benefits

<p>[For] payments authorized by part L of title I of the Omnibus Crime Control and Safe Streets Act of 1968 (42 U.S.C. 3796), as amended, such sums as are necessary, [to remain available until expended,] as authorized by section 6093 of Public Law 100-690 (102 Stat. 4339-4340)[, and, in addition, \$2,200,000, to remain available until expended,] for payments as authorized by section 1201(b) of said Act.</p>	<p>To remain available until expended, for and, \$2,000,000 for the Federal Law Enforcement Education Assistance Program, as authorized by section 1212 of said Act</p>
--	---

Department of Justice and Related Agencies Appropriations Act, 1997.)

Explanation of changes:

1. This change reflects funding for the educational payments program authorized by the Federal Law Enforcement Dependents Assistance Act of 1996, Public Law 104-238 (110 Stat 3114).

Office of Justice Programs
Public Safety Officers' Benefits

Mission: To provide a death benefit payment to eligible survivors of Federal, State, and local public safety officers who have died as a result of personal (traumatic) injury sustained in the line of duty, a disability benefit payment to Federal, State, and local public safety officers who are permanently and totally disabled as the direct result of a catastrophic personal (traumatic) injury sustained in the line of duty, or to provide payments for education purposes to children and spouses of eligible Federal, civilian law enforcement officers killed or disabled in the line of duty.

Organizational Goals:

1. To pay eligible death benefit claims within two weeks of the filing of a fully documented claim and to pay eligible disability benefit claims, and educational assistance claims within six weeks of filing a fully documented claim.
2. To issue determinations on ineligible death benefit claims within four weeks of the filing of the fully documented claim and to issue determinations on ineligible disability benefit claims, and educational assistance claims within six weeks of the filing of the fully documented claim.
3. To conduct an appeal hearing within 60 days of an appellant's request.
4. To issue the appeal determination within 30 days of the official close of the appeal hearing.
5. To handle each death benefit, disability, and educational assistance claim with the utmost dignity, sensitivity, and professionalism.
6. To continuously look for opportunities to better serve the public safety community before, during, and after tragedies involving the death or disability of public safety officers, e.g., using information available to the PSOB program office to enhance officer safety training.

Increase/Decrease	2,000

BASE PROGRAM DESCRIPTION: The Omnibus Crime Control and Safe Streets Act of 1968, as amended by the Public Safety Officers' Benefits Act of 1976, established the Public Safety Officers' Benefits Program. The Anti-Drug Abuse Act of 1988 (P.L. 100-690)(42 U.S.C. 3796), authorized a basic death benefit payment of \$100,000 when a Federal, State, or local law enforcement officer, firefighter, corrections officer, judicial official, or public ambulance or rescue squad member dies as the direct and proximate result of a traumatic injury sustained in the line of duty. The Act also provided for an annual cost of living escalator tied to the Consumer Price Index (CPI). This escalator, on October 1 of every year, increases the benefit by the percentage of increase in the CPI. If a spouse and eligible children survive, the widow/widower receives one-half of the benefit, and the remaining one-half is apportioned among the children. If there is no spouse and there are eligible children, the full benefit is apportioned among the eligible children. If there are no eligible children, then the spouse receives the full benefit. Parents are eligible for the death benefit when a spouse and/or eligible children do not survive the deceased public safety officer. The Crime Control Act of 1990, provided authority for a new Public Safety Officers' Disability Program. Federal, State, and local public safety officers are eligible for the disability payment when permanently and totally disabled as the direct result of a catastrophic injury received in the line of duty on or after November 29, 1990. Each year, the amount of the disability benefit payment is adjusted by the annual percentage change in the CPI. The death and disability benefit increased from \$123,520 in 1993 to \$127,499 in 1994, an increase of 3.2 percent. In 1995, the benefit payment was \$130,416, a 2.3 percent increase over 1994. In 1996, the benefit payment was \$134,571, a 3.1 percent increase over 1995. The 1997 benefit payment is \$138,461, a 2.9 percent increase over 1996. The request for 1998 includes funds for the estimated annual change in the Consumer Price Index.

The Federal Law Enforcement Dependents Assistance Act of 1996, P.L. 104-238 (110 Stat 3114), signed October 3, 1996, authorized the Education Assistance to Dependents Program. This Act amended the Public Safety Officers' Benefits Act and states that based on the availability of appropriations, the program will provide payments for education purposes to children or spouses of Federal, civilian law enforcement officers killed or disabled in the line of duty. Financial assistance consists of direct payments to an eligible dependent and is computed on the basis set forth in section 3532 of title 38, United States Code. A dependent cannot receive assistance for longer than 45 months of full-time education or training (or a proportional period of time for a part-time program), and is not eligible for assistance after the child's 27th birthday (unless there are extraordinary circumstances that precluded the child from pursuing a program of education before reaching 27). A person seeking assistance under this program submits an application to the Attorney General, and is notified of approval or disapproval in writing. Educational assistance can be discontinued if it is found that, according to the regularly prescribed standards and practices of the educational institution, the recipient fails to maintain satisfactory progress as described in section 484(c) of the Higher Education Act of 1965. A dependent of a Federal law enforcement officer killed in the line of duty on or after May 1, 1992, is eligible for assistance, and retroactive assistance may be provided to eligible dependents for each month a program of education was pursued.

Generally, the PSOB program staff receives a death report within one week of the public safety officer's death, usually from the employing agency. When notice is received from other than the employing agency, PSOB staff will initiate direct contact. Employing agencies generally take from 60-120 days to file a complete claim. Eligible claims are paid within two weeks of the receipt of full documentation; ineligible claims are processed within four weeks of being filed and documented. When a claim is denied, appeal instructions are provided to the claimant. Appeals are heard within 60 days of the claimant's request (contingent on the availability of hearing officers who are serving on collateral duty, and the availability of appellant's legal representative), and decisions are rendered within 30 days of the official close of the appeal hearing. Hearing officer findings may be appealed to the Director of the Bureau of Justice Assistance. Once an appeal is heard by the agency and a denial affirmed, the claimant may appeal directly to the U.S. Claims Court. Claims entering the Federal court system may take from six months to two years or more to resolve, depending on how rapidly the court and the claimant's attorney respond to statutory and procedural requirements.

While death reports had been steadily decreasing from 322 in 1989, to the lowest level of 204 in 1992, this trend leveled off in 1993 when 226 deaths were reported, an increase of 22 over 1992. This increase was due primarily to several incidents during which multiple deaths occurred. During 1994, death reports increased substantially, again due to several incidents during which multiple deaths occurred--14 Federal firefighters killed fighting a Colorado forest fire; 2 Federal firefighters killed en route to a

New Mexico forest fire; and ⁵ DEA agents killed in an airplane crash in Peru. Aside from these 21 deaths resulting from tragic incidents, death reports still appear to be increasing slightly. There were 262 deaths reported in 1994, and 270 in 1995. The 1995 figure includes losses suffered in the Oklahoma City bombing. In 1996, there were 226 deaths reported.

Disability claims cannot be initiated until the disabled officer has been permanently separated from his or her public safety agency and has been awarded maximum worker's compensation benefits associated with the officer's permanent and total disability. After receipt of the foregoing prerequisite disability certification from the disabled officer's employer, PSOB staff officially initiate the disability claim. This "prerequisite" procedure prevents PSOB staff from being inundated with disability claims that do not meet the "total and permanent" PSOB disability requirement. Employing agencies generally take from 60-120 days to file a complete claim. Because medical reviews are needed on all disability claims, both eligible and ineligible claims are processed within six weeks of being filed and fully documented. Eligible claims are not paid until the end of the fiscal year in the event more claims are received than funds are available to pay the full benefit amount. In such cases, the benefit payment to each officer must be reduced by a proportionate share in accordance with the Disability Program legislation. Ineligible claims may be appealed subject to the same time frames that apply for the Death Benefits Program.

For the same reasons that death claims are difficult to project, it is also difficult to project the volume of disability claims that will be received. Seven claims for disability benefits were initiated in 1992, eleven in 1993, six in 1994, seven in 1995, and five in 1996. Up to 15 disability claims are expected for 1997 and 30 for 1998. Inquiries are steadily increasing and a general awareness of the program has been growing throughout the nation and among public safety agencies.

The November 18, 1988, amendment to the Public Safety Officers' Benefits Act (Anti-Drug Abuse Act of 1988, P.L. 100-690) authorizes the use of up to \$150,000 of PSOB funds to establish national programs to assist the families of public safety officers who have died in the line of duty. Accordingly, Concerns of Police Survivors, Inc. (COPS) has received approximately \$150,000 each year since 1989 to carry out this Congressional mandate. It is anticipated that \$150,000 will continue to be provided to this organization in 1998. COPS is an organization that coordinates and directs a national network that responds with psychological and emotional support to families and coworkers of public safety officers who have died in the line of duty. This network consists of families of deceased public safety officers who have come through that deeply traumatic experience to take up, once again, reasonably normal, productive lives. Each May 14-16, COPS conducts their annual National Survivor Family Conference in Washington, D.C., for law enforcement survivor families throughout the Nation. This conference is held in conjunction with the National Law Enforcement Officers' Memorial Service on May 15 of each year. Beginning in 1996, COPS also received Byrne

discretionary funds to update research on departmental readiness to handle line of duty deaths, develop case studies of fatalities to enhance officer safety training, and to conduct regional training sessions on line of duty deaths for law enforcement agencies.

PROGRAM CHANGES:

	Amount
Federal Law Enforcement Dependents Assistance Act.....	\$2,000

This proposed initiative would provide payments for education purposes to the children and spouses of Federal, civilian law enforcement officers killed or disabled in the line of duty, as authorized under the Federal Law Enforcement Dependents Assistance Act of 1996 (P.L. 104-238).

PERFORMANCE MEASUREMENT TABLE: PRESENTED BY DECISION UNIT

Crime Victims Fund

Summary Statement

Fiscal Year 1998

The Crime Victims Fund was established by the Victims of Crime Act of 1984, as amended. The authorizing legislation provides for the deposit of federal criminal fines, bond forfeitures, and penalty assessments into the Crime Victims Fund. There is no ceiling on sums that may be deposited into the Fund. In 1997, collections available to OVC, for use in 1998, are expected to total \$176,533,000.

Office of Justice Programs
Crime Victims Fund

Mission: To enhance the Nation's capacity to assist crime victims and provide leadership in changing attitudes and practices to promote justice and healing for all victims of crime.

General Goal: Improve the criminal justice system response to victims of crime, including Native American crime victims, through the delivery of direct services and funding, training, and technical assistance, and through monitoring the implementation of statutes providing victims rights and other efforts identified below:

1. Develop a National Crime Victims Agenda -- an action plan for the future -- working with constituency groups;
2. Develop and disseminate promising practices for everyone who provides services for crime victims;
3. Expand the National Victim Assistance Academy and other training efforts to help professionalize the field and improve the quality of services;
4. Provide training for and collaborate with Indian nations and Federal agencies, including the FBI, the Department of Defense, U. S. Attorneys' Offices, and Victim-Witness Coordinators to enhance services for crime victims;
5. Advocate for increased rights for victims, including within juvenile justice systems;
6. Provide direct services, including referrals and information, to crime victims to respond to their needs;
7. Enhance services to tribal and local communities by providing crisis response teams, expert trainers, and mentoring programs;
8. Expand collaboration with other agencies and the private sector; and,
9. Improve the grant process, ensure constituency input, and increase training opportunities for VOCA state administrators and local programs.

Decrease	352,389

BASE PROGRAM DESCRIPTION: The Crime Victims Fund is financed by collections of fines, penalty assessments, and bond forfeitures from defendants convicted of Federal crimes. The Fund was established by the Victims of Crime Act of 1984 (P.L. 98-473), as amended by the Children's Justice and Assistance Act of 1986 (P.L. 99-401), and reauthorized by the Anti-Drug Abuse Act of 1988 (P.L. 100-690). Funds are not available for obligation during the year of collection; rather, funds accumulate so that the total amount is available for obligation in the next year and for expenditure during the next three years.

In 1995, under existing law, the Director reserved \$20 million. Title X of the Victims of Terrorism Act of 1996, P.L. 104-134, further amended the Victims of Crime Act, permitting the Director of the Office for Victims of Crime (OVC) to reserve up to \$50 million of funds collected when those collections exceed 110 percent of the amount collected in the previous year. In 1997 the Director will increase the \$20 million reserve to \$50 million. The amount reserved maybe used for compensation and assistance supplements in any subsequent year when Fund deposits fall below the amount deposited in the previous year or when compensation and assistance requests result from incidents of terrorism.

Funds are targeted at five purpose and program areas:

- (1) Administrative Office of the U.S. Courts. The first \$3 million is currently available to the judicial branch for administrative costs to improve criminal debt collections. For 1998, language has been proposed to amend the Victims of Crime Act. This amendment will discontinue the targeting of these funds to the Administrative Office of the U.S. Courts for their National Fine Center, which has recently been closed;

- (2) Grants for Child Abuse Efforts. Up to \$10 million shall be made available for grants to States to assist in developing, establishing, and operating programs designed to improve the handling of child abuse cases and the investigation and prosecution of cases of child abuse, particularly child sexual abuse. The 1988 amendments require that 15 percent of this amount shall be retained by OVC to conduct projects with similar purposes aimed at Native American Indian Tribes;
- (3) Crime Victim Compensation. Legislation sets aside 48.5 percent of the remaining deposits to be distributed to the States on the basis of 40 percent of each State's eligible victim compensation payouts during a preceding fiscal year (if available funds are sufficient);
- (4) Crime Victim Assistance. Another 48.5 percent of deposits are set aside for victim assistance grants, which are awarded to States for the purpose of providing services, other non-financial assistance, and limited emergency financial assistance to victims of crime. Priority must be given to eligible crime victim assistance programs that provide assistance to victims of sexual assault, spousal abuse, child abuse, and previously underserved victims of violent crime. Recipient organizations eligible for victim assistance funding include nonprofit organizations and agencies of State or local governments (or combinations of such entities) that provide services to victims of crime, including crisis intervention services, emergency aid, and assistance to victims participating in criminal justice proceedings; and
- (5) Training and Technical Assistance, Demonstration, and Federal Victims Assistance. Legislation sets aside the remaining 3 percent of deposits for this purpose. At least one-half of the funds available for this purpose shall be for the financial support of services to victims of Federal crime.
- Management and Administration expenses for the Office for Victims of Crime (OVC) are included in the "Justice Assistance" appropriation.

Current activities of OVC follow:

VICTIM COMPENSATION AND ASSISTANCE FORMULA GRANT PROGRAMS

In 1997, OVC will award funds to 49 States, as well as the District of Columbia and the Virgin Islands, for Victim Compensation programs and 57 States and territories for Victim Assistance programs. During 1998, OVC expects again to award funds to 49

States, as well as the District of Columbia and the Virgin Islands, for Victim Compensation programs and 57 States and territories for Victim Assistance programs.

FEDERAL TRAINING AND TECHNICAL ASSISTANCE AND DIRECT SERVICES

Federal Prosecutors and Victim-Witness Personnel. In 1996, OVC provided various training programs for Federal prosecutors and victim-witness coordinators. In March 1996, OVC co-sponsored the National Symposium on Child Sexual Abuse in Huntsville, Alabama, and sent teams of Federal criminal justice personnel to attend the training. OVC supported Federal district-specific training conferences and seminars involving Federal victims rights issues and compliance with the 1995 Attorney General Guidelines for Victim and Witness Assistance. Through an interagency agreement with the Executive Office for U.S. Attorneys (EOUSA), OVC funded a "victim rights and legal issues" instructor position at the Office of Legal Education (OLE) to draft litigation series chapters and course material and present classroom instruction to Federal prosecutors, including U.S. Attorneys, and paralegals on Federal victims' rights legislation, case law and policy, and prosecutors' duties and responsibilities to Federal crime victims. OVC also provided travel-related expenses for Victim-Witness Coordinators and/or Federal prosecutors to attend conferences such as the annual National Organization for Victim Assistance (NOVA) convention, Huntsville symposium, and Indian Nations conference.

OVC's commitment to training and technical assistance and associated funding levels will increase in 1997 due to the unusually high collections received in 1996.

National Victim Assistance Academy. In 1997, OVC will continue to fund a National Victim Assistance Academy for the purpose of providing basic and advanced victim assistance training. The Academy offers specialized training topics related to meeting the needs of crime victims for victim service providers and criminal justice personnel at the local, tribal, State, and Federal levels.

Promising Strategies and Practices to Improve Services for White-Collar Crime Victims. In 1997, OVC will continue this two-year project that provides a two-person staff to develop three written products and a 20 minute videotape for inclusion in a victim assistance resource package. The packages will be distributed to federal criminal justice personnel as a comprehensive tool to assist federal victims of white-collar crime and fraud.

Direct Services. In 1997, OVC plans to allot \$75,000 to the Executive Office for U.S. Attorneys (EOUSA) and \$100,000 to the FBI (new initiative) to provide emergency services to Federal victims when no other services exist. In addition, to assist the victims of the Oklahoma city bombing to attend judicial proceedings in Denver, OVC awarded from the Reserve Fund \$75,080 in 1996 and has allocated \$100,000 in 1997.

An interagency agreement with the U.S. Parole Commission provided funding for a Victim-Witness Coordinator position to provide services at parole revocation hearings and to coordinate notification programs with the Federal Bureau of Prisons. OVC will continue this program in 1997.

Assistance to Victims of Federal Crime in Indian Country. In 1996, under a direct services grant program entitled "Victim Assistance to Victims of Crime in Indian Country," OVC made grants to continue the support of programs to provide direct services on Indian reservations. Under this program, grants are awarded to states who make subgrants to tribes to provide victim assistance services on Indian reservations. OVC awarded grants to 18 States, and the States subgranted these Federal funds to 52 Indian tribes or tribal organizations that have initiated, expanded, or improved "on-reservation" services for violent crime victims. In addition, OVC made direct grants to two tribes (Laguna Pueblo and Northern Cheyenne) to support the Attorney General's tribal justice initiative. In 1997, OVC will also fund grants to: (1) support a national conference on victim assistance in Indian Country; (2) develop and provide training on the cross-cultural needs of Native American crime victims; (3) provide technical assistance to Indian victim assistance programs; and (4) respond to requests for training or technical assistance from communities dealing with major crises involving multiple victims.

OVC will continue funding this priority program for all participating States in 1997. In addition, OVC will continue other discretionary grant programs that support the development of programs to assist Federal victims of crime in Indian country.

Federal Criminal Justice Agencies. In 1997, through interagency agreements, OVC will fund the Federal Law Enforcement Training Center (FLETC) to train Federal law enforcement officers in the delivery of services to victims of crime. FLETC trains officers from over 70 agencies in basic and advanced classes. OVC will also provide funding to the FBI to train Victim-Witness Coordinators, fund a full time trainer and a full time victim witness administrator at the FBI headquarters. In addition, OVC will make funds available to respond to specialized requests from other Federal agencies. These programs will be continued in 1998.

OVC will continue several projects: (1) Bias Crime Train-the-Trainer provided regional train-the-trainer conferences for law enforcement and victim assistance professionals using a format developed under a previous OVC grant; and (2) Child Sexual Exploitation: Improving Investigations and Protecting Victims continued a joint OVC/Office of Juvenile Justice and Delinquency Prevention project to link criminal justice personnel across jurisdictional boundaries and to sources of victim assistance when sexually exploited children or youth are identified.

CHILDREN'S JUSTICE AND ASSISTANCE ACT PROGRAM

Grants to Tribes. In 1989, OVC funded its first Children's Justice Act (CJA) grants for Native Americans. The purpose of the CJA grant program is to assist Federally recognized Indian tribes to improve the investigation, prosecution, and handling of child abuse cases in a way that lessens trauma to the child victims. These grants are resulting in a range of systemic improvements that include: training for multi-disciplinary teams; revision of tribal codes to address child abuse; child advocacy services for children involved in the court process; protocols for reporting, investigating, prosecuting, and treating child sexual abuse cases; and improved case management and treatment services. Since 1990, two training and technical assistance grants have been awarded to Native American nonprofit organizations to provide regional training and on-site consultation to Indian tribes that received subgrants or grants to develop crime victim assistance services or improve their responses to serious cases of child abuse, especially child sexual abuse. In 1997, OVC will award 17 continuation grants to continue developing programs that can be replicated in Indian Country.

Training and Technical Assistance for Native American Children's Justice Act Grantees. In 1997, OVC will continue supporting this program to provide comprehensive, skills-building training and technical assistance to Indian tribes and organizations that were awarded grants as part of the Children's Justice Act Discretionary Grant Program for Native Americans (CJA). This grant also supported the development and production of a ten-minute video for tribal leaders that explains the importance of a coordinated effort among tribal agencies in implementing the CJA program.

Court Appointed Special Advocates (CASA) in Indian Country. OVC will support the development of CASA programs in Indian Country so that tribal courts funded through this program will be able to assign advocates to represent the best interests of children. This program is especially important in Indian Country since a tribal court may serve as a Native American child's only recourse to protection and justice. OVC will provide funds to and co-sponsor with the Office of Juvenile Justice and Delinquency Prevention (OJJDP) an award to the National CASA Association to continue two programs and establish two new programs at

tribes designated in the Attorney General's Indian Country justice initiative. In 1997, OVC will continue these four programs and will provide funding to establish two additional programs.

Tribal Judges Project. In 1997, OVC will continue funding an interagency agreement established in 1996 with the Federal Judicial Center and DOJ's Office of Policy Development to educate tribal and federal judges on the handling of child sexual abuse cases in Indian Country. In 1996, two regional training sessions provided legal education on federal procedural law involving the Federal Rules of Evidence, the Federal Rules of Criminal Procedures, and the Major Crimes Act, issues of prosecutorial discretion, and relevant tribal law regarding child sexual abuse. Funding also provided development of a program manual for use by tribal and federal judges to identify a range of training and technical assistance strategies that will assist tribes to improve the handling of child abuse and family violence. In 1997, \$50,000 will be used to support training and technical assistance for Federally-recognized tribes participating in DOJ projects or grant programs directed to improving tribal systems of justice and the handling of child and spouse abuse cases.

NATIONAL SCOPE TRAINING AND TECHNICAL ASSISTANCE AND INFORMATION DISSEMINATION

In 1996, ten projects have been funded to catalog and promote the use of promising practices in serving crime victims. These include projects that focus on all components of the criminal justice system, from first responder law enforcement strategies to post-conviction probation and parole supervision, as well as professional education programs training those who will work with crime victims. OVC funds discretionary programs to provide training and technical assistance to service providers who interact with crime victims. These professionals include law enforcement, prosecutors, judges, probation and parole officers, and corrections officials who work within state and Federal criminal justice systems. They also include mental health professionals, doctors and nurses, the clergy, and others who regularly work with crime victims.

OVC supports flexible training and technical assistance resources that offer customized services to agencies on request through its Trainers Bureau, as well as regional and national training events on special topics of interest to those who provide services to crime victims through the State Conference Training Initiative grant program.

In 1997, through the Action Partnerships with Professional Organizations program, OVC will join with the national professional and membership organizations to support projects that provide information and training to their membership for the purpose of

improving the response to crime victims. It is anticipated that OVC will support projects submitted by professional organizations that: 1) offer tracks of training at national conferences; and 2) describe other ways of providing information to organization members, such as through videotapes, newsletters, periodicals, special monographs or descriptions of model practices, "codes of ethics," or membership mailings. We anticipate reaching health care providers, mental health, law, criminal justice, clergy, educators, and other allied professionals who work with crime victims in their daily practice.

OVC will address the needs of specific victim population through a series of projects in the areas of sexual assault, gang violence, hate/bias crimes, stalking, cultural considerations, and diversity. In 1997 and 1998, OVC plans to fund six or seven projects through the Field Initiated National Impact Project that address critical training needs expressed by practitioners in the field. Projects to be funded in 1997 will include a hospital-based emergency shelter for victims of spouse abuse that will serve as a laboratory and training site, a curriculum for professionals regarding best responses to homicide survivors, promising practices and protocols for assisting domestic violence victims in the workplace, training for judges regarding victims of juvenile sexual assault, a compendium of best criminal justice practices for adolescent victims of juvenile crime and a handbook for prosecutors on implementing victims rights and services.

In 1997, OVC will complete and disseminate a document updating the 1982 Final Report issued by the President's Task Force on Victims of Crime to serve as a guide for long-term action to improve victims' rights and services. OVC continues to collaborate with other agencies on topics of common concern. For example, in 1996 and 1997, OVC and OJJDP will have jointly sponsored three youth-related grants, which focus on children and adolescents as victims and potential victims, promoting the rights of and services for victims of juvenile offenders, and educating offenders on the impact of crime and victims. Another area of programmatic emphasis has been on crimes against the elderly, where OVC has collaborated with HHS's Administration on Aging, law enforcement associations, and senior citizen organizations. The result of this grant has been the establishment of 350 TRIAD programs in 46 different states which bring together law enforcement, adult protective and social services agencies to increase services available to elderly crime victims. Workplace violence has been still another substantive focus of cooperative projects, and in both, 1996 and 1997, OVC has worked with the Bureau of Justice Assistance to assist communities and institutions in developing crisis response teams through the Immediate Response to Emerging Issues program, and with a number of other agencies, including HHS, the Department of Labor, and the U.S. Postal Service to host a symposium on general workplace violence issues.

In 1998 OVC will continue "Victim Services 2000," a program that will support a community in establishing a comprehensive and victim-centered program that employs "promising practices." The first phase entailed planning, the second phase will be the construction of a program where promising practices, policies, and procedures provide support for crime victims. Each funded site will eventually become a training site for other communities wishing to create a comprehensive program that coordinates services across jurisdictions and interests in given communities. In 1996, OVC selected Denver, Colorado as the first Victim Services 2000 site. In 1997, OVC will fund two additional sites, of which one will be in a rural community.

In 1997 and 1998, funding will be allocated for the on-going operation of the clearinghouse function through the OVC Resource Center to support the coordination and dissemination of information, particularly products developed with discretionary funding.

PROGRAM CHANGES:

Crime Victims Fund

Amount
-\$352,389

The Victims of Crime Act program is funded by collections of fines, penalty assessments, and bond forfeitures from defendants convicted of Federal crimes. Collections available to the Crime Victims Fund are \$227,707,256 in 1995 for obligation in 1996. These collections, plus \$23,906,612 carried over and available from 1995 provided a total of \$251,613,868 for the 1996 program. Although collections in 1995 were unusually high, collections in 1996 for obligation in 1997 more than doubled the amount collected in 1995. 1996 collections of \$528,941,562 are unique in that one Federal criminal fine of \$340,129,205 was collected in 1996 from a bank found guilty in a bond trading case. We hope, in particular, to target help with these additional funds in 1997 to the victims of youth and gang violence across the country. In lieu of anticipating such a level of collections again in 1997 for use in 1998, an estimate of \$176,553,000 is anticipated -- this is more in line with previous years' collections.

PERFORMANCE MEASUREMENT TABLE PRESENTED BY DECISION UNIT

DECISION UNIT: Crime Victims Fund					
MISSION: To improve the criminal justice system response to victims of crime, including Native American crime victims, through the delivery of direct services and funding, training, and technical assistance, and through monitoring the implementation of statutes providing victims rights and other efforts					
PERFORMANCE INDICATOR INFORMATION					
Type of Indicator	1995 Actual	1996 Target	1996 Actual	1997 Target	1998 Target
Performance Indicators

<p>B. Factors Affecting FY 96 Program Performance. Describe reasons for any significant differences between target levels of performance and estimates of actual performance, whether positive or negative.</p> <ul style="list-style-type: none"> - Unavailability of local funding to replicate promising practices and administrative funds to support publications review panels - Expanded training and technical assistance resources will be available for state Victims of Crime Act (VOCA) administrations in 1996, including national and regional training conferences - Funding available through VOCA and the allocation of funds to support local training and technical assistance efforts - Funding placed by agency officials in training and technical assistance efforts - CIA applications were processed within 45 days. However, the grant award process which occurred in 1996 was delayed by the furlough. <p>**Through training, technical assistance, and monitoring endeavors, OVC strives to expand the capacity of states and communities to collect data, identify gaps in services, and assess victim needs. However, OVC does not have statutory authority to mandate these reforms at the state level</p> <p>****Target was not met due to lack of adequate resources.</p> <p>*****Temporary govt. shutdown and limited resources caused slippage in target.</p> <p>*****This figure may fluctuate since OVC has little control over the indicator.</p>	<p>C. Factors Affecting Selection of FY 97 and 98 Targets. Provide information on the selection of target levels of performance, where necessary.</p> <ul style="list-style-type: none"> - Collections available in Crime Victims Fund determine continuity of goals and objectives. - Funding levels provided to tribes by other agencies - - Emphasis placed by tribal leaders on victim issues where federal funding is reduced. - Revision of on-site monitoring protocols should enable OVC to identify training and technical assistance priorities of state administrations. - OVC will increase the number of working groups convened resulting in the development of improved data collection instruments. - Availability of discretionary funding to support of regional and state conferences, training and technical assistance initiatives, based on total collections. - Funding available through VOCA. - Allocation of funds to support training initiatives. - Emphasis placed by agencies on supporting training and technical assistance for victim services. <p>*It is impossible to estimate the number of requests received given the nature of the program, i.e., responding to acts of violence (multiple victims, acts of terrorism).</p> <p>**Through training, technical assistance, and monitoring endeavors, OVC strives to expand the capacity of states and communities to collect data, identify gaps in services, and assess victim needs. However, OVC does not have statutory authority to mandate these reforms at the state level.</p>
--	---

D. Narrative Performance Information
<p>In 1996, OVC funded over 35 training and technical assistance programs to promote the replication of promising programs so that victims and service providers benefit, providing specialized training on a range of issues such as addressing bias crime, white collar crime, assisting victims of gang violence, or improving the juvenile court response to victims.</p> <p>Many of the programs have impacted communities and changed whole systems. For example, a Joint OVC and BJA program devoted to improving the response to elderly crime victims has resulted in the formation of 350 TRILAD programs nationwide. This is a dramatic increase from 155 programs which was the number noted at the beginning of 1994 when the training program was initiated.</p> <p>There have been vast improvements in the field of corrections. OVC has funded 4 projects that provided training to prison and jail personnel to improve and expand the services offered to victims of inmate violence. These projects have resulted in 15 states. A halfway service allowed inmates that participated in the training program uniformly had implemented victim support plans, notification procedures to keep victims informed of case events such as entry release or parole; procedures to track and collect restitution payments; and policies and services that address staff victimization for those who work in a corrections environment.</p> <p>A recent training-for-trainers seminar on the topic of "Victim Impact Classes/Funds for Offenders" for a diverse group of 40 administrators, directors, and line staff from both adult and juvenile corrections facilities yielded overwhelmingly positive evaluations. Statements such as, "This training should be mandated for all states for their inmate populations," "This was the most powerful, motivating training I have had in my 14 year career," "You might want to start an association of people who have had this training to continue the important work," demonstrate the positive impact of OVC efforts.</p> <p>The materials developed have been in great demand. This year, over 2,000 copies of the Hate/Bias Crime Training Curriculum have been distributed in response to specific requests and OVC has sponsored 7 workshops by demand. Over 2,500 copies of Assisting Elderly Crime Victims have been distributed and OVC has sponsored 11 workshops on elder abuse.</p> <p>OVC's Training Bureau has fulfilled 136 individual requests for assistance in 31 states. Each unit of training or consultation has resulted in an evaluation of excellent to outstanding. One training session was held for all judges within the third judicial district of the state of North Carolina so that they would be able to identify the rights of victims and the rights of offenders. The session resulted in some victim impact information, assistance in following up on restitution payments, and support for witnesses such as children who need criminal justice protection to be able to testify at their development levels.</p> <p>OVC's commitment to training and technical assistance and associated funding levels will increase in 1997 due to the unusually high collections received in 1996. The following provides a snapshot of some of the activities OVC will undertake in FY 1997.</p> <p>OVC plans to allocate funds for the Executive Office for U.S. Attorneys and to the FBI to provide emergency services to Federal victims when no other services exist. In addition, OVC has allocated funds to assist the victims of the Oklahoma city bombing attend judicial proceedings in Denver, Colorado. Through Interagency Agreements, OVC will provide funds to the Federal Law Enforcement Training Center to train federal law enforcement officers in the delivery of services to victims of crime. OVC will also provide funding to the FBI to train FBI Victim-Witness Coordinators, fund a full-time trainer, and a full-time victim witness administrator at the FBI headquarters. OVC will make funds available to respond to specialized requests from other federal agencies.</p> <p>OVC will address the needs of specific victim populations through a series of projects in the areas of sexual assault, gang violence, hate-bias crimes, stalking, cultural considerations, and diversity. In addition, OVC will fund several projects through the Field Labeled National Impact Project that address critical training needs expressed by practitioners in the field. FY 1997 projects will include a hospital-based emergency shelter for victims of spouse abuse that will serve as a laboratory and training site; a curriculum for professionals regarding best responses to battering; a curriculum for judges regarding best responses to juvenile sexual assault; a curriculum for judges regarding best responses to adolescent victims of juvenile crime; and a handbook for prosecutors on implementing victim rights and services.</p> <p>OVC also intends to target a portion of this additional funding on victims of youth and gang violence throughout the country; provide longer term funding for demonstration and program evaluation efforts; and provide funding for Victim Services 2000 laboratories to support communities in establishing a comprehensive and victim-centered program that employs "promising practices."</p>
